The 60 member countries of the bank are its stockholders, and the money the bank lends is provided partly by them. The bank derives additional funds by selling its own bonds and other borrowing in the capital markets of the world.

Who Signed the Declaration of Independence?—Who Signed the Constitution of the United States?—A short Biographical Sketch of Each Prepared by the Library of Congress for Congressman Clyde Doyle, of California

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the following historical and biographical data regarding each of the signers of the Declaration of Independence. It seemed to me entirely appropriate that at this particular season of patriotic expression toward our beloved Nation's independence it would be appropriate for you and each of my distinguished colleagues to have before you this data compiled for me at my request by the Library of Congress. You will note therefrom that it was prepared for me on April 25, 1957, and I anticipated submitting it to your attention prior to July 4; but, Mr. Speaker, the information herein contained is always appropriate, informative, and inspiring.

And also, Mr. Speaker, at my request the Library of Congress prepared for me short biographical sketches of each of the signers of the United States Constitution. They would also seem especially appropriate for us to have before us at this time. Hence, I am pleased to also include the text thereof as furnished me by the Library of Congress:

THE SIGNERS OF THE DECLARATION OF INDEPENDENCE—SOME SALIENT FACTS

NEW HAMPSHIRE

Josiah Bartlett: He was born in Amesbury, Mass., on November 21, 1729, and died at Kingston, N. H., on May 19, 1795. At the age of 16, Bartlett began the study of medicine in the office of a practicing physician, and 5 years later began his own practice in his newly adopted home at Kingston. He was 47 years old when he signed the Declaration of Independence, and he has the distinction of being the first to give his vote in favor of the adoption of the Declaration. Although a layman, Bartlett, in 1779, was appointed chief justice of the New Hampshire court of common pleas. In 1782 he was elevated to the superior court, and in 1788 was appointed chief justice of that court. He served from 1790 as chief executive of his State with the title of president; and after June 1793, under the amended Constitution, he was elected the first governor of New Hampshire. While serving in the Continental Congress, he served on the important standing committees, and played an important part in shaping legislation. While serving on the bench in New Hampshire, he was a member and temporary chairman of the State convention called to ratify the proposed Constitution of the United States; and he contributed in no small way to the dissipation of the opposition of some of the smaller towns in the State to ratification of the Nation's premier charter. Bartlett is buried in the first cemetery at Kingston.

William Whipple: He was born in Kittery, Maine, on January 14, 1730, and died in Portsmouth, N. H., on November 28, 1785. Whipple was educated in the common schools. At an early age he went to sea, and, while in his early twenties, became master of a vessel. About 1760 he formed a partnership with his brother, Joseph, in the mercantile business in Portsmouth, continuing in this pursuit until 1775, when he gave up his share of the business to enter public affairs and work for independence. He was elected to the Continental Congress in 1775, and served until 1779. He was 47 years old when he affixed his signature to the Declaration. His service in Congress was interrupted for short periods, when he was participating in military campaigns during the war. He was commissioned brigadier general in 1777, and served in several battles, including the Saratoga and Rhode Island campaigns. He served in the State Assembly from 1780–84, and in 1782 was appointed an associate justice of the Superior Court of New Hampshire, a position which he held until his sudden death. Whipple is buried in the north cemetery at Portsmouth.

Matthew Thornton: He was born in Ireland in 1714, and died on June 24, 1803, at Newburyport, Mass., while visiting his daughter. Thornton came to America with his parents in 1718, settling first in Maine and then in Massachusetts. He received his early education in Massachusetts, and went on to study medicine, completing his program in 1740. He began his practice in Londonderry, N. H., where, at the same time, he became very active in public affairs. He served as under surgeon with the New Hampshire troops in the Louisbourg Expedition of 1745, and for some time held the rank of colonel in the State militia. He served as a member of the New Hampshire Assembly in 1758, 1760, and 1761. He was a delegate to the First Provincial Congress in 1775, and was elected president of that body; he also served as chairman of the committee of safety. In 1776, he was elected to the Continental Congress, and although he did not arrive until November, he had the opportunity of affixing his signature to the Declaration of Independence. He was 62 years old when he signed that document. Thornton was appointed associate justice of the New Hampshire Superior Court and served until 1782. He served in the newly organized State senate from 1784 to 1786. His latter years were spent on his farm in Merrimack, N. H., where he devoted his time to writing. He is buried in Thornton's Ferry Cemetery, at Merrimack.

MASSACHUSETTS

John Hancock: He was born in Quincy, Norfolk County, Mass., on January 23, 1737, and died at Quincy, Mass., on October 8, 1793. When Hancock was a young boy, he was adopted by his uncle, Thomas Hancock, who was the richest merchant in Boston. He attended Harvard College and graduated in 1754. After completing his education, he entered his uncle's mercantile office; in 1763 he became a partner of Thomas Hancock & Company. When his uncle died in 1754, Hancock, a youth of twenty-seven, became the head of the leading mercantile house in Boston, and the heir to a large fortune. He was a member of the provincial legislature from 1766 to 1772, and served as president of the Provincial Congress in 1774. He was elected as a member to the Continental Congress in 1775, and served for several terms. From May 24, 1775 to October 29, 1777, he served as President of the Congress. He was the first to sign the Declaration and was 39 years of age at the time. He served as senior major general of the Massachusetts Militia during the war, and participated in the Rhode Island campaign. Hancock was elected the first governor of the State of Massachusetts in September 1780, and served until 1785, when he resigned because of ill health. In 1787 he was again elected governor and he died while serving in his ninth term. Hancock is buried in the Old Granary Burying Ground, at Boston.

Samuel Adams: He was born in Boston, Mass., on Sept. 27, 1722, and died at Boston on Oct. 2, 1803. No one had done more and perhaps no one else had done so much in behalf of American rights and liberties as Samuel Adams. He attended Harvard College and graduated in 1740. He found employment in the counting-house of Thomas Cushing, but stayed only a few months for he wished to establish his own business. After failing in his first business venture, he joined his father who operated a brewery. Not having a keen eye for business affairs, he soon dissipated his share of the family estate, and then entered the field of politics and public affairs, which was more to his liking. In the dispute with the mother country, Adams was at his best in firing the people for the cause of independence for the American colonies. He was chosen to draft the instructions of the town of Boston to its newly elected representatives concerning Lord Grenville's proposed stamp act in 1764. From 1765 to 1774 Adams served as a member of the Massachusetts General Court, and from 1774 to 1782 he served in the Continental Congress. He was 54 when he attached his signature to the Declaration. Adams served as a member of the State Constitutional Convention in 1779, and as president of the State senate in 1781. He served as Governor of Massachusetts from 1794 to 1797. He is buried in the Old Granary Burying Ground at Boston.

John Adams: He was born in Braintree (now Quincy), Mass., on October 19, 1735, and died at Quincy, on July 4, 1826, a few hours after Thomas Jefferson. After graduating from Harvard College in 1755, he taught school at Worcester for a short period, and later decided to take up law. He studied under James Putnam, and was admitted to the bar at Boston, on November 6, 1758. His law practice grew slowly, but he soon occupied a leading place at the bar. Although opposed to mob demonstrations, Adams' name was early connected with the patriotic cause by his efforts in defending the colonies on legal grounds. He was elected to serve as a delegate to the Continental Congress in 1774, and served until 1778. During the debates in Congress on the Declaration, Adams was dubbed the Atlas of American Independence. He was 41 years old when he signed the document. It was John Adams who proposed the name of George Washington, to serve as head of the American Army during the Revolution. Adams was appointed Commissioner, with Benjamin Franklin and Arthur Lee to the Court of France. He later served as Minister to Holland in 1782, and was appointed to serve as the first Minister to England, serving from 1785 to 1788. In 1788, he was elected to serve as the first Vice President of the United States, and was reelected in 1792, serving from April 30, 1789, to March 3, 1797. He was elected President of the United States and served from March 4, 1797, to March 3, 1801. Adams is buried under the Old Congregational Church, at Quincy, Mass.

Robert Treat Paine: He was born in Boston on March 11, 1731, and died in the same city on May 12, 1814. He attended Harvard College and was graduated in 1749. He taught for a while and then turned to the study of theology. After a brief career in the ministry, he studied law and was admitted to the bar in 1757. Paine served as the associate prosecuting attorney in the Boston Massacre trial and thus became connected with the patriotic cause. He served several terms in the provincial assembly, and was elected to the Continental Congress, serving from 1774–78. He was 45 years old when he signed the Declaration. In 1777 Paine was elected the first attorney general of the State of Massachusetts, and served until 1790. In 1790 he was appointed to the State supreme court by John Hancock, and served until 1804. In 1780 he became a founder of the American Academy of Arts and Sciences. He is buried in the Old Granary Burying Ground at Boston.

Elbridge Gerry: He was born in Marblehead, Mass., on July 17, 1744, and died in Washington, D. C., on November 23, 1814. After graduating from Harvard College in 1762, Gerry entered his father's mercantile business. In May 1772 he was elected to the Massachusetts General Court, where he met Samuel Adams and became keenly interested in the cause for independence. In 1776, he was elected to the Continental Congress and served from 1776 to 1781, and from 1782 to 1785. He was 32 years old when he signed the Declaration. Gerry served in the first and second Congresses, from 1789 to 1793. In 1797 he was sent on a mission to France with Marshall and Pinckney (X. Y. Z. Affair). Gerry was elected Governor of the State of Massachusetts in 1810 and 1811. He was defeated for this office in 1801 and 1812. He was elected Vice President of the United States as a Democrat, and served from March 4, 1813, until his death. Gerry's name has been perpetuated in the term "gerrymander", which refers to the splitting up of election districts. He is buried in the Congressional Cemetery, at Washington, D. C.

RHODE ISLAND

Stephen Hopkins: He was born in what is now Providence, R. I., on March 7, 1707, and died there on July 13, 1785. After attending the public schools, he entered the mercantile business; at the same time he became a practical surveyor. From the age of 25 Hopkins served in public office. He was a member of the General Assembly from 1732 to 1752, and from 1770 to 1775; he served as Speaker of that body from 1738 to 1744, and also in 1749. He served as chief justice of the Rhode Island superior court from 1751 to 1754. Hopkins was elected to the Continental Congress in 1774, and he was 69 years old when he attached his signature to the Declaration. He served as Governor of Rhode Island in 1755, 1756, 1758 to 1761, 1763, 1764, and 1767. Despite his lack of formal education, Hopkins became the first chancelor of Rhode Island College. He is buried in the North Burial Ground, at Providence.

William Ellery: He was born in Newport, R. I., on December 22, 1727, and died there on February 15, 1820. After graduating from Harvard College in 1747, Ellery engaged in various undertakings. He was a merchant, served as a naval officer of the colony, served as clerk of the General Assembly, and after being out of college for 23 years, began the study of law, being admitted to the bar in 1770. He was elected to the Continental Congress in 1776 and served until 1781. He was 49 years old when he signed the Declaration. He served again in the Continental Congress from 1783 to 1785, and in 1785 was appointed Chief Justice of the Rhode Island Superior Court. In 1786 he was appointed by the Continental Congress to serve as Commissioner of the Continental Loan Offices. He served as collector of the port of Newport from 1790 until his death. Because of his activities in the cause for independence, the British burned Ellery's property when they occupied Newport. With the exception of Charles Carroll, of Carrollton, Ellery was the longest lived of the signers of the Declaration. He is buried in the Old Cemetery, at Newport.

CONNECTICUT

Roger Sherman: He was born in Newton, Mass., on April 19, 1721, and died in New Haven, Conn., on July 23, 1793. Born under humble circumstances, Sherman attended the public schools, learned the cobbler's trade, and moved to New Milford. He studied law, and was admitted to the bar in 1754. Sherman served several terms in the State assembly, and served in the Connecticut State Senate from 1766 to 1785. He served as a member of the Connecticut Superior Court in 1766, 1767, and 1773 to 1788. Sherman is noted for the various public offices he held concurrently. While holding certain of the above offices, he also served in the Continental Congress from 1774 to 1781, and in 1783 and 1784. He was 55 years old when he signed the Declaration. He was a member of the committee appointed to draft the document, and was the only Member of the Continental Congress to sign all four great American State papers—the Declaration of 1774: the Declaration of Independence, the Articles of Confederation, and the Constitution of the United States. He served in the First Congress from 1789 to 1791, and served in the United States Senate from 1791 until his death. He is buried in the Grove Street Cemetery, at New Haven.

Oliver Wolcott: He was born in Windsor, Conn., on December 1, 1726, and died at Litchfield, Conn., on December 1, 1797. Graduating from Yale College, at the head of his class, in 1747, he was commissioned a captain by the Governor of New York. After the peace of Aix-la-Chapelle, Wolcott returned to Litchfield and studied medicine, but did not practice. He was elected sheriff of Litchfield County in 1751, and from 1774 to 1786 served as a member of the State council. He was elected to the Continental Congress in 1775, and served up to 1784, dividing his time between serving in the Army and serving in Congress. Wolcott was 50 years old when he signed the Declaration. He served as a major general in the militia, and commanded a brigade which took part in the defeat of General Burgoyne in 1777. Wolcott served as Lieutenant Governor of Connecticut from 1786 to 1796, and was elected Governor of the State, serving from 1796 until his death. He is buried in East Cemetery, at Litchfield.

William Williams: He was born in Lebanon, Conn., on April 28, 1731, and died there on August 2, 1811. Williams graduated from Harvard College in 1751, studied theology for a short time, and then entered the mercantile business. He served in the State assembly for several years, serving as Speaker of that body in 1775 and again from 1781 to 1783. Williams served in the Continental Congress from 1776 to 1778, and in 1783 and 1784. He was 45 years old when he signed the Declaration. He served as judge of the county court of Windham from 1776 to 1804, and served as judge of probate for the Windham district from 1776 to 1808. He was a member of the Connecticut convention that ratified the Constitution of the United States in 1787. He is buried in the Old Cemetery, at Lebanon.

Samuel Huntington: He was born in Windham, Conn., on July 3, 1731, and died at Norwich, Conn., on January 5, 1796. He attended the common schools, served his apprenticeship in the cooper trade, later studied law, and was admitted to the bar in 1758. He was appointed crown attorney in 1765, and served as justice of the superior court from 1774 to 1784; he served as chief justice of the court in 1784. He was a Member of the Continental Congress from 1776 to 1784, and served as President of the Congress from 1779 to 1781. He was 45 years old when he signed the Declaration. Huntington served as Lieutenant Governor of Connecticut in 1785; and from 1786 until his death he served as governor. He is buried in Norwichtown Cemetery, at Norwich.

NEW YORK

Francis Lewis: He was born in Llandaff, Wales, in March 1713, and died in New York City, on December 30, 1803. He attended Westminster School in London, and then entered the countinghouse of a London merchant. He came to the United States in 1735, and established merchantile houses in New York and Philadelphia. Lewis served in the French and Indian War as an aide to General Mercer, was captured in Oswego, N. Y., and taken to France. He was a delegate to the Stamp Act Congress of 1765 which met in New York. He served in the Continental Congress from 1774 to 1889, and was 63 years old when he affixed his signature to the Declaration. He served as Commissioner of the Board of Admiralty in 1779. Lewis is the only signer of the Declaration buried in Manhattan, in an unidentified grave in Trinity Churchyard at Wall Street and Broadway.

Philip Livingston: He was born in Albany, N. Y., on January 15, 1716, and died at York, Pa., on June 12, 1778, while attending the sixth session of the Continental Congress. Livingston attended Yale College and graduated in 1737. He entered the mercantile business in New York City and took part in public affairs. He served on the board of aldermen from 1754 to 1762, was a member of the provincial house of representatives from 1763 to 1769, and served as Speaker in 1768. He was a delegate to the Stamp Act Congress in 1765. Livingston was a Member of the Continental Congress from 1774 to 1778, and he was 60 years old when he attached his signature to the Declaration. Livingston was one of the earliest advocates of the establishment of King's College, now Columbia University. He also aided in the organization of the New York Society Library. He is buried in Prospect Hill Cemetery, at York, Pa.

Lewis Morris: He was born in Morrisania, now a part of New York City, on April 8, 1726, and died there on January 22, 1798. He was graduated from Yale College in 1746, and engaged in agricultural pursuits. Although a country gentleman, and heir to a large estate, Morris associated himself with the patriotic cause. He was elected to the Colonial Assembly of New York in 1769, but did not qualify because of nonresidence. Morris served in the Continental Congress from 1775 to 1777, and was 50 years old when he signed the Declaration. He served in the State Senate from 1777 to 1781, and from 1784 to 1788. He was a delegate to the New York convention which adopted the Constitution of the United States. He served as a member of the first board of regents of the University of New York, in 1784, and served on the board until his death. He is buried in St. Anne's Episcopal Churchyard, in the Bronx, N. Y.

William Floyd: He was born in Brookhaven, N. Y., on December 17, 1734, and died in Westernville, N. Y., on August 4, 1821. Although coming from a wealthy family, Floyd achieved only a limited academic education. When only 18, he inherited his father's large estate. Floyd served as major general in the State Militia; and when the British made their first landing on Long Island, Floyd led a body of troops which drove them off. He served in the Continental Congress from 1774 to 1777, and from 1778 to 1783. He was 42 when he signed the Declaration. He served in the State senate in 1777 and 1778. He was elected to the first Congress and served from 1789 to 1791. He returned to the State senate, serving

from 1764 to 1788, and again in 1808. He was a presidential elector in 1792, 1800, 1804, and 1820. He was a delegate to the State Constitutional Convention in 1801. He is buried in the Presbyterian Church Cemetery, at Westernville.

NEW JERSEY

John Hart: He was born in Stonington, Conn., about 1707, and died at Hopewell, N. J., on May 11, 1779. He received limited schooling, and then engaged in agriculture. He became an efficient farmer and soon acquired considerable property. He served in the New Jersey assembly from 1761 to 1771, and as judge of the Hunterdon County courts from 1768 to 1775. He served in Continental Congress from June 22 to August 30, 1776, and was about 69 years old when he signed the Declaration. He was elected to the first State general assembly under the State constitution in 1776, and reelected in 1777 and 1778. He served as speaker of that body from 1776 to 1778. His estate was devastated by the British troops when they landed in New Jersey. He is buried in the First Baptist Church Cemetery, at Hopewell, N. J.

John Witherspoon: He was born in Gifford, Haddingtonshire, Scotland, on February 5, 1723, and died on his farm, near Princeton, N. J., on November 15, 1794. Witherspoon was graduated from Edinburgh University in 1739, studied theology at the university, and was ordained minister of the parish of Beith in 1745. He at first declined the presidency of the College of New Jersey (now Princeton University), in 1766, but accepted the second invitation of that institution, and was inaugurated as president on August 17, 1768. He became a leader of the Presbyterians in America. He served in the Continental Congress in the years 1776 to 1779, 1780 to 1781, and again in 1782. He was the only clergyman in Congress, and was 54 when he attached his signature to the Declaration. After the War for Independence ended, Witherspoon returned to Princeton and continued his duties as president of the University. He is buried in the Witherspoon Street Graveyard, at Princeton.

Richard Stockton: He was born in Princeton, N. J., on October 1, 1730, and died there on February 28, 1781. Stockton graduated in the first class from Princeton College in 1748, studied law, and was admitted to the bar in 1754. He served as associate justice of the State supreme court, from 1774 to 1776. In June 1776, Stockton was elected to the Continental Congress, and was reelected in November of the same year, but declined the office. He was 46 years old when he signed the Declaration. Stockton served as chairman of a committee of Congress which inspected the northern army at Ticonderoga, and on November 30, 1776, he was captured by the Tories and held prisoner in New York City until December 29, 1776. He was elected chief justice of the State Supreme Court in August 1776, but declined this office in order to remain in Congress. Stockton was a successful lawyer, and as a trustee of Princeton College contributed much to that college and higher education in general in America by his successful mission to Scotland which resulted in John Witherspoon's coming to America to head Princeton College. He is buried in Quaker Cemetery, at Princeton.

Abraham Clark: He was born near Elizabeth, N. J., on February 15, 1726, and died at Rahway, N. J., on September 15, 1794. After attending private schools, he studied law but did not practice. He was a member of the New Jersey Provincial Congress from 1775 to 1776, and from October 9, 1775, served as assistant secretary of that body. Clark served in the Continental Congress from 1776 to 1778 and was reelected in 1779, but declined the office. He was 50 years old when he attached his signature to the Declaration. He served in the State Assembly in 1776, and from 1783 to 1785. He again served in the Continental Congress from 1779 to 1783 and from 1787 to 1789. He was elected to the 2d and 3d Congresses, serving from March 4, 1791, until his death. He is buried in the Rahway Cemetery, at Rahway.

Francis Hopkinson: He was born in Philadelphia, Pa., on September 21, 1737, and died there on May 9, 1791. Although Hopkinson served as a delegate from New Jersey, he is usually associated with Philadelphia, where he studied and practiced law. He was the first graduate of the College of Philadelphia, receiving his degree in 1757. He served as Collector of Customs of the Port of Salem, N. J., in 1763, and was a member of the Provincial Council of New Jersey from 1774 to 1776. He was admitted to practice law before the New Jersey State Supreme Court in 1775. He was elected an associate justice of the State supreme court in 1776, but did not accept the office. Hopkinson served in the Continental Congress in 1776, and was 39 at the time he signed the Declaration. From 1789 to 1791, he served as judge of the United States District Court for the Eastern District of Pennsylvania. He is said to have designed the American flag, in 1777, and his son Joseph wrote the anthem Hail Columbia. Hopkinson is buried in the Christ Church Burial Ground, at Philadelphia.

PENNSYLVANIA

Benjamin Franklin: He was born in Boston, Mass., on January 17, 1706, and died in Philadelphia, on April 17, 1790. Franklin was self-educated, acquiring most of his education while working in a printing shop. By the time Franklin was 42 years old, he was able to give up the management of his printing business and devote his time to public affairs and other interests. He had already established the Pennsylvania Gazette (1728), and had begun the publication of Poor Richard's Almanac (1732). Franklin served as deputy postmaster general of the British North American Colonies, from 1753 to 1774. He served as the agent for Pennsylvania in London from 1757 to 1762, and again 1764 to 1775. He served in the Continental Congress in 1775 and 1776, and was the oldest signer of the Declaration, being 70 years old at the time. Franklin served as diplomatic commissioner in France, and from 1776 to 1785 he served as Minister to France. He was a delegate to the Constitutional Convention in 1787. Franklin played an important role in the establishment of the first circulating library in America, and in founding the American Philosophical Society for the Promotion of Useful Knowledge. He is buried in Christ Church Burial Ground, at Philadelphia.

James Wilson: He was born in Carskerdo, near St. Andrews, Scotland, on September 14, 1742, and died in Edenton, N. C., on August 28, 1798. He came to America in 1765, lived in New York City, and later moved to Philadelphia. He studied law and was admitted to the bar in 1767. He served in the Continental Congress in 1775, 1776, and for scattered years up to 1787. He was the second youngest Pennsylvania signer of the declaration, being only 34 years old at the time. He served as associate justice of the United States Supreme Court from 1789 to 1798; and in 1790 he became the first professor of law in the College of Philadelphia. He was buried in the Johnston Burial Ground on the Hayes Plantation near Edenton, N. C., but his remains were reinterred in Christ Churchyard, at Philadelphia, in 1906.

Robert Morris: He was born in Liverpool, England, on January 20, 1734, and died in Philadelphia, Pa., on May 8, 1806. Morris came to America in 1747, and entered the mercantile business in Philadelphia in 1748. He served in the State Assembly from 1778 to 1780, and served as superintendent of finance from 1781 to 1784. At a very early age, Morris became a partner in the firm of Willing, Morris & Co. He served in the Continental Congress from 1776 to 1778, and was 42 years old when he signed the Declaration. He was a delegate to the Constitutional Convention in 1787; and from 1789 to 1795 he served in the United States Senate. President George Washington offered Morris the position of Secretary of the Treasury, but he declined the office. Because of his mastery of financial affairs, Morris was dubbed the "financier of the Revolution." In his later years, he lost his vast fortune in unsuccessful land speculation. He is buried in the family vault of William White in the Churchyard of Christ Church, in Philadelphia.

George Taylor: He was born in Ireland, in 1716, and died in Easton, Pa., on February 23, 1781. He came to America in 1736, and engaged in the manufacture of iron in Pennsylvania. He lived in Durham, Pa., in 1755, and served as justice of the peace there for 3 years. He was a member of the provincial assembly from 1764 to 1769, and served as judge of the Northampton County Court in 1770. He served as a colonel of the Pennsylvania Militia in 1775. He was elected to the Continental Congress in 1776 and 1777. He was 60 years old when he signed the Declaration. He served as a member of the First Supreme Executive Council in 1777. He was buried in St. John's Lutheran Church Cemetery, but his remains were reinterred in the Easton Cemetery, in Easton, Pa.

James Smith: He was born in Ireland in 1713, and came to America and settled in Pennsylvania in 1727. He attended Philadelphia Academy (University of Pennsylvania), studied law, and was admitted to the bar in 1745. He moved to York, and engaged in the iron business for a short time, but without success. In 1776 he organized the Pennsylvania Militia and the two regiments of the Flying Camp in Perth Amboy, N. J. He served as brigadier general of the State Militia. From 1776 to 1778 he was a member of the Continental Congress, and was 63 years old when he signed the Declaration. In 1780 he served in the State house of representatives; and from 1780 to 1781 he served as judge of the Pennsylvania High Court of Errors and Appeals. He was elected to Congress again in 1785, but he declined the office because of his age. From 1781 to 1801 he was chiefly engaged in the practice of law in York. He is buried in the First Presbyterian Churchyard, in York, Pa.

George Ross: He was born in New Castle, Del., on May 10, 1730, and died near Philadelphia, on July 14, 1779. He studied law and was admitted to the bar in 1750. He served as a member of the Colonial Assembly from 1768 to 1776, and was a delegate to the State convention in 1774. He served in the Continental Congress from 1774 to 1777, and was 46 years old when he signed the Declaration. He was noted for his wit and good humor, and his personal popularity was demonstrated by the fact that only Benjamin Franklin received a larger vote in the election for the Pennsylvania delegates to the Congress. He was appointed judge of the Court of Admiralty for Pennsylvania in April 1779, and served in that position until his death. He is buried in Christ Churchyard, in Philadelphia.

George Clymer: He was born in Philadelphia, Pa., on March 16, 1739, and died in Morrisville, Pa., on January 23, 1813. He was orphaned at a tender age, and was brought up by a prosperous merchant uncle, William Coleman. Clymer entered the mercantile business and became a partner in the firm of Merediths and Clymer. He served in the Continental Congress from 1776 to 1778, and from 1780 to 1783. He was 37 years old when he signed the Declaration. He was a member of the State house of representatives from 1765 to 1788, was a delegate to the Constitutional Convention, and was a signer of the Constitution. He

served in the first Congress, from 1789 to 1791, and in the latter year was appointed by President Washington as collector of excise duties for Pennsylvania, but resigned after the Whisky Rebellion. His last public service was rendered as commissioner to the Cherokee and Creek Indians in Georgia, when he participated in negotiating a treaty with those Indians. Clymer is buried in Friends Graveyard, at Trenton, N. J.

Benjamin Rush: He was born near Philadelphia, Pa., on December 24, 1745, and died there on April 19, 1813. Rush graduated from Princeton College in 1760, and studied medicine in Philadelphia and abroad. He began practicing in 1769, and became the most famous American physician and medical teacher of his generation. He founded Pennsylvania Hospital in Philadelphia, and served as president of the Philadelphia Medical Society. He was one of the founders of the Philadelphia Bible Society, and was also a founder of Dickinson College in Carlisle, Pa. He received several awards from foreign rulers for his contributions to medical science. He served in the Continental Congress in 1776 and 1777, and was only 31 at the time he signed the Declaration. He served in the Army with the rank of physician general in 1777. He served as treasurer of the United States mint in Philadelphia from 1799 until his death. He is buried in Christ Church Cemetery, at Philadelphia.

John Morton: He was born in Ridley Township, Delaware County, Pa., in 1724, and died in Ridley Park, Pa., in April 1777. He attended the common schools for a very short time, but he was well educated at home by his stepfather. He became a land surveyor, and served as justice of the peace in 1757. He had served in the Colonial General Assembly since his early thirties, and from 1771 to 1755 he served as speaker of that body. In April 1774 Morton was appointed an associate justice of the Pennsylvania Supreme Court of Appeals. He served in the Continenal Congress from 1774 to 1777. He was 52 years old when he signed the Declaration. He cast the deciding vote to swing the Pennsylvania delegation over for the adoption of the Declaration of Independence. He was the first of the signers to die. He is buried in St. Paul's Churchyard, in Chester, Pa.

DELAWARE

Caesar Rodney: He was born in Dover, Del., on October 7, 1728, and died there on June 29, 1784. He obtained most of his educational training at home, and then engaged in agricultural pursuits. He served in several public offices, including those of superintendent of the printing of Delaware currency in 1759, member of the State assembly from 1762 to 1769, and associate justice of the Delaware Supreme Court from 1769 to 1777. He served in the Continental Congress from 1774 to 1776, and rode from his home, through the night and rain, to cast his vote for independence. He was 48 years old when he signed the Declaration. He was elected president of Delaware, and served from 1778 to 1782. He was buried on his farm, Byfield, but a century later his remains were reinterred in the Christ Episcopal Churchyard in Dover.

George Read: He was born in Cecil County, Md., on September 18, 1733, and died in New Castle, Del., on September 21, 1798. Read studied law, and was admitted to the bar in Delaware in 1752. He served as attorney general for lower Delaware in 1763. He was a Member of the Continental Congress from 1774 to 1777. He was 43 years old when he signed the Declaration. He served as president of the State constitutional convention in 1776, and was a delegate to the Federal Constitutional Convention. He served in the State assembly, and was elected to the United States Senate, serving from 1789 to 1793. In this latter year Read was appointed chief justice of the State of Delaware, and served until his death. He is buried in Immanuel Churchyard, in New Castle, Del.

Thomas McKean: He was born in New London, Pa., on March 19, 1734, and died in Philadelphia, Pa., on June 24, 1817. He studied law, was admitted to the bar, and began practicing in New Castle, Del., in 1755. He was appointed deputy attorney general for Sussex County, and served from 1756 to 1758. He served in the Delaware assembly from 1762 to 1775. He served as a Member of the Continental Congress from 1774 to 1783, and in 1781 he served as president of Congress. He was 42 years old in the summer of 1776, but it is unknown when he actually signed the Declaration. He served as president of the State of Delaware in 1777, was appointed chief justice of Pennsylvania in 1777 and served in that capacity until 1799. He was elected Governor of the State of Pennsylvania in 1799 and served until 1808, when he retired from public life. He is buried in Laurel Hill Cemetery, in Philadelphia.

MARYLAND

Charles Carroll of Carrollton: He was born in Annapolis, Md., on September 19, 1737, and died in Baltimore, Md., on November 14, 1832. He attended the Jesuits' College of Bohemia at Hermans Manor, Md., and studied civil and common law in England and France, returning to Maryland in 1765. Carroll, a landed gentleman, was one of the richest men in America. He served as a delegate to the revolutionary convention of Maryland in 1775, and was a member of the board of war from 1776 to 1777. He served in the Continental Congress in 1776 and again in 1777 and 1778. He was 39 years old when he signed the Declaration. Carroll served in the Maryland State senate from 1777 to 1800, and served in the United States Senate from 1789 until 1792, when he resigned, preferring to remain in the State senate. Carroll was the last surviving signer of the Declaration of Independence. He is buried in the chapel of Doughoregan Manor, near Ellicott City, Md.

William Paca: He was born near Abingdon, Md., on October 31, 1740, and died there on October 23, 1799. He graduated from Philadelphia College in 1759, studied law in Annapolis and in London, and was admitted to the bar in 1764. He served in the Provincial Assembly from 1771 to 1774, and served in the Continental Congress from 1774 to 1779. He was 36 years old when he signed the Declaration. He served in the State senate from 1777 to 1779, and was appointed chief judge of the Superior Court of Maryland in 1778, and served until 1780. He was elected governor of the State of Maryland, and served 3 terms from 1782 to 1786. He was appointed by Washington to serve as judge of the United States Court for Maryland, and served from 1789 until his death. He is buried in the family burial ground in Queen Anne County, Md.

Samuel Chase: He was born in Princess Anne, in Somerset County, Md., on April 17, 1741, and died in Washington, D. C., on June 19, 1811. He was tutored in the classics by his father, an Anglican clergyman. He studied law and was admitted to the bar in 1761. He served in the State assembly from 1764 to 1784, and served in the Continental Congress from 1774 to 1778, and again in 1784 and 1785. He was 35 years old when he signed the Declaration. He was the most violent of the Maryland delegation, and because of his "fiery complexion" was given the name "Bacon face" in the Maryland court. He was appointed judge of the general court of Maryland in 1791, and in 1796 President Washington appointed him Associate Justice of the United States Supreme Court. Chase was impeached for malfeasance in office, tried by the Senate of the United States in 1805, but was acquitted of all charges. At the end of the trial he resumed his seat on the bench, and served until his death. He is buried in Old St. Paul's Cemetery, Baltimore, Md.

Thomas Stone: He was born in Charles County, Md., in 1743, and died in Alexandria, Va., on October 5, 1787. He studied law and was admitted to the bar in 1764. He served in the Maryland State Senate from 1779 to 1783. He served in the Continental Congress in 1775, and again in 1779, 1784, and 1785. He was 33 years old when he signed the Declaration. He declined to serve as a delegate to the Federal Constitutional Convention because of the illness of his wife. Stone died at the age of 44 while waiting for a ship to take him to England. He is buried in the Garden Cemetery, Havre de Venture, in Charles County, Md.

VIRGINIA

Richard Henry Lee: He was born at Stratford, in Westmoreland County, Va., on January 20, 1732, and died at his home Chantilly, in Westmoreland County, on June 19, 1794. After some private instruction, Lee attended Wakefield Academy in England, returning to this country in 1751. Lee served in the Virginia House of Burgesses from 1758 to 1775, and served in the Continental Congress from 1774 to 1780. He introduced the famous resolutions declaring "that these united Colonies are, and of right ought to be, free and independent States * * *," and which led to the Declaration of Independence. He was 45 years old at the time. He served in the Continental Congress again, from 1784 to 1787, and was the author of the first national Thanksgiving Day proclamation issued by Congress, October 31, 1777. He was elected to the United States Senate, and served from 1789 until he resigned in 1792. He is buried in the family burying ground, Mount Pleasant, near Hague, Westmoreland County, Va.

Thomas Jefferson: He was born in Old Shadwell, Va., on April 13, 1743, and died at Monticello, in Albermarle County, Va., on July 4, 1826, a few hours before John Adams. Jefferson graduated from William and Mary College in 1762, studied law, and was admitted to the bar in 1767. Jefferson served in the Virginia House of Burgesses from 1769 to 1774, and served in the Continental Congress in 1775 and 1776. He served as chairman of the committee appointed to prepare the Declaration of Independence and was the author of that document. He was 33 years old at the time. Jefferson served as Governor of Virginia from 1779 to 1781, and later resumed his service in the Continental Congress. He served as Minister to France for more than 3 years. In 1789 he was appointed the first Secretary of State of the United States under the Constitution, and served until 1793. Jefferson was elected Vice President of the United States, serving from 1797 to 1801. He was elected President of the United States for two terms, serving from 1801 to 1809. Jefferson took an active part in founding the University of Virginia. He is buried at Monticello.

Benjamin Harrison: He was born in Berkeley, Charles City County, Va., on April 5, 1726, and died in City Point, Prince George County, Va., on April 24, 1791. He attended William and Mary College. At an early age he was elected to the Virginia House of Burgesses, serving from 1749 to 1775. He served in the Continental Congress from 1774 to 1778; and as chairman of the Committee of the Whole House reported the resolution introduced by Richard Henry Lee declaring independence. He was 50 years old when he signed the Declaration. He served several terms in the State House of Representatives after leaving the Continental Congress, serving as Speaker of that body in the years 1778 to 1782, 1785, and 1786. He served as Governor of Virginia from 1782 to 1784. One of Harrison's children, William Henry Harrison, became President of the

United States. He is probably buried in Old Westover Church Cemetery, near famous Westover estate, on the James River, in Virginia.

George Wythe: He was born in Elizabeth City County, Va., in 1726, and died at Richmond, Va., on June 8, 1806. He attended William and Mary College, studied law, and was admitted to the bar in 1746. He served in the Virginia House of Burgesses from 1758 to 1768, and served as Clerk of the same body from 1768 to 1775. Wythe served as a member in the Continental Congress from 1775 to 1777. He was 50 years old when he signed the Declaration. He served as Judge of the Virginia Chancery Court in 1777; in 1778 he was appointed sole Chancellor of Virginia. He was professor of law at William and Mary College from 1779 until 1791, when he resigned. Afterward he established a private school in Richmond; and Thomas Jefferson, John Marshall, and Henry Clay, among others, studied under him. He was a member of the Federal Constitutional Convention in 1787. He is buried in St. John's Churchyard, at Richmond, Va.

Francis Lightfoot Lee: He was born at Stratford, in Westmoreland County, Va., on October 14, 1734, and died at his home, Menoken, in Richmond County, Va., on January 11, 1797. Lee pusued his studied under private tutoring, and became a member of the Virginia House of Burgesses at the age of 24, serving from 1758 to 1775. He signed the Westmoreland declaration against the Stamp Act. He served in the Continental Congress from 1175 to 1780. He was 42 years old when he signed the Declaration. He was the younger brother of Richard Henry Lee, who introduced the famous resolutions calling for independence. He served in the Virginia State senate from 1778 to 1782. He is buried in the family burying groung at Mount Airy, Richmond County, Va.

Carter Braxton: He was born at Newington, near King and Queen Court House, Virginia, on September 10, 1736, and died at Richmond, Va., on October 10, 1797. He graduated from William and Mary College in 1755, and then spent 3 years abroad, in England. He was elected to the Virginia House of Burgesses in 1761 and served until 1771, and again in 1775. He was elected to the Continental Congress in 1775 on the death of Peyton Randolph, and served until 1776. He was 40 years old at the time of the signing of the Declaration. In 1777 he was again elected to the Continental Congress, and served until 1783, and again in 1785. He was a member of the Virginia Council of State from 1786 to 1791, and again from 1794 until his death. He is buried on his estate, Chericoke, in King County, Va.

Thomas Nelson, Jr.: He was born in Yorktown, Va., on December 26, 1738, and died at his son's estate, Mont Air, in Hanover County, Va., on January 4, 1789. Nelson attended private schools, and in 1761 he was graduated from Trinity College in Cambridge, England. Although English-educated, Nelson was a stanch patriot, and never leaned toward loyalism. He was elected to the Virginia House of Burgesses in 1774, while en route home from England. He was a member of the Continental Congress from 1775 to 1777. He was 37 years old when he signed the Declaration. It was Nelson who carried the Virginia convention resolutions to Philadelphia, which in turn precipitated the action of Richard Henry Lee. Nelson served as the commander of the Virginia State forces from 1777 until 1781. Ill health brought about by his service in the field in the campaign against Cornwallis forced his retirement in 1781. He received the public thanks of General Washington and of the Congress for his services. He served as Governor of Virginia in 1781, and then retired from public service. He is buried in the Nelson Cemetery, at Yorktown, Va.

NORTH CAROLINA

Joseph Hewes: He was born in Kingston, N. J., on January 23, 1730, and died in Philadelphia, Pa., on November 10, 1779. He attended Princeton College, then entered business in Philadelphia. In 1756 he moved to North Carolina. He served in the North Carolina State house of commons from 1766 to 1775, and was a member of the committee of correspondence in 1773. He served in the Continental Congress from 1774 to 1777, and while in the Congress served as chairman of the Marine Committee. He was a friend of John Paul Jones, and was instrumental in acquiring a ship for the latter. He was 46 years old when he signed the Declaration. He served in the State House of Commons again in 1778 and 1779, and in the latter year was again elected to the Continental Congress. He died while serving in the Congress. He is buried in Christ Churchyard, in Philadelphia, Pa.

John Penn: He was born near Port Royal, in Caroline County, Va., on May 17, 1741, and died near Williamsboro, N. C., on September 14, 1788. Penn was privately educated, studied law, and was admitted to the bar in 1762. He was a leader in the patriotic cause, served in the Provincial Congress in 1775, and in the same year was elected to the Continental Congress, serving until 1780. He was 35 years old at the time he signed the Declaration. He served as a member of the board of war in North Carolina in 1780, and in 1784 was receiver of taxes for that State. Afterward he returned to the practice of law, but was almost in complete retirement because of poor health. He was buried on his estate in Granville County, N. C., but his remains were reinterred in the Guilford Battle Grounds, near Greensboro, N. C.

William Hooper: He was born in Boston, Mass., on June 17, 1742, and died in Hillsboro, N. C., in October 1790. Hooper attended Harvard College, graduated in 1760, was admitted to the bar, and in 1767 moved to Wilmington, N. C. He served in the North Carolina colonial assembly from 1773 to 1776, and during this period penned a series of articles against the Crown which awakened the people to the issues. As a result, Hooper was disbarred for 1 year. He served in the Continental Congress from 1774 to 1777. He was 34 years old when he signed the Declaration. Hooper was a member of the boundary commission appointed to settle the dispute between Massachusetts and New York in 1786. He was buried in Hillsboro, but was reinterred in the Guilford Battle Grounds, near Greensboro, N. C.

SOUTH CAROLINA

Arthur Middleton: He was born at Middleton Place, near Charleston, S. C., on June 26, 1742, and died at The Oaks, near Charleston, on January 1, 1787. He attended St. John's College, Cambridge University, and studied law at the Middle Temple in London. Middleton returned to South Carolina in 1763, and assisted his father in the management of his plantations. At the age of 23, Middleton served in the provincial house of commons, serving from 1765 to 1768. He went to Europe, traveled extensively, and returned to this country in 1771, and again served in the provincial house of commons until 1775. He served in the Continental Congress from 1776 to 1778, and from 1781 to 1783. He was 34 years old when he signed the Declaration. Middleton served as an officer in the State militia during the war, and along with his fellow signers, Rutledge and Heyward, was captured and held prisoner by the British after the fall of Charleston. Middleton was elected Governor of South Carolina in 1778, but declined the office. He served in the State senate in 1781 and 1782. He was a member of the board of trustees of Charleston College. He is buried in the family mausoleum, at Middleton Place.

Thomas Heyward, Jr.: He was born on his father's plantation, in St. Helena's Parish (now St. Luke's), in South Carolina, on July 28, 1746, and died at White Hall, in St. Luke's Parish, S. C., on March 6, 1809. He studied law in the Middle Temple in London, returned to South Carolina in 1771, and was admitted to the bar. He was a member of the Council of Safety in 1775 and 1776, and served in the Continental Congress from 1776 to 1778. He was 30 years old when he signed the Declaration. Heyward served several terms in the State house of representatives, was an officer in the militia during the war, and was captured by the British at the fall of Charleston, in May 1780, and was imprisoned for a year. He served as judge of the circuit court from 1779 to 1789. He was a member of the State constitutional convention in 1790. He was the founder and served, in 1785, as the first president of the Agricultural Society of South Carolina. He is buried in the family burial ground, on his father's plantation, Old House, in St. Luke's Parish.

Edward Rutledge: He was born in Christ Church Parish, South Carolina, on November 23, 1749, and died in Charleston, on January 23, 1800. Like the other signers from South Carolina, he studied law at the Middle Temple in London. He returned to this country, and was admitted to the bar in South Carolina in 1773. Rutledge served in the Continental Congress from 1774 to 1777, and was the youngest signer of the Declaration, being only 26 years old at the time. He was the brother of John Rutledge, who signed the Constitution and later served as Chief Justice of the United States Supreme Court. Like Middleton and Heyward, Edward served as an officer in the Army, and was captured and imprisoned by the British in May 1780. He served for several years in the State house of representatives, and in 1791 authored the act abolishing the law of primogeniture. In 1794, President Washington tendered him the appointment of Associate Justice of the United States Supreme Court, but he declined the office. He was elected Governor of South Carolina, and served from December 6, 1798, until his death. He married the sister of Arthur Middleton, a fellow signer of the Declaration. He is buried in St. Philip's Churchyard, at Charleston.

Thomas Lynch, Jr.: He was born in Prince George's Parish, Winyah, S. C., on August 5, 1749, and was lost at sea with his wife, sometime in 1779. Lynch, a member of a landed family, was educated at Eton and Cambridge and studied law at the Middle Temple like the other members of his delegation. He returned to America in 1772. Owing to his dislike for law, he did not practice long, preferring to be a planter. Lynch began his service in the Provincial Congress when he was just 25 years old, serving from 1774 to 1776. It was by accident that Lynch became a signer of the Declaration. His father, Thomas Lynch, Sr., was serving as a delegate, and became ill. Thomas Junior was elected "to care for, and if necessary to substitute, for, his father," in 1776. The father was too stick to sign the document, and thus Thomas Lynch, Jr., attached his signature to the Declaration. He was 27 years old at the time, just a few months older than Rutledge, who was the youngest signer. Lynch served as an officer in the State militia in 1776. "No other signer had so short a life or so sad a story" as Thomas Lynch, Jr. Seeking to regain his own health, Lynch and his wife embarked on a sea voyage in 1779, expecting to land in southern France. They both were lost at sea in that year.

GEORGIA

Lyman Hall: He was born in Wallingford, Conn., on April 12, 1724, and died in Burke

County, Ga., on October 19, 1790. Hall graduated from Yale College in 1749, studied theology, and preached for a short period of time. He studied medicine, moved to Liberty County, Ga., sometime after 1752, and continued the practice of medicine which he had begun earlier. He was sympathetic to the patriotic cause and was a moving spirit for independence in his State. He served in the Continental Congress from 1775 to 1780. He was 52 years old when he signed the Declaration. With the fall of Savannah, and the destruction of his property, he in 1778 moved his family north, where they lived until 1782. He served as Governor of the State of Georgia in 1783. He was buried on his plantation near Shell Bluff, in Burke County, but in 1848 was reinterred beneath a monument on Greene Street, in front of the courthouse, in Augusta, Ga.

Button Gwinnett: He was born in Down Hatherly, Gloucestershire, England, in 1732, and died near Savannah, Ga., on May 19, 1777. Gwinnett engaged in the mercantile business in Bristol, England, and later immigrated to this country, settling in Charleston, S. C. In 1765 he moved to Savannah, Ga., and continued in the mercantile business. A few years later he moved to St. Catherines Island, Ga., where he engaged in planting. He served in the Continental Congress in 1776 and 1777. He was 44 years old at the time he affixed his signature to the Declaration. From February to March 1777, Gwinnett served as Acting President and Commander in Chief of the State of Georgia. While serving as chief executive of Georgia, he was drawn into a controversy with the military authorities, particularly with Brigadier General Lachlan McIntosh. As a result, a duel ensued between the two men, and both were wounded on May 16, 1777. Gwinnett died a few days later from his wounds. He is buried probably in the Old Colonial Cemetery (now called Colonial Park), in Savannah, Ga.

George Walton: He was born near Farmville, Va., in 1741, and died near Augusta, Ga., on February 2, 1804. Walton attended the common schools, studied law, and was admitted to the bar in 1774. In 1775 he served as secretary of the Provincial Congress, and at the same time served as a member of the Provincial Congress, and at the same time served as a member of the council of safety. Walton served in the Continental Congress from 1776 to 1781. He was 35 years old when he signed the Declaration. Walton also has the distinction of signing the Articles of Confederation. He served as an officer in the First Georgia Battalion, was wounded, captured, and later released by exchange. He served as Governor of Georgia in 1779, and became Chief Justice of that State in 1783, serving until 1786. He served as Governor again in 1789, and Chief Justice in 1793. He was appointed to the United States Senate in 1795, and served until February 1796. In 1799 he was appointed judge of the middle circuit of Georgia, and served in that position until his death. He was buried in Rosney Cemetery, but in 1848 his remains were reburied with those of Lyman Hall, his fellow signer, beneath a monument in front of the court house on Greene Street, in Augusta, Ga.

THE SIGNERS OF THE CONSTITUTION

George Washington, 1732–99, Virginia: Planter, soldier, statesman; colonial officer in French and Indian War; Virginia Legislature; Continental Congress, 1774–75; Commander in Chief of Continental Army; Deputy to Constitutional Convention, President of it; President of the United States, 1789–97; Commander in Chief of United States Provisional Army.

John Langdon, 1741–1819, New Hampshire: Merchant; militia service during Revolution; Continental Congress, 1775–76; New Hampshire Legislature, speaker; Continental Navy agent; President of New Hampshire; Deputy to Constitutional Convention; Governor; United States Senator, 1789–1801.

Nicholas Gilman, 1755–1814, New Hampshire: Statesman; officer in Continental Army; Continental Congress, 1787–88; Deputy to Constitutional Convention; Congressman, 1789–97; New Hampshire Senate; United States Senator, 1805–14.

Nathaniel Gorham, 1738–96, Massachusetts: Merchant, landowner; Massachusetts Legislature, speaker; Massachusetts Board of War and constitutional convention; Continental Congress, 1782–83, 1786–87; judge; Delegate to Constitutional Convention, Chairman of Committee of the Whole; Massachusetts Council.

Rufus King, 1755–1827, Massachusetts: Lawyer; Massachusetts Legislature; Continental Congress, 1784–87; Delegate to Constitutional Convention; United States Senator from New York, 1789–96, 1813–25; Minister to Great Britain; Federalist candidate for Vice President and President.

William Samuel Johnson, 1727–1819, Connecticut: Lawyer, Stamp Act Congress; Connecticut agent in England; Connecticut Council; judge; Continental Congress, 1784–87; delegate to Constitutional Convention; United States Senator, 1789–91; president of Columbia College.

Roger Sherman, 1721–93, Connecticut: Shoemaker, lawyer; Connecticut Legislature and Council of Safety; Continental Congress, 1774–81, 1784; signer of Declaration of Independence and Articles of Confederation; delegate to Constitutional Convention; mayor of New Haven; Congressman, 1789–91; United States Senator, 1791–93.

Alexander Hamilton, 1757–1804, New York: Lawyer; aide to Washington and line colonel in Continental Army; Continental Congress, 1782–83, 1788; New York Legislature; Annapolis Convention; delegate to Constitutional Convention; part author of Federalist; Secretary of the Treasury, 1789–95; inspector general in United States Provisional Army.

William Livingston, 1723–90, New Jersey: Lawyer; New York Legislature; local New Jersey Committee of Correspondence; Continental Congress, 1774–76; commander of New Jersey Revolutionary militia; Governor of New Jersey; Commissioner to Constitutional Convention.

David Brearley, 1745–90, New Jersey: Lawyer; officer in Continental Army; New Jersey Constitutional Convention: chief justice of New Jersey; Commissioner to Constitutional Convention; United States district judge.

William Paterson, 1745–1806, New Jersey: Lawyer; New Jersey Provincial Congress, Constitutional Convention, Attorney General, and Council; Commissioner to Constitutional Convention; United States Senator, 1789–90; Governor; Chancellor; Associate Justice of Supreme Court, 1793–1806.

Jonathan Dayton, 1760–1824, New Jersey: Landowner; officer in Continental Army; New Jersey Legislature, speaker; Commissioner to Constitutional Convention; Continental Congress, 1788; New Jersey Council; Congressman, 1791–99, Speaker; United States Senator, 1799–1805.

Benjamin Franklin, 1706–90, Pennsylvania: Printer, statesman, scientist, philosopher; Pennsylvania Legislature; Deputy Postmaster General of Colonies; Albany Congress; Colonial agent in England; Continental Congress, 1775–76, signer of Declaration of Independence; Commissioner and Minister to France; President of Pennsylvania; Deputy to Constitutional Convention.

Thomas Mifflin, 1744–1800, Pennsylvania: Merchant, politician; Pennsylvania Legislature, Speaker; Continental Congress, 1774–75, 1782–84, President of it, 1783–84; aide to Washington, major general and quartermaster general in Continental Army; Continental Board of War; Deputy to Constitutional Convention; President of Pensylvania and Governor; Pennsylvania Constitutional Convention.

Robert Morris, 1734–1806, Pennsylvania: Merchant, financier; Continental Congress, 1775–78; signer of Declaration of Independence and Articles of Confederation; Pennsylvania Legislature and Council of Safety; Superintendent of Finance, 1781–84; established Bank of North America; Deputy to Constitutional Convention; United States Senator, 1789–95.

George Clymer, 1739–1813, Pennsylvania: Merchant; Pennsylvania Council of Safety; Continental Congress, 1776–77, 1780–82, signer of Declaration of Independence; Pennsylvania Legislature; Deputy to Constitutional Convention; Congressman, 1789–91.

Thomas Fitzsimons, 1741–1811, Pennsylvania: Merchant, militia officer in Revolution; Pennsylvania Council of Safety and Navy Board; Continental Congress, 1782–83; Pennsylvania Legislature and Board of Censors; Bank of North America; Deputy to Constitutional Convention; Congressman, 1789–95.

Jared Ingersoll, 1749–1822, Pennsylvania: Lawyer; Continental Congress, 1780; Pennsylvania Attorney General; Deputy to Constitutional Convention; United States District Attorney; municipal officer in Philadelphia; judge of Pennsylvania District Court; Federalist candidate for Vice President.

James Wilson, 1742–1798, Pennsylvania: Lawyer; Pennsylvania Provincial Convention; Continental Congress, 1775–77, 1783, 1785, 1786, signer of Declaration of Independence; Continental Board of War; Advocate General for France in America; Deputy to Constitutional Convention; Associate Justice of Supreme Court of the United States, 1789–98.

Gouverneur Morris, 1752–1816, Pennsylvania: Lawyer; New York Provincial Congress and Constitutional Convention; Continental Congress from New York, 1778–79, signer of Articles of Confederation; Assistant Superintendent of Finance; Deputy to Constitutional Convention; special mission to England; Minister to France; United States Senator from New York, 1800–03.

George Read, 1733–98, Delaware: Lawyer; Delaware attorney general and Legislature; Continental Congress, 1774–77, signer of Declaration of Independence; Delaware Constitutional Convention and Council; Continental Court of Appeals; Annapolis Convention; Deputy to Constitutional Convention; United States Senator, 1789–93; Chief Justice of Delaware.

Gunning Bedford, Jr., 1747–1812, Delaware: Lawyer; Delaware Legislature and Council; Continental Congress, 1783–85; Delaware attorney general; Annapolis Convention; Deputy to Constitutional Convention; United States district judge.

Jacob Broom, 1752–1810, Delaware: Surveyor, businessman, manufacturer; Deputy to Constitutional Convention; borough officer in Wilmington; Delaware Legislature; postmaster at Wilmington; bank director.

Richard Bassett, 1745–1815, Delaware: Lawyer; militia service in Revolution; Delaware Council of Safety, Legislature, and Constitutional Convention; Annapolis Convention; Deputy to Constitutional Convention; United States Senator, 1789–93; judge of Delaware Court of Common Pleas; Governor; United States circuit judge, but office soon abolished.

John Dickinson, 1732–1808, Delaware: Lawyer; Delaware and Pennsylvania Legis-

latures, speaker in Delaware; Stamp Act Congress; Continental Congress, 1774–76, 1779, signer of Articles of Confederation; president of Delaware; president of Pennsylvania; Annapolis Convention; Deputy from Delaware to Constitutional Convention. (Though not present at the signing, his signature was added, at his request, by George Read of Delaware.)

James McHenry, 1753–1816, Maryland: Physician; surgeon in Continental Army, military secretary to Washington, aide to Lafayette; Maryland Legislature; Continental Congress, 1783–85; Deputy to Constitutional Convention; Secretary of War, 1796–1800.

Daniel of St. Thomas Jenifer, 1723–90, Maryland: Planter; agent and receiver general for lord proprietary of Maryland; Maryland Legislature, Council, council of safety, and president of Senate; Continental Congress, 1779–81; Maryland-Virginia Conference of 1785; Deputy to Constitutional Convention.

Daniel Carroll, 1730–96, Maryland: Planter; Continental Congress, 1781–83, signer of Articles of Confederation; Deputy to Constitutional Convention; Congressman, 1789–91; Commissioner for District of Columbia.

John Blair, 1732–1800, Virginia: Lawyer; Virginia Legislature, Provincial Convention, and Council; judge of General Court and Chancery of Virginia; deputy to Constitutional Convention; Associate Justice of the Supreme Court of the United States, 1789–96.

James Madison, 1751–1836, Virginia: Lawyer, statesman; Virginia Convention, Legislature, and Council; Continental Congress, 1780–83, 1787–88; Virginia-Maryland Conference of 1785; Annapolis Convention; deputy to Constitutional Convention; part author of Federalist; Congressman, 1789–97; Secretary of State, 1801–09; President of the United States, 1809–17; Virginia Constitutional Convention; rector of University of Virginia.

William Blount, 1749–1800, North Carolina: Landowner; paymaster in Continental Army; North Carolina Legislature, Speaker; Continental Congress, 1782–83, 1786–87; deputy to Constitutional Convention; Governor of Territory South of the Ohio River and Superintendent of Indian Affairs; Tennessee Constitutional Convention; United States Senator from Tennessee, 1796–97; Tennessee Senate.

Richard Dobbs Spaight, 1758–1802, North Carolina: Planter; North Carolina Legislature; Continental Congress, 1783–85; deputy to Constitutional Convention; Governor of North Carolina; Congressman, 1798–1801; North Carolina Senate.

Hugh Williamson, 1735–1819, North Carolina: Merchant, physician; surgeon general of North Carolina militia; North Carolina Legislature; Continental Congress, 1782–85, 1787–88; deputy to Constitutional Convention; Congressman, 1789–93.

John Rutledge, 1739–1800, South Carolina: Lawyer; South Carolina Legislature; Stamp Act Congress; Continental Congress, 1774–75, 1782–83; South Carolina Council of Safety, Constitutional Convention, President, and Governor; judge of Chancery Court; deputy to Constitutional Convention; Associate Justice of Supreme Court of United States, 1789–91; Chief Justice of South Carolina.

Charles Cotesworth Pinckney, 1746–1825, South Carolina: Lawyer, soldier; South Carolina Provincial Congress, Council of Safety, Legislature, and President of Senate; colonel in Continental Army; deputy to Constitutional Convention; declined Cabinet positions; Minister to France; major general in United States Provisonal Army; candidate for President.

Charles Pinckney, 1757–1824, South Carolina: Lawyer; militia service in Revolution; South Carolina Legislature; Continental Congress, 1784–87; deputy to Constitutional Convention; South Carolina Council, Governor, and Constitutional Convention; United States Senator, 1799–1801; Minister to Spain; Congressman, 1819–21.

Pierce Butler, 1744–1822, South Carolina: Planter; officer in British Army before the Revolution; South Carolina Legislature; Continental Congress, 1787; deputy to Constitutional Convention; United States Senator, 1789–96, 1803–04.

William Few, 1748–1828, Georgia: Lawyer; Georgia Constitutional Convention, Legislature, and Council; militia service in Revolution; judge of Georgia County and Circuit Courts; Continental Congress, 1780–82, 1786–88; deputy to Constitutional Convention; United States Senator, 1789–93; New York Legislature and prison inspector; bank director; New York City Alderman.

Abraham Baldwin, 1754–1807, Georgia: Clergyman, lawyer; tutor at Yale; chaplain in Continental Army; Georgia Legislature; author of charter and president of University of Georgia; Continental Congress, 1785, 1788; deputy to Constitutional Convention; Congressman, 1789–99; United States Senator, 1799–1807.

Resolution Opposing Recognition of Red China

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. BYRD. Mr. Speaker, I am unalterably opposed to any form of recognition of the Chinese Communist Government. I shall continue to oppose trade or recognition with Red China until the Communist regime is overthrown. I am confident that the overwhelming majority of Americans feel as I do about this matter. Under previous leave to extend my remarks, I desire to insert a letter which I have received from Mr. Francis X. McBarron, county commander, Catholic War Veterans, U. S. A. Brooklyn, N. Y. I am also inserting a resolution adopted by the county convention of the organization represented by Mr. McBarron. The letter and the resolution express strong opposition to the granting of diplomatic recognition by the United States to Red China, and opposition to trade, in any form, with the country as long as it is under the domination of the Communists.

The letter and resolution follow:

KINGS COUNTY CHAPTER,
CATHOLIC WAR VETERANS, U. S. A.,
Brooklyn, N. Y., July 3, 1957.

Hon. ROBERT C. BYRD,
Representative from West Virginia,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BYRD: We wish to commend you for your masterful approach to the problem of trade with Red China as presented on the floor of the House of Representatives on Friday, June 28. We can assure you that our organization is most heartily in accord with the views that you expressed therein.

In connection with this, we adopted at our county convention in January a resolution emphasizing these very points. To further our views, especially since hearing the remarks of Senators FULBRIGHT and MAGNUSON on the June 16 WCBS–TV presentation Face the Nation, who advocate moves opening relations with Red China, we reaffirmed our position with another resolution, copy of which is enclosed, on the same day that your scholarly speech was presented.

If each of our representatives in the Halls of Congress could be as perspicacious as yourself in understanding the Communist conspiracy, I am sure that our Nation would have no cause for alarm. Sir, you have rendered our country a great service. May you continue your inspiration to the forces of freedom, and may God grant you the foresight to continue in His infinite wisdom.

Very sincerely yours,
FRANCIS X. MCBARRON,
County Commander.

The following resolution, adopted at a meeting of the Kings County chapter, Catholic War Veterans, on June 28, 1957, is being forwarded for your information and necessary action:

"Whereas communism is a conspiracy which would seek to destroy our democratic way of life, and Red China is an important member nation of those countries promulgating this conspiracy; and

"Whereas Red China stands condemned by the United Nations as an aggressor nation; and

"Whereas, by its own admission, the government of Communist China has murdered millions of its countrymen who opposed the Communist form of Government; and

"Whereas the United States does not recognize the government of Red China, either diplomatically, economically, culturally or socially, and in effect, has a ban on trade with that country; and

"Whereas on June 16, 1957, on the WCBS–TV presentation, Face the Nation, Senators WARREN G. MAGNUSON, of Washington, and J. WILLIAM FULBRIGHT, of Arkansas, advocated moves toward opening relations with Red China; and

"Whereas the Catholic War Veterans are on record as opposed to the granting of recognition in any form whatsoever to the Government of Red China: Now, be it therefore

"*Resolved*, That the Kings County chapter, Catholic War Veterans, and its member posts, reaffirm their opposition to the granting of diplomatic, economic, cultural, and social recognition by the United States to Red China, and to trade, in any form, with this Communist country; and be it further

"*Resolved*, That our views be brought before the President of the United States, the United States State Department, the United States Delegate to the U. N., the United States Senators from New York and the Congressmen from Brooklyn."

Better Than Point 4

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. DAWSON of Utah. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues the observations

of the well-known columnist, George E. Sokolsky, in this morning's Washington Post and Times Herald.

Mr. Sokolsky's observations on the accomplishments of the Mormon missionaries reminds me of an admonition from one of our Church's great leaders, Brigham Young: "God has given you the wood, stone and strength to make a house, but He won't come down and build it for you."

The article follows:

BETTER THAN POINT 4

(By George E. Sokolsky)

It used to be an adage before the human race became too wise for its own good that God helps those who help themselves. The real sin of our aid to other countries is that the aid has been used not to raise the standards of living of all the people but to strengthen governments.

It cannot be otherwise that in many countries what we used to call graft is a normal characteristic of political operations and this free flow of money from the United States must have encouraged a lot of graft.

At any rate, suddenly a large number of unexplainable rich men have appeared whose prosperity is not readily understood and whose personal conduct is what the French, when they were hoity-toity, called parvenu. Some of the new multimillionaires would have a tough time if their accounts were checked.

The Mormons have produced a different idea. Their missionaries, scattered over the earth, have brought something new into many countries. The missionary doctor is well known and his achievements have been enormous.

No country owes the United States a greater debt than China to which the American medical missionary gave of his heart and his means without stint. The ingratitude of the Red Chinese is only another example of the immorality of Marxism wherever it seeds down.

The Mormons have introduced the labor missionary. Their idea is that if a people want better things and better ways of life, they can learn how to "do it yourself." So they are sending out missionaries who are carpenters, electricians, masons, plumbers, and painters who will show various peoples how to do things for themselves.

This, of course, is no new doctrine with the Mormons who built their incredible economic strength by hard work. That is one reason why, during the depression, Mormons were not on relief.

So, their labor missionaries go to the Pacific islands, for instance, not to drop a pile of money which is soon dissipated.

The Mormons get together with the local community and all go to work building, let us say, a schoolhouse. Everybody works and when the job is done the local people are proud of their achievement, because they did it. They built it themselves which means a great deal more to a people than to be given money for what they do not need.

In New Zealand, 36 Mormons work with a force of 215 native Maoris in this school building operation. The Maoris will love those schools because they are themselves the builders. They also built homes for families and dormitories for single men.

The details of this project are of no particular interest here because they are typical building operations. What is important is that missionary activity, which has for more than a century been America's most valuable contribution to many countries, has found a new outlet and a new method. The missionaries over a century did an infinitively better job for native peoples than any government has ever done.

Desalting the Sea for Agricultural Water a Long Way Off

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. ENGLE. Mr. Speaker, recent statements by the Department of the Interior have led people to believe that successful and economic desalting of sea water for irrigation use is right around the corner, and these optimistic statements created such a false impression that in some areas of the Far West water-development projects which should be pressed with great vigor were affected. California Grange News, in an editorial of June 25, 1957, refers to the impression of some of the lawmakers in the State capitol in California with regard to the Feather River project planned to be financed and built by the State. The fact, of course, is that desalting the sea for agricultural water is a long way off. Our committee report specifically criticized these overoptimistic statements by the Department of the Interior and called the public's attention to the true facts. The California Grange News editorial is as follows:

PLEASE PASS THE SALT

At the peak of 1 of the innumerable hassles in the 1957 legislature over the water crisis, 1 of the lawmakers remarked to a grange representative: "By the time they get the Feather River project built and running, we'll have all the irrigation water we need from the ocean."

A great many people share this lawmaker's belief. They see successful conversion of salt water as just around the corner. Within a year or two at the most, they estimate, the inevitable announcement will be made that such conversion is economically feasible. Then the problem of water shortage will quietly disappear.

Congressman CLAIR ENGLE, chairman of the House Interior and Insular Affairs Committee, released a report which blasts this false sense of security.

According to ENGLE'S committee, the Department of the Interior is guilty of "misrepresentation to the American people" of progress made under the program.

ENGLE says:

"While the program has been permitted to drift along without proper emphasis, officials of the Department have made numerous optimistic statements indicating that large-scale use of converted saline or salt water is just around the corner. While we believe that several processes being studied show promise of successful economical saline or salt-water conversion eventually, such success is not just around the corner. Success can be accomplished if the Department would put this program into high gear."

He adds:

"The concern of our committee is that such misrepresentation of progress will lull the Nation into a false sense of security with respect to water and that the immediate need for conserving and making better use of the water available from natural sources will be overlooked and not given emphasis."

ENGLE is the author of two bills calling for research into sea-water conversion; he is to be commended for his interest in this project just as he now deserves recognition for bringing to light its apparent slow progress.

Most farmers view conversion as the ultimate solution to the water crisis; they unquestionably would like to see the Government spend a large sum toward research. But they must realize that to shrug off today's problems because saline conversion "is just around the corner" itself is a dangerous attitude.

Conversion remains a dream, a tantalizing one but in this State it should not detract from the necessity of seeing that the South gets water without hurting the North.

Labor's Sincere Reform Codes

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely editorial, appearing in the May 25, 1957, issue of the Boston, Mass., Daily Globe projecting further concrete evidence of labor's sincere intent and full competence to put their own house in order without the imposition of punitive legislative action.

The article follows:

LABOR'S REFORM CODES

The hierarchy of the American labor movement has made it plain that racketeering and corruption will not be allowed to corrode the newly merged American Federation of Labor and Congress of Industrial Organizations. Ouster from the executive council of Dave Beck, president of the International Brotherhood of Teamsters, is notice that the teamsters must clean house or face expulsion.

The charge against Beck was "gross misuse of union funds entrusted to his care." The top labor governing body has found Beck guilty of violating this basic trade union law.

The council has acted with dispatch on the Beck case. On March 29, the council suspended him after he had invoked the fifth amendment before the Senate Antiracketeering Committee. Beck violated the union's code of ethics by refusing to answer committee questions.

This code does not prohibit a union member from using the constitutional guaranty but an officer, questioned on union business, must reply or resign. A bill of particulars, forming the basis of the charges, was served on Beck several days before his ouster by the AFL–CIO executive council. The teamster boss again did not choose to answer.

Beck may appeal his case to the AFL–CIO convention in Miami in December, if his union decides to press the issue. This, however, is unlikely.

George Meany, president of the AFL–CIO, already has initiated steps to prevent a recurrence of the Beck episode. Because some unions feel powerless to oust corrupt leaders or to correct abuses, a code of democratic procedure, designed to govern all affiliated unions, is being prepared. The federation would do well to consider putting teeth into this code by employing a citizens review board.

The United Automobile Workers, at their convention last month, set up a watchdog committee of this type to guard members against unethical practices, amending the U. A. W. constitution to permit selection of leaders in education, religion, and the judi-

clary to serve. By its composition, it is evident the board will be no rubber stamp.

This is solid protection for the union rank and file. It affords members an opportunity to speak out against malpractice, without the sword of arbitrary explusion dangling over their heads.

The Senate hearings also have pointed up the need for reform in the field of union finance. The Foundation for Employee Health, Medical Care, and Welfare offers a constructive report dealing with union pensions and welfare investments through established companies. This is a job for experts. Incompetence can be as costly as corruption.

The federation is not anxious to expel the teamsters—the largest union in the country. That could be accompanied by grave results. Internal reform, based on sound ethical and fiscal codes, is a wise alternative.

Federal Aid to Schools

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I include a copy of a letter to the editor of the New York Times from Frank E. Karelsen, which was published by the Times on Monday, June 10, 1957. For the information of the House, Mr. Karelsen is a prominent New York attorney.

It seems to me that we should give serious thought to his point that we waste many of the dollars appropriated for national defense if we permit our citizens to be inadequately educated.

The letter follows:

FOR FEDERAL AID TO SCHOOLS—DEFENSE SPENDING CONSIDERED WASTED IF CITIZENRY IS POORLY EDUCATED

To the EDITOR OF THE NEW YORK TIMES:

The Public Education Association commends the New York Times for the support it has been giving to Federal aid to school construction. However, in the hue and cry of today's controversy over the $72 billion budget proposed to Congress, certain fundamentals seem to have been quickly forgotten.

The billions of dollars which the administration has budgeted for defense spending is in fact justified only because it is needed for the preservation of our citizens and the assets of our Nation. The most important asset of our Nation is its children. The White House Conference on Education last year found that these children were being short-changed because of the shortage of classroom space throughout the country. The conference also concluded that the State and local governments could not supply sufficient funds to begin to adequately meet these needs.

FALSE ECONOMY

Certainly, a failure to develop our most important asset, our children, to the fullest extent possible—but still to spend billions for their defense—is incomprehensibly false economy. If the future generation is not equipped to cope with problems which the present budget is both creating and attempting to solve, then any expenditure of money by the Federal Government is to a great extent money wasted.

The Public Education Association is particularly distressed by the efforts of the economy-minded Congress to stifle even the little more than token Federal financial support for school construction advocated by President Eisenhower.

The present crisis in public-school housing is clearly demonstrated by the facts that at the beginning of the current academic year the schools needed 159,000 classrooms, 80,000 to relieve overcrowding and 79,000 more to replace facilities unfit for use. Official figures show that for the past 3 years State school agencies have reported that the number of pupils in excess of capacity of the schools in use has been 2,225,000 children each year. The overcrowding leads to half-day sessions, makeshift facilities, obviously overcrowded classrooms and inadequate education.

The difficulty, however, does not stop here. The anticipated increase in future school enrollments will be at the rate of 1 million more children in public schools for the next several years to come. This, together with the need for replacement due to obsolescence, makes the outlook, unless there is Federal aid to school construction, rather grim.

KELLEY BILL'S PROVISIONS

The emasculated Kelley bill (H. R. 1, as revised), now bottled up in the House Rules Committee, would appropriate $300 million a year for 5 years, or a total of $1½ billion, to the States for school construction. At the most this would provide less than 25 percent of the school-building shortage anticipated between now and 1960, after taking account of the heroic efforts of the States and local school districts to meet the demands.

The defeat of the Kelley bill will not relieve the taxpayer of any burden, in view of the fact that it concerns only one-half of 1 percent of the proposed budget, but its defeat could delay indefinitely the construction of 45,000 badly needed classrooms.

An ill-informed and poorly educated citizenry presents as great, if not a greater, danger to the future of America than the armed attack by some foreign country. All of us agree that we must face the crisis in foreign affairs, but we must not be so shortsighted that we do not see that the investment in our country's future—its children—is of vital necessity to the doctrines of democracy and the free world.

We must meet the fierce competition for the very survival of freedom in all vital fields; to postpone the decision to use the power of the Federal Government to help provide a more adequate public-school plant would be a reckless gamble for our country and the whole free world.

FRANK E. KARELSEN,
Vice President, Public Education Association.

NEW YORK, *June 4, 1957.*

The Status-of-Forces Treaties

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. BYRNE of Illinois. Mr. Speaker, I would like permission to insert in the RECORD a statement by my friend, Maj. Gen. Julius Klein, retired, of Chicago, on a subject which has and is still of vital interest to every American. I refer to the status-of-forces treaties between our country and nations where American troops are stationed:

STATEMENT OF MAJ. GEN JULIUS KLEIN, RETIRED, OF CHICAGO, ILL., PAST NATIONAL COMMANDER OF THE JEWISH WAR VETERANS OF THE UNITED STATES, AS SUBMITTED TO THE JUDICIARY COMMITTEES OF THE HOUSE AND SENATE

Steps to revise the status-of-forces treaties between the United States and countries where United States troops are stationed should be initiated even before the Supreme Court returns a verdict in the Girard case.

With Prime Minister Kishi, a real friend of the United States, now in this country, a useful first step could be taken by undertaking bilateral discussions with the Japanese Government.

Regardless of the decision brought in by the Supreme Court, the national interest of the United States, no less than the interests of every individual American citizen in uniform, requires a reaffirmation by our Government that it intends to preserve the constitutional guaranties that are the right of every American. To deny these guaranties to an American because he wears the uniform of his country and serves the defense needs of our own and other nations on foreign soil is to impose an additional jeopardy on every one of our young men who is required to take on the ever-present risks that go with foreign military service in a time of international tension.

It should be axiomatic that he who defends our flag is entitled to all the rights that flag symbolizes.

In analyzing Judge McGarraghy's decision in the Girard case, it appears that the determining factor as to whether William Girard would be tried in a Japanese civilian court or by a United States Army court-martial proceeding was whether or not he was acting on official duty. Had the court felt that Girard was not performing military duty, the decision may have been against him. Under present treaties, Judge McGarraghy may have had no other choice but to rule that Girard be tried by a Japanese court. That his decision turned out as it did is a tribute to Judge McGarraghy. But the issue that confronted Judge McGarraghy—the question of whether or not Girard was in performance of assigned military duty—is one that cries out for immediate remedy if the rights guaranteed to individuals under our Constitution are to be preserved.

In 1946, I testified before the Doolittle committee under the direction of Gen. James Doolittle. I believe then, as I do now, that the maintenance of a fair and effective code of military justice in the United States armed services demands that the American GI be guaranteed the same personal constitutional rights as a soldier that he enjoyed as a civilian.

I do not believe that either of my wartime commanders in the South Pacific, Gen. Douglas MacArthur or Adm. William Halsey, would have surrendered a William Girard or any other American serviceman under their command for trial by any tribunal other than a United States military court.

In testimony before a House Foreign Affairs Committee on February 2, 1956, I asserted, and reiterate now, that Communist propaganda agents are quick to exploit the inequities arising out of the status of forces treaties. Just how they are capitalizing on the Girard case is shockingly apparent.

Congress and the Executive should give close attention to the proposal advanced by Congressman FRANK BOW, who has called for either a revision of the status of forces agreements or a withdrawal by the United States from such agreements so that foreign courts will not have criminal jurisdiction over United States military personnel stationed within their boundaries.

FPC Should Say "No" on the Canadian Gas Issue

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. SILER. Mr. Speaker, the State of Kentucky has a very important stake in the Canadian gas hearings now being held by the Federal Power Commission. Only West Virginia and Pennsylvania produce more coal than Kentucky, but our State's comparative position will become even further enhanced because neither of those States has the coal reserve strength of Kentucky. Beneath the soil within the boundaries of Kentucky are almost 60 billion tons of recoverable coal reserves—enough to last for approximately 900 years at the present rate of production.

Our mines have a working force of perhaps 40,000 men, and the wages which go into their paychecks have a very decided impact upon the business establishments within the 3 counties in eastern Kentucky and the 12 in western Kentucky where bituminous coal is produced. Next to agriculture, coal has the highes value in products and is the biggest employer in the entire State. Kentucky cannot enjoy complete economic progress without a vigorous coal industry.

When a foreign product enters fuel markets of the Middle West or of the eastern portion of the United States, Kentucky's economy is injured. The millions of barrels of residual oil that have flowed onto the Atlantic Seaboard from foreign refineries over the past decade have had a most injurious effect upon the Kentucky coal industry. That oil has also been responsible for loss of revenues and wages in the railroad industry of our State, and it has ultimately affected all wage earners—from bootblack to service station operator, from haberdasher to washing machine salesmen. The losses extend into our State, county, and local exchequers, into our churches, and into our charitable organizations.

Attempts to bring Canadian gas into the markets now being served by coal constitute another intended raid upon an industry that has already sustained more than its share of hardships through unwise import policies. The ambitious programs, of which the gas import plan is the latest venture, projected by world fuel merchants are astounding in their absolute disdain for domestic industry and labor. Save for the substantial profits that are to be realized by the pipeline people, what other gains would be forthcoming?

To exhaust a limited fuel resource such as natural gas while billions of tons of lignite and bituminous coal are within easy reach of consuming areas would be an extravagant use of a scarce source of energy regardless of where in nature's storehouse it may occur. At first glance into the Canadian gas proposals, a United States citizen might be inclined to say: "Let Canada send her natural gas into this country so that we can preserve our own resources." Even without concern for the American workers who would lose their jobs as a consequence, this simple conclusion is loaded with question marks.

What assurance have customers in the Midwest of a firm supply of a foreign product? Canadian statesmen have said time and again that the Dominion's newly discovered natural-gas supply should be reserved for use in Canadian homes and industries. If, after a few short years, those who advocate this policy succeed in having their views prevail, what would happen to those customers who meanwhile come to depend on Canadian gas?

Price of natural gas is a subject that has occupied considerable time on Capitol Hill and in the executive department for several year. It certainly cannot be arbitrarily dismissed in the Federal Power Commission hearings on the Canadian gas cases.

Who is to say that the controlling pipeline interests—or any segment thereof, whether it be producer or distributor—would not burden American customers with exorbitant price increases once this market had been seized and consolidated? The proposed pipeline to the Middle West from the Canadian line would bear the same public-utility status enjoyed by other lines throughout America, thus creating a fuel monopoly as soon as coal and competing oil products were displaced. When competition is out of the way, how high the price of imported gas would go is a matter over which no Federal, State, or local government body in the United States would have control.

Another question pertains to possible high export taxes that are quite likely to be imposed by the Canadian Government at some time in the future. How to get enough revenue to meet government spending is a perennial problem practically the world over. To levy a substantial tax upon a foreign consumer is a legal and accepted device that is naturally to be anticipated.

Let me make it clear that I am not challenging the integrity of the Government of Canada or its party in power. There has already been so much talk about the fantastic profits made by American investors in the pipeline that putting the squeeze on a United States consumer beholden to a fuel produced in the Dominion would seem the logical approach to bringing some of the dollars back across the border.

Until an assortment of global-minded officials in the State Department began to assume a progressively greater degree of power in the making of foreign trade treaties two decades or so ago, equitable foreign trade agreements were the recognized instrumentalities of international commerce. Since the so-called liberal element in Washington began to make fantastic concessions at the expense of our own industries and working forces, it has admittedly become very difficult to erect any semblance of protection against the onrush of foreign goods.

Perhaps the recent statement of Canada's new Prime Minister will bolster our chances of ruling out this new threat to the American coal industry. The Wall Street Journal for July 8 reported from Ottawa:

> Canada's new conservative government hopes to switch 15 percent of the nation's imports from the United States to Great Britain in a move that could slice more than $600 million a year from American exports now flowing into Canada at upward of $4 million annually. Canada's newly elected Prime Minister John Diefenbaker told a press conference the switch from United States to United Kingdom wares is the foundation of his proposal for a British Commonwealth conference he wants to hold here.

In the light of this declaration, it would seem a sensible and easy matter for the Federal Power Commission to refuse extension of the Canadian pipeline into American markets. If an explanation is needed, the FPC need only point out that the decision is in the interest of the general welfare of the United States.

On the assumption that the Commission will follow this patriotic course, let me say that thousands of coal miners and railroad workers in Kentucky and neighboring States will be highly appreciative of this wise and considerate decision.

Attention Men—Can Chivalry Be Revived in This Atomic Age?

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include a very pertinent and challenging editorial, appearing in the May 23, 1957, issue of the Boston, Mass., Daily Globe, expressing the unhappy conviction that if chivalry is not dead it is certainly in a very dismal and declining state. "O tempore, O mores."

Let us hope that all is not yet lost and if we are impelled to forego instinctive actions, let us resolve to still retain at least our sense of good old-fashioned chivalry.

The editorial follows:

WHY CHIVALRY IS DEAD

Of course the lady who wanted to crash the press box at the baseball park was merely an honest working girl. She had an assignment from the home office and she tried to carry it out. She didn't represent a mass demand by women that their exclusion from this last of man's preserves should be ended.

Nevertheless, she represents a female attitude to which man may well give thought, for all the good it will do him.

During the ages when man was boss he carried on most of his activities beyond the sight and hearing of his female relatives.

He climbed on his horse and sought the Holy Grail. He won a battle and came home loaded with loot. He foregathered socially with his fellows in establishments of

the gayer type. In short, he was out in the great world. And his spouse, her mother, her sisters, his daughters and his sisters all supposed he was living it up, having a wonderful, glamorous time.

Now if there is one thing a woman, particularly a married one, can't endure, it's to have any man in whom she's interested have a good time when she's not present.

It may be that the lady abhors baseball, football, horse racing, poker. She may prefer staying home to going out in company. She may hate tobacco smoke. Speeches and banquets may bore her, as well they might. She wants no part of man's activities. Invited to join she'll decline, as likely as not with a sniff.

But let man seem to be enjoying baseball, fishing or sitting around in a dim, cool place with his friends, and she becomes like the proverbial woman scorned. She does feel scorned, in a way. To be sure, she doesn't want the fellow around the house all the time. On the other hand, the more fun she thinks he has while he's away, the less she likes it.

It may be admitted that man wasn't a very good fellow when he had it. He kept all the money. He held women prisoners in the home. He wouldn't let them learn. As often as not he did his best to keep them at the level of mobile vegetables.

The broad process of shaking man loose from power still continues, even though he is by now well shaken indeed.

A woman heads the British empire, and there's another who's pretty influential in Monaco. Women teachers instruct the young, who also learn when they get home that mother knows best. Women handle all the money and they don't have to stay home except to use the telephone.

Woman has pretty well wiped out the old saloon by turning it into a cocktail lounge with chrome furniture. She's in the Senate. She heads colleges and corporations. She rides in the smoking car. She goes to war. She's seen on golf links and tennis courts.

Everywhere man is, presumably having a good time, woman wants to go also, to see whether she's missing something. When they make up the passenger list for the first spaceship some woman will insist that she be included. Not that she cares about the trip, especially, but as an expression of her subconscious feeling that man, the cad, shouldn't have all the fun.

Probably it doesn't matter much whether girls get into the press box, which is about man's last refuge. It's a small box and only a few men can hide in it at once, anyway. But the attempt does point up one modern fact and the reason for it.

Chivalry is dead, because man can no longer afford it. Once woman has taken his money, power and favorite haunts away from him he has neither strength nor means left to buy her a pedestal.

Nasser's Contradictions

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. MULTER. Mr. Speaker, the following quotations of President Nasser, which appeared in the July 1, 1957 issue of Israel Digest, make most interesting reading.

"I NEVER CALLED FOR ISRAEL'S DESTRUCTION," HE SAID

During a recent interview with Look magazine, Gamal Abdel Nasser, dictator of Egypt, remarked: "I have never called for the destruction of Israel. You will not find any such threat in any of my speeches—regardless of what the Zionist propagandists may say."

We therefore print below a selection of Nasser's promises of annihilation directed against Israel, the names of the newspapers in which they appeared, and the dates of their utterance.

"ISRAEL MUST BE DESTROYED

"The Arab countries look upon Israel as an artificial state which must be destroyed." (Al-Difa'a, Jordan Daily, May 7, 1954.)

"THERE WILL BE NO PALESTINE SOLUTION

"After the Egyptions liquidate the canal episode, they will only have the Palestine problem to deal with. No man forgets blood, vengeance, and honor. There will be no solution as long as the Arabs of Palestine are in the hands of the enemy." (Falastin, Jordan Daily, October 27, 1954.)

"WHEN WE BEGIN THE BATTLE

"When we begin the battle, we shall be able to restore what has been lost. We shall rely on our strength and not on the Security Council and its decisions." (Al-Akhbar, Cairo Daily, March 4, 1955.)

"PREPARE FOR THE HOLY WAR

"We must prepare for the great battle in Palestine, we must prepare for the Holy War in Palestine." (Al-Ahram, Cairo Daily, March 8, 1955.)

"THE WAR HAS NOT ENDED

"The war between ourselves and Zionism has not yet come to an end, and it may be that it has not even begun. The meaning of this war which is to be in the near future for us * * * is the realization of our hopes and the restoration of our rights." (From a pamphlet published in December 1955.)

Review of Jet Engine Costs

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 5, 1957

Mr. PRICE. Mr. Speaker, I ask for unanimous consent to reprint in the CONGRESSIONAL RECORD an article entitled "Review of Jet Engine Costs," by Allen M. Smythe, which appeared in the June issue of Aeronautical Purchasing. The article shows how various congressional committees have aided the Defense Department in solving some of their technical and budgetary problems.

The article follows:

TOP LEVEL DEMANDS FOR ECONOMY CALL FOR PROCUREMENT—REVIEW OF JET ENGINE COSTS

Pentagon fiscal officials, pressed by White House and congressional demands for more economy in military budgets, are making a critical review of turbojet engine costs. Results could be very important to the major jet engine builders and the hundreds of subcontractors who make parts and components of these modern aerial powerplants.

This survey so far nearly resulted in the abandonment of the WS 125 atomic-bomber project. A group from the Joint Atomic Energy Committee, chairmaned by Representative MELVIN PRICE, is credited with persuading the Pentagon to go ahead on a much-reduced scale with this project to determine if a breakthrough can be found for a feasible lightweight reactor. Much of the funds required will have to come from the Atomic Energy Commission.

Military expenditures for jet engines are now running at a rate of $1¼ billion annually. New fighter aircraft require larger and more powerful engines. Demand is heavy for multiengined bombers, tankers, and transports. As a result, in 1959 expenditures may be at a rate of $2 billion annually.

While the trend of military demand calls for speed and altitude rather than numbers of aircraft, greater numbers of larger and more expensive jet engines are required. Piston engines have power and weight limitations. Turbojets are the answer to speed. Turboprops are more economical in fuel and are being adapted to aerial transports.

TURBOJETS GET BIG MONEY

The big money is being spent for turbojet engines. As speed increases in an arithmetical ratio, power and costs increase in a geometrical ratio. Tremendous heats, new metals, use of special alloy steels, intricate design, close tolerances, all require the highest type of scientific and engineering skills.

The prime contractors subcontract many of the parts and components to smaller firms which have the technical knowledge to process the heat-resisting, alloy steels. As the greater funds go to the engine builders, the Pentagon is insisting that a higher percentage be awarded to subcontractors in order to maintain a considerable portion of the prime contractor's capacity in a standby readiness status.

Another effort to reduce costs by reducing the percentage of spare engines and parts is being studied. Some engines now require 30 percent for spares. The supply for parts often goes higher. Engineers assert that present percentages for these extras can only be decreased as reliability increases. This in turn means longer and more thorough tests in the development stage before production contracts are awarded.

The proposal for the abandonment of the atomic-engine project was an economy move. It was made to Secretary Wilson by his engineering advisers last October 23. It questioned the military need for such an aircraft which could not be completed for 8 to 10 years. It would be very large and heavy and probably could not go beyond Mach 1 speed. A supplementary report on December 12 showed how enormous savings could be made if the project was to be continued only as a scientific experiment.

Over $300 million has been spent so far. The Air Force has given cost-plus research contracts for a small-scale reactor and full size turbojet engines to both Pratt & Whitney and General Electric. Costs last year were reported to be running at a rate of $150 million anually, with prospects of even larger expenditures if a workable test model reactor could be developed.

TITANIUM INCREASES COST

A congressional complaint that is giving much concern to Pentagon planners is that of the prohibitive cost of titanium in jet engines. Secretary Wilson also has a similar complaint from his engineering advisers. Titanium has many good qualities besides lightness and heat resistance. It also has some characteristics that are not liked by metalworking firms. Mr. Wilson's advisers have stated that a partial substitution of steel by titanium in the J–57 increases the price from $140,000 to $210,000 and such a 50 percent increase is not justified by the

small decrease in weight and a doubtful increase in efficiency.

Another weapon system that is being given a critical fiscal appraisal by the Air Force is the WS 110, the chemical-fueled engine bomber. This bomber would eventually supersede both our medium- and long-range bombers. Airframe design contracts have already been given to North American and Boeing.

Awarding of the engine design contract is being discussed with General Electric and Allison. This powerplant, which will use "exotic" fuel, is expected to require 5 years to develop at a cost of around $120 million.

The proposed specifications of the bomber indicate that it will not require tankers for refueling and will be in the Mach III speed range. No estimate of the total cost can yet be made but Air Force fiscal officers are hopeful that as fewer numbers will be required the overall cost will be less than that for the Boeing B–52.

The Johnson Senate and the Hébert House investigating subcommittees are complaining that Defense procurement officials are paying too much per engine. Both groups have pointed out that the J–57 now in production for 4 years costs $140,000 each. Spares and parts, if added, would raise this 30 percent. However, officials state there have been many changes in a number of models of the J–57 and that all of these have greatly increased the efficiency and the power of the engine as well as the cost.

The J–57 is in the 10,000-pound thrust category. The J–75 which will soon go into production is in the 16,000-pound class and first contracts indicate it will cost $254,000. Pratt & Whitney is the creator and builder of both of these engines and is under Navy auditing cognizance and management. The Bureau of Aeronautics is reported to have issued one large incentive-type contract of $600 million for J–57's.

The Ford Motor Co. is a licensee and second source for both the J–57 and J–75. It is under Air Force auditing cognizance and management. The Air Force has spent over $400 million in special tooling to equip this plant for mass production. It has been reported that in the event of an emergency, it could produce more than all other firms combined.

At the present moment and in the near future 82 percent of all funds allotted for jet engines will go to these two firms. Forty-seven percent is scheduled for Pratt & Whitney, 35 percent for Ford. The balance will go to Allison, Curtiss-Wright, General Electric, and Continental Motor in the order named.

The J–57 is used in the following Air Force fighter aircraft: the North American F–100, the McDonnell F–101, and the Convair F–102. The Boeing B–52 bomber uses eight of them. The Boeing aerial tanker, KC–135, uses four. The Northrop intercontinental "air-breaking" missile soon going into production will be propelled by it.

The Navy uses the J–57 in the carrier-based Douglas Skyray F4D and the Vought Crusader F8U. Two of them go into the Douglas Skywarrior A3D.

The new powerful J–75 will go into the Air Force fighter models of the Republic F–105 and the Convair F–106. The Navy has planned several unannounced aircraft for its use.

Last fall, Dr. Clifford Furnas, then research chief of the Pentagon, protested against the large percentage of funds going to these two models of jet engines. His complaint was given serious consideration but officials explain that although the funds that are paid to Pratt & Whitney and Ford will increase in the next few years, their percentage of the total expenditures will decrease. This is because General Electric is expected to jump to a strong third position among engine builders when their new lightweight J–79 goes into quantity production.

The General Electric engine plant in Cincinnati is under Air Force auditing cognizance and management. It has many research contracts but its greatest effort is concentrated on the development of the J–79. Five years under development this 11,000-pound thrust turbojet has met and exceeded every preliminary test so far. It has been built under a cost reimbursement contract that has run well over $100 million.

J–79 DOING WELL

The J–79 has developed more than its required 11,000 pounds thrust. It is well below its hoped for 3,000-pounds weight. With small frontal area and many new features, it promises to become one of the most reliable powerplants yet developed.

It will propel the Lockheed supersonic fighter F–104 and the Grumman carrier-based fighter F–11F. Four of them are expected to take the new Convair B–58 medium bomber into the Mach II speed range.

When these three airframes are ready to go into production, the Air Force plans to have their powerplants on the production line. In the meantime every effort is being made by laboratory and flight testing to insure reliability.

Initial price-redetermination contracts being issued have a target price of $230,000 per engine. As costs are determined much of the work will be subcontracted.

The Air Force has agreed to release enough of these lightweight high-performance engines to power the new commercial jet airliner that Convair is building. Delta and TWA are among the airlines that have placed substantial orders for this new commercial transport.

TURBOPROPS FOR ALLISON

The Allison Division of General Motors has substantial commercial business for their turboprop engine. Their military turbo jet J–71 is now considered obsolete and no further orders are expected. Their long range prospects in this field will depend largely on their ability to negotiate contracts with the Air Force for chemically fueled turbojets.

Curtiss-Wright has suffered from the military change from piston to jet engines. It was the largest military contractor in World War II with an annual business of over $2 billion. Its turbo-compound piston engine powers most of the commercial airliners of the world.

Over half of Curtiss-Wright's business now comes from the commercial field. Its military business is diversified with emphasis on research work. The J–65 is now a satisfactory engine but is approaching obsolesence and no further orders are expected. Research is being done on another type of jet engine that is expected to show low fuel consumption at very high speeds.

Unemployment in Michigan

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. HOFFMAN. Mr. Speaker, Michigan's Governor, "Soapy" Williams, with his political buddies Walter Reuther and Gus Scholle, has been running Michigan for several years. Now they find that the policies which they have forced upon the State—that is, the one of imposing excessive taxation on corporations which create and maintain jobs, meet payrolls, together with Reuther's determination to put industry in a straitjacket and levy a tribute upon every worker's pay check—are creating unemployment, tend to drive industry into other States which have adopted more lenient and fair tax and labor policies.

George M. Van Peursem, Speaker of the Michigan House of Representatives, in a letter to the public dated June 26, 1957, answered the Governor by stating:

This week's newsletter deals with a subject of considerable interest to all of us. The Governor of Michigan has been telling the people of Michigan (last Sunday, he informed the nation) that we have gained 150,000 more industrial jobs from 1952 to 1956. No one has challenged these figures, or their source. Nevertheless, they sounded suspicious to me; and, after investigating, I found my suspicions confirmed. The results of my inquiry are the subject of this week's newsletter.

The statement to which the Speaker referred reads as follows:

The Governor has been consistently asserting that Michigan has gained 150,000 more industrial jobs during the 5-year period between 1952 and 1956. The question occurred to me as to just where these 150,000 jobs are? I have checked the Governor's statements about job increases, and I can't find the jobs.

The most reliable source I know to determine the job situation in Michigan is the Michigan Employment Security Commission. This commission keeps track of job movement in Michigan, and its records show just what is happening to our industry.

This is what I find:

The total number of jobs in Michigan in 1952, excluding agricultural and the self-empolyed was 2,275,000.

In 1956, the total was 2,349,000.

This is a net gain of 74,000 more jobs for our State during the past 5 years (1952–56).

But even more important, however, is the analysis of the total job figures. Average factory employment in 1952 was 1,104,000. Average factory employment in 1956 was 1,074,000. So while the Governor brags about 104 new plants and 150,000 new jobs in Michigan, the cold figures compiled by the official commission charged with this responsibility show a net loss of 30,000 factory jobs between 1952 and 1956.

A gain of 104,000 jobs occurred during this period in nonfactory employment (retail jobs, service industries, and the like) to offset the factory-job loss.

The truth, then, is that we are in fact worse off from the standpoint of factory jobs today than we were 5 years ago. This should plainly point up the problem that is facing Michigan. We need to attract more industry, and to encourage those that are here to stay and expand in Michigan.

Our reputation as an industrial State grew on the automobile industry. But from 1952 to 1956, there was a loss of 31,000 jobs in auto production in Michigan.

In other words, we have been losing ground, and if we don't wake up fast, we will lose more than we can ever make up.

The low rate of job gains in Michigan, along with our ever-growing unemployment problem, can only be further aggravated by Michigan's rate of population growth. From 1950 to 1956, Michigan's population increased faster (18 percent) than the national average (10 percent), and faster than any other Midwestern State.

From July 1, 1952 to July 1, 1956, Michigan's population increased over 13 percent (881,000). Now, of course, these children don't need jobs today, but they will be ready

to join our labor force within a very short time, and jobs must be provided for them.

If a healthy economic climate isn't created in Michigan, and if industrial expansion by Michigan industries in our neighboring States continues, not only these children, but our entire State stands to lose.

There is no need to panic. Through cooperation, farsightedness, and adequate planning, these problems can be met. But these problems can only be solved if the Democrat administration in Lansing will, first of all, face up to them.

Resolution of Appreciation

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. MILLER of California. Mr. Speaker, on June 25, 1957, the Government Employees' Council, AFL–CIO, rightfully bestowed upon one of our colleagues in the Congress, the Honorable OLIN D. JOHNSTON, senior Senator from South Carolina, and chairman of the Senate Post Office and Civil Service Committee, a resolution of appreciation for his outstanding work as a Senator, with special emphasis on his activities as chairman of the Senate Post Office and Civil Service Committee.

The Government Employees' Council, AFL–CIO, is made up of 23 member unions with more than one-half million members representing all phases of Government work, such as employees in the field service of the Post Office Department, employees under the Classification Act of 1949, as amended, wage board employees, printing trades and craftsmen of all types, technical engineers, draftsman, and similar types of occupations, fire fighters, and many other groups of employees in the Federal service.

Under unanimous consent, I am including a copy of the resolution of appreciation presented to Hon. OLIN D. JOHNSTON, along with my remarks, in the Appendix of the CONGRESSIONAL RECORD.

The resolution follows:

RESOLUTION IN APPRECIATION OF THE HONORABLE OLIN D. JOHNSTON, UNITED STATES SENATOR, SOUTH CAROLINA

Whereas it is the destiny of few men to devote the major portion of their adult life in the service of their country and humanity; and

Whereas it requires mental capacity, honor, and integrity for a person in public life to fight the good fight for principles rather than for the expediencies of the moment; and

Whereas the true stature of a statesman is measured in terms of intellect, honesty, imagination, humility, courage, compassion, diligence, perseverance, but above and beyond these gifts his personal integrity must be of the highest order; and

Whereas the Honorable OLIN D. JOHNSTON has consistently demonstrated that he possesses this rare combination of gifts required of a statesman, as exemplified in his words, deeds, and actions during more than 35 years of dedicated and useful service to the citizens of his native State of South Carolina and these United States; and

Whereas the Honorable OLIN D. JOHNSTON, in his capacity as chairman of the Senate Post Office and Civil Service Committee, has particularly distinguished himself in the field of social legislation, in that by his efforts and leadership he has been directly or indirectly responsible for every item of beneficial legislation affecting the men and women who work for the Federal Government that has been enacted by the Congress during the 14 years he has served with distinction as a Member of the United States Senate: Therefore be it

Resolved, That as a mark of the devotion and esteem in which the Honorable OLIN D. JOHNSTON is held in the hearts and minds of the officers and members of the Government Employes Council of the American Federation of Labor and Congress of Industrial Organizations, this resolution of appreciation is unanimously adopted; and be it further

Resolved, That in thus memorializing this distinguished gentleman from South Carolina, Senator OLIN D. JOHNSTON, it is the sense of the resolution that henceforth and hereafter he shall be regarded and known as "the champion of all those who toil for an existence," given this 25th day of June 1957 in regular meeting of the Government Employes Council of the American Federation of Labor and Congress of Industrial Organizations, held in Washington, D. C.

THOS. G. WALTERS,
Operations Director.
ORBIN A. BURROWS,
Secretary-Treasurer.
E. C. HALLBECK,
Vice Chairman.
WILLIAM C. DOHERTY,
Chairman.

CAB Inaction Is Crippling the Industry

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave granted, I am inserting an editorial which appeared in the July 1, 1957, edition of American Aviation. The viewpoint stated warrants careful consideration, as the public interest will be best served by economically sound airline operation—and operators.

The editorial follows:

CAB INACTION IS CRIPPLING THE INDUSTRY

(By Wayne W. Parrish)

Both domestically and internationally the Civil Aeronautics Board is on quite a spot. The issue is fares.

The sooner it takes a realistic look at the economic and operating facts of life, and either fires its economic staff or pounds some sense into it, the better off both it and the airlines will be.

Domestically, the CAB hasn't a leg to stand on by continuing to hold up approval for even another week of a minimum 6 percent fare increase.

The revelations in the current fare investigation are about as shocking as anything that has ever appeared in any government case in all American history. The CAB staff had prepared data purporting to show that instead of granting seven airlines a fare increase these carriers should actually lower their fares. It is like trying to argue that there's a drought when it's been pouring rain for 2 solid weeks.

Can anyone imagine a more ludicrous argument than the one prepared by the CAB staff forecasting a $28 million profit for TWA for this year of 1957 when this airline lost $8 million in the first quarter? This would mean that TWA would have to show a profit of $36 million in the remaining 9 months when in actual fact TWA thinks it will do well to break even.

Capital Airlines was equally surprised to learn from the CAB staff that it would net $20 million this year—later adjusted downward to $9 million after the airline decided not to take those 15 Viscounts—when in fact Capital itself estimates a loss of $2.5 million for the year.

And so with the other 5 airlines that filed some time ago for a 6 percent fare increase to stave off serious economic troubles. Thanks to H. Templeton Brown, attorney for United Airlines, the phoney, fraudulent character of the CAB's economic data was exposed to public gaze as the hearings began.

If CAB is to be true to its mandate to foster a sound air transport system, it will approve a 6 percent fare increase immediately, and then use the general passenger fare investigation to determine how much more is needed to bring airline fares into alinement with reality. Since 1942 air fares have increased only two-tenths of 1 percent while the Consumer Price Index has risen by 66.7 percent, bus fares have gone up 25.4 percent, and rail fares have increased 39 percent not including certain regional increases this year. Enough said.

Internationally, the CAB has become a storm center due to its rejection recently of the request of all airlines for a 5 percent fare increase over the North Atlantic. Every government except the United States okayed the increase. It is probable that the CAB has no real idea of the deep resentment held against it by foreign airlines and foreign governments. Repercussions and certain retaliations are bound to come.

There is even talk abroad of resorting to ICAO as arbitrator under the provisions of the Bermuda bilaterals. How many official and unofficial protests from other governments have reached CAB through diplomatic channels is not known, but one way or another there have been protests submitted amidst much fuming and steaming. Here again CAB work is undoubtedly at fault. The staff looked at overall load factors and concluded that business was good. What it overlooked was the large volume of immigrant, family-plan and other low-fare traffic. Load factors are dangerous indications of net revenues in transatlantic business.

* * * * * * *

CAB was already on a tough spot before the request for a fare increase. Last year it crammed down the throats of all transatlantic airlines a demand for a third-class or austerity-class service which would offer fares far below the present tourist category. Under CAB pressure the airlines—including TWA and PAA—agreed to such an austerity service starting in 1958. It is now clear that this hastily-conceived and ill-contrived plan is resulting in a chaotic fare and equipment situation.

It may be too late to stop the austerity service, as such, but it is as certain as tomorrow morning's sunrise that the plan pressured by CAB won't achieve its major purpose. Not only will the very low fare have to be raised, but the present tourist service will disappear and austerity will grow into just another tourist class. Meantime some of the smaller European carriers are going to be hurt—and perhaps hurt badly.

There are now so many fares and fare structures on the Atlantic that only an expert can figure them out. Part of this confusion is due to amateurs within the CAB staff level who place ideology above practicality. What is needed is a simple two-fare structure for the North Atlantic, first and tourist, combined with excursion fares for anywhere from 15 to 23 days. The excursion fares can drop to the low fare level

desired by CAB; they can be the steam valve and the filler traffic needed to develop a strong year-round transatlantic air transport system.

We hope CAB Chairman Durfee will dig into the fare mess and bring order out of chaos. He has shown a very considerable ability since he took over a year ago. He inherited much of his present trouble which is largely on the staff level.

The Operation of Our Meatpacking Industry

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. HILL. Mr. Speaker, today, F. W. Specht, president of Armour & Co., appeared before the Committee on Agriculture and made an excellent and informative statement on the operation of our meatpacking industry. I include as part of my remarks the entire statement made by Mr. Specht to our committee:

STATEMENT BY F. W. SPECHT, CHAIRMAN AND PRESIDENT OF ARMOUR & CO. AND MEMBER OF THE BOARD OF DIRECTORS OF THE AMERICAN MEAT INSTITUTE, BEFORE THE HOUSE AGRICULTURE COMMITTEE, WEDNESDAY, JULY 10, 1957

Mr. Chairman, members of the committee, I am grateful that you have granted me permission to appear before the House Agriculture Committee on the subject of the legislation you are considering—amendment to the Packers and Stockyards Act of 1921.

I read some of the testimony before other committees of the House and of the Senate on this subject recently. When I realized the extent to which the packers of the United States were being maligned with unsupported statements, I felt that I could not remain silent. I am responsible to more than 60,000 employees and around 18,000 stockholders. It would be seriously negligent, in their behalf as well as my own, to let some of these careless and unbelievable statements stand in the record of this Congress without correction—by simple truth.

Under such circumstances, one may be expected to blame others. I do not propose to take that course today. Instead, let me explain my position in the simplest of terms. Truth alone can refute misstatements, regardless of their motivation.

Reckless and untrue charges have been hurled at my company and at the entire meatpacking industry by persons who, from their experience in the food industry, should know better.

Some of these careless charges use that dangerous technique of half-truths. Some are so patently without basis of fact that the exact opposite is true.

I, for one, have greater respect for the Congress and for its purposes than to make casual statements here. These hearings provide our greatest protection. In the final analysis, this is the way our Congress must probe for the true facts so that its legislation may be based only on the true facts.

It would be too time consuming for me to discuss each misstatement, each half-truth, and to attempt to refute each here. You are concerned primarily with principles.

Nevertheless, let me point out only a few typical examples.

At one of the recent congressional hearings, a witness was discussing Armour & Co.'s acquisition of the Hauser Packing Co. at Los Angeles. He was trying to make the committee believe that we had taken unfair advantage of our competitors; that we had gobbled them up. This witness made the following statement:

"Armour & Co. acquired that plant and property * * * for $250,000. The land was worth several times more than that."

What is the truth? The fact is that the Hauser Packing Co., at Los Angeles, had lost money for 9 consecutive years and was heavily in debt to a Los Angeles bank. The bank came to us in 1934, 23 years ago, looking for help. At their request, we first leased the plant in January 1935. We acquired the plant in October of that year for $432,680.

In addition to the original cost, Armour poured in more than a million dollars in capital expenditures. We did everything possible to make it a fine and successful plant.

Despite all this, competition is so keen that, over the years, we found it impossible to operate that plant profitably. Finally, this year, we had no choice but to close that plant.

Who gobbled up whom? The truth is exactly the opposite of what a congressional committee was told.

Here is another example of typical misstatements made before congressional committees:

Another witness testified that Armour & Co. (and other meat packers) between April 1 and May 15, 1957, were "dumping" pork loins on the market at Salt Lake City and at Ogden, Utah, at prices $3 to $6 per hundredweight below the quoted Chicago carload market for the purpose of forcing out competitors. When we heard that, we ran down the facts.

During the entire time, Armour sold pork loins in Salt Lake City on only 2 days, April 4 and April 5. These sales totaled less than 800 pounds. And the price was $1 per hundredweight or more over the quoted Chicago carload market. We didn't sell a single pork loin in Ogden during the period in question.

These are merely two examples of misstatements before the Congress. We can document them and others. We are ready to help this committee take each half-truth and nontruth and get to the true facts. I will make our people available to this committee and its staff whenever desired for that purpose.

In seeking a true perspective, let us turn back a bit. Some years ago, our research scientists discovered a way of combining edible oil with nonfat milk so that the resulting product could be churned in a butter churn, to produce a very superior oleomargarine. The United States Government gave us a patent on the process. We started making the product, advertising it as a churned margarine, which indeed it was.

In February 1951, the Federal Trade Commission started looking into the matter. We cooperated with them, since we make it a practice voluntarily to comply with FTC regulations. And the FTC approved the advertising.

Again, in 1954, the Federal Trade Commission reviewed the matter. Again they approved the advertising.

In 1955, the Commission changed its position. They decided that it was against the law to come right out and say, in a newspaper advertisement, that churned margarine is churned margarine. The Federal Trade Commission without notice filed a complaint against us.

Armour & Co. answered the complaint, pointing out, in effect that manufacturers are permitted, in fact are required, to tell the truth about their products. Armour & Co. makes the only churned margarine on the market. Our lawyers told the Commission that fact and said that it is entirely legal for us to say so, in our advertising.

But in their answer, our lawyers also cited the Packers and Stockyards Act, questioning the jurisdiction of the Federal Trade Commission on the grounds that Armour & Co. is a meat packer; therefore, is subject to the jurisdiction of the Secretary of Agriculture.

The Federal Trade Commission agreed with that argument. They ruled that the Secretary of Agriculture had jurisdiction in the matter.

No one, either in the Congress, or elsewhere, was much interested in the margarine case, but evidently the lawyers for a large chain of food stores made careful note of it.

This chain was involved in proceedings before the Federal Trade Commission. The lawyers for the chain pointed out that their company owned a packing plant. Hence, they said, because of the Armour ruling, the Secretary of Agriculture has jurisdiction over their company's business practices, not the Federal Trade Commission.

It was like an atomic bomb had hit the food industry. People now reread the Packers and Stockyards Act and suddenly realized that anyone owning as much as 20 percent of a meatpacking plant was considered a packer under the act.

One must remember that this case did not concern any company principally engaged in the meatpacking business. It concerned an asserted loophole in the law in no way affecting a true meatpacker.

Nevertheless, this entire matter was turned into an attack on the real meatpackers of the United States—those of us principally engaged in the meatpacking business. We were suddenly accused of being monopolists; of taking advantage of the farmer and consumer; of everything else anyone cared to imagine.

What is a meatpacker, in the true sense of the word? A meatpacker provides the vital pipeline between the farmer and the consumer, the necessary link for the farmer and the ranchers of America who grow the cattle, hogs, and sheep.

This system (whereby the meatpacker serves as the farmers' butcher, warehouser, shipper, and salesman) developed through the ages. It is nothing new. It is nothing designed by us at Armour's or by any other packing company. Like everything else which has developed in the growth of this country, it is a natural development; it has continued to exist because it is right—right for the farmer and right for the consumer. No one has been able to create or develop a better system.

The meat packers of America are an integral part of the daily life of the farmer and the consumer. The importance of the meatpacker, economically, is too little understood or appreciated.

All of the grass and much of the grain grown on our American farms can be marketed only through livestock. As meatpackers, we buy the producer's cattle, hogs, and sheep everyday. There is always a cash market for farm and ranch animals, something that did not exist until the national meatpackers developed their business. This cash market is the greatest free market in the world today.

In our plants, we perform the functions of slaughtering, chilling, cutting, curing, smoking, sausage making, cooking, rendering, and canning—all essential to the production of good food. Then we ship these products under refrigeration; we sell the meat; we deliver the orders; we give our customers credit; and we collect the money—all for a profit of a fraction of a cent a pound.

Our ability to utilize the hides, skins, tallow, bones, and other animal byproducts increases the value of every farm animal. The

meatpacker's efficiency, our progress through constant research, and the consistent improvement of livestock products have been just as important to the American economy as more spectacular developments in machines, electronics, and some other fields.

Therefore, I am proud to be a meatpacker, to be head of one of the Nation's foremost meatpacking businesses. We at Armour feel that we are fulfilling a vital function for the Nation, for the farmer, for the housewife, for every family in this country. My 60,000 coworkers at Armour's will bear me out in that feeling. Hundreds of thousands of workers in other meatpacking businesses in this Nation will similarly agree. We are proud of our work, of our contribution to this Nation's welfare, to its economy.

Let us, therefore, place this entire matter back into some kind of realistic perspective. Perhaps that will, at least, help to clear the air and to get the real issue before this congressional committee. Let us review what has been said.

We, the companies principally and primarily packers, have been repeatedly accused of monopoly; of other strange practices.

But, if one examines the record carefully, one finds that, in general, these accusations refer to a period around 40 years ago. If we are to go back 40 years, we must take cognizance of what has happened in this world during the past 4 decades.

We are talking of the period of World War I. The world has gone forward since then. Japan, at that time, was one of our allies, with Pearl Harbor not even dreamed of. Germany was then a defeated nation for the first time, not our ally at NATO. Communist Russia was considered a lot of crazy Bolsheviks, not a serious threat to our way of life. Airplanes were something that only a wild-eyed Billy Mitchell would dream of, not solid citizens or sound Army men.

And, during those 40 years, a revolution of magnitude took place in the food-retailing business. A new type of food retailing developed. The old corner grocery store started to vanish. The great new supermarkets came into being. The retail food business became more and more concentrated into fewer and fewer hands, the great chains and the independents and cooperative groups.

As this new development in food retailing progressed, concentrated buying resulted. These new groups started their own meat warehouses. Some bought or acquired interests in meatpacking plants.

What happened to our old friend, the corner grocery store? One need only look at figures from the United States Bureau of the Census: 1939, 387,337 grocery stores; 1948, 350,754 grocery stores; 1954, 279,440 grocery stores, over 100,000 fewer grocery stores than in 1939.

We, the meatpackers, have been accused of monopoly. Let us look at the figures from the United States Bureau of the Census relating to our business.

In 1921 (the year the Packers and Stockyards Act was passed) there were 1,184 meatpacking establishments in the United States.

In 1939 there were 1,392. In 1947 there were 2,154. In 1954 (the last year for which figures are available) the Bureau of the Census reports that there were 2,367 meatpacking establishments in the United States.

These official United States figures in themselves refute any ridiculous charges of monopoly. Instead of diminishing, the number of meatpacking establishments in this country has grown more than double the number when this very Packers and Stockyards Act was passed. Is that monopoly? Is that exclusive possession of the trade, or even a trend in that direction? At the same time, we witness the gradual shrinking of the number of retail grocery stores in the country, when the population is growing rapidly.

From the facts, one can see that as a result of the amazing growth of the supermarkets (both chain and independent) the retailing of food has been concentrated in fewer and stronger hands. The situation in the meatpacking industry is exactly the opposite. There has actually been an increase of more than 100 percent in the number of individual meatpacking businesses in the United States.

So one can see that this is a different day; we are different people in a different world. What went on 40 years ago is not pertinent today, unless there has been no change for the better, no progress. It should be obvious to everyone that the meatpacking industry of today is not the pioneering packing business of many years ago. That era is gone, not only for us but for most of the Nation's other businesses, too. It is a new day.

In that clarified atmosphere, let us again look at that word "monopoly." Monopoly means, in effect, exclusive possession of the trade, or perhaps a combination toward exclusive possession of the trade or commerce. Or, for practical purposes, it means the ability to obtain unreasonable profits and the ability to exclude others from the business.

We have seen that the number of meatpackers has doubled. So much for the exclusion of others from the business.

As for unreasonable profits, the meatpacking industry has consistently earned less than other American industries.

The 30-year average (1925–54) net earnings for the industry were only ninety-five one-hundredths of 1 cent per dollar of sales.

In 1955 meatpackers earned eighty one-hundredths of 1 cent per dollar of sales and 6.7 percent on net assets, while, on the average, all manufacturing companies earned 6.7 cents per dollar of sales and 15 percent on net assets.

Armour & Co.'s net profit from its combined operations for the 12 years since World War II (1945 through 1956) averaged only sixty-three one-hundredths of 1 cent per dollar of sales and averaged only 5.65 percent on net worth.

I believe that no reasonable person would call those profits unreasonable in this day and age of prosperity.

The men who created the American meat industry were pioneers. They were leaders in their time and acted no different from others in their day. They made a great contribution to our Nation. They gave freely of their wealth to charity, to education, and other worthwhile causes. But one must face the fact that all business was rough and tough in the days of the pioneers who built our Nation.

As in most other industries in the United States, some practices developed in the meatpacking business in the early days which deserved review.

That was done, and the consent decree of 1920 and the Packers and Stockyards Act resulted. But that was more than 35 years ago. Someone recently testified before a congressional hearing that the packers virtually pled "guilty" when they signed that consent decree. If so, how many of America's other fine businesses are similarly "guilty" because of consent decrees?

But, "guilty" of what? I am not a lawyer but I understand that a consent decree is a most honorable and practical instrument of the law. Both sides, in the best tradition of the Nation, seek to find a common meeting ground according to the circumstances as they then exist. If that indicates guilt, I don't know how to argue it further.

Much as been made of the fact that we, and two other packers, have gone to the Federal court to ask for relief from certain sections of the consent decree, which enjoin us from entering many fields in the food business, wide open to our competitors.

There have been inferences to the effect that we have some wicked purpose in asking the Federal court for relief from that decree. It takes only reading of the legal papers to dispel any such inferences, for the facts are clearly and openly stated.

It might not be unwise if I made quite clear our purpose in seeking relief from that consent decree.

We are a business. We have around 18,000 stockholders, who depend on us, the executives, to look after their properties, their investments, together with some 60,000 workers who depend on us to insure that our business remains healthy; that their jobs will go on and their futures will be secure.

As head of my company, it is my responsibility to look ahead—to prepare for the future—to protect our stockholders and our workers.

Is it fair play for one competitor in today's prize ring of private enterprise, to be free to enter into any business he desires, able to sell wholesale, retail, be a packer plus a department store and drugstore—while the other competitor, ourselves, must wear manacles of restraint forged almost 40 years ago when conditions were completely different from today?

I believe it is unfair. That is why we asked the Federal court to review the situation today; to judge whether we, too, should not be entitled to freedom from restraints of almost 40 years ago. It is a matter of simple equity.

I think most people will agree that many laws and regulations often need review and scrutiny to keep them up to date, to relate them once more to the new needs of the new day, as this committee is doing here today. The true meatpacking business is an integral part of our agricultural industry. It is the necessary link between the farm and the consumer's home. I believe that no American in business, whether large or small, should be denied privileges equal to those of his competitors in the open market. Bigness in itself can hardly be a crime so long as competition remains free. Otherwise, the premium for Americans of tomorrow would be on mediocrity, not on success in our time-honored way.

That is why Armour & Co. asked the Federal court to review the old consent decree. We seek an equal chance for survival.

Let me be personal for a moment.

I came up the hard way in Armour & Co. I had no influence, no connections. I got my first pob by answering a newspaper ad. I went to night school while I worked days at Armour. I know this business. I grew up in it. Armour and the American system of fair play gave me my chance for success. I feel I owe it to the future generations in this company to do my utmost to see that they have a similar opportunity.

That is why I hope that this Congress, and certainly this House Agricultural Committee, the watchtower for the farmers, will examine the entire subject, not merely one segment of it, inspired by the acts of a company not primarily in the meatpacking business.

At times, in the testimony before the various congressional committees, the point has been raised that there has been very little legal action against the meatpackers by the United States Department of Agriculture; that the Department has been remiss in its regulatory obligations.

If viewed from a constructive angle, it demonstrates an amazing record of careful and rigid observance by those of us principally in the meatpacking business. I personally believe it to be a proud and unmatched record of observance of Federal regulations. As a matter of fact, our company considers that the law and the regulations are, and should be, minimum standards of ethical business conduct.

If anything, this could be considered a prototype for cooperation between Government and industry for others to follow. And this has been possible only because of the efficient manner in which the Department of Agriculture has administered the Packers and Stockyards Act, since its adoption by the Congress.

The Department of Agriculture supports the Hill bill, since it fully answers all arguments based on the chainstore case. The Hill bill places persons not primarily meatpackers under the jurisdiction of the Federal Trade Commission.

The Secretary of Agriculture already has adequate authority under the Packers and Stockyards Act to prevent unfair or monopolistic trade practices. The Department of Justice already has adequate authority over our industry to prevent unfair or monopolistic trade practices. Private persons or companies who feel that they may have suffered damage due to any allegedly unfair or monopolistic trade practice can go to the courts for equity under the present laws.

But the Hill bill redefines a packer, and settles any jurisdictional questions by clearly placing those only "incidentally" packers under the jurisdiction of the Federal Trade Commission.

I agree with the Department of Agriculture, that the Secretary should have authority to delegate supervision of any activity of a principal meat packer to the Federal Trade Commission when, in his judgment, that will best serve the national interest. This would enable any Secretary, from his broader understanding of the entire American agricultural picture, to retain jurisdiction when that particular activity is so much a part of the agricultural aspect of the packer's business that there is no practical way to separate it.

Therefore, in simple terms, those of us who are principally and primarily in the meatpacking business will remain where we belong—as part of the basic agriculture of the United States of America. Those who are primarily in some other business, with their meatpacking activities only a minor aspect of their total operations, would be supervised primarily by the Federal Trade Commission. Their livestock buying for slaughter would generally be supervised by the Department of Agriculture. These activities, obviously, are a part of the agricultural picture of this country and belong under the Department of Agriculture.

To anyone who really knows the agriculture industry, its many problems, the dependency of one activity upon another, this is the realistic solution to the problem.

In summation:

1. The packers principally in the meatpacking business have been accused too lightly and too freely. I hope that what I have said may, at least, have restored the perspective.

2. The Federal Trade Commission case, which has dramatized this situation, was not caused by a company principally a meat packer but by a company whose packing business is only a minor part of its entire operation. So, why turn the case into attack on the principal meat packers?

3. I favor the Hill bill for it clarifies what a meat packer really is.

4. Any proposed revision of the law, however, might well look into more generic and basic problems which have arisen since the Packers and Stockyards Act was originally written, and should give equal rights to all segments of the food industry. That will result in greater and greater competition. And the ones who will gain the most will be the important people involved—the livestock producer and the consumer.

That is really what this is all about.

I am grateful for this opportunity. Thank you.

Secretary of the Interior Seaton Terms High Dam as "Extravagant Waste"

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. BUDGE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article which appeared in the Idaho Sunday Statesman, July 7, 1957:

SEATON TERMS HIGH DAM AS "EXTRAVAGANT WASTE"

WASHINGTON.—Secretary of the Interior Fred A. Seaton said Saturday that construction of a Federal Hells Canyon dam would constitute "extravagant waste" which would be impossible to justify to the Nation's "overburdened" taxpayers.

Furthermore, he said, Hells Canyon would compete for funds against other bona fide reclamation projects now under construction or authorized without contributing even 1 acre-foot of water for irrigation.

He made his views known in a letter to Representative ARTHUR L. MILLER, Republican, Nebraska, ranking minority member of the House Interior Committee.

MILLER has called up for consideration next Wednesday by the full committee of all the Hells Canyon bills now pending in Congress, including an authorization measure passed by the Senate and one introduced by Representative A. ULLMAN, Democrat, Oregon. Earlier this week, the irrigation subcommittee killed a similar high dam authorization bill introduced by Representative GRACIE PFOST, Democrat, Idaho, by striking the enacting clause.

Seaton also took note of the power shortage in the Pacific Northwest. He said that due to dominance of Federal facilities in the Northwest at present, whenever a power shortage occurs, the bulk of the interruption falls upon Federal customers. We believe that the addition of non-Federal facilities now under construction by the Idaho Power Co. will bring about greater diversity in the power supply picture of the Northwest.

Representative HAMER BUDGE, Republican, Idaho, said that Seaton's letter had been placed in the record of the Hells Canyon hearings by the Interior Committee's Subcommittee on Irrigation. He said the Secretary's letter was devastating in its clear-cut analysis of the reasons for opposing the Hells Canyon project and allowing Idaho Power Co. to continue with its federally licensed projects.

In a separate letter to BUDGE, Seaton pointed out that the Bureau of Reclamation has estimated the construction and transmission costs for Hells Canyon and the allied Scriver Creek project would cost $525 million, exclusive of interest during the building, operation and maintenance costs and funds to reimburse Idaho Power for its investment or damages in its project now building on the Snake River.

Appropriations would be necessary during the next 6 fiscal years at an average annual rate of more than $87 million for construction and transmission alone, Seaton said. The estimated need of $140,484,000 for construction in fiscal year 1961 alone—provided Congress were to make appropriation this year—would exceed 87 percent of the appropriation requests for all reclamation projects in all 17 Western States in the 1958 budget, the Secretary added.

In comparison, the Secretary wrote, during the past 20 years, Congress has appropriated an average of $124,046,000 for all reclamation construction and rehabilitation.

"If S. 555 (the Hells Canyon bill) is enacted," said Seaton, "apropriations for the next 6 years for reclamation projects will have to be 60 percent higher than those appropriated for the last 6 years."

The Secretary emphasized that reclamation project already authorized or under construction will require appropriations of $2,267,189,015. And this does not include projects currently under consideration by Congress, he said.

"Authorization of Federal construction of Hells Canyon Dam," he said, "would place bona fide reclamation projects in competition with a project the major purpose of which is power production. The Hells Canyon project would not provide additional water for or reclaim 1 acre of arid land; it has nothing to do with reclamation, yet the funds therefor would be provided out of the amounts made available for reclamation construction."

Seaton reminded that 10 years ago and from time to time since then, "Congress had a choice between Federal construction of the Hells Canyon Dam and the alternative of permitting the Federal Power Commission to license non-Federal construction. During this 10-year period the theoretical benefits dramatized by proponents of the high dam have been repeatedly considered by the Congress. The Congress did not heed their pleadings and refused authorization for Federal construction.

"Today we are not faced with a theory. As a practical matter it would be impossible to justify to the taxpayers of the Nation, overburdened as they are, the extravagant waste of authorization of Federal construction at this time. The Brownlee and Oxbow projects are in the advanced construction stage; production of the electrical energy is scheduled to begin September 1958. One million acre-feet of flood-control storage should be available for the spring runoff in 1959. I am informed that more than $48 million has been committed for this construction and for turbines, generators, switch gear, and other equipment for which orders have been placed. Many man-hours of engineering design have been employed. Factory employees are fabricating the equipment which will soon be ready for shipment to the dam site.

"For these reasons and those set forth in our report to the committee, I do not favor enactment of S. 555."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

Civil Rights

EXTENSION OF REMARKS
OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, July 11, 1957

Mr. JOHNSON of Texas. Mr. President, the Senate debate of the past few days has produced public discussion which should be of great value to our country. This is reflected in one of our leading newspapers, the New York Times. I ask unanimous consent to have printed in the Appendix articles on this subject by two eminent commentators, Arthur Krock and James Reston, and an editorial which appeared in the Times this morning.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the New York Times of July 11, 1957]

AN OBSTACLE TO THE CURRENT SENATE DEBATE

(By Arthur Krock)

WASHINGTON, July 10.—The Senate debate on the administration's civil rights bill furnishes a negative demonstration of the value of the usual procedure of referring measures to committees. Because the majority put this bill before the Senate without reference to the Judiciary Committee, there is no pro-and-con report on the possible effects of the various provisions by a group with special qualifications to make it.

Hence the Senate, lacking the guidance on which it habitually depends, must decide which of several interpretations by individual members are the more credible. And these interpretations differ markedly with respect to part III of the bill. Senator RUSSELL construes this to have been subtly drafted to permit an Attorney General to use the Armed Forces to impose racial integration in all forms on the South.

He bases this construction on the invocation, only in part III, of section 1985, title 42, United States Code. Part III authorizes the Attorney General to initiate enforcement of a new group of equal rights—proclaimed in Supreme Court decisions that ban school and other forms of racial segregation—that were not the law of land when the code was last legislated. And section 1985 invokes section 1993, which reads:

"It shall be lawful for the President * * * or such person as he may empower * * * to employ such part of the land or naval forces * * * as may be necessary to aid in the execution of judicial process * * * [or] to prevent the violation and enforce due execution of the provisions [of sections establishing equal rights]."

In the administration draft section 1993 is thus made an integral section of part III. But, as Senator RUSSELL pointed out, this provision for the use of the Armed Forces is omitted from part IV of the administration measure that deals with the right to vote and has been stressed as the principal objective of the legislation.

ARGUMENTS AND ANSWERS

RUSSELL's interpretation has been accepted by the other southern Senators, and it has disturbed the President and northern Members of the Senate to whom the existence of this factor, buried in the text, came as a surprise. Consequently, analyses of part III have dominated the early stages of the debate, Senators FULBRIGHT, EASTLAND, and ERVIN agreeing with RUSSELL, Senator BUSH asking for more clarification on the point, and Senator JAVITS dismissing it as a hobgoblin.

"What I should like to know is," said BUSH, "where is the threat of the use of the Armed Forces contained in this bill? * * * I have examined [the full text] * * * and I do not find it."

"One of the evils of this legislation," replied FULBRIGHT, "is that it itself does not set forth the terms; it incorporates by reference sections that [invoke others that provide penalties] by way of the use of force."

"The Brown case in 1954," said EASTLAND, "held that a child has a right to attend a nonsegregated school. To deny that right is a violation of section 1985 [which invokes section 1993]. * * * The Attorney General would get a decree to give the child a right to attend a nonsegregated school. * * * If the decree were violated he could [have the offender convicted and put in jail without trial by jury]. Or the President can use the Armed Forces to effect judgments rendered * * *."

"We have read the pertinent section," said JAVITS. "[It] is now in the law, and the fact that it has not been used [to enforce the right to vote] during all these years should certainly be some evidence as to whether or not it will be used in the future. * * * That is the main burden of our argument: namely, that we seek to import nothing new in the law. * * * That is why so many of us say that the idea [it] will suddenly be misused is only a hobgoblin in the closet."

TWO POLITICAL PHILOSOPHIES

But, asked ERVIN, "does not the history of the United States show that a Republic Congress actually sent troops into the South, and that they were garrisoned in many places?

And it was not [section 1993] enacted at a time when it was officially accepted by the Republican Party in control of Congress that the Southern States were conquered provinces?"

The exchanges make plain once more an ancient division between two political philosophies. One group contends that a law should be weighted for its potential uses as well as for what it specifies. The other contends that, though these uses admittedly are potential, they should not weigh again other provisions in an essential law that are subject to no such objection; moreover, that the present Government would not, nor would a Government conceivable in the United States, give force to these potentials.

The latter position reflects President F. D. Roosevelt's attitude on the occasion when he sought power which he said, in effect, might be dangerous in other hands but not in his. But, as FULBRIGHT pointed out, the Senate's choice is made more difficult by the fact that "there is no written report by exprets * * * members of the Judiciary Committee and their * * * staff explaining the issue in detail."

[From the New York Times of July 11, 1957]

BROWNELL ON RIGHTS BILL—AN ANALYSIS OF HIS ROLE IN CURRENT FIGHT AND OF SENATORS' CHARGES AGAINST HIM

(By James Reston)

WASHINGTON, July 10—Attorney General Herbert Brownell, Jr., has emerged in the Senate civil rights debate as the chief whipping boy of the southern opposition.

He is charged with being the chief draftsman of an ambiguous and "cunning" bill, with presenting it as a "right to vote" bill, and attempting to conceal the fact that it could also be used at his own discretion to help enforce racial integration in the public schools and other publicly owned establishments in the South.

Like most charges in Washington, there is less here than meets the ear. It is true that the Attorney General is the chief draftsman of the bill—that he and his associates, particularly Warren Olney, 3d, assistant Attorney General, devised the formula of giving Federal judges the right to hold in contempt of court, without a jury trial, anyone who defied a court injunction against interfering with a citizen's civil rights.

AMBIGUOUS BILL

It is also true that the bill is ambiguous in the sense that it can be interpreted in many ways, and that in all his testimony Mr. Brownell has emphasized that its main purpose is to secure the right to vote of all qualified citizens, including Negroes in the South.

It is not true, however, that he has sought to conceal from the Senate the fact that the authority sought in the bill could be used under certain circumstances to assure compliance with the Supreme Court's public school decision.

In a formal statement last February 14, he told the Subcommittee on Constitutional Rights of the Senate Judiciary Committee that "the proposals of the administration would, of course, go beyond the voting cases and give to the Department [of Justice] the authority to invoke civil remedies in other cases of civil rights violations."

He illustrated this specifically in the case of the Supreme Court's public school integration decision by pointing to the Hoxie (ARK.) case.

In that case the local school board decided on racial integration in the schools without waiting for a law suit to compel them to follow the Supreme Court decision. Shortly thereafter, individuals mainly from out of the town came into Hoxie and, according to the court record, threatened the superintendent, and members of the school board with violence if they insisted on maintaining the integrated school.

Mr. Brownell noted before the Judiciary subcommittee that the Hoxie school board had defied the intimidation, had taken the case into Federal district court, had sought and received an injunction against the intimidators and had carried on peacefully with the integrated school. The Attorney General said, however:

"There may well develop other situations in which after voluntary desegregation the pressures placed upon the local school authorities are so great as to prevent their taking the initiative in instituting legal action.

"In this situation the Department of Justice under this legislation would be authorized to take the initiative in filing a suit for an injunction against any individuals seeking to interfere with the school authorities in their attempt to comply with the ruling of the Supreme Court."

COURT'S PRINCIPLE CITED

Mr. Brownell implied hat he would follow the Supreme Court's principle that the local school authorities "have the primary

responsibility for elucidating, assessing, and solving these problems," and that he would intervene only if the local authorities were unable or unwilling to deal with persons seeking to block voluntary integration by the local school board.

Nevertheless, he did testify that the administration's new civil rights legislation could be used to help implement the school integration decision and that it did "of course, go beyond the voting cases."

The southern bloc in the Senate is unalterably opposed to this. They insist that while this may be Mr. Brownell's interpretation of the law he is seeking, the language is so broad and ambiguous that he or some other Attorney General might interpret it in such a way as to use the power of the Federal Government regardless of whether the local school authorities were trying voluntarily to integrate the local schools.

For example, in the hearings before the House Judiciary Committee, Mr. Brownell was questioned at length about whether he would intervene on an appeal from any citizen in the South who asserted that he was entitled under the Supreme Court order to attend an integrated school and was being denied that right by local authorities.

MISLEADING INTENT DENIED

"What would you do then?" he was asked. "Would you initiate an injunction against the school board in the case I gave you under this act if it is enacted?"

Mr. Brownell replied:

"I don't want to mislead you. I am not trying to avoid answering your question. I have found in my own experience that it is very unwise to give answers to a hypothetical case of that kind because there are always special circumstances."

In short, part of the reason why the southern Senators are up in arms about this legislation is that they are being asked to accept imprecise language that even the administration's officials concede could be interpreted in many different ways, most of them anathema to the South.

The administration officials have emphasized the right-to-vote aspects of the bill, because this is their main objective and because this is the most popular aspect of the legislation.

They have also made the language ambiguous and this is now being challenged and will undoubtedly be changed substantially before the end. But they have not threatened, as charged, to use troops in the South to enforce court injunctions, and they have not denied that the legislation could be used in the school-integration problem.

[From the New York Times of July 11, 1957]

THE RIGHT-TO-VOTE BILL

The lengthy conference President Eisenhower had yesterday with Senator RUSSELL, of Georgia, indicates the seriousness with which the White House views the major charge brought by Mr. RUSSELL in his speech last week against the civil-rights bill. This was the sensational allegation that hidden in one section (part III) of the bill is "a force law designed to compel the intermingling of the races in the public schools" by the injunctive process, and "to authorize the use of troops" to integrate them.

Although the inflammatory language Senator RUSSELL used in his speech does not contribute to a calm approach to this touchy subject, the fact remains that he has discovered in the pending bill terminology that may indeed be fairly interpreted in the way he chooses to interpret it. In previous discussion of the civil-rights measure there has been almost total neglect of this one point. The administration bill in something very much like its present form was debated and passed by the House a year ago; the current one was debated and passed by the House again last month; there have been extensive hearings and reports and innumerable speeches on the subject; yet in all this time no one has made a real issue of the possibility pointed to by Senator RUSSELL that the bill might be used to enforce school integration by injunction. The House minority reports both this year and last, and some brief testimony by Attorney General Brownell, do mention this possibility. But until the last few days it has been generally overlooked—so much so that some of the bill's leading proponents now admit privately that they had never even thought of it.

Now, this does not mean that the language is therefore bad, nor that on its merits the section of the bill to which Senator RUSSELL most violently objects should be eliminated. But it does mean that there is every indication that neither President Eisenhower nor the principal protagonists of the administration bill in Congress considered this measure as anything more than a bill to insure to every American citizen the right to vote in Federal elections, as guaranteed by the Constitution. The President has said as much in his press conferences: "I was seeking * * * to prevent anybody from illegally interfering with any individual's right to vote * * *." Practically everybody fighting for this bill, and we include this newspaper, has been seeking the same thing. We have viewed it primarily as a right-to-vote bill; and, as we have said here before, we believe that the injunctive process without jury trial is a perfectly proper device to enforce this basic constitutional right if necessary.

We also believe with the Supreme Court, and have said many times, that integration of the schools is likewise required by the Constitution. We believe, too, in equality of economic opportunity for all races—a point that was originally included in and then eliminated from the administration's civil rights proposals. But not all of these rights can be enforced in precisely the same way, nor can some be effectuated as quickly as others.

It would in no way prejudice the inexorable forward march of school desegregation in the South to make it clear that this bill deals exclusively with voting rights, which is what almost everybody had thought all along it deals with. Integration of schools is quite another matter; and although it may well be that the devices used in the pending bill may ultimately be found necessary to enforce the desegregation decision as well, it is the part of wisdom to take one step at a time and concentrate now, in this law, on the basic right of a free ballot.

Of course, the entire question of amending the civil-rights bill is premature anyway, because technically the question now before the Senate is whether or not to take up the measure at all. The southern oppositionists haven't a leg to stand on—though they have strong voices—in the debate over making this bill the pending business. Once that is done, then will come time for amendments and limitations. The southern diehards, Senator RUSSELL included, are not going to like the bill in whatever form it emerges. Much more important than whether or not they like it is the question whether it is an equable, moderate, enforcible bill in conformity with our best traditions. We think that it can easily be made just that.

Flood Control a Major Problem

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. JOHNSON of Texas. Mr. President, the cost of controlling floods is tremendous. The cost of neglecting to control them is far greater. That point was strikingly amplified in an editorial published recently on the distinguished editorial page of the Dallas, Tex., Times Herald. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAG IN FLOOD CONTROL PROJECTS CALLS FOR ACTION ON ALL FRONTS

It is not easy to imagine flood conditions more distressing than those experienced by Texas a few weeks ago, but an expert on the subject warns that we can have even worse floods in the future.

Brig. Gen. L. E. Seaman, United States Army division engineer for the Southwest district, speaking in Vicksburg last Monday night, made the following perturbing statement:

"We can have greater floods than those recorded—including those that have been recorded in the last two months."

The general was stressing the need of extensive flood-control measures and of proper management of storage reservoirs during periods of heavy rainfall.

Storage reservoirs, as the general explained, hold back the rushing water until they are filled up, but if the downpours continue, the water must be released to save the dams and hold inundation to a minimum.

When we consider how speedily empty and almost empty major reservoirs in the Southwest were filled after 7 years of drought, we can applaud the Army Engineers for their excellent construction of dams and for fine work during a serious emergency.

A few of the small dams in Texas broke, but all the major dams, including Texoma, held firm. If the construction had been faulty or if the engineers had not judiciously released the water, shocking disaster probably would have resulted. The situation was bad enough, but it might have been worse.

In citing the value of big reservoirs as flood-control devices, General Seaman declared that they must be supplemented by other methods of protection, methods that can check inundation after the reservoirs are filled to capacity. These additional measures are essential, for during long stretches of drought the public forgets about high-water marks and puts to use land that is subject to overflow when unusually heavy rainfall comes.

Flood control is a major problem, not only in Texas but all over the country. The cost of controlling floods is enormous, but the cost of neglecting control is much greater. As Senator LYNDON JOHNSON points out, this Nation's investment for flood control and water resources development has fallen far behind the increase in population and ex-

pansion of the economy. It is high time for us to make up for this lag. The need is so great that all levels of Government must join in meeting it, Federal, State and local.

The Open Curtain

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. JOHNSON of Texas. Mr. President, the San Antonio Express, which has as enlightened and realistic an editorial page as will be found in any Texas newspaper, recently published a penetrating editorial discussion of the proposal for an "open curtain" exchange of information between the people of Russia and the people of the United States.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOHNSON'S "OPEN CURTAIN" WORTH A SINCERE EFFORT

Senator LYNDON B. JOHNSON'S proposal to make free exchange of information between Russia and the United States a part of the overall disarmament negotiations is certainly a fresh approach to the problem.

The Texan's "open curtain" bid, made recently in New York, might prove to be an easier "first-step" to take than mutual inspection. The Russians are already denouncing the "open skies" plan of aerial inspection, which is a basic step in present negotiations.

JOHNSON'S proposals have been widely hailed as constructive and bipartisan statesmanship, particularly in view of the fact that he embodied this proposal within President Eisenhower's overall program for easing tensions. Although the Senator's proposal is not new (the State Department offered such an exchange via radio in 1955), it came at an opportune time and gave impetus to similar suggestions in the press the day after Khrushchev's TV-radio interview.

If the combined influence of the Senate leadership, demands in the press and willingness of Mr. Eisenhower and Secretary Dulles can bring the Soviet Union to open its radio and television facilities to us in exchange for similar facilities for the Russians in the United States, we may be getting somewhere.

But even that is a long row to hoe. In essence, our job would be to convince the Russians. We believe our side has the best story to tell and we are confident that we have the people capable of telling it convincingly. However, we face the formidable task of overcoming Kremlin objections; of penertating the propagandized minds of Russian masses; of bringing about a revolution of enlightenment among Russian citizens.

It's a long shot. Perhaps we have the Russians in position to listen. Certainly it is worth the effort.

Foreign Policy Begins at Home

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. BEALL. Mr. President, during the recent foreign policy conference at Colgate University, Gov. Theodore R. McKeldin, of Maryland, delivered an extremely timely address stressing how important it is for all of us to distinguish between our Nation's ideals and what is expedient. Specifically, said the Governor, we must remember that the goals toward which we are striving are "liberty, justice, and humanity," and that we must not mistake various approaches to these ideals as ends in themselves. The Governor's remarks on this subject were quite thought provoking, and I ask unanimous consent that a copy of his speech be printed in the Appendix of today's RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY BEGINS AT HOME

(Address of Theodore R. McKeldin, Governor of Maryland, Colgate University, foreign policy conference, Hamiliton, N. Y., July 2, 1957)

The foreign policy of the United States, to the extent that it is foreign and not domestic, is a matter of details profoundly modified, not to say governed, by existing circumstances. In all that may be called really fundamental our foreign policy is identical with our domestic policy, except in one provision. That is stated in article IV, section 4, of the Constitution of the United States: "The United States shall guarantee to every State in this Union a republican form of government."

But that provision is itself merely a detail. The basic policy of the United States, foreign and domestic, is to make it possible for every lawabiding man to live in peace enjoying the fruits of his own labor under laws and rulers approved by a majority of the people. In our own experience the most efficient means to that end is representative democracy, which is to say, a republican form of government; so we have guaranteed that form to every State. But it is as a means to an end. If the end be achieved, the basic policy of the United States will be furthered, regardless of the means.

So stated, this seems too simple and plain to admit of argument. Yet it is a fact that one of the chief hindrances to the establishment and pursuit of a sound and consistent foreign policy is the tendency of our own people to forget or ignore this basic principle. With shocking frequency we have confused the means with the end. We talk of democracy as if it were an absolute virtue, to be listed along with liberty, justice and humanity, forgetting, or choosing not to believe, that democracy is merely a way of approach, and there may be and in fact are other ways of approach to liberty, justice and humanity.

Does any man in his right mind believe that Winston Churchill is a slave? Yet he has lived all his life under monarchy. Does anyone believe that the Greeks who fought under Pericles and the Romans who fought under Cincinnatus were slaves? Yet they lived under dictatorship.

As a matter of fact, whenever our own Nation has been seriously threatened, we Americans have cheerfully abandoned many of the basic principles of democracy for the time being. Lincoln suspended the writ of habeas corpus and sharply abridged freedom of the press during the Civil War. Wilson, in 1917, and Roosevelt, in 1941, both became virtually dictators. At the outbreak of war the function of the President as Chief Executive is swallowed up by his function as Commander in Chief, and until the fighting is over democracy is adjourned. Yet these temporary adjournments of democracy have not worked any alteration in the devotion of our people to liberty and justice—ample evidence that democracy is the means, not the end.

Yet a great deal of criticism of our foreign policy—most of the intemperate criticism—has been based upon some supposed failure of our diplomatic agents to give democracy first priority and let liberty and justice take care of themselves.

Here let me draw a distinction, rather a fine one, but very important, between legitimate and illegitimate criticism. More than a dozen years ago leaders of the two major parties, a Democratic President and a Republican Senator, attempted to make this distinction plain when they formulated what is known as the bipartisan policy. They agreed, and the rank and file of the parties agreed with them, that criticism intended solely to influence an election in this country is not legitimate criticism of our foreign policy.

Fair-minded men still agree with that. To denounce the Secretary of State, not because he is wrong, but because denouncing him may curry favor with some faction in this country, is rank dishonesty, and no more need be said about it.

I am interested, rather, in two widely prevalent interpretations of the principle of bipartisanism, both of which are perfectly honest but both, as I believe, dreadfully wrong. One is the assumption that the repudiation of illegitimate criticism meant the repudiation of all criticism, so that any program the State Department hands us must be accepted without a murmur.

I am sure that very few Americans accept this view 100 percent. It is too absurd. But I suspect that it is partially accepted by many honest and intelligent men and has had the effect of making them less effective critics than they would be otherwise. The more sincere the man, the more likely he is to be handicapped by doubts. When action that he deems unwise is taken in a specific case, his impulse to speak out is checked if the question arises in his own mind, "Do I object to this because it is wrong, or merely because I dislike Mr. Dulles—or Mr. Acheson before him, or Mr. Hull before either?"

Such a question inevitably dulls the edge of honest criticism, and when honest criticism is blunted we are worse off, for the finest Secretary of State never possessed a monopoly of wisdom. Any official can profit by knowing the opinions of other men of brains and character.

Yet I cannot believe that this handicap upon our establishment of a sound foreign policy is of very great importance. After all, men who refrain from criticism—or refrain from anything else—because they are too honest, have never been numerous enough to have a decisive effect upon human affairs.

Much more important is the other misconception of bipartisanism. This is the idea that American foreign policy must be so conducted as to further everything upon which our two major parties are agreed. This is by no means the case. Our parties are agreed on the ideals of liberty, justice, and humanity as absolutes whose values are unchanged by time or space; and our foreign policy should certainly be designed to further these ends.

But our major parties are agreed on a great many other things, some of which are not ideals but mere expedients. This is to say, they serve our needs very well, but it is not necessarily true that they would serve equally well another nation, in different circumstances, and with different traditions. For example, we are agreed on trial by jury as the best means of protecting the rights both of the accused and of the State. But it is certainly not the only way of protecting those rights, and not always the best way. In Maryland, for example, the accused, even in a capital case, may waive his right to a jury trial and submit his case to the judge alone; and many defendants prefer that form of trial.

We are agreed on universal suffrage, but because it works to our satisfaction does not mean that it would work equally well in a nation staggering under a heavy load of illiteracy and poverty. We are agreed on separation of church and state and the absolute prohibition of religious tests for official positions; but it would be oppression to try to impose that system upon Pakistan or India.

Yet it is astonishing and, I may add, discouraging to realize how many perfectly honest Americans fail to make the distinction between our ideals and our expedients and criticise our foreign policy for failing to do what it ought not to do. Many of us seem unable to realize that the ideal of liberty implies freedom for other nations to be different, but unless our foreign policy takes that into consideration it is doomed to failure.

It is all very well to say that foreign policy is far removed from the daily activities of the ordinary citizen, but it is true only to a limited extent. Our representatives abroad, being Americans, respond to the climate of opinion in America as surely as the rest of us do. No doubt their special training modifies their response but doesn't eliminate it, which means that an uninformed or misinformed public opinion will gravely affect the operations of foreign policy in every corner of the earth.

This is why I began my remarks by raising a question as to the distinction between foreign and domestic policy. The education of our own citizens is unquestionably an item of domestic policy; yet the maintenance of a sound and successful foreign policy depends in large measure on the development of an intelligent and informed public opinion at home.

A large number of agencies, public and private, are working to that end, and doing admirable work—as witness this conference in which we are participating. The American people are being given more complete information, more carefully and skillfully analyzed, on foreign affairs than they have ever had before. I cannot be too emphatic in expressing my admiration for this work and my hope that it will be continued and expanded.

At the same time I am inclined to believe that we might do well to balance this flood of information on the foreign situation by paying a good deal more attention to the domestic situation—not the trend of daily events, but the basic relation of the American republic to the other free nations. I have no hesitation in saying that it is not thoroughly understood by a majority of our people. The confusion of ideals with expedients is wide spread and by no means confined to the unlettered. It goes high up the scale of education and cultivation. I have encountered men whose native intelligence was powerful enough to win them great success in the world, but who nevertheless harbored positively childish notions of what the United States seeks to do, or ought to do in the rest of the world.

As long as this confusion exists it is idle to expect our foreign service to operate at the highest level of efficiency. You may have the best trained men imaginable, patriotic, hard-working, devoted; but if they are constantly subjected to criticism based on a completely wrong conception of what they are supposed to do and are trying to do, those men cannot possibly do the best work of which they are capable.

When General Hancock was running for President in 1880 he evoked a storm of ridicule by the remarks, "The tariff is a local issue." But it was perfectly true. Most men's attitude toward the tariff was determined by what they thought was the effect of the tariff on their own local interests. Perhaps I shall be inviting ridicule by the observation that foreign policy is very largely a domestic issue. Nevertheless, it is true; for until we create a domestic public opinion with a better understanding of what it is all about, our foreign policy will continue to be hampered and harassed by many avoidable faults and failures.

Civil Rights

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Swapping Civil Rights," published in the Washington Evening Star on July 11, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SWAPPING CIVIL RIGHTS

Senators opposing the civil-rights bill are properly and effectively concentrating their efforts now on showing, in terms of the surrender of certain civil rights, the cost imposed by this bill for the protection of other civil rights, ostensibly the right to vote. There is no doubt that such costs are inherent in the bill.

Senator FULBRIGHT, in an able speech, made an illustrative comparison between the value of certain civil rights involved—the value of the right of trial by jury and the value of the right to vote. He recalled that the guaranty of trial by jury is mentioned specifically four times in the Constitution, which in no place provides unrestricted suffrage for every citizen. More than relative values, however, the Senator was stressing the preoccupation of the founders with a right that is fundamental in a free society, and which is subject to damaging impairment in this bill.

It remained for Senator ERVIN, however, in an outstanding discussion of the jury trial issue, to point out the real danger, as we see it, in this bill's circumvention of the jury trial principle. That danger does not lie in the realistic possibility that arbitrary, capricious, or tyrannical Federal judges will be sent into the South and ruthlessly begin throwing into jail—for sentences restricted only by personal discretion—men and women they find guilty of violating their injunctions. The danger is in the expedient advocacy, by men anxious to accomplish an end which they find immediately desirable, of broadening the injunctive process far beyond its previously narrow field; perverting, in fact, its historical use, and coupled with the power of punishment for contempt, utilizing it in a new and extensive field of criminal law.

We do not believe that Senator ERVIN is seeing monsters under the bed, or indulging in mere oratorical rhetoric, when he says that if the Federal courts are given power to suppress crime by injunction in equity proceedings and trial for contempt without juries, in the field of civil rights, to prevent offenses already defined in ancient law as criminal, there is no valid reason to suppose that on some other day, when people are frustrated and sickened by inability to deal with crimes in another field, some other well intentioned administration headed by a President who wants to accomplish what seems to be a morally desirable and politically helpful end, will not resort to the same subtle evasion of a basic principle of free government.

The attempt to pack the Supreme Court was made by an honorable and upright Attorney General, under the direction of his President, as a method of accomplishing what they believed to be a desirable end. This expedient extension of the injunctive and contempt processes to enforce old laws in new areas has been put forward by another honorable and upright Attorney General to get around admitted difficulties in obtaining convictions by jury in civil rights cases. He is doing it for what he believes to be a desirable end, and his President is more familiar with the end than with the means employed to reach it.

We do not believe the parallel is overdrawn. We applaud the Senators of the minority who are attempting to show the cost in damage to one civil right demanded as the price of strengthening another. Those who defeated the Court-packing plan were also, at one stage, in the minority.

Civil Rights

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. RUSSELL. Mr. President, the debate of the past few days has been in the very highest traditions of Senate procedure.

Not only has it helped Senators in understanding the issues before us. It has generated a public discussion which is educating the people of our Nation.

As one example, I cite the very excellent editorial which appeared in the Washington Star today. This editorial points out that the bill in its present form involves a "cost in damage to one civil right demanded as the price of strengthening another."

"There is no doubt that such costs are inherent in the bill," the editorial asserts. This editorial might well have been entitled "Stop—Look—Consider."

Mr. President, this is a question that is entirely aside from the merits of the pro- or anti-civil-rights argument. It is a question that goes specifically to language in the bill that goes far beyond

anything proposed in recent years by even the most burning advocate of so-called civil rights.

The public is now aware of what it really is—and I believe that when our people are informed, they can reach sound and sensible conclusions.

Mr. President, I had intended to ask unanimous consent that the Washington Star editorial be printed in the Appendix of the RECORD, but, since my colleague [Mr. TALMADGE] has had it printed, of course I shall not duplicate his request.

Black Canyon Reclamation Day

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, July 11, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address presented at Caldwell, Idaho, on July 22, 1955, by Mr. LaSelle E. Coles, second vice president of the National Reclamation Association, on the occasion of the observance of Black Canyon Reclamation Day. The title of the address is "Reclamation at the Crossroads." Mr. Coles, who is a recognized authority on the subject of reclamation, has made a plea in his address for a realistic and equitable approach to the financing of reclamation. His speech urges the acceptance of what is referred to as a "basin account" with revenues from power providing assistance for reclamation. His proposal is even more significant and pertinent today, Mr. President, than it was at the time of its delivery. It should prove stimulating to people in all western regions who are faced with the problems of conservation of their water resource and feasible methods of financing the great programs which will have to be undertaken.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RECLAMATION AT THE CROSSROADS

(Address on Black Canyon Reclamation Day at Caldwell, Idaho, July 22, 1955, by La Selle E. Coles, second vice president of the National Reclamation Association)

The title of my talk today is "Reclamation at the Crossroads." To those of you who have not followed the national trend this may be news. To you who are vitally interested in the reclamation program it is not news. In 1932 the National Reclamation Association was organized in Salt Lake City for the purpose of saving the reclamation program for the West. We will all have to admit that the problems of that era were simple in comparison to those we face today. In 1932 they merely needed money. The country was in the middle of a great depression, and we were starting on a program to spend our way out of that depression, consequently all they had to do was sell the program to the late Franklin D. Roosevelt and the Congress. This was ably done by the men who organized and took part in the national reclamation program. They are to be complimented, as the impetus of their work has been felt through the years.

We still need money to finance reclamation, but our problems 23 years later are much more complex. We have awakened suddenly to the fact that even here in the great Northwest, our water supply is not unlimited. The water we have left will control our development. It must be used to irrigate the desert, to turn the wheels of industry, to furnish a municipal water supply, to furnish recreation, and for many other purposes. With so many interests competing for this remaining potential water, we are bound to have problems and will have to fight for our program harder in the future, or it will go by the wayside. Our national debt is much different today than in 1932, consequently those who are looking for places to economize pick on reclamation. To you, I say this is false economy. In 1932 we had a water policy, but policies become obsolete the same as machinery. Today we are trying to operate on a policy geared to the horse-and-buggy days, consequently every conceivable method has been used by the people, the Congress, and the Bureau of Reclamation to get around this obsolete policy. In doing this a new policy has been created by each authorization which has gone beyond the Reclamation Act of 1902.

I would like to review with you what has happened to the reclamation program. During the Korean war and the Truman administration, a policy of no new starts was inaugurated. It was said that we needed the money to fight the war, and at that time had plenty of food. No one could take issue with this policy, but like so many policies, which, when once established, they are hard to get rid of. This policy lasted until last year at which time we had five new starts, though small at least the ice was broken. This year, according to the Bureau, we have seven so-called new starts. You would have to use your imagination to call some of them new starts. The bad part of this no-new-starts policy was that it extended to only part of the West. We in the Northwest stood still, with the exception of those projects which had already been authorized. In the Missouri Basin, and the Central Valley of California, they continued with their program. New projects were authorized each year this policy was in effect. Why? Because the Missouri Basin project was authorized as one project and the Central Valley was handled the same way. They could claim any project which was feasible was not a new start, but merely part of the original authorization. It looks like some place along the line, we in the Northwest missed the boat. If this policy had continued for another 5 years the Bureau of Reclamation in region I would have been out of business.

Most of you know what has happened to the appropriations for reclamation. Let's take a look at the appropriations for general investigations:

1950	$11,626,000
1951	13,212,000
1952	10,428,000
1953	8,850,000
1954	5,275,186
1955	6,109,136
1956:	
Recommended by Budget	7,675,000
Recommended by House Appropriations Committee	5,669,492

The action of Congress for next year's appropriations is now history. Thanks to the work of the Congressmen from the West, our secretary-manager, William E. Welsh, and many others, the House and Senate overrode the Appropriations committee and restored the cut. They not only restored the cut, but added projects in the Northwest, which the President and Budget had not recommended. This is one of the few times in the history of the country that this has happened. I am especially interested in the amount appropriated for general investigations. Our future program depends upon a backlog of projects being available for immediate construction. The National Reclamation Association has recommended $10 million for general investigation. We have not received this amount, but at least we have had an increase over the low of $5,275,186 reached in 1954. The above figures represent what has happened to the entire reclamation program. The tendency has been for less and less money. We do not need the large amounts of money made available to the Bureau during the Mike Strauss regime, but we do need enough money so that an orderly program can be carried on. We should have a reasonable amount each year. This would tend to stabilize the personnel of the Bureau. It takes years to train a good engineer, and it is hard to get them back once they are lost. The wielding of the ax, beyond a certain point, is often more costly than appears on the surface. What incentive is there for a young engineer to enter Bureau work?

At the present time our entire program is under attack by a group made up mostly of people from the East. I am sorry to say it, but this attack is backed by a few in the West. Those in the West who are supporting this opposition are selfish—they are fighting the entire reclamation program, because of regional differences. The mouthpieces for this group have been Raymond Moley, author; and Leslie Miller, ex-Governor of Wyoming and recently a member of the Hoover Commission. Moley has written several articles in Newsweek and later put the material into book form. Miller had an article in Reader's Digest; both are good writers and very capable. They make a good case against reclamation for anyone who does not know the true picture. They picture only the dark side. They ask the question, "Why develop more land in the West in the face of an agricultural surplus?" They do not point out that a very small percentage of the produce of the irrigation projects is not surplus, but is fruits, vegetables, nuts, meats, etc., which have resulted in a much better year-round diet for the American public. Our agricultural surplus in 1954 was less than 6 percent of the total population requirement. Mr. B. T. Shaw, Administrator, Agricultural Research Department, testified before the House Subcommittee on Agriculture, that if the people continue to consume food at the rate they did in 1953, our consumption and production of agricultural commodities will be in balance by 1962 and possibly by 1959. Moley points to the small amount of returns from reclamation projects in comparison to the money spent. He does not point out that the large percent of the money has been spent in recent years and that according to the repayment contracts a small amount would be due. Moley asks the question, "Why spend money to build expensive projects in the West when there are millions of acres in the South not needing irrigation which can be reclaimed for about $200 per acre?" I have spent only a very short time in the South so do not know the situation there, but with the ingenuity and resourcefulness of the American people, I am sure this job would have been done by private capital, if Mr. Moley is right. I do not have time to answer all arguments the opposition puts forth, but as I see the picture we will have to develop all our resources in the West, in the East, and in the South if the American people are to maintain the standard of living to which they are accustomed. Our population is increasing at about 2,800,000 per year; these people must be fed and have jobs, if this country is to remain strong.

On December 25, 1952, the Bureau of the Budget issued its famous Circular A–47, which has been with us ever since. In this circular the Bureau of the Budget attempted to set up uniform standards, which had to be adhered to before any proposed project would be considered by Budget. In recent years the Budget Bureau has gained so much in stature that in a way, they have almost gained control over whether or not projects will be built. Budget is actually the one who has been making our water policy, not the Congress. This is all wrong. It amounts to one branch of the Government usurping the power of another. All of us with proposed irrigation projects have been trying to find ways to get around A–47. The only way this can be done is by the use of power returns in the repayment feature. A–47 says a project must pay out in 50 years. How many reclamation projects do we have left which will pay out in that period of time? It also says all projects must be allocated on the "separable cost-remaining benefits" method, unless there is some very good reason why this cannot be done. In my area we have been working on a small project, the Crooked River. In the original allocation we were allowed $1,152,000 on flood control. Under the "separable cost-remaining benefit" method this was reduced to $654,800. A cut of 44 percent. NRA and the western Congressmen and Senators have complained so much about this order that Budget decided to revise it. This was attempted this year but the proposed revision is worse than the original. I would like to refer to "Discussion of Budget Circular A–47," and the Related Power Partnership Principle—Hearings Before the Committee on Interior and Insular Affairs, 84th Congress, first session, March 15 and 30, 1955." On page 37 you will find Secretary McKay's statement, "The Secretary agrees with the general principle but is opposed to the standards as recommended. On page 73 in this document Mr. Dexheimer answered the chairman's question, as to how many of our remaining projects could be built under A–47. Mr. Dexheimer could only name the Ventura project in California. All other projects would be dependent upon some type of subsidy.

In the field of irrigation subsidy we have several theories. The Hoover Commission represents one school of thought. They recommend that all income be returned to the General Treasury and irrigation assistance be a direct subsidy out of the General Treasury. This is a good theory, and as a theory, I do not disagree. In actual practice, can it work? Are the people in the East ready to grant an outright subsidy to irrigation development? I doubt it very much. The Missouri Basin, the Central Valley, the Columbia Basin, Michaud, here in our own State, and many more projects have been authorized with a power subsidy. What a mess the entire program would be in if an attempt were made to change all these authorizations. It would set the program back 50 years.

We might as well be realistic. Most irrigation projects being authorized are those, which use power returns in some form or another, as a subsidy. In my thinking it all adds up to a basin account. I have had people argue with me, that we do not have a basin account in the west. In words I will agree, in practice I cannot agree. What is the Missouri Basin project, the Central Valley project, the Upper Colorado River project, as proposed by the administration, if not basin accounts in actuality. What is the difference between the Columbia Basin project, the Foster Creek division of Chief Joseph, your Michaud project, and the Missouri Basin project? They all use power as a subsidy. Some say it is a hidden subsidy and that the people are being fooled. To this I say "poppycock." Read any of the authorizations and it is spelled out in black and white what the subsidy amounts to. Suppose the law was changed and a project was considered feasible if it could be paid for by the farmers in a period of 100 years. Is there any justification in part of the farmers in Idaho and Oregon paying for 100 years and the other part paying only within their ability to pay for 40 or 50 years, with power paying the balance? In the past those in authority and the law have been favorable to those projects which have power "incidental to the project." This phrase "incidental to the project" has been stretched to the point, where I do not know what it means, and I doubt very much if others who use the term actually know its true meaning. It is one of those phrases used to fit the occasion.

All the authorizations, to which I have refered have established a precedent and thus have created a water policy for parts of the West. Can we turn back and repudiate this policy? I believe not. To be fair all should be allowed to operate under the same policy. This would mean that we in the Northwest would have a basin account or would seek authorization as a Columbia Basin project. To me it makes no difference what you call it—it all adds up to the same thing—"power assistance for reclamation." How can this be accomplished? We need leadership, cooperation among States, and planning. Where can we look for our leadership? We should look to our respective political leaders, but apparently this is impossible because of the diversity of political views. Hells Canyon is a good example of a political football. Reclamation development should never be a political issue. All projects should be authorized upon their financial and engineering feasibility. If we cannot look to our political leaders for leadership, then to whom are we to turn? I think we have one source left and that is the proposed Columbia Interstate Compact Commission. They should furnish the leadership which we need. The Commission would be composed of members from all Northwest States which should eventually result in cooperation among the States. To accomplish the above they would have to work out a plan for future development. We are badly in need of such a plan. We have not been pulling together. We must consolidate the thinking of the majority, put our shoulder to the wheel, and really push from here on out, if the program to reclaim the arid lands of the west is to survive.

Jury Trial Takes a Beating

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Jury Trial Takes a Beating," from the Baxley (Ga.) News-Banner.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JURY TRIAL TAKES A BEATING

While the Nation raves and rants over the trial of Pfc. William S. Girard by three Japanese judges where there is no trial by jury, the House of Representatives has just passed a civil-rights bill that will allow trial without jury.

The bill appears to be headed for Senate passage despite the opposition of Senator RUSSELL and other southern Senators. It is aimed at the South and will make Federal courts all-powerful in enforcing United States Supreme Court decisions.

The bill would empower the Attorney General to take into Federal court the cases of any persons whose civil rights had been violated or threatened and to protect their interests by seeking Federal court injunctions. Anyone violating the injunctions would be subject to trial for contempt of court without benefit of jury.

In short, the bill vests in Federal court judges the exclusive power to enforce civil-rights legislation.

It is also ironic that the United States Supreme Court this week reversed the conviction of 14 Communists tried in California and struck down a contempt of Congress conviction of a labor racketeer on the grounds that their individual rights had been violated. It seems to enjoy dictatorial power when it comes to forcing unpopular decisions on individuals in the South. At the moment the people of the South don't belong to the right minority.

Address by Former Senator Ashurst Before Arizona Bar Association

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered before the Arizona Bar Association recently in Prescott, Ariz., by former Senator Henry Fountain Ashurst.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A NATION'S GENESIS

(Address by Henry Fountain Ashurst to the State Bar of Arizona at its annual convention at Prescott, Ariz., May 25, 1957)

When I received your gracious invitation to speak here, thoughts of bygone days came to my mind. Events of long ago seemed visible for a moment and then vanished into the distant haze of far-off things where precious recollections are stored away, for your invitation came to me just 4 days after the 60 years since I was admitted to the Arizona bar. My eyes seek eagerly for lawyers who were at the Arizona bar at the time of my admission; alas, but two remain. The others have gone to that vast realm where the innumerable dwell; their law briefs are cobwebbed, their pens are rust, they are serene upon the shining pathway of the stars—I trust, for they faithfully served their day and generation.

The formative days of my career were spent at the foot of the north Arizona mountains, whose purple crests in summer and whose snowwhite fangs in winter upthrust themselves into the turquoise sky arching above them, and I blush to admit that, among the many opportunities presented to me by this happy land, I entered the political field too early to have acquired that rich and ripe knowledge of the science of law which might have qualified me to receive the gladsome light of jurisprudence.

Whatever may be said about clergymen, physicians, and lawyers (being human they receive their share of criticism), society has confidence that the clergyman will never betray his penitent, the physician will never betray his patient, and the lawyer will never betray his client. All honor to these professional men for their fidelity. Reliance, upon their fidelity, is a diamond pivot upon

which society may safely revolve, and without which reliance in these intimate, confidential human relations, society itself could not endure, and there could be no livable life. One is minister for soul, one is minister for health, and one is minister for justice.

The word "justice" is a beautiful word; it is a close synonym for the words "fairness, impartiality." But the word "justice" has a philosophical and legal precision those words have not, and the word "justice" was used impressively by Sir Edward Bulwer Lytton in his play "Richelieu's Vindication" wherein Richelieu in his own defense, exclaimed:

"I found France rent asunder,
The rich men despots and the poor banditti;
Sloth in the mart and schism within the temple;
Brawls festering to rebellion, and weak laws
Rotting away with rust in antique sheaths.
I have recreated France; and, from the ashes
Of the old feudal and decrepit carcass,
Civilization, on her luminous wings,
Soars, phoenix-like, to Jove! What was my art?
'Genius,' some say; some, 'Fortune,'
'Witchcraft,' some.
Not so; my art was Justice."

In all literature there is no finer exposition of the importance of law and judicial authority than that set forth by Shakespeare in the scene between Henry V, lately become king, and the chief justice who had formerly committed him for contempt. The chief justice stood before the young king whose life as the prince of Wales had given no warrant of wisdom or integrity; for he had, in his reckless days, been the boon companion of Falstaff and his disreputable associates.

Referring to his commitment by the judge, the king asked:

"How might a Prince of my great hopes forget so great indignities you laid upon me? * * * Roughly sent to prison, the immediate heir of England! * * * May this be washed in Lethe and forgotten?"

The judge interposed this memorable defense:

"I then did use the person of your father;
The image of his power lay then in me:
And, in the administration of his law,
Whiles I was busy for the commonwealth,
Your highness pleased to forget my place,
The majesty and power of law and justice * * *
And struck me in my very seat of judgment;
Whereon, as an offender to your father,
I gave bold way to my authority,
And did commit you."

This argument prevailed, for the king replied:

"You are right, justice, and you weigh this well;
Therefore still bear the balance and the sword;
And I do wish your honors may increase."

At the time of my admission to the Arizona bar, I did not know and could not know that our Nation was upon the threshold of a marvelous age in the world's history; an age of such incredible achievement in art, science, literature, luxury, growth, transportation, national power, chemical discoveries, and mechanical inventions that it may not be described even by a sapphire pen—dipped (for ink) into rainbow dew nor by an orator of silver tongue and golden larynx.

Our Nation is now a mighty world power and liberty-seeking peoples should be glad and joyous wherever their ears may catch the music of an American drumbeat. But human nature is the same everywhere; hence, our known wealth and puissance make us the victim of the jealousy of some of the less happier lands of Europe and Asia who have accepted American benefactions and are consumed with envy. Gratitude is one of the noblest attributes adorning mankind, but it is personal and individual. Statesmen know, or should know, that gratitude does not exist among governments—or rather that gratitude among governments is simply a lively sense of favors yet to come.

Until the birth of the United States Government, nations generally had an unregistered birth date. Their beginnings were usually legendary or obscure. They had no birthday celebrations for through the many centuries they had at some unknown date severally emerged from some dim, mysterious region said to be peopled with giants or heroes. Romance, tradition, and folklore, false in fact, but beautiful in fiction, handed down the myth that some nations were sired or mothered by wolves, some by lions, some by unicorns, some by swans, but the beginnings of our Nation are well known. If one were flippant of speech—one might say that America was a self-starter. We know the names of the founders, where they were born, and where they were educated. They were not chasing any will-o'-the-wisp; they were not idle dreamers on a sentimental journey, for they well knew that mankind cannot construct a society where all men shall be equal as to intellect, ingenuity, adaptability, temperament, and ambition. They knew that a manmade law cannot give to the nightingale the wings of the eagle nor give to the eagle the art of trilling the beautiful midnight minstrel of the nightingale, and that freedom, liberty, and livable conditions of life do not come by the graceful waving of a magician's wand but, like our daily bread, must be earned.

It would be a fascinating drama, in the realm of imagination, to see pass before us all the men who signed the Declaration of Independence, and also all the men who signed the Constitution of the United States—documents of grandeur in the world's annals. All the characters of men known to history, biography, and fiction would appear. Some wearing brocaded waistcoats; some wearing silk breeches, silver buckles at the knee and instep; the stock, the gaiters, the cork-soled boots, the powdered wig, lace cuffs, the ivory snuffbox. The quick, razor-edged tempers, the punctilious pride, the authentic scholarship, the statesmanship; some of them could have outshone Lord Chesterfield in an exhibit of graceful manners. Brilliant rhetoricians shaping sentences like daggers of jade; word stylists; sweet-singing-wasp speakers.

Many of these men comprehended the garnered wisdom of the ages and were familiar with the history of the republics of the antique world. Not a few had been graduated from colleges in the Colonies: Harvard, Yale, William and Mary, Princeton, Kings (now Columbia), and the Pennsylvania College; some had been graduated from English, Irish, and Scottish universities, and one need not be acutely imaginative to seem to hear the eager and eloquent oratory, the vibrant words and gorgeous rhetoric of that romantic long-ago. Some of them ascended the steep acclivity from obscurity to far-shining fame—some few descended the declivity from fame to oblivion. Some of them, with steady hand at sunrise, held dueling pistol and with same steady hand, at sunset, held mint julep or hot-buttered rum. Nearly all were devoted equestrians—good riders who daily printed their horses' hooves into the receiving earth. They were men of courage and fortitude, of self-esteem and self-respect, of energy and action with bold, penetrating eyes, projecting noses and convex, sunburned faces. They were drawn from the various trades, professions and occupations, and were shrewd to a remarkable degree. They each and all were fiercely determined to set up a government assuring civil liberty, and they launched mankind's first major Republic since the days of ancient Rome. They bravely raised the banner of a republic at a time when the entire world seemed fixed in autocratic systems of government. Eight of the men who signed the Constitution had 11 years before also signed the Declaration of Independence. The principles of the Declaration and the guaranties of the Constitution have withstood the mutations and vicissitudes of time, and have beaten back the wildest storms that ever blew because they embody the inborn, invincible sentiments of those who know the value of freedom, and who respect the dignity and sacredness of human life.

The founders attempted to guarantee freedom of opportunity only, and thus the right and the privilege of every citizen to employ that opportunity and to earn or win as many of the prizes of life as his character, intelligence, zeal, skills, creative imagination, courage, and luck would bring him.

Among the civil liberties protected by the Constitution and the Bill of Rights is the right of every citizen to try to acquire a home, a shop, a farm; to acquire property, large or small; to earn wages; make investments and increase his fortune, so long as he does not interfere with that same right belonging to everyone else.

These civil liberties Karl Marx communism would destroy. The government should be the servant, not the master, of the citizen; but communism would make the government the master of the citizen. Communism is a fanatical delusion that has no regard for the sacredness of human life nor the value of human liberty; it would deprive labor of its wage, ambition of its stimulus, excellence of its supremacy, and character of its respect. Many, if not most Communists, are persons who will remain obscure unless they become obnoxious, and unhappily they choose the latter; but Communists when brought into court quickly avail themselves of that shield, the Constitution, which shield they had so cunningly sought to destroy.

Lack of monetary wealth does not necessarily mean lack of success. Many persons who have not accumulated riches live happy, noble, useful lives, and are truly good and great. Multitudes of American men, with the purse of a peasant, carry themselves with all the politeness, pride, and bearing of a prince. Multitudes of American women with meager financial resources walk with courage and spread sunlight, kindness, and mercy with a grace and charm that any queen could well emulate. Conversely, now and then, some indifferent person, by the legerdemain of chance or the impishness of the vice of destiny is awarded a fortune; frequently some worthy person by industry, integrity, and business judgment earns a fortune, and believe me when I say that if the refreshment of adventure, risk, and hazard were eliminated, life would be flat, insipid, and almost unbearable, but it is true that success in all departments of life generally gravitates toward those who are competent, industrious, and patient.

In the rhythm of life we revere bygone days and try to reconstruct their scenes, but let us not garnish the past too heavily with prismatic illusions. The lovely enchantments of bygone times abide with us here and now, and there is much in everyday life that inspires and gives a mighty upsurge to the human spirit.

I take no stock in the gloomy jeremiads constantly chanted that the human race will destroy itself; I do not subscribe to the defeatist attitude that human beings are but the helpless zanies of witless fate and thoughtless chance which will overthrow the wisdom of the wise, the valor of the brave, and the trophies of the truth. I reject such philosophy, and I assert that mankind is endued with reason, conscience, ample power of self-direction, and has his fate in his own hands. Those explosive forces, the atom bomb and its synthetic half-brother,

the hydrogen bomb, which have brought such specters of dreadful terror to so many persons will (before the silver of years shall have crowned the temples of the young here) be the selfsame forces that will heat and illuminate man's habitation, transport him and his commerce, and heal and cure many of his physical ills and agonies. There is somewhere a conservation of spiritual energy that preserves the core of every noble resolve and worthy action, and molds them into a beneficent achievement aiding mankind in his arduous struggle upward and onward.

The first settlements were made on our eastern coast at Jamestown, 350 years ago; and at Plymouth Rock, 337 years ago; and these intervening years of progressive development have a history, brilliant and varied in its coloring. Like a gorgeous tapestry, some of its threads are golden, some are silver, and some crimson—crimsoned with the lifeblood of the pioneer freely shed in his contests with savage men and savage beasts, but these threads are interwoven into one picture of civil freedom such as mankind has never before in all the ages looked upon.

Our frontier line, like the receding shadow line of the sundial, receded under the advancing sun of civilization, and from the date of these early settlements the American experiment of free government has been filled with sacrifice, tragedy, color, romance, and high endeavor.

Our country has inherited all in history that has gone before and every American citizen may justly exclaim: "Mine is the majestic past, mine is the shining future. Our eternal maxim: all things for America; she is the vital axle of the restless wheels that bear me onward; beyond the map of America my heart can travel not, but fills that limit to its utmost verge," for America is now the only first-rate power left in the world—where the Goddess of Liberty daily pours forth her gladsome song—a song that encourages all mankind by its amplitude and grandeur.

Federal Budget Reform

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Standard-Times, New Bedford, Mass., on July 1, 1957, in connection with S. 434 which passed the Senate unanimously recently and is now up for consideration in the House.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL BUDGET REFORM

The Citizens Committee for the Hoover Report, a nonpartisan group working for adoption of Hoover Commission recommendations, has cited 12 bills before Congress that deserve immediate attention and should be enacted before the 1957 session is adjourned.

The measures were selected from approximately 170 bills in the hoppers of the Senate and House that deal with Hoover Commission proposals. Since it is apparent that most of these bills will not get to the floor of either Chamber in the comparatively few weeks remaining in this session of Congress, a concerted effort is being made to get action on proposals that will have the most beneficial results.

Top priority is urged for a measure cosponsored by Senators KENNEDY, Democrat, of Massachusetts, and PAYNE, Republican, of Maine, which would require the Federal budget to be submitted on an annual accrued-expenditures basis. Enactment of this bill, already passed by the Senate and awaiting House action, would save the American taxpayers $4 billion a year, according to Hoover Commission estimates.

The measure provides that Congress would appropriate each year only funds required to operate the Government for a period of 1 year. This would eliminate the "hoarding" of unused appropriations by Federal agencies and give Congress tighter control over expenditures.

Need for the change in budgeting procedure is brought home forcefully in the estimate by Senator BYRD (Democrat of Virginia) that the various departments of the Federal Government now have on hand approximately $70 billion in unexpended funds appropriated by Congress in previous years.

This means that if Congress appropriated an additionay $71,800,000,000 for fiscal 1958, as requested by President Eisenhower, the Government actually would have in excess of $140 billion at its disposal during the next 12 months.

It is unsound business practice to run the Government on this basis. The system encourages extravagance by Federal agencies, some of which literally have more money than they know what to do with. It is not uncommon for Federal departments to deliberately "pad" their budget requests in the hope of building a perpetual surplus.

This is an unhealthy and wasteful situation that can and should be corrected by enactment of the Kennedy-Payne bill.

Other measures on the priority list of the citizens committee would centralize procurement and supply activities of the armed services under a single agency, curtail unnecessary participation by the Federal Government in activities best handled by private enterprise, and centralize surplus property disposal in the General Services Administration.

These and various other bills designed to reduce waste and inefficiency in government should be approved by Congress with all possible speed. The sooner the measures are enacted, the sooner the American taxpayers will reap the rewards of more efficient government at reduced cost.

The Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. YOUNG. Mr. President, one of the finest and most deserved tributes I have read concerning our late and good friend Senator Joseph McCarthy was a eulogy preached by the Reverend Edward Lodge Curran, Ph. D., at the commemorative exercises held by the Queens County Catholic War Veterans of New York State on June 29, 1957, at Forest Hills Park Music Grove, Forest Hills, Long Island, N. Y.

It is a eulogy that I am sure the many thousands of devoted friends of Joe McCarthy would like to read. I ask unanimous consent that this eulogy be printed in the Appendix of the RECORD.

There being no objection, the eulogy was ordered to be printed in the RECORD, as follows:

EULOGY ON THE LATE SENATOR JOSEPH R. MCCARTHY, PREACHED BY THE REVEREND EDWARD LODGE CURRAN, PH. D., AT THE COMMEMORATIVE EXERCISES HELD BY THE QUEENS COUNTY CATHOLIC WAR VETERANS OF NEW YORK STATE, JUNE 29, 1957, AT FOREST HILLS PARK MUSIC GROVE, FOREST HILLS, LONG ISLAND, N. Y.

We are assembled here, united in our devotion to the great Catholic, the great American and the great Senator, for whom we have just offered this sacrifice of the Mass. We thank the Catholic War Veterans of Queens County for having made this sacred occasion a reality.

In the spring of the year and in the summer of his life, Senator Joseph R. McCarthy heard the eternal summons of God. Many times, as he flew above the clouds on military mission in the defense of his country at war, he faced the possibility of death. The winds sung a song of death. The propellers hummed a symphony of death. The bullets carried a message of death. Yet, he was spared a flier's death in the bosom of the sky, to meet a hero's death within the bosom of his countrymen.

And thus it was, in the spring of the year and in the summer of his life, that he heard the eternal summons of God and answered it. He left his loving wife and child. He left the jeweled lakes of Wisconsin. He left this Nation, to which, like Washington, he gave his best in war and peace. He left the millions whom he had inspired with the righteousness of his cause and with the vigor of his virtues. He turned aside from the pathway of the world to dwell in the eternal mansions of God. In the beautiful words of the poet, William Butler Yeats, he "paced upon the mountains overhead and hid his face amid a crowd of stars."

The death of Senator Joseph R. McCarthy is one of the greatest tragedies our Nation has suffered since the close of World War II. We shall miss his face and form upon the horizon of life. We shall miss the ringing cadence of his voice. We shall miss his dynamic leadership. We shall miss his sincerity, his integrity, his energy and his courage.

Our hearts go out to his beloved wife in her bereavement. Despite the tragedy of her grief, there should be one sunburst of consolation within the shadows of her soul. She is not alone in her grief. We who are gathered here, the thousands upon thousands who have gathered around similar requiem Masses in his memory, and millions upon millions of his fellow citizens are sharers of her grief. Her tears are mingled in the ocean of tears that have been shed by all real Americans at his passing. The memory of his life will quicken and deepen the reality of her love. The memory of his life will quicken and deepen the reality of our devotion.

His entire life was motivated by love. He loved his family. He believed in the divine and spiritual as well as in the human and emotional factors of marriage. He knew that the preservation of the family means the salvation of the state. Even in this, he revealed his detestation of atheistic communism. For communism seeks to destroy the divine integrity of the family, to abolish the divine authority of the family, to wipe out the divine essence of the family, so that the coming generation may be brought up in hatred and slavery, in godlessness and war.

He loved his God. He never forgot the love of God that he was taught in his boyhood home. He practiced the command of Christ to love God with all his mind and heart and soul and strength. He learned to

use the language of prayer simultaneously with the language of his native tongue. He knew that a godless world would be a world of sin and slavery and tyranny and despair. He realized that the aim of atheistic communism is to create a godless world. He refused to compromise with the enemies of God. Therefore, he detested and defied atheistic communism as the enemy of God as well as the enemy of man.

He loved his church. He was proud to be known as the Catholic Senator from Wisconsin. He regarded his church as the extension of Christ's personality throughout the world. He was loyal to the truths of Christ, to the sacraments of Christ, to the ideals of Christ. He was good as well as brilliant. He was spiritual as well as successful. He was the greatest lay crusader in his church against the forces of atheistic communism. He never forgot the clear and ringing words in which Pope Pius XI denounced the menace of atheistic communism. "Communism," Pope Pius XI wrote 20 years ago, "is intrinsically wrong and no one who would preserve Christian civilization may collaborate with it in any undertaking whatsoever." He sought to acquaint his fellow citizens with the truth of that indictment.

He loved his country. No man ever loved it more. He loved his country so much that he risked his life to defend her in World War II. He loved his country so much that he spent his entire senatorial career in ferreting out the communistic termites that had entrenched themselves in our body politic for nearly 20 years.

He was not one of those public officials who bravely denounce communism on the one hand and cowardly appease communism on the other hand. Since communism is intrinsically wrong, it is wrong in all its principles, in all its methods, in all its objectives, and in all its activities. Since communism is intrinsically wrong, it is not merely a political evil or a social evil or an economic evil. It is a spiritual evil. It is intrinsically wrong like hatred. It is intrinsically wrong like blasphemy. It is intrinsically wrong like the murder of the innocent.

No member of the Government of the United States of America ever understood the evil of atheistic communism as clearly and as dynamically as Senator Joseph R. McCarthy. Because he knew that communism is intrinsically wrong, he opposed the policy of keeping communism alive, through the misuse of American tax money and through the greed of American trade, anywhere throughout the world. Because he knew that communism is intrinsically wrong, he righteously denounced all Communists, all communistic fellow travelers, all fifth-amendment liberals, and all public officials who had been guilty of ignoring or concealing the criminal conspiracy of atheistic communism.

As chairman of the Senate's investigating subcommittee, he performed a service for the defense of America that ranks second to none in the annals of the United States Senate. He was not deterred by the hatred of his communistic enemies. He was not deterred by the sarcasm of phony liberals. He was not deterred by the betrayal of his own political party. He put his country above all parties. For the sake of his country, he was willing to bear every personal affront and attack. The magnanimity of his soul prevented him from hating anyone. He even accepted the injustice of the White House-sponsored senatorial censure, with dignity and meekness.

The greatness of a man is measured by the qualities of his soul more than by the magnitude or multitude of his activities. The spirituality and the patriotism of Senator Joseph R. McCarthy have enshrined him in the history of his country and in the hearts of his countrymen forever. We shall continue to offer him our loving prayers and our prayerful love. We shall preach the message of his life to every young American. We shall emulate the message of his life by our own undying love of God and country. We shall fulfill the message of his life by dedicating our lives to the purpose for which he lived his life and for which he laid down his life: the protection of our beloved country and our beloved church against the forces of atheistic communism forever.

British Budget Worries

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. NEUBERGER. Mr. President, evidence of the popular acceptance of the American field service program is cumulative. An able editorial in the Pendleton East Oregonian of July 1, 1957, describes the impact on one Oregon community.

The editor heralds the program as the best answer found yet for building peace in the world.

Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S GOOD FOR EVERYBODY

Pendleton said goodby last week to an American Field Service student and in a few weeks will be greeting another. Werner Von Kuensberg departed on Thursday of last week for his home in Switzerland after spending a year in Pendleton High School and in the home of Mr. and Mrs. Raley Peterson. In 1955 the American Field Service sent Jan Stoltz, a boy from Sweden, to Pendleton.

The AFS program is well established in Pendleton. So successful has it been that efforts are being made to expand it. Students in the high school and adults who have been working with the program would like to bring two students here annually.

It is a very impressive experience to hear an AFS student tell what a year in this country has meant to him, what he expects to make of the knowledge he has acquired. A listener is certain that the AFS program is the best answer found yet for building peace in the world. If students in all the countries of the world could be brought into the program the misunderstandings between nations would soon disappear.

Of course the program is a two-way street. It is a great contribution to the education of Pendleton school students.

The Pendleton Kiwanis, Lions and Rotary clubs provide the funds that bring AFS students here. Other organizations and individuals contribute through the year to some of the living expenses of the students. A large contribution is made, of course, by the families that house the students.

For a recent issue of the Medford Mail-Tribune, Managing Editor Eric Allen, Jr., wrote an excellent editorial on the AFS program. This is the editorial:

"John Hansen, the young Dane who has spent the past school year as a member of the family of Mr. and Mrs. H. D. Christensen of Medford, will be returning home soon.

"From what we have been able to learn of John and his activities and friends here, his stay has been a resounding success—from his standpoint, that of the Christensens, the high school, and his new friends.

"This makes it a success for the American Field Service, which is responsible for his visit.

"The AFS, we were surprised to learn, is the same American Field Service which sent volunteer ambulance drivers to France during World War I and later in World War II. It has since broadened its ideas of service and international friendship into the sponsorship of these visits by young Europeans.

"An exchange program recently was worked out, for young Americans to go the other way for a shorter period of time. This is the plan under which this summer Dave Frohnmayer, of Medford, is going to Europe, to live with a family there.

"In the fall, another AFS exchange student will arrive in Medford to live for the school year.

"We believe the value and importance of these international visits can hardly be overemphasized. We wish they could be expanded time and time again, for they provide what is probably one of the most effective means of international understanding.

"The simple fact of finding out that there are other ways of life, and that they have their own benefits and advantages, is important.

"But there are other benefits, and they are lasting ones. We suspect that the John Hansens and the Dave Frohnmayers of this year and the years to come never will allow themselves to fall into the provincial type of thinking which makes for suspicion and misunderstanding.

"The American Field Service operates with a minimum of staff and a minimum of income out of a small office in New York. Its funds come from donations, many of them from organizations.

"It maintains certain standards as to language and background to pick youngsters who will benefit most from their year abroad. It has standardized the cost of an exchange visit at $650—which is the average—so that no host community will be penalized by having to pay more for a student from a greater distance.

"In the case of John Hansen, the cost was subscribed by the Medford Rotary Club, with funds raised by its annual suit sale. The money goes for transportation, some incidentals, and a small allowance for the student. The rest of the cost—living expenses, school, and so on—is provided by the host family, which is carefully screened before being picked for the privilege.

"The AFS committee here happens to be composed mostly of Rotarians, although there is no formal relationship between the two. It is hoped the program can be broadened in coming years, and support from the community at large would be welcome.

"We can think of few projects more worthy of enthusiastic help. President Eisenhower has declared that, if it is carried far enough it would be 'an effective agent in combating totalitarian propaganda and will help eliminate the misunderstandings that promote conflict.'

"One author writing about the AFS program quotes an ancient Sanskrit saying, which admonishes: 'Walk together, talk together, O ye peoples of the earth; then and only then shall ye have peace.'"

The Late Thomas H. MacDonald

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. DWORSHAK. Mr. President, as the interstate highway system is being

planned and constructed Americans should pay tribute to the outstanding services of the late Thomas H. MacDonald. For 34 years he served as director of the Bureau of Public Roads, and laid the groundwork for a highway system which will remain as a monument to his vision and perseverance. Recently the Asphalt Institute Quarterly published an article written by Bernard E. Gray as a timely tribute to the Father of the Nation's Highway System, and I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CHIEF, 1881–1957

(By Bernard E. Gray)

Thomas H. MacDonald, the chief, is gone. By his death last April 7 the United States lost an engineer of exceptional competence, the highway building profession an outstanding leader. The crusade he headed to construct a vast highway network for America carries on without him; yet his spiritual guidance will be felt as long as roads are built.

Born in Colorado, Tom MacDonald was raised and educated in his adopted State of Iowa. His interest in highway engineering was sparked in undergraduate days at Iowa State Colege where, for his senior thesis, he wrote a pioneering study on the highway needs of farmers in which he discussed the power required to pull a wagon over different types of road surfaces. In 1904, after receiving his engineering degree, the State legislature ordered a study of the highway situation with a view toward developing methods for future improvement. Iowa State College was given the task and assigned Mr. MacDonald to head the project. The research that went into this undertaking was the beginning of a devotion to highway improvement that was to guide the rest of his life.

When Iowa launched a road-improvement program in 1907, Mr. MacDonald accepted the position of State highway engineer. He served in that capacity until 1919 when his outstanding ability and background having been recognized by officials of the Federal Government, he was called to Washington to head the newly organized Bureau of Public Roads as the Nation's Federal Highway Commissioner. He held this post continuously for 34 years until his retirement, in 1953, at age 72. Not content to stand pat on his long and distinguished career in State and Federal service, Mr. MacDonald accepted direction of the highway research center at Texas A and M. College. He had made marked progress toward the solution of several current highway problems at the time of his death.

Numerous accomplishments highlighted his fine life in public service, for which he was duly honored. Engineering societies gave him honorary membership; his alma mater conferred upon him its highest graduate degree. He was decorated with the United States Medal of Merit and the French Legion of Honor; was invested by the King of Norway as Knight of the First Class of the Order of St. Olav; and was a member of the distinguished Masarykova Akademie of Czechoslovakia. These were appropriate expressions of respect for technical and engineering contributions. More important, however, was the universal esteem in which he was held as a man. He maintained in the highest degree a personal and professional integrity at all times, often under the most trying conditions. He lived simply, on a relatively small salary, yet he administered expenditure of more billions of public funds than any other American in peacetime history, fully supported in his office by seven successive Presidents.

In the opinion of this writer, Tom MacDonald accomplished three things for which he particularly merited the title "The Chief," as he was affectionately and respectfully known.

First, he foresaw with remarkable clarity the potentialities of highway development and made long-range plans to bring them to fruition.

Second, he appreciated fully that these plans could be carried out successfully only through cooperation with the States and in complete recognition of their sovereign rights. Thus he coordinated closely with such organizations as the American Association of State Highway Officials and the Highway Research Board, in whose committees various differences could be adjusted and the next step taken. He recognized, too, the contribution that industry could make and he invited its participation in the standardization and improvement of specifications for materials and equipment.

Third, he was an excellent administrator. Establishing broad, general policies, he delegated authority for local decisions to his field engineers. But even though the responsibility for management of the huge and far-flung operations of present-day Federal aid rests heavily on these fieldmen, it is still the States that propose and make plans, and the Federal Government that approves them, in this partnership plan conceived 40 years ago.

One incident may give a glimpse into MacDonald's great foresight. At a road show some years ago, long before the Interstate System had been adopted, the Bureau had a model exhibit showing the difference in traffic capacity between a beautiful, controlled-access superhighway and a road cluttered with stop lights and hotdogs stands. It was early in the morning when this writer went to view the display. He found Mr. MacDonald alone, watching the smooth operation on the one road and the confusion on the other. "Wouldn't it be wonderful," he mused, nodding toward the superhighway, "if we could have a countrywide system like that, with no cross traffic. It would soon pay for itself many times over."

And so it will, if we, who carry on, adhere firmly to the sound principles of highway design and operation supported so stanchly by the chief, Thomas H. MacDonald—father of the Nation's highway system.

The Algerian Crisis

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, July 11, 1957

Mr. KENNEDY. Mr. President, I continue to receive many communications and comments regarding my speech last week on the Algerian crisis. I ask unanimous consent to place in the Appendix of the RECORD, an article, Dissent in France, from the July 6 issue of the London Economist, whose reputation for accuracy and careful political evaluation is unmatched. I am asking for permission to insert also an article by Homert Bigart in last Sunday's New York Times. Mr. Bigart's excellent reporting, and of his other colleagues of the Times in North Africa, has furnished much of the evidence from which I drew my conclusions in my address.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the London Economist of July 6, 1957]

DISSENT IN FRANCE

When the figure of Marianne on the pediment of the Palais Bourbon was recently struck by lightning, the symbol of the Republic lost a hand in which she had apparently held a book of the law. The witticisms that followed have been greeted less lightheartedly than they would have been only a few months ago. A decreasing number of Frenchmen remains convinced that everything is for the best in the best of possible republics. True, the sun has been shining on Paris and its inhabitants are preparing to take to the road, leaving their city to the tourists. But the holiday mood lacks something. The latest Government crisis has reminded people of the dangerous state of the country's finances—and it has provoked second thoughts on the subject of Algeria.

Pacification in Algeria was fast becoming taboo in French political life, a topic on which it required courage to refuse to conform. But nearly 3 years after the outbreak of the revolt, the lack of positive results is so striking that dissenting voices cannot be drowned in official abuse. Three important books have questioned, from completely different angles of approach, the wisdom and efficacy of the existing policy. M. Servan-Schreiber, the able and youthful editor of the Mendesist l'Express, has shown in an eyewitness account how pacification has failed in its principal task and has widened, instead of bridging, the gap between the French and Moslem communities in Algeria. M. Raymond Aron, a professor and a senior leader-writer on the conservative Le Figaro, shows the falsehood of certain premises on which the official attitude is based. Finally, M. Philip, a former Socialist minister and a veteran European, attacks the policy followed in Algeria by M. Mollet and by the minister-resident in Algiers, M. Lacoste, as criminal and a betrayal of Socialist principles.[1]

Like M. Mendès-France, M. Servan-Schreiber did not consider that enough was being done to capture the imagination of the Algerian Moslem majority. It has been suggested that this critical attitude was the reason for his recall to the colors for service in Algeria. If the purpose was really to keep him quiet, the move had exactly the opposite effect. His recollections of 6 months as a lieutenant in Algeria—with names of persons and places intentionally altered—have an impact certainly much greater than anything he could have written had he stayed in Paris. The testimony is as nightmarish as the incident on which the book opens. A trigger-happy French soldier in a passing jeep shoots an innocent Arab and goes on his way. Local French settlers, on finding the corpse, conclude inevitably that this was the work of fellaghas. A few Arabs, still bold enough to work for a French firm, cross the village in a lorry at this stage and are being held as suspects. Frightened, they try to run away and are shot by a military convoy sent after them. Next day, in the officers' mess, a newcomer from France dares to question the guilt of the victims. His scruples are dismissed as suitable for a Paris drawing room: "The fellaghas are anybody, anywhere." Every Arab is a potential rebel.

[1] Lieutenant en Algerie. J. J. Servan-Schreiber. Julliard, 690 francs.

La Tragédie Algérienne. Raymond Aron. Plon (Tribune Libre), 300 francs.

Le Socialisme Trahi. André Philip. Plon (Tribune Libre), 600 francs.

It seems strange that M. Servan-Schreiber's book should have been treated as an attack on the army. If anything, he has a somewhat romatic conception of military virtue and the slight cult of the superman imparted to French letters by the novels of Malraux. Some of the protagonists—and not only those sharing the author's views—seem larger than life. But they are all almost helpless because the course of the struggle is determined by French settlers, whose apparent immediate interest is the preservation of the status quo; like the extremists on the other side, they oppose any compromise. Against this background of intrigue and impotence we are shown some of the author's real heroes, mostly former Gaullists preserving an ideal image of France, trying to establish contact with the Arabs. They do not give the impression of expecting their mission to succeed any more than does M. Servan-Schreiber, but they stick to it because, with the flower of French youth involved, something more than the future of Algeria is at stake—the spiritual and political fate of France.

M. Aron is less concerned with mood or emotion than with logic. Careful to dissociate himself from leftwing critics, he actually kept half of his brief manuscript in a drawer for a year, presumably from an anxiety not to embarrass the executives of official policy. He sees no easy way out of the Algerian tragedy; he looks only for the least evil. But in the course of his search he exposes in a devastating way some of the fictions which official repetition has elevated into dogmas. Thus he shows that Algeria is not part of France, and cannot be. Algerian nationality must be recognized as much for economic and demographic reasons as because of the insurrection. There are now 9 million Moslems in Algeria and 1 million Europeans. If present trends continue, in 1980 the number of Europeans will be much the same, but the Moslems will number about 18 million. The French can hardly hope to persuade the Moslems to control their birth rate; nor can they invest enough to keep up with the pressure of population.

The argument leads inexorably through the recognition of Algerian autonomy to the creation of a separate state and the ultimate admission of its independence. Yet France is now fighting in Algeria because it refuses to admit this violation of independence which it would have to accept even after victory. The question is really one of timing and conditions. Would it not be preferable, argues M. Aron, to accept the idea of future independence and to offer the most attractive possible settlement, while showing the determination not to surrender to force? Such a course would offer the chance of preserving French influence in Tunisia and Morocco; it might pave the way for a north African federation closely linked with France. It would involve great risks and sacrifices. Part of the French population might even have to be evacuated and resettled. M. Aron, while favoring such a gamble, does not insist upon it, against all other courses. But he does plead earnestly that the French Government should at least make its choice lucidly and not for all sorts of fictitious reasons. His plea is the more urgent because he thinks that France has very little time left to decide. In only a few months a decision will be thrust upon it by lassitude, economic difficulties, and the need for foreign aid.

Most of M. Aron's arguments are not new, but his little book is important for the directness with which he penetrates to the heart of the matter and for the personality of the author. "He cannot be accused of communism, progressism, or neutralism," is his comment on another writer; the description would fit M. Aron himself perfectly. His stand is, therefore, symptomatic. Many conservatives now share his view, at least in private; that the loss of sovereignty in Algeria need not spell the economic doom of France; on the contrary, French resources could be more usefully invested at home to make the French economy competitive.

The myth of Algeria as an integral and indispensable part of France is a conservative creation, but during the 16 months of the Mollet government its stanchest upholders have been Socialists. Other Socialists think differently. M. Philip has been a leader of opposition within the party; the severity of his judgment on the Mollet government's performance can be gathered from the title of his book, Socialism Betrayed. French economic policy under M. Mollet was, in his opinion, mistaken; the Port Said expedition was a sin; the Algerian policy was a crime. The crime first arose from its authors' ignorance of the real situation, but it was perpetuated through a campaign of intimidation and deception. Within the Socialist Party many critics were silenced through disciplinary action; outside it public opinion was lulled into a false sense of security by biased official reports. M. Philip's outspokenness has caused him to be debarred for 3 years from holding any party office. But the voice of dissent is rising again, and the Socialist critics of the Lacoste policy in Algeria last Sunday mustered one-third of the votes at the congress at Toulouse. With M. Mollet out of office, the Socialists, too, are getting ready for a change of line.

The official voices of the parties lag behind; the intellectual ferment, illustrated by these three books, is more representative of the changing mood. Repeated references to General de Gaulle as deus ex machina are another sign of the growing feeling that the Algerian conflict must not drag on forever. Pacification has proved a total failure. Though the instigator of the Suez expedition is now Prime Minister, and M. Lacoste is still in authority in Algiers, the attitude associated with their names is on the ebb. But, to use M. Aron's expression, Has France still time to make its own choice and make it lucidly? Is public opinion, for so long kept in blissful ignorance, ready for the shock? After years of fair-weather reports, the parliamentary lightning conductor has been corroded. Another storm may cost Marianne more than her hand.

[From the New York Times of July 7, 1957]

FRENCH VERSUS ALGERIANS: A DARKENING STRUGGLE—BOTH SIDES ARE SHOWING WEARINESS AS LOSSES OF THE REBELLION MOUNT

(By Homer Bigart)

ALGIERS, Algeria, July 6—More than 16 months have passed since Robert Lacoste took power as French Minister here, proclaiming that the Algerian nationalist revolution had reached its dying last quarter hour and that France would prevail.

Today, the Moslem rebellion continues with no sign of ceasing. Despite the arrival of heavy French reinforcements, the French admit that the security situation is certainly no better than a year ago. Urban terror has increased, while in the bled (countryside) nationalists bands have become more daring and aggressive.

Without question the French Army could hold Algeria. There are nearly half a million troops here plus another 100,000 armed gendarmerie, territorials and other security forces. In the face of this concentration the 16,000 armed rebels must remain scattered in small bands. No city or town of any consequence is in rebel hands. Whenever the rebels stage a major assembly, they invariably suffer a heavy defeat.

Probably the French could crush the armed rebellion quickly by resorting to uninhibited warfare. Indiscriminate bombing of regions heavily infested with rebels and their active sympathizers would seem more effective than the present tactic of waiting until the rebels strike.

Such a resort would appeal to the extremist elements who argue that, if the Moslem population of about 9 million were reduced by, say, 2 million, the balance could be dominated easily by the European population of 1,200,000.

Others protest that this is the obscene arithmetic of genocide. As it is, both the rebels and the French have committed acts that have appalled public opinion in France and throughout the civilized world.

Hopes for a peaceful solution are dim. The French and the National Liberation Front (F. L. N.) have got themselves into a psychological box. The French say they will never admit the concept of an independent Algeria. The rebels, equally adamant, swear they will never accept anything less than complete independence.

FRENCH ALLEGATION

French propaganda insists that the rebellion has the active support of less than 5 percent of the Moslem population; that the great majority are sick and tired of the bloodshed and would eagerly cooperate with M. Lacoste's reform program were they not terrorized by activists. This line fails to impress some observers who recall that most revolutions, including the American, French, and Bolshevik, were sparked by a handful of zealots, with the Adamses, Hancocks, Lenins, and Stalins imposing their will on passive, often apathetic masses.

Moreover, the weariness extends to the French settlers as well as the Moslems. Terror has forced the abandonment of thousands of French farms since the revolution began 32 months ago. Algeria is mainly agricultural, so the French administration has had to take drastic measures to arrest this trend.

Strategic farms have been fortified and garrisoned. Others have developed elaborate plans for self-defense.

Algeria has always been a deficit country, heavily subsidized by France. But until the last quarter of 1956 Algeria had enjoyed a favorable trade balance outside the franc zone. High-grade iron ore from the Ouenza mines was the chief currency earner.

However, Ouenza is in the heart of rebel country 10 miles from the Tunisian frontier. The town has a besieged look. Planes land at the airstrip only when the pilots see an armored car standing by. The rail outlet to the Mediterranean port of Bône was cut several times last year, and production dropped sharply.

TRADE DEFICIT

In trade outside the franc zone, Algeria showed a deficit of 7 billion francs ($20 million) for the first quarter of 1957. The April deficit was 4 billion francs. Heavy imports of American military equipment, notably helicopters and trucks, and of American oil-drilling equipment, were a chief cause of the imbalance.

Algeria's overall trade deficit for the first quarter of 1957 crested at 55 billion francs—more than $157 million. Traditionally Algeria has a wine and cereal economy which is exasperatingly competitive rather than complementary to that of France. But the French insist that the discovery last year of oil in the Sahara changed the whole picture and that tomorrow Algeria will be a land of wealth.

The importance of these oil discoveries is not yet established. It is much too early to say that Sahara's oil reservoirs rival those of the Middle East. But French oil companies already have invested an estimated $100 million in the venture and reports continue highly encouraging.

Visions of oil wealth have made Algeria suddenly desirable to many Frenchmen who formerly would not have minded leaving it to the natives.

It would take several years to build the proposed pipeline from the Hassi Messaoud oilfield across 500 miles of desert and moun-

tains to the nearest Algerian seacoast on the Gulf of Bougie. Two intervening mountain ranges, the Sahara Atlas and the Tell Atlas, are notorious rebel haunts.

Touring the oilfields this week Max Lejeune, Minister of the Sahara, was warned by army officers that a major operation would be required to cleanse these forested ranges of rebels.

RUSHING PRODUCTION

But M. Lacoste's administration wants production by next year. So, against the advice of some oilmen who regard the project as impractical, a small pipeline will be built from Hassi Messaoud to Touggourt, 125 miles north. From there oil would be carried in tank cars by rail to the port of Philippeville. This route could handle only 500,000 tons yearly.

A much more practical outlet would be a pipeline eastward to the Tunisian coast. But French relations with Tunisia are so bad that M. Lacoste refuses to consider negotiations with Premier Bourguiba.

Even if the oil boom collapses Frenchmen here insist Algeria cannot be abandoned. What would happen to the 1,200,000 Europeans, they ask. France does not want them and the majority have no desire to go to France.

Probably not more than 300,000 of the Europeans are of French origin. Many of these French families settled in Algeria generations ago and no longer have any ties in France. The biggest minority bloc consists of 400,000 Spaniards who have accepted French citizenship.

OTHER GROUPS

Also there are large colonies of Maltese, Italians, and Jews. These Jews, who have lived in Algeria for centuries, were granted French citizenship in 1870 when they renounced the Mosaic law and accepted French justice. There are about 45,000 Jews in Constantine and several thousand in Algiers. They are overwhelmingly pro-French, although a few have been arrested as rebels.

Any suggestion that this European minority could live at peace in an independent Moslem Algeria is dismissed by the French as fantasy.

Political contacts between European and Moslem have virtually ceased. Liberal Frenchmen who have tried to maintain social contacts with Moslem friends have been hunted and arrested by French security forces.

Anti-American feeling among French ultras (extremists) deepened last week as a result of the speech by Senator JOHN F. KENNEDY, Democrat of Massachusetts, demanding American intervention in Algerian issues. On the evening of July 4 a small bomb exploded against the entrance of the American consulate. There was little damage and no one was injured.

State Control of Elections—The Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial from the July 9, 1957, issue of the Charleston, S. C., News and Courier. The editorial is entitled "People Should Accept No Compromise on States' Control of Elections."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEOPLE SHOULD ACCEPT NO COMPROMISE ON STATES' CONTROL OF ELECTIONS

Talk about compromise on civil rights force bills before Congress is in the news from Washington. What goes on behind the scenes the public seldom knows at the time, and doesn't always find out later. We speak with no knowledge other than what we read in press dispatches.

The comment of Senator MUNDT, Republican, of South Dakota, who has predicted a compromise in time to let the Senate adjourn by mid-August, is especially interesting. He said the compromise would be one "for which the South can't vote, but one with which the South can live." The terms of the compromise would be to guarantee the right of Negro and other minority groups to vote without harassment.

Qualified Negroes, like qualified white people, already have a right to vote. Race agitators from time to time dig up cases of alleged intimidation of Negro voters in the South. No doubt there are voting irregularities in the South, as in other regions of the country. In the areas that the News and Courier knows about, Negroes register and vote without hindrance. If there is widespread violation of anybody's civil rights we are not aware of it. The big question is not so much whether and where violations may occur, but who has authority to enforce guaranties of the rights.

Heretofore in our country the States have set up and supervised elections within their borders. We strongly believe that the future of the American Republic depends on saving a balance of power between State and Federal authorities. Control of the ballot and voting procedures is essential to that balance.

The force bill now before Congress, generally known as the civil-rights bill, would set up new Federal machinery, armed with power to imprison without trial by jury, to manage racial aspects of elections. It would be a short step to amend this law to put other, perhaps all, election machinery into Federal hands. Thus some of the safeguards—precious few of them remaining—would disappear.

Compromise on the force bill is a compromise with freedom. Today the Southern States may seem to be the target. But the danger exists for all 48 States.

Perhaps the danger cannot be avoided in the present mood of our Government. Senator MUNDT, in the past a stanch supporter of States rights, has forecast a compromise "with which the South can live," even though it cannot vote for the compromise.

The South could not live with reconstruction after the Civil War. Some of the proposals today seem designed to revive the spirit of Reconstruction. The News and Courier does not believe the South can live with that spirit now any better than it could live with it 80 years ago.

For that reason we reject any compromise with basic rights and basic freedom.

If the South loses to superior power, either in the form of votes in Congress or any other form of force, let it not be said that the South gave its consent. Someday, if it is not then too late, the rest of the country may come to its senses. The South may be able to hasten that day by resisting wreckers of the Republic. If the people of the United States realized what was being done to their country, they would not offer up the South as a sacrifice, nor compromise with liberty.

The South might be able to live with compromise, but not at the same time with pride and self-respect.

Annie Applegate Kruse, Pioneer Historian and Leader in Southwestern Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. NEUBERGER. Mr. President, one of the truly great pioneers of my State is Annie Applegate Kruse, of Yoncalla, Oreg. Mrs. Kruse has been a leader in her community for many years. In addition to raising a large and respected family, she is a distinguished historian and the descendant of the heroic pioneers who first blazed the famous Applegate Trail into southwestern Oregon. Mrs. Kruse is 82 years of age, but she is young in heart. Her views are liberal, enlightened and tolerant. My wife, Maurine, and I always feel that we have refreshed ourselves at the fountain of knowledge and wisdom when we stop with Mrs. Kruse and her friends, while we are in the beautiful countryside of Douglas County.

I believe many members of the Senate will be interested in a splendid tribute to Mrs. Annie Applegate Kruse which appeared in the July 1957 issue of the Northwest Ruralite. For that reason I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANNE APPLEGATE KRUSE: LADY WITH A GIFT OF GAB

Anne Applegate Kruse lives at Yoncalla, in the lush, green Yoncalla Valley of northern Douglas County.

She will be 82 in November.

She bounces along the streets of Yoncalla like she was a half-century younger.

Little children who pass her on the street call her "Annie." So does most everyone else.

She reads the Congressional Quarterly from cover to cover.

She makes all of her own clothes.

She is outspoken on political questions and will debate most any political, social, or economic question under the sun.

She'd like to walk barefoot on the grass—if she just had the opportunity.

She plays the Beer Barrel Polka on the organ.

To each of the young men-about town, she is "my girl."

She dances the polka each summer at the Yoncalla rodeo dance.

In short, Anne Applegate Kruse is more than just a citizen of Yoncalla and a descendant of the pioneer Applegate brothers who trekked westward to Oregon in 1843.

Anne Applegate Kruse is an institution.

A friend once said of her, "'Annie' will argue about anything. All a fellow has to do is knock on her door and tell her he wants to argue. She'll say, 'Well, what do you want to argue about and what side do you want to take? And when the dust has settled an hour or two later, 'Annie' will usually be on top."

She says of herself, "Well, I was born with a gift of gab, all right."

"My people walked—literally walked—from the Atlantic to the Pacific. That's 3,000 miles. It took them 300 years to do it.

They came to Oregon in 1843 to save it for the union. Russia had claimed it, England had claimed it—why, if it hadn't been for Jesse Applegate and his brothers, the Russian flag might be flying over our schoolhouse right now."

That's "Annie" talking.

"• • • And you think I want to see these eastern monopolies come here and steal the land that belongs to us? Never!"

She's talking about Hells Canyon. This happens to be her hobby. She is perhaps the most avid and explosive public power proponent Yoncalla has ever seen.

"I could visualize the Columbia River fully developed—20,000 men put to work. And for each man employed, they could put two more to work in factories."

Recently, when she was in Los Angeles to appear on the television program "This Is Your Life" with Gladys Workman, she engaged in a conversation with two California men.

"As soon as they found out I was from Oregon they started to work on Wayne Morse and public power. So I told them that their old oil wells would run dry some day. But not our Columbia River. Why, we've got power enough in the Columbia to run all of their factories, businesses and homes and not even miss it.

"They said I ought to speak to the Los Angeles Chamber of Commerce. I said I'd love to. One of them said he could probably arrange a speaking engagement at the Lions Club. I said, nothing doing. I'll settle for nothing less than the Los Angeles Chamber of Commerce."

Anne Kruse talks politics to just about anyone who comes along.

"The other day a young man came here and said for a small fee he'd fix my roof. I asked him if he was for Wayne Morse and public power. We talked about it for awhile and then he got mad and the whole deal was off. Of course, my roof doesn't need fixing anyway."

Of course, "Annie" discusses many things besides public power.

"I'm opposed to daylight-saving time," she says firmly. "You don't gain a thing by it. God put the sun in the heavens the way He wanted it, and when it's right straight up it's time to rest and eat lunch. This business of changing time is the most ridiculous thing I ever heard of. You can change your working hours—that's O. K.—but not the time."

Then someone mentioned education.

"What we need in this country is the return of the CCC, because we have lots of children between the ages of 14 and 19 who have nothing to do. Slow children need help, and the CCC would help them. Among these slow children are many who could become great scientists. Look at Mark Twain—he was the dunce of his school. Thomas Edison—they sent him home because he couldn't learn anything. My observation has been that those who go through school with straight A's are not necessarily those who do well in later life. The trouble with the schools is they herd the kids into the schoolroom and teach them all the same thing. So after 12 years they can't read, count, or spell—they don't even know whether Columbus discovered America or the North Pole."

Thus far you may have gained the impression that Mrs. Kruse's main talents lie in talking. She has a good many more. For example, she's a good cook, having once cooked for 20 workingmen (her specialty is strawberry pie, and she also makes her own bread). But it's true that she's seldom at a loss for words when it comes to politics.

"I'm trying to get people to see the light on this public power question," she says, "and I'm talking all I can."

Freedom of Debate in the Senate

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 11, 1957

Mr. TALMADGE. Mr. President, on Tuesday, July 2, the Special Subcommittee on Senate Rule XXII of the Senate Committee on Rules and Administration was privileged to hear testimony from Hon. Eberhard P. Deutsch, of New Orleans.

Mr. Deutsch, a distinguished member of the Louisiana bar, and one of his State's outstanding leaders, presented a penetrating legal exposition of the question of freedom of debate in the United States Senate and its relation to our concept of constitutional government.

I ask unanimous consent, Mr. President, that the text of Mr. Deutsch's testimony be printed in the Appendix of the RECORD in order that all Members of the Senate may have the privilege of reading his views.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY EBERHARD P. DEUTSCH OF THE NEW ORLEANS BAR IN OPPOSITION TO PROPOSED AMENDMENTS TO SENATE RULE XXII RELATING TO LIMITATION OF DEBATE

Mr. Chairman, I am Eberhard P. Deutsch, of New Orleans. I was born in Cincinnati, Ohio, on October 31, 1897.

I completed my studies in law at the Tulane University of Louisiana at New Orleans in 1925, since which time I have been engaged in active practice in that city.

I served for 2½ years in the First World War and for some 4½ years in the second, following the end of which I served further as principal legal adviser to Gen. Mark W. Clark in the military administration of Austria, and as member and chairman of the Allied military legal directorate governing that country.

I am a member of the American Bar Association and of its standing committee on peace and law through United Nations. I am also a member of the Louisiana State and New Orleans Bar Association; of the Association of the Bar of the City of New York; a director of the American Judicature Society; a member of the Maritime Law Association, of the American Society of International Law, of the International Law Association, of the Selden Society and of other organizations in the same and related fields.

I was special assistant to the Attorney General of the United States in the appeal of the vast Texas City disaster litigation, believed to have been the largest litigation in the history of the world.

My practice has spread over large areas of constitutional law. I was counsel for Louisiana newspapers in the case in 1936, in which the Supreme Court of the United States held unanimously that a tax on advertising constituted an infringement of the freedom of the press.

I have acted as counsel for the American Civil Liberties Union in a number of cases involving impairment of civil rights.

Articles which I have written on constitutional law have appeared in leading law journals throughout the country, and have been cited by the Supreme Court of the United States and by other courts.

I am firmly convinced that the time-honored principle of free and unlimited debate in the United States Senate is a cardinal bastion among those set up for protection of our constitutional liberties.

In accord with this conviction, I oppose any modification of Senate rule XXII which would result in either an immediate or eventual cloture provision.

Nearly 2,500 years ago, Pericles, the great Athenian statesman, said that "acts are foredoomed to failure when undertaken undiscussed."

It would seem to be no less a travesty on wisdom in the 20th century of the Christian era, to undertake to effect a self-imposed restraint on discussion in the Senate of the United States, concededly the ablest legislative body in the history of the world.

Inroads of cloture have already encroached on the Senate's original rule of unlimited debate; a principle which had steadfastly withstood the influence of the hour rule adopted by the House of Representatives in 1841.

First in 1917, and later in 1949, Senate rule XXII was amended by provisions from which the Senate's present cloture clause evolved. Because, however, it is so extremely difficult, as a practical matter, to bring this clause into play, Members of the Senate continue to have a right of essentially unlimited debate.

The case for unlimited debate in the Senate has its roots firmly planted in the tenets of our American philosophy of government. Complete freedom of legislative debate is actually one of the fundamental, inalienable rights secured by the Constitution.

It must be remembered that freedom of debate in the Senate is not a right pertaining to the individual Members of that body as such.

It is the right of "we, the people," to be assured that our representatives shall be free to discuss for us, the merits and demerits of measures pending or proposed, without regard to advocacy or opposition by majority or minority, without restriction, and without accountability except to the Chamber as a whole.

The exercise of this right serves to keep an intelligent electorate informed as to its own public affairs, and is thus allied to, and protects, our own unrestricted kindred rights of freedom of political thought and expression.

That this guardian of our other freedoms has long held its preeminent position among our fundamental liberties is manifest from the pages of our history. And, in the words of Mr. Justice Holmes, "a page of history is worth a volume of logic."

Even prior to adoption of our national Constitution, the bill of rights (article XII) of the constitution of Massachusetts provided: "The freedom of deliberation, speech, and debate, in either house of the legislature, is so essential to the rights of the people, that it cannot be the foundation of any accusation or prosecution, action or complaint, in any other court or place whatsoever."

The Articles of Confederation provided (in article V, clause 5) that "freedom of speech and debate in Congress shall not be impeached or questioned in any court or place out of Congress"; and this concept was carried over into clause 1 of section 6 of the first article of the Constitution of the United States.

It is true that freedom from accountability for what is said in parliamentary debate does not in terms entail a right to unlimited debate; but freedom of debate involves an absence of restriction on debate, a concept which has withstood assault throughout the history of the Senate of the United States.

In 1841, 4 days after the hour rule of cloture had been introduced in the House, Henry Clay sought to introduce it in the Senate. In support of his measure, he said: "Let our contests be contests of intellectuality, and not of physical force in seeing who could sit out the other or consume the most time in useless debate."

The Senate, however, refused to accede to Clay's appeal. The consensus of opinion in this body at that time, was expressed by Senator Rufus King of Alabama, as follows (as summarized by Thomas Benton in 30 Years' View, Appleton, New York, 1854–56, vol. II, p. 253):

"Mr. King was truly sorry to see the honorable Senator so far forgetting what is due to the Senate, as to talk of coercing it by any possible abridgment of its free action. The freedom of debate has never yet been abridged in that body since the foundation of this Government. Was it fit or becoming, after 50 years of unrestrained liberty, to threaten it with a gag law? He could tell the Senator that, peaceable a man as he [Mr. King] was, whenever it was attempted to violate that sanctuary, he, for one, could resist that attempt even unto death."

Why have Americans, through the course of our history, come to feel so strongly about preserving free and unfettered debate in the upper chamber of Congress? What primary concept has motivated their adherence to this principle which so plainly reveals the essential vitality to our Government which this freedom furnishes?

Succinctly stated, the rationale of the principle lies in the oft-repeated maxim that our American tenet of majority rule is qualified by the equally basic tenet that minorities have inviolable rights.

In a parliamentary system whose government is represented by its cabinet, the will of the majority is the supreme law of the land, unfettered by express constitutional restraints.

But the glory of such a constitutional system as our own, lies in its enforceable guaranties of protection of minority rights and liberties.

It will be recalled that the declaration of American independence was grounded on the concept that "governments are instituted among men" to secure their inalienable rights and liberties, and "that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it."

When government threatens to destroy the rights of a minority, freedom of unlimited debate in the Nation's highest legislative assembly is the surest and safest method by which to avoid all-too-frequently futile appeals to the judiciary, or even the ever-present danger of appeals to force in revolution against tyranny.

On the occasion of his initial inaugural, Abraham Lincoln proclaimed: "If, by the mere force of numbers, a majority should deprive a minority of any clearly written constitutional right, it might, in a moral point of view, justify revolution—certainly would if such a right were a vital one. * * * A majority held in restraint by constitutional checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people."

In his first inaugural address, Thomas Jefferson said: "All, too, will bear in mind this sacred principle, that though the will of the majority is in all cases to prevail, that will, to be rightful, must be reasonable; that the minority posses their equal rights, which equal law must protect, and to violate would be oppression."

The facet of this principle now under discussion was expressed with great clarity and force by Franklin L. Burdette in Filibustering in the Senate (Princeton, 1940):

"The existence of filibustering in America today is evidence of a compromise between the authority of the many and the rights of the few. The principle of leadership is tinctured with restraints. * * * To the politician interested in practical use of the doctrine of inalienable rights, obstruction is a recourse of more than passing value. It is an effective if incalculable defense against oppression and overbearing authority. It may lie unused for years and then, in a moment of emergency, serve to good purpose in the cause of freedom. It may defeat the hand of greed or the ambition of irresponsible officials without resort to more violent means. * * * It is not an unfamiliar cry that government is constituted to protect minorities against majorities. Indeed, most Americans would uphold the argument that there are rights of individuals which a majority must respect. Natural rights, inalienable and inherent, are still significant in American thought. The Constitution contains great guaranties of minority freedom from oppression. Many defenders of the filibuster argue that when a great constitutional guaranty is being trampled by an unheeding majority, the minority should obstruct with all the vigor at its command. * * * It is contended that if a minority cannot be protected by parliamentary means, the forces restrained through majority pressure may well overturn the majority at the next election, or may burst out even in violence or revolution. Filibusters are almost always supported by minority opinion bearing at least some strength in the Nation, and if the issue is great enough that minority may never yield short of physical conflict. Filibustering is part of the democratic system to force compromise, the conserving possibility in great controversy."

The term "filibustering," as involving employment of, or capitalization on, this concept of protecting minority rights by freedom of debate in the Senate, has, at times, actually been drawn into some disrepute.

No doubt there have been abuses of this right in the history of the Senate; but abuses of a substantive right have never fairly been felt to detract from the virtue of the right itself.

When John Marshall was a member of the famed XYZ mission to France, he penned a brilliant letter to Talleyrand, in which the great constitutionalist said that the fact that liberty is sometimes carried to excess in America, is perhaps "an evil inseparable from the good with which it is allied; perhaps it is a shoot which cannot be stripped from the stalk without wounding vitally the plant from which it is torn."

A filibuster is entirely defensible on the ground that the Member of the Senate who is speaking believes that the action which the majority threatens to take will result in erosion of minority rights.

Thus, in 1922, Senator Lee S. Overman of North Carolina summed up the unyielding position of the Democratic minority in a Senate filibuster, as follows:

"When any considerable number of Senators are satisfied and conscientiously believe that any proposed legislation is unconstitutional, that it involves the integrity of the States and the liberties of the people, and if passed would undermine the very foundation stones of this Republic, I think they are fully justified in filibustering to prevent, if possible, a militant majority from roughshodding over a strong minority."

Such justification has not infrequently been vindicated. In his able work, The American Senate (Knopf, New York, 1926), Lindsay Rogers points out that, for instance, "the Force bill was passed by a partisan majority in the House of Representatives. It was defeated by a Senate filibuster. That it was the better course for the measure to fail, will not now, I think, be questioned; the will of a majority of the Senate may have been thwarted, but the minority was right."

Democratic government is often called government by discussion; and, as Ewbank and Auer point out in Discussion and Debate: Tools of Democracy (Appleton, New York, 1951): "Those who do not like this concept, who demand 'action, not talk,' forget that purposeful talk necessarily precedes intelligent action. * * * Part of America's national heritage has been the principle of majority rule by persuasion rather than by force."

Curtailment of debate may perhaps be a physical necessity, as a practical matter, in the House of Representatives, because of the unwieldy size of that body. It is therefore all the more imperative that there be unrestricted freedom of debate in the Senate, which has become the only forum in our National Government in which unhurried consideration and, if necessary, long discussion, can be employed to perfect good laws, or prevent the passage of bad ones.

Burdette submits that the role of the Senate in revising bills passed in the House is one of great importance; and that Senators are entrusted, in that regard, with responsibility for thorough analysis of legislation, and value the privilege and utility of unlimited speech to enable the presentation of every possible view.

The Senate is of course equal to this great task; and when it assumes that responsibility, achieves the senatorial stature which John Adams envisaged when he described it as "a select council of statesmen, true to their duties, not ambitious of logomachy, and not making their honorable station subsidiary to other objects."

Opposition to unlimited debate in the Senate of the United States is apparently engendered, in some measure, by advocacy of expansion of executive, at the expense of legislative, authority in government.

Rogers strenuously contends that in our constitutional form of government, with its ingenious system of checks and balances, the Executive needs an antagonist in the forum of public debate, and that without the Senate he would have none. He states:

"As the much-vaunted separation of powers now exists, unrestricted debate in the Senate is the only check upon presidential and party autocracy. The devices that the framers of the Constitution so meticulously set up would be ineffective without the safeguard of senatorial minority action. It is perfectly correct to say that in all foreign legislative systems debate can be restricted, but it is not proper to argue, by analogy, that there should therefore be restrictions in the Senate, for that body is sui generis. Foreign practice reads no lesson to the United States, for ours is practically the only system which separates the powers of government, divides and confuses responsibility, and makes things move by the calendar rather than by popular will. Had we executive leadership of, or control by, the legislature, the problem would be quite different. As things are, the justification of unrestricted debate in the Senate is the nature of our governmental system."

That persuasive argument by minorities may lead to the attainment of justice through conversion of majority views, is a common phenomenon of our daily lives. It can find no more forceful illustration than in persuasion against cloture itself.

Thus, Senator Hoar, of Massachusetts, conceded frankly over half a century ago: "There was a time in my legislative career when I believed that the absence of a cloture rule in the Senate was criminal neglect, and that we should adopt a system of rules by which business could be conducted; but the logic of my long service has now convinced me that I was wrong in that contention. There is a virtue in unlimited debate,

the philosophy of which cannot be detected upon a surface consideration."

I accordingly respectfully urge this subcommittee to report unfavorably on all proposed amendments to Senate rule XXII which seek to infringe on free and unlimited debate—a basic freedom which serves as one of the important tenets of our constitutional democracy.

Thank you.

Hells Canyon

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. HOFFMAN. Mr. Speaker, it is quite true that using the dollars of the taxpayers in other sections of the country to build a high dam in Hells Canyon will help to develop that area.

But why should we of Michigan pay some $27 million of the estimated cost of this project to create competition with our own industry?

From the pen of Mark P. Haines, of the Sturgis Journal of June 27, comes the following editorial on this situation:

MICHIGAN'S STAKE IN HELLS CANYON

The rollcall vote of the United States Senate on the Hells Canyon project is important enough that it should be made a matter of future reference by all Michigan voters. Of special interest to citizens of this State is the fact that Senator MCNAMARA voted for the big Federal dam and Senator POTTER voted against. Both Senator CAPEHART and Senator JENNER, of Indiana were recorded as absent and not voting, but it was announced that both would have voted "nay" if they had been present.

It will be noted, too, that the two Senators from Idaho, where the proposed dam will be located, on the Snake River, split on the issue. Senator DWORSHAK, Republican, voted against the project and Senator CHURCH, Democrat, voted for it. The two Oregon Senators, MORSE and NEUBERGER, have been ardent supporters of this adventure in socialism and voted "yea."

The significance of the voting to Michigan taxpayers is the fact that, if constructed, it will cost them nearly $27 million which represents this State's share of the $465 million estimated total cost of the project, all to be financed by Federal taxes.

Michigan's share of the cost of this monumental Federal folly, which will never yield any benefits to its citizens, is $2 million more than the $25 million which the State legislature hopes to raise from a special tax on liquor and cigarettes for school needs.

It ought not to be necessary to point the moral.

Following is the rollcall vote on the Hells Canyon Dam. We suggest you cut it out and put it where you will see it when you again go to the polls to vote for a Michigan Senator.

Yeas, 45: Aiken, Anderson, Bible, Carroll, Chavez, Church, Clark, Cooper, Douglas, Eastland, Ellender, Ervin, Fulbright, Gore, Green, Hayden, Hennings, Hill, Humphrey, Jackson, Johnston of South Carolina, Kefauver, Kennedy, Kerr, Langer, Long, Magnuson, Mansfield, McNamara, Morse, McClellan, Murray, Neuberger, O'Mahoney, Pastore, Russell, Scott, Smathers, Smith of Maine, Sparkman, Stennis, Symington, Talmade, Wiley, and Yarborough.

Nays, 38: Allott, Barrett, Beall, Bennett, Bricker, Bush, Butler, Byrd, Carlson, Case of New Jersey, Case of South Dakota, Cotton, Curtis, Dirksen, Dworshak, Flanders, Frear, Goldwater, Hickenlooper, Hruska, Ives, Javits, Kuchel, Lausche, Malone, Martin of Iowa, Martin of Pennsylvania, Morton, Mundt, Payne, Potter, Purtell, Robertson, Saltonstall, Schoeppel, Thurmond, Watkins, and Williams.

Not voting, 12: Bridges, Capehart, Holland, Jenner, Johnson of Texas, Knowland, Monroney, Neely, Revercomb, Smith of New Jersey, Thye, and Young.

The result was announced, yeas 45, nays 38.

Build To Win

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a very interesting editorial which appeared in the Stars and Stripes, the voice of the veterans of the United States, on July 11, 1957.

BUILD TO WIN

At the peak of their glory in 1917–18 there were approximately 4,800,000 men in uniform—men who saw service in World War I. According to present figures there are now less than 3 million veterans of World War I still alive. It would seem safe to assume that some 2,000,000 of the men who served in the Army, Navy, and the Marine Corps between April 6, 1917, and November 11, 1918, have gone to their final reward.

Without criticism of the older veterans' organizations which have striven manfully in behalf of their comrades of the first World War, a feeling had developed that what was needed was an organization which would devote itself primarily to the interests of the men of that conflict.

Thus, some 8 years ago the Veterans of World War I of the United States was born. It had rough sledding for a couple of years but finally emerged as a real entity in the field of veterans and little by little it has progressed to the point where it is growing in membership and influence every day.

As a feature of the program of this new group it proposed that a pension of $100 a month be granted to every honorably discharged veteran of World War I 60 years of age with the required days of service.

This was an ambitious idea and one which even the leaders of the new organization realized could not be achieved without time and struggle.

Another thing they sought was a charter from the Congress of the United States recognizing this new group as it had recognized the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, and other important veteran organizations.

This second desire was one which could have been satisfied without too much deliberation by the Congress. It asked only that the new outfit be placed on a par with other veteran groups and that it be recognized by the Veterans' Administration as a properly instituted body of men who could represent their fellow veterans and the dependents of those veterans before various claims bodies of the Veterans' Administration.

The cost of such recognition would have to be borne by the Veterans of World War I of the United States of America in the form of service officers and, except for some possible space allotted to them in various VA offices, the cost to the Government would be nil.

At this time the two bills sponsored by the Veterans of World War I, as described above, are before Congress. What their chances are for passage are unpredictable for a number of reasons. The present administration, unwilling to spend more money than it can help, and particularly where veterans are concerned, seems definitely opposed to the pension bill.

Members of Congress also are not particularly bothered about what, to them, seems only a small group of veterans. Strange as it may seem, the men who make our laws are quite realistic when it comes to numbers. Show them a voting strength which carries weight and they are impressed.

Arguments in favor of the World War I pension bill have been presented with every angle of the issue discussed and need not be discussed here.

That is where the veterans of World War I of the United States of America enter into the picture. As we have pointed out, there are approximately 2,700,000 veterans of World War I still alive. Despite great activity in the past 2 years the new organization has just begun to scratch the surface of the vast group which remains to be shown that membership in the World War I vets is worth while and that every living veteran of the First World War should join and every eligible woman should join the auxiliary in order to put forth a show of strength which will impress our legislators.

Of course, there are some people who are not joiners. Little can be done with them. There are others, sufficiently well off that they themselves, having no need of a pension, cannot understand why others should seek it. These are the self-satisfied and they may be discounted as possible members, though if they were to lose their present possessions they would be among the first to clamor for relief. They can be passed up for a time despite their shortsightedness and, despite above all, their failure to realize that consideration for others of their kind in need of aid should be foremost in their Christian minds.

Skipping these groups there still remains a vast potential to be reached and persuaded that here is one organization devoted to but one thing, the welfare of their fellow comrades of World War I and their dependents.

Present members of the organization, highly placed or just those who attend meetings because they believe in the ideals sought to be attained, should go out into the highways and byways, explaining their plans, to both the veterans and their women folk, until those still outside the fold will realize that here is a group which works for me.

This can be done if all concerned are interested enough to preach the gospel of brotherhood which should be in the hearts of all men who fought together in our Nation's first great war.

Surely when the men who have not joined understand the true meaning of what the veterans of World War I seek to achieve there will be no hesitation in signing them up to the local barracks and enlisting their women into the local auxiliary.

Now all this requires not only time and money but a true devotion to the cause they maintain. The money must come from dues-paying members and the more members enrolled the more money can be expended presenting the story of the World War I veterans in the places where its consideration means something of value to the veterans concerned.

As for devotion, while all members should be devoted to the principles at stake, the greatest devotion should come from the leaders. Here are the men who, because of prestige, can influence many—potential members of the organization and other citizens who are not veterans but are grateful for the work the veterans have done.

Here may be the crux of the situation. Let these leaders not strive for personal power, but rather for the greater good of the whole number. Such action will serve to win confidence of many individuals who are always doubtful of any new organization.

Let every move made by the individual member or the leaders of the organization be such that it will be evident that only the betterment of all is uppermost and with that one point proven we feel sure that the baby veteran organization will grow and expand and that it, too, will be a voice in the land, a voice to be listened to, and heeded.

Why Steel Prices Went Up

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. VURSELL. Mr. Speaker, since United States Steel recently announced an increase of approximately $6 per ton, and since steel is one of the basic products of our industrial economy, I think it is important that the Members of Congress, who have such a great responsibility to the people of the Nation, know the basic facts, or reasons, for such increase in the price of steel. I think it is well to review the facts which briefly are as follows:

On August 3, 1956, a year ago, after the steel companies had suffered a loss of millions of dollars as a result of a 34-day strike, the United States Steel Corp. signed a 3-year labor agreement contract effective July 1, 1956, which provided a total increase each year of about 24 cents per hour annually, including a cost of living adjustment of about four cents an hour plus other benefits.

Under that agreement, which became affective July 1, 1956, the steel company to meet the increase in labor costs for the first year increased its prices about 7 6/10 percent.

At the beginning of this, the second year of the 3-year contract with the United Steel Workers, the steel company gave the employees their second increase in wages and employee benefits, which will amount to about 21 cents per year from July 1, 1957, to July 1, 1958, which includes a cost of living adjustment of 4 cents per hour and various other benefits.

Mr. Hood, president of United States Steel, in announcing the signing of the second year contract, and in explaining its provisions, said:

The new pay adjustments will bring the corporation's average hourly employment cost for wage employees engaged in steel production to about $3.52 per hour, a record high.

Mr. Hood called attention to the inflationary pressures on all other costs that have been accompanying wage increases in recent years. He made the statement that from 1940 through 1956 United States Steel's employment costs per employee-hour has risen 250 percent, which purchased goods and services, taxes, and other costs had risen 315 percent, or even more substantially. Thus United States Steel's total costs per employee-hour rose 284 percent over this period.

In contrast, the price of finished steel mill products, as measured by the Bureau of Labor Statistics, increased only 138 percent. The difference between this increase in total costs and the smaller increase in prices has been absorbed by United States Steel over the years through greater efficiency of operation, intensive cost reduction, the expenditure of billions of dollars on modernization and improvement of facilities, and partly by a decline in the profit rate.

In emerging from the depression, United States Steel made a profit in 1940 of 9½ cents on each dollar of sales, a figure exceeded in numerous predepression years, but never equaled for any year since 1940, Mr. Hood pointed out. The nearest approach to that was in 1955, when the corporation earned 9 cents on each dollar of sales. Last year it earned 8.2 cents on each dollar of sales.

The pay increases that are taking effect in United States Steel under the terms of the 1956 labor contract, which terminates June 30, 1959, and which provides for further increases in 1958, are these:

1. A general wage increase of 7 cents per hour for all hourly rated employees, plus an increase of two-tenths of 1 cent in the present differential of 6.3 cents per hour between each of United States Steel's 32 job classifications for its production and maintenance employees.

OTHER BENEFITS

2. A cost-of-living increase of 4 cents per hour for all hourly rated employees. This brings to 7 cents an hour the total cost-of-living adjustments occurring under the 3-year labor agreement in the first year of its operation. The adjustments are governed by the consumer price index of the Bureau of Labor Statistics.

3. An increase to one and one-fifth times the regular rate of pay, from one and one-tenth times the regular rate, as the compensation for nonovertime work performed on Sunday.

4. An increase to double time and one-tenth, from double time, as the compensation for work performed on any of 7 specified holidays.

In addition to these increases in United States Steel's employment costs, other increases will result from similar and simultaneous adjustments in the pay of salaried employees who are covered by labor agreements signed last summer, as well as from appropriate increases to other salaried employees, Mr. Hood reported.

As of May 20, 1957, United States Steel Corp. for the first quarter announced a quarterly dividend of $1.75 per share on the preferred stock, and 75 cents per share on the common stock. The common stock is listed at a value of approximately $69 a share on today's market.

The following table shows earnings and some other costs of operating the steel business:

FOR THE YEAR 1956

Products and services sold	$4,228,900,000
Tax payments	427,000,000
Total net income after taxes	348,100,000
Employment labor costs	1,681,000,000
Dividends paid	170,100,000
Other employee benefits	*225,352,981

*The $225,352,981 in employee benefits which already exceeds dividends paid by over $55,000,000 does not include fringed costs paid to employees, which amount to an additional 50 to 60 percent, or about $120,000,000.

And may I say that under our tax system nearly all of these dividends the stockholders receive are subject to the regular income tax which greatly reduces the net amount.

A close look at the table above indicates that taxes paid by United States Steel are $78,900,000 more than the net earnings of $348,100,000 after taxes. Net earnings after taxes for 1956 were 8.2 percent.

Operation Alert, 1957

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. WILEY. Mr. President, on July 12, 13, and 14, there will occur throughout the United States the fourth annual national test exercise for civil defense.

I was pleased to note in the newspapers of my State encouraging word concerning the participation by civil defense leaders of Wisconsin in this exercise, as in all previous such exercises.

This year, the test exercise occurs at a time of widespread discouragement among many civil defense leaders.

The revolutionary development of the hydrogen bomb has required a recasting of many of our views concerning civil defense.

Action on civil defense appropriations has been disappointing.

Yet, there is a job to be done. It must be, and will be, done.

Each day's newspaper accounts concerning disaster in various parts of our country reminds us how civil defense grassroots leaders have proven invaluable in relieving havoc caused by nature. So, too, in the event of enemy attack, they could do an invaluable job in relieving the toll which would be taken by nuclear warfare.

We of Wisconsin take our civil defense responsibilities seriously. I note, for example, in a release from the State office of civil defense, through its director, Maj. Gen. Ralph J. Olson, that, not one, but two major survival studies, in which Wisconsin is particularly interested, are now underway, with Federal assistance. One is a Minnesota-Wisconsin study, which has been underway for approximately a year. It concerns the

movement of people from the Minneapolis-St. Paul area, and the projected impact on my State. Thirteen northwestern counties in Wisconsin are being included in the planning relating to the evacuation of the twin cities. They have been designated as the northwest disaster region.

A second study has just gotten underway. This Milwaukee-Wisconsin study is intended to provide an operational plan for civil defense in my State.

This summer, a third study—one concerning the Duluth-Superior area—is planned.

Meanwhile, I note with pleasure the action of the State civil defense council in seeking to strengthen efforts against natural disasters, as well as enemy-caused disasters.

I commend the civil defense leaders and workers throughout my State.

As an indication of their activities, I send to the desk the text of an article, from Monday's issue of the Wisconsin State Journal, describing participation in the Dane County area and elsewhere in my State in Operational Alert, 1957.. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REALISTIC CD EVENTS SET AS PART OF NATIONAL TEST

Two realistic civil defense events will take place here this week.

One will be a 3-minute air-raid alert Friday morning. The other will be a civil defense training demonstration at Franklin Field Saturday noon.

The alert will be set off at 11 a. m., when all of Madison's air-raid sirens will be sounded to help signal the start of a nationwide civil defense operation.

OPERATION ALERT

The steady wailing of the sirens will serve also as a signal for city officials to gather at the city-county building to be briefed on the tactical exercise, called Operation Alert 1957.

Mayor Ivan Nestingen will then be handed a sealed envelope from the Federal Civil Defense Administration (FCDA) which will reveal whether or not Madison has been supposedly attacked and how strong the attack has been.

They are then scheduled to evacuate to the Cherokee Heights School auditorium where they will be briefed further. Leading the discussion there will be Thayer Burnham, city biochemist, who will talk on radioactive fallout and health conditions; and Donald Theobold, of the city engineering office, who will speak on the destructive forces of the atomic bomb.

ESTIMATED DAMAGE

A report on the estimated damage done by the bomb here will be given by representatives of the Madison Gas & Electric Co., the Wisconsin Telephone Co., the Madison Metropolitan Sewerage District, Madison hospitals, the Western Union, the water, street, health, and welfare departments, and key industries.

Saturday's event, called Civil Defense in Action, will start at noon under the direction of Lester Shore, Madison civil defense operations assistant.

Civil defense volunteers will demonstrate their training in a tent exercise which will involve rescuing victims from a collapsed building, their removal to hospitals, a mass feeding test, and medical work.

SCOUT VICTIMS

The victims will be a group of Explorer Scouts who will be conveyed to Madison General and St. Mary's Hospitals in mail trucks manned by postal employees. The transportation will be supervised by Eugene Cawley, a postal employee and member of the city's civil defense commission.

The rescue teams will be commanded by John R. Howell, who will be assisted by Dr. R. M. Becker, Dr. A. E. Cowle, Dr. L. E. Holmgren, and Dr. D. L. Williams, all of whom will be in charge of mobile medical teams.

Many doctors and nurses will be on hand to receive the "injured" at the hospitals. After they are released from the hospitals they will return to Franklin Field to partake in refreshments which will be served by Dane County Red Cross personnel.

The public is invited to witness the demonstration.

SIX THOUSAND IN STATE TO WORK ON ALERT

MILWAUKEE.—More than 6,000 persons will be actively engaged in six southeastern Wisconsin counties during the nationwide civil defense operation alert next Friday.

Involved in Wisconsin's share of the big practice alert will be the combined civil defense organizations of the so-called Metropolitan Target Area—Milwaukee, Ozaukee, Washington, Waukesha, Racine, and Kenosha Counties.

The test will be the first coordinated effort of these counties in simulating operations of a large-scale disaster.

Operation Alert will get underway nationally on Monday. From then through Friday, the Wisconsin area will take part in simulated strategic evacuation of dependent persons from the population centers.

On Friday, the tactical phase of the exercise will take place with a simulated air attack on the United States, with air raid warnings going to major cities. Sirens in Milwaukee and its suburbs will signal a simulated evacuation.

An MTA control center will be set up in Milwaukee, with an alternate center at Silver Lake in Waukesha County. County control centers will be set up in the sheriff's office of the respective counties. The takeover signal will get its first test if Milwaukee is listed as one of the target centers.

Address by Hon. Frances P. Bolton at Ninth Annual Colgate Foreign Policy Conference, Colgate University

---

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 11, 1957

Mr. MINSHALL. Mr. Speaker, I ask unanimous consent to insert an address made by our distinguished colleague from Ohio, Mrs. BOLTON, at the foreign affairs conference held at Colgate University during the week of July 4.

The address follows:

EMERGENT AFRICA

Mr. President, Dr. Wilson, members of the conference, honored guests, and friends. To be here in this distinguished company is a privilege indeed. To me it is an especially delightful moment, coming as I do to the university begun so many years ago by 13 men of whom my great grandfather was 1. Little by little those modest beginnings have grown into this splendid institution whose roots go deep down into the earth, whose trunk is straight and strong, and whose branches reach ever more eagerly towards the stars. How proud those 13 must be to find representatives from so many nations gathered together with world-minded Americans in earnest effort to bring about greater understanding.

I hesitate to speak of that great continent of Africa to such an informed group as this. I am certain there are those among you who know far more of Africa than I, which of itself is both fearsome and challenging. However, my interest in this continent that God has held in reserve is deep, my efforts to know as much as I can about it, sincere. I am happy to give you some of my thinking.

Just here I must say to you that I hesitate to use the pronoun "it" in speaking of Africa. There is nothing neuter about Africa. But can one say he or should it be she?

Africa is so vital, so personal and yet so impersonal. There are moments when one says "she" unhesitatingly, so great is the sense of maternity, of the creative, passive, waiting forces that seem to surround one, that seem to well up out of the earth, one walks on. And then again Africa is all male—aggressive, powerful, ruthless, invincible. Above all else, Africa is a land of extremes, of such beauty by day and by night that one stands breathless before it; of such ruthless cruelty that only the bravest can support it.

The oldest land mass of earth, Africa's shores have been beaten upon so long that there are few harbors. Her great plateau has long since been made infertile, for after the trees were gone, the winds have blown away the productive soil. Her great rivers are not highways from their sources to the sea, for in their courses they must tumble down to sea level, and death is in their depths. Her incredible forests, her steaming jungles, her low marshes, her fearsome heights, her beautiful lakes, and glowing volcanoes, her snow-clad mountains, her deserts, and her rain forests. There is no end to the wonders one may see. Once seen one is never quite the same again.

Yes, Africa is a country of great extremes and many emotions. Of pygmies and men 7 feet tall. Even the climate runs the gamut from driest desert to heaviest rainfall, from snow-capped Kilimanjaro practically astride the equator to the great basin of the Congo, and, in addition, in certain marvelously beautiful areas, a temperate climate unsurpassed anywhere.

One can readily understand why, for so many centuries Africa was a coastline but not a continent. One can appreciate why there was so little accurate information to be had well into the nineteenth century, and not too much today. In searching for information, one is reminded of the four lines written by Jonathan Swift:

> "So geographers, in Afric maps,
> With savage pictures fill their gaps,
> And o'er unhabitable downs
> Place elephants for want of towns."

Those of you who have been to Africa know something of its vastness. You have felt its mystery, you have been stirred by its almost incredible possibilities. You have, perhaps, found your own emotions shaken, as never before, by the power, the force, that seems to well up out of the very earth. You have been faced with the reality of Africa's awakening. It is as if a great giant stirred for the first time in many centuries, stretching himself, opening his gentle eyes upon an unknown and very disturbing world. Perhaps you, too, have found your own world somewhat shaken by direct contact with this awakening, and all it can mean to the future of mankind.

It was to that Africa that I went in September nearly 2 years ago, I and my three

companions, on behalf of the Subcommittee on the Near East and Africa of the Committee on Foreign Affairs. I took with me a Signal Corps photographer, a transportation officer who had spent some 8 years in West Africa, and a medical observer, loaned by the Mayo Clinic.

It was our purpose to see all we could in the all-too-short 3½ months allotted us. Starting at Dakar, our route took us into countries in West Africa, south to the Cape, up the East Coast, into the Central Federation, north to Ethiopia, Khartoum and Cairo. It was a continent of contrasts that we saw: its luscious forests and deserts, its granite mountains, its indescribable beauty, its cruelty and ruthlessness. We saw the ravages of disease and the efforts being made to eradicate it. We glimpsed its vast wealth, its unbelievable possibilities. But especially did we see the people: Indians, Lebanese, Syrians, Europeans and above all, Africans, whose present awakening will have such bearing upon the future of the world.

Thanks to the great courtesy of the Washington representatives of the metropolitan countries in advising the various government heads of our coming, we were given every opportunity to learn something at least of what they are doing in their separate areas. Unfortunately we could not go to Spanish Africa, but we did visit the French, the Portuguese, the British, the Belgian areas, and South Africa as well.

It was truly exciting to see the tremendous housing programs everywhere, the schools, the hospitals, the dispensaries, the clinics, and the maternity homes and, of course, in every country, the missions, both Catholic and Protestant, which have been responsible for so much of the education and the staffing of the health work. Each metropolitan country had its own special methods, its own program, but all were moving along roads that will bring better living to all the people.

If we are to speak together of an emergent Africa, we shall have to take a moment or two to look at the past of this so little known continent of which Colonel Van der Post has written that "not even the animals understand."

We know little of the history of Africa south of the Sahara. Legend tells of an ancient and powerful West African empire known as Ghana which flourished more than a thousand years ago, and from which many of the present tribes have sprung. The Egyptians, who are more closely linked with the Middle East than with Africa, trace an unbroken civilization back nearly 6,000 years, while the Berbers and others are indigenous to north Africa. The Arabs, twice conquerors of north Africa, have left many of their people on the African continent. But these moved in upon indigenous people whose past is hidden by time, who carry in their blood strange memories of ancient glory. Today, archaeologists are finding evidence in unexpected places of very ancient civilizations.

It was not until the 19th century that Europeans came to Africa, to encounter unexpected ills. It was as if Africa had raised her own barriers against intrusion, for the West Coast was soon known as the white man's grave.

Yet the adventurous, the daring, came to explore, to settle and to exploit. They had little or no regard for the people they found there who lived primitively. Who were, as a rule, readily subjugated. Yet it was in the Ashanti country of the Gold Coast—now Ghana—that the British found violent resistance. We were told it took eight wars to conquer them.

As one reads history there seems little difference between the white man's conquest of Africa and his conquest of North America. In neither continent did he attempt to understand those who dwelt there. Land tenure? Marriage laws? They mattered not at all. Here in these United States Indians were put on reservations. In Africa there are native reserves. To our shame be it said that we are not even now seeing to it adequately that the people we dispossessed share our way of life to the full.

As I have said, each governing country in Africa has its own methods of dealing with these indigenous people. One might say that the common denominator of their work is health and education. Certainly their common experience must be amazement at the latent ability of these men who must leap across the barriers that separate them and their primitive ways from today's motor cars and airplanes. Modern invention, highways, and airfields—big and little—have found their way even into the jungles. Railroads are being built, work is underway to develop hydroelectric power, the attack on disease is slowly but surely winning the battle for health. Education is being made increasingly possible. Today's Africa has already come a long, long way since yesterday.

It is less than 2 years ago that the Sudan took her place among the free nations of the world, and but a few months since the Gold Coast became the first black country south of the Sahara to join the British Commonwealth, taking the name of the ancient empire of Ghana from which her people stem.

Here the light of nationalism is burning brightly. The emotion of the March 6 midnight moment with Nkrumah's, "We are forever free" is still strong, though the wise ones know that Ghana is only at the beginning of a long process, that the road ahead is not an easy one. No one-crop economy is ever without danger—and the price of cocoa is all important in Ghana. But great things are in the making: a harbor is being built, the Volta Dam is in everyone's heart and mind and hope rides high.

All Africa, nay, all the world, is watching. Has the tide of nationalism swept this new nation too quickly into the heavy responsibilities of freedom, or is their wisdom sufficient to their need? One cannot but wish them well. But Ghana is a favored State, for there are few if any Asians or Europeans among her people. Her problems should be far more readily solved than those of Nigeria for instance, where in her great northern region are some 10 million Muslims who seem to have little urge towards today's world. At the moment no date has been set for a free federation, although the western and eastern regions have been accorded self-government.

It is in the eastern and central areas of Africa that Britain at least, is attempting to work out methods by which the training for an attainment of complete autonomy can be achieved without upheaval. Here the African must raise his sights also. It is natural that, roused from his long isolation, his first reaction should be, this is my country, mine alone, all outsiders must go. Of course, the outsiders are so far in the minority that he could wipe them out almost over night. But were he to do so, he would have put himself back into the limbo of savagery. That is not what his heart desires, and one can but hope that those who are attempting to assume leadership will recognize this fact and will use great wisdom in the exercise of their responsibility.

What is to be Africa's role in this amazing era of revolutionary change? To what end, her fabulous wealth in bauxite, cobalt, copper, gold, uranium, diamonds, rubber, cocoa, coffee, and still undiscovered raw materials? To what end her markets, though her needs are infinite? To what end her teeming millions? To what end the many races within her borders, deriving as they do from different continents and separated by long periods of their cultural development, now thrown together to work out a common future?

There is no question but that Africa today is suffering from deep wounds inflicted by fear and mistrust between races and between tribes. The immense task of raising the masses from poverty and ignorance demands the exertion, in unity and fellowship, of all the talents that the continent can provide. Past achievements and plans for the future toward this supreme aim are alike endangered by the threat—or the reality—of internal dissension and Communist penetration.

The urgent need is for a new spirit, a patriotism stronger than racial or tribal loyalty, and for a policy suited to the true needs of the people, of which the people can be proud.

As one looks at it all there seem to be three great forces which, in interaction, will determine the future of the African Continent: (1) a growing African nationalism, (2) western civilization, and (3) increasing Asian influence. Communism will certainly do its utmost to take a hand in the game.

The growth of African nationalism cannot be stayed. Those who wish to live constructively in Africa must work with this tide, not against it. But it is not a fearsome thing, rather is it something to be cordially welcomed because of its creative possibilities.

Western civilization with its promise of better health and ever-increasing opportunity to share in the good things of the world makes its own very real appeal.

Asian influence also has its contributions to make to the emerging continent. The problem of bringing these forces together is not an easy one, but if the West and the East have a true desire to prove to Africa by their attitudes and actions that they ask only to share in the great task of equipping Africa to take her full part in world affairs, the future will hold unbelievable values not just for Africa, but for all the world.

Such an effort is being made in Central Africa within the Tropic of Capricorn (from the Limpopo River to the Sahara) by the Capricorn Africa Society. This society was founded in Salisbury in Southern Rhodesia in 1949 by a group of people composed of members of different races, who believed that a policy for Africa must come from within Africa itself. Its members are committed to the uncompromising acceptance of two purposes: First, the establishment of a way of life in which there will be no discrimination on racial grounds, opportunity will be open to all, and human capacity and merit will be the only criteria for responsible participation in public affairs. Second, and equally important, to maintain and make effective the cultural, moral, and spiritual standards of civilization. These are based upon the belief that all men, despite their varying talents, are born equal in dignity before God, and have a common duty to one another.

Is it not possible that in this great emerging continent there is present opportunity to bring about an understanding among men on a far broader foundation than anything so far tried?

In any consideration of Africa's future, it must not be forgotten that white men in considerable numbers have made their homes in Africa for generations. It is the only country they know. Asians, too, have immigrated and made it their country. This presents a new problem which would appear to be solvable only by merging this new nationalism of the African with that of the other races to whom Africa spells home, so creating a comprehensive nationalism whose influence could well be incalculable.

This Capricorn Africa lives in an area as large as the United States. Although the majority will always be black, white as well as brown Africans will share the responsibilities with complete unity of purpose. Capricorn Africa works on the policy of creating an interracial integrated life in which the different races cooperate without regard to color, for the common material and spirit-

ual enrichment of all. This positive, creative faith in the value of totality is a belief that in the conditions prevailing, a far richer and greater thing can be achieved by the active cooperation of the different races than by any more partial program. The motive power to which CAS chiefly looks for the realization of its aims is the growth of a common African patriotism which members of all races share, which all will seek to serve and which in the case of many individuals will have its roots and nourishment in a deeper, ultimate, religious view of the meaning of life.

I have reminded you that this is an age of revolutionary change. Let me suggest that the fundamental change that must be made, not just in Africa but all over the world, is in the realm of our thoughts. Only as we learn to think in terms of the whole shall we be able to prevent the moment of chaos towards which humanity appears to be heading. And a new way of thinking means a new way of feeling. "Nothing is more needed in Africa today," says one of its leading men, "than a new emotional drive strong enough to counteract the powerful passions of racialism. A new commanding loyalty must take the place of the motives which at present determine action."

So as we look at an emerging Africa let us do so with a deep sense of the immensity of her problems. Let us—all of us—be very wise in our desire to be of service to her, letting her express her need and her desire, not forcing upon her our ideas of that need. She has within her borders all the difficulties facing humanity in this great era of change. She has the opportunity to find the solutions men everywhere are seeking. Facing another moment of destruction and chaos, the world may well look to emergent Africa for new light upon the great road of God's evolution.

American Field Service Program

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 11, 1957

Mr. NEUBERGER. Mr. President, inasmuch as considerable discussion has been concentrated during this session of Congress on the whole question of the Federal budget, perhaps there could be found some information of value in the methods and system used by the United Kingdom in handling its Federal exchequer and expenditures. A useful article on this subject, which highlights not only the British system but also some of its serious problems, appeared in the Washington Evening Star of June 16, 1957. The author of the article is George W. Oakes, distinguished American journalist, who has spent the past several years in Britain studying its political and economic and social conditions. I ask unanimous consent that the article by Mr. Oakes, published in the Washington Evening Star of June 16, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONTROLS ARE WEAK—THE BRITISH HAVE BUDGET WORRIES, TOO

(The American Congress and the British House of Commons both are currently battling with budgets and the high cost of government. Many in each country are deeply concerned with diminishing legislative control over the governmental bureaucracies that have grown so swiftly in the postwar years. Here is a report on how the British system works and what British leaders think of it.)

(By George W. Oakes)

LONDON.—"Parliament, like all elected assemblies, has lost the will to control Government expenses—it's constantly pressing to increase spending." Such is the considered view of one of the House of Commons' most respected Conservatives, a former Cabinet Minister, with 30 years of parliamentary life behind him.

Herbert Morrison, the Labor Party's most experienced parliamentarian in the Commons, wrote in 1954: "Whether the House of Commons is an adequate and efficient watchdog over public expenditure is open to question." That view is shared by most Members of Parliament today.

Under the British system, the House of Commons allows the majority party or the government in office to spend what it considers necessary to implement its policy. The Commons' most powerful control is its constant right and privilege to throw any government out of office by defeating it.

Unlike the American system, under which Congress can alter and amend the details of the President's budget, the House of Commons in practice accepts the Government's recommended estimates or appropriations as presented. If it rejects these proposals, then the Government must resign.

HOW IT WORKS

The British procedure works this way:

Each February the Government proposes its estimates to the House of Commons for the next fiscal year (which begins in April). These estimates are debated on certain days when the whole House sits as a Committee of Supply (Finance). Formerly the supply debates concerned financial matters, but during the past quarter century or so they have become occasions for the opposition to criticize and discuss the general policy behind the estimates.

For example, a supply debate on colonial estimates recently gave the opposition a chance to attack the government's Cyprus policy rather that the cost of implementing it. So the Commons gives less attention to government spending than it used to.

The House of Commons, in contrast with Congress, has no committees that hold hearings or question ministers on financial expenditures before all current estimates are voted. However there are two select committees of Commons that, without discussing policy, try to see that public funds are spent as economically as possible and only for the items authorized.

These are the Select Committee on Public Accounts established by Gladstone in 1861 and the Select Committee on Estimates set up in 1912. This machinery, organized when the annual budget was a mere fraction of that presented last April and the entire governmental organization about the size of a modern city administration, has remained virtually unchanged.

STUDIES PAST SPENDING

The Public Accounts Committee—by far the more important—consists of 15 members from both parties under the chairmanship of a prominent member of the opposition—often an ex-financial secretary of the treasury. It methodically examines the money already spent to determine whether it was used for the purpose intended by law. Its method is to concentrate on one government department at a time, covering thoroughly the major establishments once every few years.

The committee has a single clerk, but it also utilizes the staff services of the controller and auditor-general, an officer of the House of Commons whose duty is to audit the accounts of the government departments and report to the Commons.

Sitting every week usually from February to August, the committee questions in detail the highest permanent officials and they hold these sessions in great respect. If civil servants exceed their authority or use money for purposes other than intended their careers can quickly be ruined.

The Public Accounts Committee's chief defect is that it is examining expenses incurred nearly 2 years earlier. Former cabinet ministers believe that the committee's accounting operation should be expanded so that it could examine more departments regularly instead of covering a limited number once every few years.

The committee labors under a further disadvantage as it is not authorized to investigate the accounts of the great nationalized industries—coal, electricity, railways, and so forth. Then, too, some question whether an annual accounting checkup is adequate for long-range projects with expenditures spread over several years.

But despite its limitations, Members of Parliament regard the Public Accounts Committee as efficient and of vital importance. Its investigation of uneconomic expenditures and extravagance was particularly useful during the last war.

POLICY IS BYPASSED

The Estimates Committee, with 36 members split among the parties, is appointed annually to examine proposed expenditures and recommend economies consistent with policy. Its five subcommittees meet weekly from January and the full committee, under the chairmanship of a member of the party in power, issues its reports during the summer.

The committee cannot consider policy matters, hence in practice it can only advise on broad principles of management and economic administration. To take a minor illustration, it would inquire whether in constructing Army barracks, estimates were received from a sufficient number of contractors but it wouldn't concern itself whether the barracks should have had more recreation rooms.

Since the committee operates with half a dozen clerks and no other permanent staff, its scope of activity is limited. High civil servants appear before it to answer questions and explain appropriations. As a result of its reports to the Commons, the government usually issues a reply concerning the committee's proposals and sometimes these provoke debates. Two recent reports that attracted attention concerned the procurement of military aircraft and the construction of civil airports.

The Estimates Committee is generally regarded as considerably less effective than the Public Accounts Committee.

Many authorities doubt its usefulness for several reasons. It cannot deal with financial policy and so is unable to influence current estimates. It is handicapped by lack of an investigative staff and by the ignorance of Members of Parliament of technical financial problems. That the little time available for the vast task of checking the estimates prepared in February and voted on shortly thereafter means that in the few subjects it can cover each year it is often inquiring into funds already spent.

FEAR LOSS OF POWER

There is a conviction among experienced parliamentarians, former Cabinet Ministers and many Members of Parliament that creation of additional special advisory committees would mean a delegation of powers from the Commons and thus weaken the authority of the House itself as the center for debate and decision.

Also, it is felt that big artisan committees would tend to tie up Ministers too much and inhibit the opposition during debates. Nevertheless a special committee was set up during the current session to examine the

reports and accounts of certain nationalized industries.

Sir Robert Boothby, an independent Conservative Member of Parliament believing that Parliament needs additional means of exercising its control, has for some time favored the establishment of select all-party advisory committees in the field of defense, foreign policy, and finance which would have the power to question Ministers and high civil servants. Some Members of Parliament argue that if such a committee composed of qualified Members of Parliament could have questioned Ministers before the Suez adventure, it might never have occurred. "Nye" Bevan is known to favor a special Commons committee to supervise colonial policy. But this demand for additional committees has not attracted much general support. On the whole, Ministers and potential Ministers are against any mechanism that might restrain their powers when in office.

Is Mr. Nikita Khrushchev a Titoist?

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 11, 1957

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an article written last winter by my dear friend, the Reverend Father Dr. Joseph F. Thorning, honorary professor of international relations in the Catholic University of Chile, a pontifical Institution. This article, Communism: National and International, produced documentary evidence to the effect that Titoism was the new, official line of the Soviet hierarchy and of the Soviet apparatus in the United States. In other words, the current password of the Marxist-Leninists throughout the world that there are many roads to socialism, meaning total domination by the disciples of Karl Marx and V. I. Lenin, was agreed upon by Messrs. Nikita Khrushchev, Nicolai Bulganin, and Josip Broz Tito at Brioni on the Adriatic and Yalta in the Crimea last September.

One of the most interesting developments in this Marxist-Leninist move is that the Washington Star could report on July 10, 1957, that Mr. Nikita Khrushchev could now be described as a Titoist. In short, the Marxist-Leninist conspirators have agreed upon a new formula to coax American dollars into the bankrupt Marxist-Leninist empire. The article, Communism: National and International, follows:

COMMUNISM—NATIONAL AND INTERNATIONAL

The crisis in Eastern Europe has focused world attention upon the relationship between the national communism of Yugoslavia and international communism as exemplified by the Soviet empire.

The case for a constellation of states, independently dedicated to the principles of Marxism-Leninism, has been stated in some detail by a number of commentators, including Messrs. Walter Lippmann, George F. Kennan, Drew Pearson and C. L. Sulzberger. Their thesis can be presented in the words of Mr. Lippmann "In the interests of peace and of freedom—freedom from both despotism and from anarchy—we must hope that for a time, not forever but for a time, the uprising in the satellite orbit will be stabilized at Titoism. It is in the interests of the Western World that the Soviet Union be helped to accept Titoism in its empire, and that it should not feel that its own security is menaced." (October 26, 1956.)

According to Mr. Drew Pearson, the policy of subsidizing Josip Broz-Tito has "now richly paid off." For it was the "example of a Tito able to defy Moscow," Mr. Pearson adds, that "set the pattern now being followed in Poland, Hungary and probably soon in Czechoslovakia." (The Washington Post, October 30.)

State Department thinking appears to be in harmony with this exposition. In what seemed to be a major foreign policy declaration Mr. John Foster Dulles, United States Secretary of State, in a speech at Dallas, Tex. (October 27, 1956), spoke as follows: "Today, our Nation continues its historic role. The captive peoples should never have reason to doubt that they have in us a sincere and dedicated friend who shares their aspirations. They must know that they can draw upon our abundance to tide themselves over the period of economic adjustment which is inevitable as they rededicate their productive efforts to the service of their own people, rather than of exploiting masters. Nor do we condition economic ties between us upon the adoption by these countries of any particular form of society." This may indicate, as Mr. Thomas J. Hamilton (New York Times, October 28, 1956) has pointed out that the administration "would be satisfied if the Soviet satellites, while remaining Communist, all began to copy Tito."

The ideology of communism we are told, has been shaken to the core by a phenomenon, nationalism, which it has chosen to ignore. This is the opinion of Mr. C. L. Sulzberger who has won an enviable reputation as European correspondent of the New York Times. It was to be expected, therefore, that Mr. Sulzberger, on November 7, 1956, could relate that the administration was "prepared to go to considerable lengths in recognizing national communism as a governmental form with which we can deal on a friendly basis."

The logical result of such a policy would be, not what has been described as a commonwealth of Communist republics, but rather a new federation of totalitarian Marxist regimes. Presumably, each unit in this new system would be independent. Its unifying spirit, of course, would be devotion to national communism.

This new realinement of forces within the framework of the Soviet empire received the enthusiastic endorsement of the Daily Worker (New York City) on October 19, 1956. President Tito who, prior to the demise of Joseph Stalin, had been denounced in that periodical as a criminal monster, an unprincipled double-crosser, and a Fascist beast, was pictured as a suitable candidate for continued United States aid, providing money and commodities were to be provided, as in the past, without any strings attached.

At the same time, the Daily Worker, before the reported split among its editors, urged support for expanded foreign economic aid and various forms of peaceful competition with the lands of socialism. This, as some students of Marxism-Leninism know, was an echo of a draft resolution adopted by the Communist Party in the United States of America in September 1956. The same specialists on Marxist developments noted, with no little attention, that it did not take long for the draft resolution of the comrades in the United States of America to become translated into official State Department policy. Although the two conclusions may have been arrived at independently, they now coincide with the views of the commentators mentioned at the beginning of this analysis.

It is also noteworthy that, when Mr. W. Gomulka, new head of the Communist regime in Poland, indicated his willingness to accept United States dollars and food, he emphasized, as had President Tito, that this would have to be accorded without any strings attached.

A new book by the aforesaid Mr. Sulzberger, The Big Thaw, illustrates the parallel policies of the United States Government and the Daily Worker as expounded immediately upon the eve of the heroic refusal of students, workers, and soldiers in Hungary to accept national communism under a Titoist leader, Mr. Janos Kadar. In his book, subtitled A Personal Exploration of the New Russia and the Orbit Countries, the gifted New York Times writers explains his viewpoint in unmistakable terms: "Titoism, philosophically, is a kind of decompression chamber between the Russian empire and the Western World. * * * This is a form of ideology abhorrent to us because it is avowedly Communist, against religion, private property and liberty as we conceive it. But as a form of government it is acceptable to us as long as it represents independence and national freedom of action. * * * Our tradition is to allow any country to choose its own form of government. What we oppose is enslavement by outside powers. We object to Soviet imperialism enslaving peoples clamoring to be free."

What has been proved at Budapest and throughout Hungary, however, is that men, women, and children who love God and country are not apt to be satisfied with independence from the Kremlin; they are determined to rid themselves of Soviet domination and, perhaps more importantly, of national communism. The myth of Titoism perished in the flames of Hungarian patriotism.

Fortunately, a highly laudable reappraisal of outlook, if not of policy, is already underway in the highest echelons of the New York Times editorial board. On October 17, 1956, the Times proclaimed that, "President Eisenhower's decision with respect to the continuance of American aid to Yugoslavia" seemed "a sound one" and, somewhat naively, added that "Yugoslavia is not a part of a conspiracy for Communist control of the world."

On November 9, however, the truth about this conspiracy began to dawn upon the Times' editors. Under the caption "Hungary and Yugoslavia," this great newspaper presented a totally distinct view and a conclusion perfectly in accord with the facts (i.e. the Yugoslav votes) reported from, and recorded in, the United Nations. The exact expression of this fresh approach to the issue of national communism vis-a-vis international communism may be worthy of repetition here:

"With heavy hearts and great indignation the people of the free world have watched as the Russians have drowned the Hungarian revolution in blood. They have watched, too, with horrified amazement the position of the Yugoslav Government on these tragic events.

"The Hungarian people may well be excused if they thought they had every guaranty of Yogoslav help and sympathy in their fight for freedom.

"But in the past 6 weeks the situation has changed dramatically. First Tito compromised himself morally by signing a friendship agreement with Gero in Belgrade on the eve of the Hungarian revolution. Then in the past few days, as the Soviet army, hiding behind the Kadar clique, turned with blazing guns on the Hungarian people, Yugoslavia indicated its support for that group. Last Sunday Pravda was even able to cite Borba in its editorial heralding the Soviet attack and implicitly to suggest, as has proved true, that Yugoslavia in practice supported that attack.

"At the United Nations * * * Yugoslav Ambassador Brilej did call for the exit of Soviet troops from Hungary. But he referred only to the 'involvement' of Soviet troops in recent Hungarian events, not to the mass murder done by those troops."

My own comment about this editorial, excellent as the latter is, may be summarized in the following points:

1. It was not the Russians who drowned the Hungarian revolution in blood. It was the Soviet hierarchy, completely divorced from the ordinary, decent human beings in the Soviet Union. The Slavs, it must be granted, are among the most humane in the world. This is true whether they reside in Czechoslovakia, Bulgaria, the U. S. S. R. or Yugoslavia.

2. The Yugoslav people, if free of the much-vaunted national communism of President Tito, would have been prompt to spring to the aid of the Hungarian patriots. United States guns, planes and tanks in the hands of the totalitarian Marxist clique in Belgrade prevented any spontaneous human response on the part of Croatians, Slovenes, Serbians, Montenegrins and the folks of Bosnia and Herzegovina. As for sympathy, that is fully enlisted on the side of the brave Hungarians. Regrettably, the newspaper war of words (Cf. Pravda versus Borba) has done nothing to turn the tide of slaughter and deportation in Soviet-dominated, Titoist Hungary.

To all but the blind the mystery of the meeting of Marxist minds at Brioni and Yalta must be emerging, little by little, into the light of day. The gentleman of Moscow and the master of Yugoslavia came to an agreement: the latter was authorized, as Mr. Thomas J. Hamilton (the New York Times, Oct. 28, 1956) suggested, to act for Moscow as a kind of branch manager for some of the satellites, including Hungary. Clearly, this Chief of the United Nations Bureau for the Times was one of the correspondents who was no longer mystified, or confused, or deceived. Mr. Hamilton had been an eye-witness of Yugoslav actions (somewhat at variance with their words in the United Nations). Mr. Hamilton and his principals now understand the key to Brioni-Yalta mysteries.

National communism, with independence for all Marxist states, is compatible with international communism.

The Titoist controlled revolts erupted, to the surprise of nobody privy to the plot. In Hungary, however, the conspiracy did not work out according to plan. The wildly improbable happened. The Hungarian people wanted real freedom. They insisted upon representative government; they knew, quite perfectly, the meaning of democracy. Consequently, they refused to be satisfied with compromises, concessions, exhortations, and promises. What they wanted, more than life itself, was to escape from the straitjacket of national communism.

In the light of these developments, it would seem clear that no confidence can be placed in the independent judgment of national communism in relation to international communism. So long as national communism is maintained by a totalitarian government, allowing no freedom to its people to express themselves without fear of reprisals, we can expect that government to take the side of international communism and to be its ally in a conflict with the struggle of its captive peoples to be free.

In short communism, whether national or international, is a movement the leaders of which, no matter how or where located, have in common the objective of extinguishing freedom and rendering unchallangeable the authority which they themselves exercise.

Amending Reorganization Act of 1949

SPEECH

OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8364) to further amend the Reorganization Act of 1949, as amended.

Mr. BASS of Tennessee. Mr. Chairman, this proposed legislation is one which is called the extension of the Reorganization Act. I think the real description of this bill or legislation can be found on the first line in the second paragraph on page 3 of the report where it says "proven tool." That is exactly what this business is. It is a proven tool used to implement legislation by negative action. I was surprised actually when I came to the Congress and found that this sort of law existed which allowed the Congress of the United States to abrogate its responsibility by a failure to function with reference to legislation which affects the entire Nation. These reorganization plans come before the Congress and they become the law. They become statutes. They are things that the people of the country have to live under. Yet, we, as Members of the Congress, fail to act on this legislation. It becomes law if we do not act. I made that statement before a group in my district about 2 months ago. The man who is chairman of the legislative committee for a chamber of commerce asked me a question about some of the Hoover Commission recommendations. I explained to him how this reorganization plan worked. He could not believe that the Congress of the United States would allow such a thing to go on. That you just put something before the Congress that is sent up by the executive department and, if it is not voted down, then it becomes the law without affirmative action.

I do not believe 1 person in 10,000 of the informed American public knows that such a situation as this exists in the lawmaking body of the United States of America. Let me go into a little bit of this Hoover Commission deal which this reorganization plan actually has affected more than anything else. The so-called Hoover Commission or the Commission on the Reorganization of the Executive Branch of the Government has gone over the country saying, "We have recommended this which would save $2 billion—this which would save $6 billion—and this which would save $12 billion." If you would add up all of the billions of dollars that Mr. Hoover and some of his spokesmen have said they would save if these plans were adopted, we would not have a $72 billion budget this year.

In fact, I thing we could have operated the entire Government on $100,000 if we had saved all the money they said they had told us how to save, and yet they say the Congress of the United States was absolutely responsible for not saving this because all we have to do is just to fail to act and make all of this possible.

The advocates of the Hoover Commission tell you that the President has sent up all of the recommendations this commission has made, to both the Democratic President and the Republican President, when the fact of the matter is that the second Hoover Commission spent $2 million in making these investigations and only two of those proposals have been submitted by the executive branch of the present administration to the Congress, and neither one of them became effective. We spent $2 million for them only to find out we did not need them in the first place. I think that legislation which continues such an act as this should be defeated.

Mrs. CHURCH. Mr. Chairman, will the gentleman yield?

Mr. BASS of Tennessee. I yield.

Mrs. CHURCH. Mr. Chairman, I am sure that the gentleman does not want to leave the House with the impression that the only recommendations that the second Hoover Commission made were the two, recently referred to, that were sent down to the Congress by the White House.

Mr. BASS of Tennessee. No; I said that the White House only sent two of the recommendations to Congress.

Mrs. CHURCH. But I call the gentleman's attention to the fact that a large portion of the Hoover recommendations did not need legislative enactment to become effective; and I am sure that the gentleman would not want to overlook that fact.

Mr. BASS of Tennessee. I was referring to those which required negative legislative action. What I am saying and what I am advocating is that they should have legislative action instead of negative action.

Mrs. CHURCH. I would assure the gentleman that I am not rising at this time to dispute his statement in that regard, but rather to refute the implication that all the recommendations by the second Hoover Commission had been rejected by the House. As a matter of fact the recommendations of the second Hoover Commission fell into two classifications: those which did not require legislative action and those which did require legislative action. Of those which could be put into force by executive direction, a large majority have already been put into effect. It is the Congress which has so far largely failed in taking necessary action on those Hoover recommendations that need legislative approval.

Mr. BASS of Tennessee. I understand thoroughly the purported obligation and work of the Hoover Commission. But the cost of government has continued to grow and no savings have been affected. I think it was a waste of time, a waste of money, and a waste of a lot

of space in newspapers all over the country in an effort to make the American people believe they were making some recommendations which were going to save America vast sums of money. Instead I say this commission should not have been established in the first place and I say this bill should be defeated.

Police Might as Well Give Up if They Can't Question a Suspect

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. WHARTON. Mr. Speaker, supplementing my recent comments in the Appendix of the RECORD concerning the obvious difficulties of our law-enforcement officers in functioning under the Mallory decision, I submit herewith an article by Columnist George E. Sokolsky in which he expresses similar views on the subject:

POLICE MIGHT AS WELL GIVE UP IF THEY CAN'T QUESTION A SUSPECT

Granted that a rapist is entitled to due process of the law, are not citizens entitled to juridical protection against rapists? Granted also that there may be a wide difference of opinion as to what should be done about Communists—should they be permitted to do their party work freely on the basis of the first amendment or should they be prosecuted as spies and unregistered enemy agents—can there also be a difference of opinion about rapists?

It would seem to me that the Supreme Court, in its present mood, has done more harm by the Mallory decision which freed a rapist on such technicalities as to make it practically impossible for police to function at all. Is the Mallory decision to be applied to the mugger, the heroin pusher, and the labor racketeer?

For what the Mallory decision says is, in effect, that the police may question a suspect as long as he is not under arrest, but the moment the culprit is arrested, it is unreasonable delay in arraigning him if the police use any time to make a case against him.

I wonder whether any of the Supreme Court brethren have any knowledge of police work. In the larger cities, the nature of felonies has changed radically from what it was half a century ago. Back in those days, burglary was one of the most serious felonies; crimes were usually against property.

Today, the prevalent crimes may be divided into three categories:

1. Psychological crimes, committed by teenagers, associated with sex, often involving rape and murder; 2. Crimes related to narcotics, often involving children of elementary and high school age; 3. Rackets, involving not only gangsters but reputable businessmen, lawyers, bankers, public officials, which arise from the prospects of earning untaxed or untaxable money.

The psychological prisoner is usually a teenager or a very old man who has gone nuts over sex and to whom rape and murder are outlets for an emotional build-up. It is found in the records that rape is a repetitive crime. The rapist will rape again if he gets a chance. Most often, he can only be caught by confession, because when a fellow commits a rape, he does not invite witnesses to watch him. It is done on a lonely road; in a cellar; on a roof top.

If a congressional committee were to hold a hearing on this subject, the police of every city can produce records of denial for days, until confession comes, often with braggadocio. Without confession, the police usually do not have the slightest lead, except that a girl-child has disappeared as though in thin air.

Now the Supreme Court has told the police of this country that they must not question the suspect after he has been arrested, only before he has been arrested. In that case, the police had better drop the matter altogether. It has been experience that the psycho does not talk until the police get him downtown, as it is often called, put him through the lineup, let him tell it to the judge. No questioning at headquarters and no confessions.

The heroin and marijuana business is very big, running into hundreds of millions of dollars. Its centers of manufacture and distribution are Naples, Beirut, and Tientsin; its best market is the United States. The immediate felon is the pusher who may be your son earning an extra quick dollar to buy a black leather jacket or a motorcycle. Behind the pusher is the biggest organized crime syndicate the world has ever known, with powerful influences who are so remote from the crime itself as not to be conscious of association with it. The initial outlay requires millions of dollars; so this cannot be small business, but the pushing is done by boys, girls, candystore peddlers, etc. Those who are hooked by the habit are ruined for life. It is slow murder, often producing degeneracy and insanity before death.

How do the police get arrests in such cases? By using the methods the pushers use—by scaring the living hell out of boys, girls, candystore peddlers, and such, so that they tell where they got the stuff. If they are not scared, they will not tell. If the children cannot be questioned after they are brought to police headquarters, it is all over. There is no case.

Name, Rank, and Serial Number No Longer Enough in War?

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. SIEMINSKI. Mr. Speaker, not a single Member of this House would deliberately water down the right of our GI's as prisoners of war to rely solely on giving their name, rank, and serial number to guarantee fair and humane treatment.

Our GI's are instructed to remain silent on every point that might be helpful to the enemy except giving, in courteous response, their name, rank, and serial number. Information on troop disposition, terrain, and changing situations the enemy must obtain on his own.

I hope, Mr. Speaker, that we in the Congress are not unwittingly placing in the hands of others a precedent that could be used against our boys to require them to give more information than just their name, rank, and serial number.

Could not a future wartime enemy say, in effect, "Look, GI, your own Congress requires witnesses to give more than just their name, address, and occupation. They must testify about others, else they are held in contempt. What is good enough for your Congress is good enough for us. So give with the information. Who was on your left flank? What outfit was on your right flank? Else, take the consequences."

I trust my fears in this regard are ill-founded, Mr. Speaker.

Schools Basis of Nation's Future

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I include an editorial from the Huntington (W. Va.) Advertiser of May 10, 1957. The Advertiser is one of the leading newspapers of my State of West Virginia, and I commend its views to the membership of the House.

The editorial follows:

SCHOOLS BASIS OF NATION'S FUTURE

President Eisenhower's appeal to young people to stay in school for the full development of their God-given capacities also stressed indirectly a serious responsibility upon public officials.

"Only in this way," the appeal said, "can they hope to make their finest contribution to the strength of the Nation and reach fulfillment of their own life purpose."

Young people cannot stay in school unless they have schools to stay in. Providing sufficient classrooms and competent teachers for the steadily growing population is the duty of officials.

The bill providing Federal funds for school construction, finally voted out by the House Education Committee yesterday, has been languishing for months.

That has been possible because of public indifference or outright opposition. A great many people honestly feel that schools are the responsibility of the States and that if the Federal Government once starts contributing to them, it will never be able to stop.

Their argument is not without some foundation. On the other hand, the crowded condition of schools is critical and threatens to become worse each year.

There are no indications that the emergency can or will be adequately met by the States. In that respect the States have failed in their obligation to the young people and the future of the country.

But if the service of educated young people will be necessary to meet the country's demands of tomorrow, the arguments by which the bill is delayed threaten national growth and security.

No fine point of law or debate on the responsibility for schools should stand in the way of providing the country with the trained manpower necessary for industrial progress or military preparedness.

Public and official indifference has already resulted in a dangerous shortage of scientists and engineers. The problem has been stressed repeatedly. Efforts to relieve the

shortage have been undertaken by foundations, corporations and associations.

These efforts cannot succeed unless the public becomes sufficiently aware of the danger to make its influence felt among those who can vote the funds for sufficient schools.

New Provincial for the Order of the Sisters of Mercy

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader-Evening News of Monday, July 8, 1957, commenting on the appointment of Mother Mary de Lourdes Rivers, R. S. M., to succeed Mother Mary Celestine McHale, R. S. M., as the next provincial of the Province of Scranton of the Order of the Sisters of Mercy:

NEW MERCY PROVINCIAL

Appointment of Mother Mary de Lourdes Rivers, R. S. M., to succeed Mother Mary Celestine McHale, R. S. M., as provincial of the Province of Scranton, Order of Sisters of Mercy, is recognition for a member of the community who has distinguished herself as an educator and administrator for three decades.

Mother Mary Celestine, a native of Wilkes-Barre, held the post for two successive terms, a total of 6 years, which is the limit under rules of the order. During her tenure, the province continued its march of progress. Her new assignment had not been announced at this writing.

Mother Mary de Lourdes, a native of Pittsburgh, came here 6 years ago from Altoona where she was superior and principal at St. Marks School. Since her arrival at Dallas, she has served on the faculty of Court Gate of Heaven School and as professor of English at College Misericordia. For 3 years she was a member of the provincial council and, before her advancement, was assistant mother provincial for one term.

With this background, she is eminently fitted for her new responsibilities. A keen mind and a sense of humor are not the least of her attributes. Throughout her career she has taken special interest in young people with the most gratifying results. As an executive at provincial headquarters, she enhanced a reputation for zeal and objectivity.

From all indications, Mother Mary de Lourdes will be a worthy successor to the resourceful Mother Mary Celestine in supervising the largest of the nine provinces of the Sisters of Mercy in the United States. The Province of Scranton, which embraces Pennsylvania, New York, and British Guinea, South America, officially came into existence in 1929, although the order was founded 126 years ago in Ireland and a community was formed in Wilkes-Barre 82 years ago. It has 830 nuns, laboring unselfishly in 71 convents, 70 elementary schools, 17 high schools, 1 senior college, 1 junior college, 5 hospitals, 1 leprosarium, as well as in homes for children and the aged. This broad field of service offers a challenging opportunity to these dedicated women and they have been making the most of it.

Amending Reorganization Act of 1949

SPEECH
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8364) to further amend the Reorganization Act of 1949, as amended, so that such act will apply to reorganization plans transmitted to the Congress at any time before June 1, 1959.

Mr. HOLIFIELD. Mr. Chairman, I rise in support of the committee bill. I believe that I have some background of knowledge of reorganization plans.

I notice on page 4 that 56 reorganization plans have been transmitted to the Congress and 41 have become effective. If my memory serves me right, I served as chairman of the reorganization subcommittee for 4 years, and I handled 45 of those Presidential reorganization plans, and 39 that I handled became law. I also served on the second Hoover Commission, and the gentleman from Michigan [Mr. MEADER], who spoke a few minutes ago, has taken a completely consistent position with that which he has taken all along in regard to the extension of the Reorganization Act. He has always been against it.

I took the other side of the position for many, many years, but I am beginning to also feel that the Congress should take back into its hands as much authority as it can in the field of policy. I believe that in the delegation of authority by the Congress we are weakening the function of the Congress and therefore I think that this bill should be supported. It gives to the President the right to send up reorganization plans. As long as amendment No. 2, the amendment which provides for a simple majority rather than a constitutional majority stays in the bill, I am willing to go along with it, because this will give to the President the right to call to the attention of the Congress any important reorganization plan he wishes to make but at the same time it will in effect give back to the Congress the regular legislative power, the power of a majority vote of the Congress over that reorganization plan which the President may propose.

So, I am supporting the committee bill with this provision in it, because I think it is a step back toward giving the Congress the power that they should have, according to the responsibility which is placed upon the Congress.

There is one more comment I wish to make. After serving for some 18 or 19 months on the second Hoover Commission, I came to the conclusion—and I so stated in my concluding minority report—that the Congress should look with a great deal of caution upon the creating of commissions, particularly commissions which have the responsibility of formulating policy, because those commissions, regardless of how respectable the people are that are chosen, how widely they come from different fields of life, they still do not have a responsibility to the electorate. It is the Members of Congress in both branches that have the responsibility to the electorate. They are the ones that have to go back home every 2 years in this body and every 6 years in the other body and pass muster before the people of the districts as to whether the decisions they have made on policy are right or wrong. But, if the Congress appoints a commission, the commission serves its time, it renders its report, it has no responsibility, it either expires or the members resign, they have no responsibility except to their own prejudices or their own beliefs. They have no responsibility to the people, and therefore I think that any step toward giving back to the Congress the authority commensurate with the responsibility which the people expect us to exercise is a good step. Therefore if this amendment stays in the bill, I will support it, and if the amendment is stricken from the bill, I will vote against the bill.

Mr. HARVEY. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from Indiana.

Mr. HARVEY. It was my privilege to serve with the very eminent gentleman from California on the subcommittee for reorganization that implemented the very many Hoover Commission recommendations. I first of all would like to say that I think the gentleman from California, serving as chairman of that subcommittee, did a very fine piece of work, and I was very much encouraged myself with the results of that effort.

I was a little astonished to hear my good friend from Georgia [Mr. LANHAM] state a moment ago that he felt that no economies, of any significance at least, had resulted from those reorganizations. I would like to ask the gentleman from California what his reaction is as to the results of those reorganizations.

Mr. HOLIFIELD. I would have to give my answer in two phases. I think that the recommendations of the first Hoover Commission which had to do with economy and efficiency in Government were on a solid basis, that we moved in many fields of legislation and that we did accomplish economy in certain of those fields and efficiency in some of those fields. I have no way of computing the amount in dollars. However, when the second Hoover Commission departed from trying to improve the structure and the function of government organizationwise, and got into the field of policy, it was my opinion, and I expressed it on several occasions in my minority reports, that they were at that time encroaching upon the area of responsibility which the Congress should exercise. I prophesied that no good results would come of most of the recommendations of the second Hoover Commission.

The President's failure to send to the Congress reorganization plans based on the second Hoover Commission's recommendations is proof that the President

and his advisers either lacked confidence in the merit of the recommendations or they realized that they were encroachments on the policymaking function of the Congress.

Moley and Supreme Court

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Newsweek:

MOLEY AND SUPREME COURT

In his latest three columns in Newsweek, Contributing Editor Raymond Moley has taken close looks at the United States Supreme Court decisions which have caused so much consternation. In writing on these particularly controversial issues, Moley has revisited an earlier field of interest in which he distinguished himself before he gained fame as a journalist. His achievements in later years have tended to overshadow his career in law administration, but they cannot diminish it.

After receiving his master of arts from Oberlin College and a doctor of philosophy from Columbia University, Moley devoted himself to criminal-law administration. From 1919 to 1923 he was director of the Cleveland Foundation, which under his leadership conducted the first monumental survey of the administration of justice in an American city. This and other comprehensive surveys of law enforcement, notably in Missouri and Illinois, led to his appointment as research director of the New York State Crime Commission during the administrations of Gov. Alfred E. Smith. For 30 years he was professor of public law at Columbia University.

He was appointed by Gov. Franklin D. Roosevelt in 1930 as a member of the commission which created a new New York State parole system. Later, Governor Roosevelt appointed him research director of his Commission on the Administration of Justice. In all these posts he served with distinction.

In 1931, Judge Samuel Seabury, then conducting the investigation of New York City's magistrates courts, employed Moley to formulate constructive suggestions for reform, and later he was Judge Seabury's chief witness in the investigation of the District Attorney's office in New York County.

Moley's reflections and conclusions resulting from these and many other firsthand observations of the workings of law, the courts, prosecuting agencies, and the police are summarized in three books published between 1929 and 1933, Politics and Criminal Prosecution, Our Criminal Courts, and Tribunes of the People, and in articles in law journals.

In 1933, after serving briefly as a member of President Roosevelt's brain trust, he embarked on a journalism career. For the past 24 years he has written a weekly column of opinion, first in the magazine Today, which he helped found, and later in Newsweek, which was merged with Today in 1937. So well known has he become for his perspective column in Newsweek, I thought readers should know that when Moley writes on the issues in law involved in the Supreme Court decisions, he draws on a background held by few other men.

Duty To Know Ignored

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert an editorial which appeared in the Nashville Tennessean, dated July 9, 1957, concerning the importance of the President to keep informed on administration legislation. The President's statement of July 3 concerning the civil-rights legislation provoked the editorial. I am sure all Members will be interested in reading the editorial, and it follows:

DUTY TO KNOW IGNORED

While the American people's right to know is being so widely discussed, the duty of the President of the United States to keep informed on administration legislation also assumes growing importance.

For long months Mr. Eisenhower has been defending the civil-rights legislation drawn up by his smooth and politically minded Attorney General, Mr. Herbert Brownell. On more than one occasion he called the proposed legislation 'moderate' and held that it would bring peace and quiet to the South. He thought it was aimed solely at the right to vote. He believed its scope was limited.

But all the time, he didn't know.

Even as late as July 3, the Chief Executive was groping in the dark, he admitted at a White House press conference.

"I was reading part of that bill this morning," he said, "and I—there were certain phrases I didn't completely understand. So before I made any more remarks on that (rewriting the bill so that it specifically dealt with the question of the right to vote rather than implementing the Supreme Court decision on integration in schools) I want to talk to the Attorney General and see exactly what they do mean."

Whether the President had read any part of the bill before last week is left unsaid, but the possibility cannot be dismissed that he had been dependent, up to that time, on briefings by Mr. Brownell. And that leads to an additional possibility—that the Attorney General told his chief only what he wanted him to know.

In his bemusement, Mr. Eisenhower has said he was always ready to listen to anyone's presentation of his views on the matter. And it would be well if he did this so that he could strike a balance between the opinions of Senator RICHARD RUSSELL, for instance, and the chief legal officer.

Now some of the things said about the civil-rights legislation have been extreme, but at the same time there have been solid arguments in behalf of a trial by jury in contempt cases rising out of judicial action under the proposed law.

That Mr. Eisenhower is voluntarily going to make any important concessions to opponents of the bill, as now drawn, must be doubted.

Mr. Brownell will tell him, no doubt, just what he told the Senate Subcommittee on Civil Rights: That any intimation that the military would be used to enforce court orders in civil-rights cases "does not represent the true state of facts." Yet if the military would not be used, as a last resort, how would such a measure have any effectiveness?

The disturbing thing is that Mr. Eisenhower has been talking all along about an important issue concerning which he is not well-informed, and has been leaning on underlings whom the Nation as a whole cannot implicitly trust for good intentions.

Where he has not understood what was brewing, however, there is no doubt that Mr. Herbert Brownell knows to the fullest the scope of the legislation which has already entered into the most determined fight of this Congress session. And, not even his best friends could assume that moderation has been an impelling motive in the Attorney General's civil-rights plans.

Operation Good Neighbor

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. CANFIELD. Mr. Speaker, it is always pleasant to read good news in the hometown newspapers instead of the tragic and unhappy headlines that so often take prominence. So it was with real pleasure that I picked up a copy of the Paterson, N. J., Evening News this week to read the following story, which might well be titled "Operation Good Neighbor," in the Up-Country column written by Harold MacCullough, a capable newspaperman from that area. It describes the splendid public relations job being done by the commanding officer and staff of the United States Army Nike Station in the suburban community of Wayne Township, New Jersey.

The residents were not all overjoyed when the Army announced its plans to locate a guided-missile station in their back yards, but since the opening of the base, Capt. Donald E. Bull, commanding officer, and his men have become a most welcome part of the community. They have shown a civic spirit and a warm friendly approach that have endeared them to their neighbors. Captain Bull and his group deserve commendation for turning what might have been an unpleasant, friction-charged relationship for both the missile station personnel and the people of Wayne Township, into a happy, heartwarming experience.

THEY SAY UP COUNTRY
(By Harold MacCullough)

Sometime back when the United States Army announced it planned a Nike guided missile station for the area between Alps and Ratzer Roads, and Route 23, Wayne Township, an uproar went up from many who protested the installation.

Since it has been in operation we have heard no unfavorable comments.

The equipment there and the personnel, ably commanded, provides a setup that gives the residents of the area a feeling of security.

But, something rarely heard of, is what the men have done by way of saving lives through the medium of giving blood.

The enlisted men, and there are approximately 100 of them at the installation, have

given as much as 40 pints of blood to aid the ill and thereby saving lives.

Men trained in the art of handling weapons of war which are designed to kill, are in peacetime saving lives.

We are not telling tales out of school, when we speak of one case in particular, where the young men at the Nike station volunteered and gave their blood to help save a life.

The patient was the wife of an editor of this newspaper. She was desperately ill and the call went out for life-saving blood. Among those appealed to were the Nike personnel.

Others gave too, but when the men at Nike were lined up for inspection, and the appeal read to them, it was only a matter of seconds when many stepped out of line and volunteered.

We can explain it best when we use the words of the editor when he said: "I arrived at the hospital only to see men in uniform all over the place. What a comfort."

When we find soldiers, volunteering time and time again, it is something worth telling the public about.

We proudly salute those at Nike, men and officers alike.

We would like to list the names of all who have given blood but space will not permit. At a later date we plan to name the honor roll.

We list the officers at the station, all capable men, who "have the situation well in hand."

Capt. Donald E. Bull, commandant of the station; Lt. Harry Masker, executive officer; Lt. Robert J. Falvey, and Lt. Wilbur D. Lord.

Good luck to all, officers, noncoms and men in the ranks.

Polish Falcon Resolution

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted by the Polish Falcons of America, Nest 212, Fifth District, at its 29th meeting held in Ansonia, Conn., June 28 through June 30, 1957.

The resolution follows:

We, the delegates of Polish Falcons of America, convened in 34th convention and the 29th meeting, in Ansonia, Conn., on June 28, 29, and 30, 1957, resolve:

To be loyal and to defend the interests of the Polish nation, including its Oder and Neisse west boundary, which is racially Polish territory and which rightfully belongs to Poland.

The Polish nation, always a bulwark of Christianity, was sold into the orbit of the Kremlin.

We, as citizens of the United States in North America and with the help of our State Department will endeavor to obtain for our Polish countrymen the freedom and independence which is rightfully theirs.

We, American citizens, request our United States Government to use its influence so that our nation could free itself from the enforced outrages of Moscow; we have great regret that our Polish efforts regarding these outrages have not been more fruitful and that Poland has not gained her emancipation. As Americans of Polish descent we consider it our sacred duty to support these matters of eventual liberation and return of full freedom within her boundaries.

We request our Polish organizations to support these claims, and work for justice in the freedom of our country.

Long live the United States.

Long live the Polish Falcons with its president, Walter Laska, in charge.

As a Polish Falcon organization of United States citizens who are of Polish descent, we stand loyal by our President, Dwight D. Eisenhower, and our American homeland.

Long live the fifth district of Polish Falcons of America.

For resolution committee:

K. MAJEWICZ,
Chairman.
M. ZELINSKA.
PR. PIANKA.
KL. MARKOWSKI.

Mr. Dulles on Red China

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of July 4, 1957, entitled "Mr. Dulles on Red China." It is interesting to note the prophetic accuracy of both Secretary Dulles and the editors of the St. Louis Globe-Democrat. Indeed, Communist dictatorships are built on the shifting sands of oppression and brute force. No regime built on that shaky a foundation can long stand.

All Americans should remain determined not to strengthen these shaky and temporal organizations by any acts of ours.

MR. DULLES ON RED CHINA

In San Francisco recently, Secretary of State John Foster Dulles made a brilliant analysis of this Nation's policy toward Red China. It was a classic argument that should go far toward reassuring our important friends and allies in Asia that Washington will not climb into bed with their worst foe—the aggressive Communist regime that holds power in Peiping.

Before Secretary Dulles spoke, some columnists circulated the report he would take this occasion to announce that Washington was backtracking on its refusal to begin doplimatic relations with the Red Chinese regime. Secretary Dulles' blunt speech was a ringing rebuttal to those who hope somehow, some way to persuade Washington to help this international aggressor get into polite society.

Secretary Dulles took particular note of the argument, often advanced by British spokesmen, that the Red Chinese regime is here to stay, and we might as well do business with it.

On this point he said:

"First of all, let me say emphatically that the United States need never succumb to the argument of 'inevitability.' We, with our friends, can fashion our own destiny. We do not accept the mastery of Communist forces.

"And let me go on to say that these Communist despotisms are not so immutable as they sometimes appear. Time and circumstances work also upon them * * *.

"Nothing could be more dangerous than for the United States to operate on the theory that if hostile and evil forces do not quickly and readily change, then it is we who must change to meet them * * *.

"If Communism is stubborn for the wrong, let us be steadfast for the right."

It is, as Secretary Dulles pointed out, an optical illusion that makes the totalitarian regime of a Stalin, a Khrushchev, a Mussolini, or a Mao seem as solid and unshakable as the pyramids. Their dictatorships are built on the shifting sands of oppression and brute force.

No regime built on that shaky a fundation can long stand.

It is not the United States that must tremble for the future, but the Red dictatorships. John Foster Dulles should get a bouquet for reminding us of a basic fact of political life that is all too often forgotten.

South Is on the March

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Nashville Banner, under date of July 9, 1957, commenting on a statement of Frank J. Soday, president of the Southern Association of Science and Industry:

SOUTH IS ON THE MARCH

The South, industrially, is building—not built. Its roster of enterprises is growing—not grown. To borrow a statement of Frank J. Soday, president of the Southern Association of Science and Industry, "The South, birthplace of American industry, is coming into its own at last."

Mr. Soday documents that assertion with a summary of this expansion, published in the Manufacturers Record, enlarging upon his prediction of 2 years ago that by 1965 the South would have 30 percent of the country's manufacturing industry—a rate of growth that would require the addition of three plants each day during the period, or a total of 10,000 in 10 years. That rate of growth was exceeded in 1956, when 1,060 plants were added to the southern manufacturing potential.

"To illustrate the rapidity with which the South has been building its manufacturing potential, the Gulf States area has accounted for one-sixth of all of the industrial construction in the country during the past 10 years. The value of such construction is $3.25 billion, which is six times the value of all industry built in the New England area during the same period."

The South's proportion of the Nation's manufacturing facilities has increased from 9 percent in 1900 to 22 percent today.

The South now has 33,700 manufacturing establishments, of which 15,000 employ 50 or more persons. Some 22,000 new industrial plants have located in the area since 1939, and its industrial output has increased from $11 billion to $62 billion during the same period.

State by State and regionwide this progress shows, developments that have come because the resources are here and concerned leaders have worked at it.

The Banner observed the other day that Nashville's steady business and industrial

advance reflects the confidence of those investing in such a program of expansion. On the wide scale, the South's economic growth rests on the same essential, heartening factor.

Mr. Soday does not overstate it, drawing his conclusions from the remarkable record of facts and figures: Southern industry is on the march. It commands national attention. It denotes awakening to the fact that progress is everybody's business.

So They May See Us

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. FULTON. Mr. Speaker, I am submitting to the Congress and the American people a well-written article by Ernest K. Lindley in which the constructive proposals made by Vice President NIXON at the 42d Kiwanis international convention at Atlantic City on June 27 are outlined.

The article follows:

[From Newsweek for July 8, 1957]

SO THEY MAY SEE US

(By Ernest K. Lindley)

The constructive proposals made by Vice President NIXON at Atlantic City last week deserve serious attention. He urged that the United States:

1. Increase to 25,000, more than doubling, the number of leaders from all parts of the world brought to the United States annually under the Government's exchange program.

2. Actively seek an exchange of persons and information with the Soviet bloc.

There is and has been no opposition in principle to more visitors from nations outside the Communist sphere. The chief obstacle is financial. Our Government has provided some funds for this purpose, as have foundations and other private organizations. These subventions have enabled many thousands of leaders—officials, teachers, journalists, businessmen, labor leaders, and others from many lands—to visit the United States in the last several years. A very large majority of these visitors have gone home with a better understanding of our institutions, our customs, and our purposes, and a friendlier feeling toward us. As the Vice President pointed out, what these people say about us carries more weight than what we say about ourselves through the Voice of America and our other overseas information activities.

YOUTH, AS WELL

A program so manifestly useful in its effects ought to be expanded. NIXON's proposal to double the Government's exchange program is not in the least unreasonable. The number of visitors from the newer countries of Asia and Africa might well be trebled or quadrupled. The cost would be insignificant. We should bring to this country not only more recognized leaders from other lands but more potential future leaders. The Soviet Union, Red China, and other Communist nations make an especially strong play for the young people. They bring them on temporary visits and also offer scholarships by the thousands. We should do the same and on an even larger scale. Were the scholarships available, a large percentage of the students in the new nations who go abroad to study would come to the United States. We are missing the opportunity to assist in the education of thousands of young people who in time will become leaders.

Various objections have been raised to a wider exchange of persons and information with Communist nations. NIXON himself does not advocate such exchanges with Red China now. But he favors them with the Soviet Union as well as with the smaller Communist states of Eastern Europe. As he pointed out, many of the principal obstacles lie on the side of the Soviets. If they want a freer exchange of information they can agree to a regular exchange of TV programs, can stop jamming the "Voice of America," permit American magazines and newspapers to circulate freely in the Soviet Union, and remove other barriers which they have imposed.

SLOW ON THE UPTAKE

But the fact remains that during the last 3 years the Soviet Union has sought a wider exchange of persons with us as well as with other countries. Our response has tended to be lethargic if not at times reluctant. As a result of the Soviet suppression of the Hungarian freedom movement, we halted exchanges. Whether this method of showing our disapproval served well our own long-range purposes is debatable. Now we are again arranging exchanges.

While recognizing that certain risks are involved, the Vice President has concluded that the widest possible exchange of persons with the Soviet bloc is to our advantage. He made the point that if many come, the Soviet authorities will have a hard time in making sure that all of them are hardened Communists. But even hardened Communists are likely to see things in the United States which in the future will make them less susceptible to their own propaganda.

Our hope of achieving a reliable peace with the Soviet Union rests largely on a gradual evolution of the Soviet political system. Such an evolution is likely to be stimulated by maximum exposure of the Soviet people to contacts with the rest of the world. NIXON is, I think, right and wise in urging that we actively seek to promote this maximum exposure.

China's Problem

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of July 4, 1957:

CHINA'S PROBLEM

Most Americans do not realize the staggering scope of Communist China's economic problem, and the speech of Mao Tsetung, obtained recently by a western newspaperman, reveals the gravity of the situation now being felt inside China.

Although the Chinese Communists have unquestionably made some progress in establishing order among China's 600 million people, the rapidly increasing population is complicating the task of raising the living standard in that country. According to reliable sources, Mao admitted some 30 million births are taking place annually in China, and also that the increase in the grain harvest in the last 2 years has been just enough to take care of the increase in population—maintaining the same low standard of living.

With China on a huge heavy industry expansion, it is obvious that workers' wages cannot be increased and living conditions improved while this is going on and China's birth rate remains as high as it is. In short, China faces the problem so many countries face—that of overpopulation.

Recent indications that Mao is taking an increasingly independent line from that of Moscow and an admission from China's top leader that the Chinese economy is having its troubles, are encouraging.

The net effect seems to be that Communist China is not to be considered a major threat to the Western powers in the near future—as far as any major war or grandiose expansion in that area of the world is concerned. However, if the economic problem is ever solved in China, and the Communists continue to expand their heavy industry, eventually the regime in China could become a more dangerous threat to the world than Communist Russia.

As to Tight Money

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch, Saturday, July 6, 1957, commenting upon one recent report of one subcommittee on fiscal policy of the Joint Economic Committee:

AS TO TIGHT MONEY

The next time Democratic campaigners feel inclined to make political capital by inveighing against "tight money" policies of the Eisenhower Administration, they should be reminded of a report just issued on that subject by a subcommittee of the Joint Congressional Economic Committee.

Representative WILBUR MILLS, of Arkansas, was chairman of the subcommittee. Senators PAUL DOUGLAS, of Illinois, and JOSEPH C. O'MAHONEY, of Wyoming, completed the Democratic majority. Minority members were Representative THOMAS B. CURTIS, of Webster Groves, and Senator BARRY GOLDWATER, of Arizona.

After hearing 35 economists and Government officials testify, this subcommittee unanimously concluded that the Government ought to maintain "tight money" and resist tax cuts as the best way to combat continuing inflationary pressures. Fiscal and monetary restraints on the total level of spending are essential in such a period as this, the subcommittee says. So interest rates must continue to be high, Government income must continue to surpass outlays, as long as inflationary dangers persist.

This is a courageous and unquestionably a correct assessment of the Nation's economic position. Since "tight money" always hurts somebody, and would not be effective unless it did, politicians face a constant temptation to exploit it for political purposes. But the truth is that if money suddenly became "loose" instead of "tight," the added demands thus poured into the economy would redouble the upward pressure on prices which already causes concern.

If the Government were to try to hold prices in check by other means than a restrictive monetary policy, it would have to

resort to even more rigorous measures—such as a policy of extreme fiscal austerity, increasing taxes while reducing expenditures, and imposing direct controls on prices and wages.

"Tight money" did not actually originate with the Eisenhower administration. It originated with the Federal Reserve Board, when that independent agency stopped supporting the price of Government securities in 1951, during the Truman administration, and started tightening up on credit. Ever since that time, interest rates have been gradually rising.

For a time in late 1953 and 1954, when the inflationary pressures slackened, the Federal Reserve system eased up on credit restrictions. But when the economy began expanding again, the brakes again had to be applied. They will have to stay on unless we want to see a runaway boom end in a disastrous bust.

This is not to say that some special hardships arising from restrictive credit policies need not be dealt with. For example, some of the governors at their annual conference were on the right track when they suggested a Federal guaranty for local school bonds that would permit them to be marketed at lower interest rates. But when Democratic governors converted this sensible idea into a broadside attack upon "tight money" as such, they were talking politics, not economics.

Representative MILL'S subcommittee, speaking economically, told the story—the national welfare demands fiscal and monetary restraints for as long as the pressure of prices and wages remains on the inflationary side.

Prejudice Cannot Interfere With Educational Programs

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I include an editorial from the Jacksonville (Tex.) Daily Progress of Thursday, June 13, 1957. I commend it to the membership of the House.

The editorial follows:

PREJUDICE CAN'T INTERFERE WITH EDUCATIONAL PROGRAMS

If this is one Nation, indivisible, with liberty and justice for all we must see to it that there is equal opportunity in public-school education for all children. This means a decent school building in Mississippi or Arkansas as much as in the east Texas oil field.

This never will be one Nation until we forget our provincialism, and bring about an equalization of opportunity, everywhere in the land.

If there is no way locally to to build a decent schoolhouse, let's see that it is done by the county. If there is no way for the county to provide the decent schoolhouse, let's make sure the State does it. Going further, if it is not possible for States to build these schools, then it is our responsibility, right here in Texas, to make sure that the backwoods child of another State gets an equal opportunity to education.

The principles of Gilmer-Aiken which brought about a high degree of equalization in teacher pay throughout Texas needs to be carried to the buildings, as well. And the same principles need to be carried out in the Nation.

All of this propaganda about fear of the greatest Government in the world—the United States Government—is sickening indeed. Believe not a word of it. What these opponents of Federal aid in school building are saying is that they don't want all children to have a fair and equal chance in America. The whole idea of civilization is concern for the welfare of others. It's the basis of Christianity and godliness, too.

Things Just Don't Happen

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. KEATING. Mr. Speaker, the causes and effects of the recent upheaval in the Kremlin will be the subject of much discussion for years to come. A number of evaluations and interpretations have already been put forth.

A particularly careful and interesting analysis recently came to my attention. It was written by Gen. Joseph F. Battley, president of the National Paint, Varnish, and Lacquer Association, in Coatings, his weekly report to the industry. General Battley, who served his country with great distinction and ability for many years, has written a piece which deserves wide attention, and under leave previously granted, I include it at this point in the RECORD:

THINGS JUST DON'T HAPPEN

The banishment of Stalinist leaders from the ruling force in Russia has implications extending far beyond those which show on the surface of a major political upheavel. More importantly, the action ties into a series of events which, in their totality, add to what undoubtedly is President Eisenhower's greatest victory in the cold war to date.

The chain of events may well be considered to start with the Suez crisis. Then, it will be recalled, Syrian allies of Russia were poised for movement into Jordan, the next objective of the Kremlin, with the Egyptian situation well under control. The goal, of course, was the teremendous oil reserves in the Middle East. The barriers, England and France, had been obliterated. President Eisenhower moved with courage and dispatch. The Sixth Fleet made its grand entrance into the Mediterranean, with nothing left undone to wring the last full measure of drama and determination from the act. The stakes were indeed high. The full evaluation awaits history's report, but the immediate outcome is in the pages of the newspapers of July 4.

Then President Eisenhower made his courageous decision based on careful consideration of possibilities and military propabilities. When the history of the cold war is written, I believe that his strategy in this instance will go down as one of his greatest achievements. New York and Detroit were not threatened with guided missiles as was London when Sir Anthony Eden intervened in the Suez. Nor did this country receive a stern warning letter from Khrushchev as did England and France. In fact, the only words from Moscow were a few jumbled sentences in Pravda against the United States. The Syrian troops broke camp, went home. Jordan defeated its enemies from within, safeguarding the integrity of its borders.

Without firing a gun or losing a friend anywhere, the United States had dealt Russia a staggering blow. It paved the way for the Richards mission. Today only Syria and Egypt are outside the orbit of the Eisenhower Doctrine. Israel knows peace in a greater measure than for many months.

Against this backdrop there was bound to be clamor in Moscow where defeat is not easily accepted, less readily admitted because rarely so openly and definitely inflicted. Heads had to roll. Appropriately, July 4, the day which is synonymous with the greatest stride the principle of independence ever has undertaken, marked the Kremlin purge.

The Russian attitude has changed in other directions. It is willing to discuss control of the atom bomb. It has freed the farmers and eliminated a principle of the Communists in so doing. Now it removes the last of the Stalinists from control. Russian threat has diminished. It is more amenable to peace talks as it realizes it must get along with the rest of the world.

Robert Edwards, writing in the London Express, said, "Successful diplomacy depends on overwhelming strength" and I would add that it also depends on a President who makes his decisions and who has removed the fear of war for generations ahead. There is no question that the change of policies in Russia is due to one man alone and Russia has found the President willing and responsive to their new proposals for peace. Nevertheless, he will be apprehensive until they prove their acceptance of a peaceful code.

Sudeten Germans Send Congratulations to United States

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Dr. Walter Becher, member of the Bavarian Landtag, Secretary General of the Sudeten German Council, in which he extends his best wishes and congratulations to the United States on the occasion of our Independence Day:

SUDETENDEUTSCHER RAT E. V.,
München, July 1, 1957.

Hon. DANIEL J. FLOOD,
United States Representative,
Washington, D. C.

DEAR REPRESENTATIVE FLOOD: On the occasion of July 4, the American Independence Day, I should like to express to you on behalf of the Sudeten German people, my best congratulations to this national day of your Nation, and best wishes for the free and great future of the United States.

Since the past July 4, we have witnessed unfortunately, the failure of the free world in the case of the Hungarian freedom fight, when the West did not help men bleeding for freedom, and we have witnessed also a new flower of the policy of illusions, believing in the national communism—trick of international communism—a trick bringing the West to help Communist states, and we have seen efforts to trade with the Reds. This is an obvious failure which does not suit either the great American past nor a sound and moral thinking in the free world. This fail-

ure concerns all countries of the West, including West Germany.

Yet it is exactly July 4, the American Independence Day, on which also we, the Sudeten Germans over here in West Germany recall vividly the splendid past of the United States and the traditions of your great people and express our hope that these traditions of freedom for men and nations will again be revived in the future as a beacon for all freedom-loving men of all nations.

Please accept, on July 4, my best and most sincere wishes for the future of your country, and your people, for your work in the Congress, and for you personally.

Yours most sincerely,

Dr. WALTER BECHER,
Member of the Bavarian Landtag, Secretary General, Sudeten German Council.

Need Not Proved

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. ABBITT. Mr. Speaker, I am pleased that apparently much support for the so-called Federal aid to school construction legislation has subsided. When Congress convened the first of this year, we were importuned by certain groups to pass immediately the so-called Federal aid to school construction legislation. An all-out effort was made to create the impression, among other things, that due to the great need for classrooms it was necessary to have the Federal Government provide the funds to the States and localities to construct the necessary schools. Actually the Federal Government has a much larger public debt than do the States and localities. Also it has been demonstrated that the need for school construction is not nearly as bad as contended by the proponents of the legislation.

It has been further demonstrated that many of the proponents of this legislation are attempting to get the Federal Government one step closer toward taking over the public schools of America.

Experience has taught us that Federal aid is inevitably followed by Federal control. I am glad to see the slowing down and the waning of support for this socialistic legislation. I am also glad to know from the press that the Chief Executive is not as strong for this legislation as he originally was reported to be.

Recently there appeared in the Petersburg Progress-Index an editorial on this legislation. As usual, the editor of this fine paper has pinpointed the problem and demonstrated the fallacy of the contentions of the proponents of this legislation. I have a high regard for the editor and commend to the Members of this body the editorial. I believe it will be helpful if the Members will read it before accepting without serious study the glib statements of the proponents of this legislation. The editorial is as follows:

NEED NOT PROVED

Speaker RAYBURN says he wants the House of Representatives to pass on the $1,500,000,000 school construction bill at this session, "one way or another."

A similar bill died in the previous session because of the anti-integration rider. It has been offered again as a key part of the Eisenhower program, and the present edition is a compromise of Democratic and Republican proposals. In spite of the considerable support, it has become one of the favorite targets of the economy drive. Unofficial reports say that President Eisenhower's enthusiasm for it has been waning.

The most revealing recent commentary on the subject is the response to a questionnaire which Senator JOHN MARSHALL BUTLER sent out to State governors. Of 27 who replied, 14 expressed opposition to Federal aid for schools. The Maryland Republican is confirmed in his belief that the professional alarmists and Socialist-inclined pressure groups have tried to create the impression there is need for a Federal school building program.

The answers to his questionnaire, not to mention all the other evidences on the subject, show that there is no consensus that such a program is needed, even if it would not be an entering wedge for Federal control of public education.

He Plowed Deep

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. BRAY. Mr. Speaker, Indiana's farmers recently learned that one of their most effective leaders and spokesmen plans after this year to take a less active part in farm organization activities. For more than a generation Hassil E. Schenck has been president of the Indiana Farm Bureau, and its strength and vitality today are testimony of his leadership. Although he has announced that he will retire from the presidency, we are sure his counsel and vast experience will continue to be available to farmers in Indiana and in the United States for many years to come.

I want to insert an editorial which appeared in the Indianapolis Star on Wednesday, July 10, 1957, and which is indicative of the high regard in which Mr. Schenck is held in Indiana?

HE PLOWED DEEP

In the impending retirement of Hassil E. Schenck the farmers of Indiana and the Nation will lose the active services of one of the Nation's outstanding agricultural leaders. The fact that he is both the senior State Farm Bureau president in point of service and the senior director of the American Farm Bureau Federation is an indication of the amount of time he has given to these organizations.

His leadership has been sound. He has resisted the growth of Government controls in agriculture. He has sought to steer farming toward increasing adaptation to the demands of the market place.

His leadership has been effective and successful. The growth of the Indiana Farm Bureau, during his 23 years as president is evidence of that.

Schenck has certainly earned the right to retire from organization activity. But he will be missed.

Egg Prices Do Not Improve

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. KNUTSON. Mr. Speaker, Mr. Henry A. Ness, of Hallock, Minn., writes:

A dozen eggs doesn't pay for a 6-inch bolt—is this equality?

Such egg prices do not leave much to eat and live on let alone buy bolts to fasten the chickenhouse door. Mr. Arthur Carlson, of Bagley, Minn., has listed the egg prices in markets in Bagley and Bemidji. Gilbert Fasse, of Staples, reports prices for eggs from January to June 1957, ranging from 20 cents to 23 cents for grade A large, and from 14 cents to 16 cents for grade C in his area. Mr. Simon Knudson, of McIntosh, reports prices ranging from 15 cents to 23 cents for different grades of eggs in his area and 8 cents for light and heavy hens and cockerels. In the Fosston market, Mr. Knudson reports the same egg price range for the different grades and prices of 8 cents for hens, 7 cents for springers, and 6 cents for roosters.

Under leave to extend my remarks, I insert in the RECORD the letters from Mr. Ness, and Mr. Carlson, together with the attached price lists for eggs and poultry:

JULY 5, 1957.

DEAR MRS. KNUTSON: I am very happy to receive your report from the House of Representatives. * * * I am a rather busy farmer at this time. I do not have a report from all this area.

Bagley—Eggs:	
Grade A	$0.23
Grade A, medium	.18
Grade B	.18
Grade C	.15
Bimidji—Eggs:	
Grade A	.26
Grade A, medium	.23
Grade B	.20
Grade C	.18

These egg prices have remained about the same for the past 10 days.

Most sincerely,

ARTHUR CARLSON.

BAGLEY, MINN.

Bagley markets

Eggs:	
Grade A	$0.23
Grade A, medium	.18
Grade B	.18
Grade C	.15
Hens	.08
Cocks	.06
Springers	.08

HALLOCK, MINN., *July 7, 1957.*

Mrs. COYA KNUTSON,
Congresswoman, Minnesota.

HONORABLE COYA: I have had good intentions of writing you for some time but it seems as though we forget to voice our appreciation to those who are doing a good job for us.

* * * * *

I realize after my trip to Washington, D. C., how futile it is to put anything across to our present Department of Agriculture. I am herewith enclosing my last statement for 15 dozen eggs which speaks for itself. A dozen eggs doesn't pay for a six-inch bolt—Is this equality?

We have just had another 2 inches of rain and I'm afraid approximately 80 percent of the crops in my area will be completely lost and I urge you to do all you can to include Kittson County in the disaster area, to provide emergency loans for the farmers, as I know if provided it will be greatly appreciated by many.

If I can be of any assistance to you in the future kindly advise.

Sincerely yours,

HENRY A. NESS.

Lancaster Co-op Produce

Eggs:	
Grade A, large	$0.21
Grade A, medium	.15
Grade B	.16
Grade C, No. 2	.15

Political Chicanery Thwarts Economy

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. HOFFMAN. Mr. Speaker, the deadline on payment of income taxes coming close on the heels of a $71 billion budget shocked our people into a realization that (a) their taxes were too high, (b) the Federal Government was spending altogether too much money, (c) national financial disaster was just around the corner. The result was an insistent demand that Congress cut appropriations. That the Congress proceeded to do.

But then came pressure from many groups insisting upon new legislation; additional appropriations of billions for foreign aid, other billions for national defense, millions for Federal aid to education, to name but three.

On top of those three—and there were others—came the politician's dream. A bill to protect civil rights, though it referred to but one, the right to vote. One purpose was to secure the Negro vote in the 1958 and 1960 elections.

The bill was wholly unnecessary. We have a statute—Revised Statutes, section 2004 and following—which makes it a criminal offense to deny to any person his right to vote at any election because of race, color, or previous condition of servitude. We have a crime-detecting organization, the FBI, unsurpassed. We have a Department of Justice with an Attorney General and United States district attorneys and district and appellate courts with authority and the means of enforcing that statute.

Nevertheless, though not needed, to curry favor with minority groups, along came this so-called civil-rights bill. It created a new Commission which was empowered to employ an Advisory Commission with authority to make investigations, subpena witnesses, hold hearings, and make recommendations. A new snooping agency. This though the regular standing committees of the Congress have like authority, and upon these standing committees is imposed the same duties delegated to the Commission.

The bill also authorized the appointment of a new Assistant Attorney General and provided authority to employ an unlimited number of assistants to the assistant. The Congress was given not even an estimate as to the cost which would be incurred by the Commission, its employees, the Assistant Attorney General and his assistants and employees, but the bill did contain a provision authorizing the appropriation of so much as may be necessary to carry out the provisions of this act.

The foregoing is an illustration of the way the Congress, under the guise of a worthy purpose, in my judgment, needlessly authorizes the wasteful expenditure of your tax dollars. It is an example of how an economy drive is halted.

To further insult the intelligence of the average citizen, the bill, while purporting to protect civil rights, took from the citizen his established constitutional right to a trial by jury when charged with a criminal offense.

I did not vote for the bill because (a) there is now on the books ample legislation to protect the right to vote; (b) we have an FBI second to no agency in the wide, wide world capable of detecting criminal activities; and (c) we have a United States Attorney General backed by able, vigorous United States district attorneys, plus United States district and appellate courts capable of seeing that the present law protecting the right to vote is enforced.

And because, most important of all, the bill deprived a citizen of his basic, fundamental, constitutional right to trial by jury.

Incidentally, it calls for additional unnecessary Federal employees and the needless spending of additional tax dollars.

Two Ohio Citizens Recognized as National Leaders in Fight To Control Tuberculosis

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. BOW. Mr. Speaker, an unusual honor has come to Stark County in the recognition of two of our citizens as national leaders in the fight to control tuberculosis.

Dr. William M. Morgan, of Alliance, is serving as president of the National Tuberculosis Association, and Mr. L. L. Taylor, of Canton, is president-elect of the National Conference of Tuberculosis Workers.

Each man in his own field, one voluntary and the other as a professional worker, has reached the highest office to which he might aspire in this work.

As one who has observed their sincere devotion and unceasing labors over the years, I can testify the recognition is well deserved.

Dr. Morgan, a professor at Mount Union College, has served the tuberculosis association in county, State, and national offices for 20 years.

Mr. Taylor has been in this work since 1944, and he is the third county executive ever to be elected to top national office.

Both have contributed greatly to eliminate tuberculosis as a threat to public health in our county, State, and Nation. They have brought honor to Stark County and the State of Ohio.

Beyond the Fifth

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Moley from Newsweek dated July 15, 1957:

BEYOND THE FIFTH
(By Raymond Moley)

PORTLAND, OREG.—The current reflections of Dave Beck must be embittered by the thought that if his interrogation by the McClellan committee had been a few weeks later, he and his son might have spared themselves the trouble of taking the fifth amendment 328 times. For the Supreme Court in the Watkins case makes it clear that any witness, without mentioning self-incrimination, may decide for himself what is relevant to the making of the laws of the land. However, the most eminent of the defenders of the fifth amendment, Dean Erwin N. Griswold of the Harvard Law School, in his book, The Fifth Amendment Today, justifies a witness in taking the fifth even when he has no confidence in a committee. There was a time, during the internal revenue scandals, when many of us had no confidence in the Bureau, but we responded to its questions and paid our taxes.

But we are far beyond the fifth amendment now. Silence, unembellished silence, is the law.

Since the Watkins decision, all sorts of screwballs and subversives are skipping about like rams. The Court has fitted their needs, as one lawyer puts it, "like a glove." Go ahead, folks, say what you please; choose whatever shabby, traitorous pals your heart may crave; go to their meetings, and sing in the choir. Support Communist causes with sympathy and money, and you may be invited to lecture with Oppenheimer at Harvard.

COMMUNIST REVIVAL

There is no better Member of Congress than GORDON H. SCHERER. He was out here on the coast when the Supreme Court handed down its shocking decision. He was serving as a member of a subcommittee of the House Un-American Activities Committee. He says that when the news of the Court's action was known, a former chairman of the Communist Party in California said that this "will mark a rejuvenation of the party in America * * * we are on our way."

SCHERER saw the rejuvenation in San Francisco. Communists swarmed into the hearing room like flies. Members of the subcommittee were subjected to snide remarks as they passed by. When the hearings opened, a lawyer appeared, armed with the Watkins decision, and before his witness was allowed to speak demanded that the subcommittee outline in detail the nature and object of its investigation and explain to his satisfaction how each question was pertinent to the subject of the investigation.

What Dean Griswold said applies with greater pertinence now, for it reflects the sentimental thinking behind these decisions. The fifth amendment, he wrote, was "an expression of the moral striving of the community * * * a symbol of the America that stirs our hearts." He argues that the taker of the fifth should be spared not only any unfavorable inferences, but any social punishment and reproach. Time was when people who stood against prevailing opinion in defense of their beliefs were prepared to take the consequences. Sidney Hook, in his devastating book replying to Griswold, "Common Sense and the Fifth Amendment," says: "Can anyone imagine a William Lloyd Garrison or a Eugene Debs hiding behind the fifth amendment?"

TEST OF HISTORY

Hook exposes relentlessly the shallow scholarship which prompts the dean to associate the immunity from self-incrimination with the great Anglo-American struggles for human rights. The renowned reformer of the penal law, Jeremy Bentham, saw no justification for the privilege. Nor did America's foremost legal scholar, John H. Wigmore. Justice Cardozo said that "justice would not perish if the accused were subject to a duty to respond to orderly inquiry." Justice Stephen, in his "History of the Criminal Law of England" wrote that the privilege was merely one of a number of rights which "arose from a peculiar and accidental state of things which long since passed away."

Perhaps it is a mark of the dilution of law and commonsense with sociological and psychological jargon in law schools that is responsible for the loose sentimentalism of Griswold, who occupies the position once distinguished by such scholars and philosophers as Roscoe Pound. Perhaps that is what is the matter with our judges.

The Supreme Court Reaches for Total Power

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am inserting a timely article by Mr. Forrest Davis which appeared in the July 6 issue of the National Review. The time has come for all citizens of this country to realize that something strange is going on within our High Court.

The article follows:

THE COURT REACHES FOR TOTAL POWER—IN ITS DECISION OF JUNE 17 THE WARREN COURT, SAYS ONE OF THE MOST ERUDITE OF AMERICAN JOURNALISTS, HAS THROWN DOWN A GAGE WHICH CONGRESS MUST TAKE UP UNLESS IT IS WILLING TO ABDICATE

(By Forrest Davis)

The 17th of June was a decision day in the vast, muted, alabastrine palace of the United States Supreme Court, a steamingly humid, unseasonable day without. The decisions announced within may well mark the date in future as our 18th Brumaire—the occasion on which the Court asserted its power over the Congress as on that November day in 1799 the Napoleon Consulate seized power from the Council of the Five Hundred.

On June 17 the Court, in its Watkins decision, announced itself, as dissenting Justice Tom C. Clark phrased it, the "Grand Inquisitor and supervisor of congressional investigations." That decision, written by Chief Justice Earl Warren, arrogated to the Court by profuse obiter dicta command over a vital function of the Congress, derived from Lord Coke's description of the House of Commons as the "general inquisitors of the realm" and from long usage and precedent. In its decision in the California Communist cases, acquitting 5 and ordering new trials for 9 other defendants, the Court repealed one section of the Smith Act, an act previously held constitutional by this Court. It wrote law by establishing a new standard, under which a Communist scarcely could be found guilty of conspiring to overthrow this Government by force unless apprehended on the barricades, faggot in one and, tommy-gun in the other; and the Court usurped the ancient prerogative of a jury to be the sole judge of the facts at trial.

In short, on June 17 the Warren Court (bearing the Chief Justice's name in some public derogation because to him is attributed the stiffening of the will to power in certain of his associates) precipitated a constitutional crisis long in the making which, should Congress defend its prerogatives, will give rise to a struggle for power reminiscent of the quarrels between King and Commons in Stuart and Hanoverian England.

Even more frighteningly, the court on June 17 confirmed the public judgment that in all cases dealing with Communism it hastens to the side of those guilty or accused of bearing a part in the great conspiracy, fathered in Moscow, which the executive and the Congress repeatedly have declared to be a "clear and present danger."

ABSOLUTISM

The only visible beneficiary of the Court's solicitude for the Communist cause is that cause itself; a fact to which the New York Daily Worker exuberantly testified. The Court, because it speaks in the name of civil liberties, is often described as "liberal." Yet as it suppresses the powers of the Congress, as it spreads the broad mantle of its protection over the Communist apparatus, it is reactionary; as reactionary as the endeavor to subvert and betray our fluid, flexible, tractable, but often uncomprehending society is reactionary. Where the Court, beyond the reach of the citizen, arrogates to itself the irresponsible right to make law de novo (as in the school cases); where it blurs the line between the state and society (as in the Girard College case); where it amends the law capriciously (as in the California Communist cases); the Court is not only reactionary but tinged with the political vice of the 20th century: absolutism.

Four decisions of June 17 conformed to the Court's pattern set in the Steve Nelson appeal from a Pennsylvania conviction. Two—the reversal of the conviction of John T. Watkins, an Illinois labor leader, for contempt of Congress, and the California Communist rulings—bespoke a revolutionary impulse in the Court, i. e., a desire to realine the power relationships of the State and to magnify the Court into the sole legitimate author of the law of the land.

What the Court did in Watkins was to ride down the congressional right to investigate, to press it within narrow limits of legislative intent, to surround witnesses with a wall of immunity, and specifically to deny the Congress' right "to expose for the sake of exposure," which was the Chief Justice's belittling term for the right of "informing," a right which Woodrow Wilson, in his Congressional Government, placed above even the Congress' legislative function. Said Wilson, of a right pretty well taken for granted and highly regarded by Liberals, including two members of the Court, before the Congress began seeking light on the Communist threat in our midst:

"Even more important than legislation is the instruction and guidance in political affairs which the people might receive from a body which kept all national concerns suffused in a broad daylight of discussion."

To suffuse national concerns in Mr. Wilson's "broad daylight" requires that the Congress be free to inform itself, as well as the people, through the investigative process with power to subpena persons and papers and to punish refractory and obstructive witnesses for contempt.

The Watkins decision, by adding the first amendment's guaranty of free speech and the common-law right of privacy to the fifth amendment as a screen between Congress and the witness, makes future inquiries dependent on the leave of those under investigation.

Congress' right to free inquiry, struck down by the Chief Justice and five associates in supposed deference to the citizen's right freely to discuss, has been maintained in large part by liberals. Two concurring justices in the Watkins decision, Hugo L. Black and Felix Frankfurter, upheld the congressional prerogative to the full when the reluctant witnesses were businessmen or corrupt politicians. In a New Republic article of May 21, 1924, revealing entitled "Hands Off the Investigations," Mr. Frankfurter eloquently affirmed the right searchingly to inquire.

He wrote: "The question is not whether people's feelings here and there may be hurt, or names dragged through the mud * * *. The real issue is whether the danger of abuses and the actual harm done are so clear and substantial that the grave risks of fettering free congressional inquiry are to be incurred by artificial and technical limitations upon inquiry."

In 1936, Black was conducting, as chairman of the Senate's lobby committee, an inquiry into the practices of certain corporate witnesses. He wrote feelingly for the February Harper's magazine, under the title "Inside a Senate Investigation," of the dodges employed by witnesses to withhold papers and escape his questioning. Senator Black, as a matter of course, militantly upheld the right of his committee to penetrate the special privilege of secrecy claimed by witnesses. He witheringly dismissed any invocation of the right of privacy. Wrote Black:

"There is no power on earth that can tear away the veil behind which powerful and audacious and unscrupulous groups operate save the sovereign legislative power armed with the right of subpena and search. * * * Notwithstanding * * * continuous opposition, the House and Senate have uniformly sustained the right of their committees to obtain such evidence [from balky witnesses] since the first congressional investigation was ordered by the House in 1792. The courts have upheld them."

It is clear that Justice Black does not regard Communist agents and all who serve Moscow as members of powerful and audacious and unscrupulous groups from whom the veil may only be torn away by the sovereign legislative power. Nor does Justice Frankfurter currently hold that Congress' writs should run against witnesses able but unwilling to reveal the scope and nature of Moscow's endeavor to undo our society.

THE KILBOURN CASE

In reaching his decision in the Watkins case, the Chief Justice relied upon an all but forgotten and long neglected Supreme Court case, *Kilbourn* v. *Thompson*, (103 U.S. 168), decided in 1881 and a rather singular finding. Warren held that the legislative purpose behind the questioning of Watkins had not been disclosed to him with indisputable charity.

This assertion Justice Clark disputed in his dissenting opinion, bluntly and specifically. Clark noted that the committee chairman remarked upon opening the hearing that the House had referred to the committee (the House Un-American Activities Committee) a bill which, if enacted, would limit the benefits of the National Labor Act to unions not Communist-controlled. It was understood, said Clark, that the committee was inquiring into the extent of Communist influence in unions in the Chicago area and that Watkins clearly knew the legislative purposes, as was evidenced by his formal statement.

Clark obviously thought this objection, upon which the Chief Justice based the reversal of Watkins' conviction, a quibble. Upon *Kilbourne* v. *Thompson* Warren relied for obiter dicta questioning the propriety of the Un-American Activities Committee's possession of the subpena power, Congress' right to interrogtae private persons, and the right to any inquiry where a narrow legislative intent is not proclaimed.

The contention that Watkins was not sufficiently apprised of the legislative intent can be understood best by a reference to Kilbourn. For there the 1881 Court found, with some reason, that the House, in establishing a committee to inquire into an aspect of the historic crash of the banking firm, Jay Cooke & Co., had neglected to state or imply a legislative intent. To bring Watkins into line with Kilbourn, therefore, it was necessary to raise a doubt about the current committee's proclamation of intent.

The Kilbourn citation itself casts a reflection upon the liberalism of the Court's motives. As the only Supreme Court decision attacking the congressional right to free inquiry, it has drawn the devastating fire of liberal historians of the Court for three generations. The House obviously was acting in its informing capacity when it authorized the inquiry into a real-estate pool involved in the Cooke failure. Kilbourn, the pool manager, resisted the committee, was adjudged guilty of contempt, imprisoned, gained freedom on a writ of habeas corpus, and sued the Speaker, the committee members, and the Sergeant at Arms, Thompson (from whom the case derives half its title), for false arrest. The District of Columbia Supreme Court upheld the defendants, the United States Supreme Court reversing.

The Kilbourn court held that the House, in the absence of intent to legislate, had no authority to make inquiry into the private affairs of the citizen, much less punish him for silence. The Justices concluded:

"This Court does not concede that the Houses of Congress possess this general power of punishing for contempt. The cases in which they can do this are very limited. The House of Representatives is not the final judge of its own power and privileges in cases in which the rights and liberties of the subject are concerned, but the legality of its action may be examined and determined by this Court."

If we are to judge the desires of the Chief Justice by the internal evidence of his Watkins opinion, Kilbourn, once he had got over the hurdle of intent, fitted his purposes with exactitude.

Prof. James M. Landis who, holding office under President Franklin D. Roosevelt, was accounted a New Deal Liberal, expressed the Liberal consensus concerning Kilbourn in the Harvard Law Review of December 1926 under the heading "Constitutional Limitations on the Congressional Power of Investigations," wherein he wrote:

"No standard of judgment can be developed from *Kilbourn* v. *Thompson*. Its result contradicts an unbroken congressional practice, continuing even after the decision, with the increasing realization that committees of inquiry are necessary in order to make Government effectively responsible to the electorate."

Concerning the doctrine, so fervently announced by Warren, that a House of Congress or a committee thereof must explicitly state the immediate purpose of an inquiry in advance, Landis protested:

"That it must announce a precise choice before adducing evidence necessary for a proper judgment, is to insist upon leaping before looking, to require of Senators that they shall be seers. The grant of legislative powers by the founders 1789 carried no such implications."

FIVE COMMUNISTS ACQUITTED

In the California Communist cases, this Court flagrantly demonstrated the truth of the late Chief Justice Charles Evans Hughes' ironical aphorism that "the law is what the judges say it is." The majority, again with Justice Clark as the lone dissenter (although Justice Harold H. Burton demurred on one point), distorted the verb "organize" in the Smith Act out of recognition by its framer or the Members of Congress who passed it. The Smith Act included the organization of the Communist conspiracy's myriad agencies, committees and fronts. The Court confined the meaning to the reorganization of the Communist Party, United States of America, in 1945, invalidating that section of the act as bearing upon the defendants on the ground of the statute of limitations. Since the Smith Act became law in 1940, the Congress hardly could have brought the 1945 reorganization into purview.

The five defendants were aquitted on the ground of insufficient evidence. On this point, Justice Clark said:

"This Court should not acquit anyone here. In its long history, I find no case in which an acquittal has been ordered by this Court solely on the facts. It is somewhat late to start in now usurping the function of the jury, especially where new trials are to be held covering the same charges."

The Warren Court, never impressed by rights claimed by the States, found no difficulty on June 17 in denying the right of the New Hampshire Supreme Court to hold a Socialist editor, Paul Sweezy, in contempt for refusing to answer questions by the State's attorney general, acting for the legislature, regarding a lecture Sweezy had delivered at the University of New Hampshire. The attorney general was seeking to discover what affiliations Sweezy had, if any, with the Communist conspiracy. The Court's decision followed Kilbourn on the subject of legislative intent.

A tendency of the Court in 1930 to substitute personal inclination for principle moved the Great Dissenter, Oliver Wendell Holmes, to a frank derogation of his colleagues. Dissenting in a case where the majority applied the due-process clause of the 14th amendment against what he considered a constitutional right of Missouri, he wrote:

"As the decisions now stand, I see hardly any limit but the sky to the invalidating of those rights if they happen to strike a majority of the Court as, for any reason, undesirable."

Justice Holmes further doubted that the 14th amendment was intended to give us carte blanche to embody our economic or moral beliefs in its prohibitions.

In the Steve Nelson case, the Court ruled that the Pennsylvania courts had no power to investigate or act upon Communist issues because the Smith Act preempted that field to the Federal Government. Congress had not so stipulated or intended. The Nelson decision had the effect of dismantling the investigative machinery of the many States inquiring into the Communist conspiracy.

The Warren Court's decisions in the so-called Communist cases from Nelson to June 17, in the sociologically founded desegregation school case of 1954, the Du Pont anti-trust case and the Girard College case which opened the door to the State's interference in the institutions and associations of society, indicate that this Court employs criteria, constitutional or not, that can fairly be termed, in lawyer's English, "terms of art."

WHY?

What lies behind the Court's lenity toward witnesses and petitioners associated with the Communist cause? Who can tell what goes on in the somewhat commonplace minds of the Court's majority, none of whom was known as a leader of the bar or (except for the literate, mercurial Frankfurter) for any intellectual distinction before mounting the bench? All owe their immense dignity and well-remunerated lifetime jobs to accidents of patronage, religion, or geography. The Chief Justice himself can only be supposed to hold his elevated office because he made the expedient choice at the Republican National Convention of 1952: Certainly no previous attainment as a jurist or scholar recommended him.

Why should the Court's majority steadfastly inhibit the Congress and the executive arm in exercising vigilance against so awful an endeavor to destroy us? Frankfurter in the 1920's, Black in the 1930's, powerfully maintained the right of free inquiry to Congress against the citizen. Back in 1941, Earl Warren, rising to the governorship of California on the strength of his prosecutions of Communist mischief-makers as Attorney General, recognized the face of the enemy. The California Parole Board had freed three Communist goons, sentenced to 20 years for murder, after they had served only a little more than 4 years of their sentences. Warren expressed his outrage and scorn in a newspaper statement which ended:

"The murderers are free today not because they are rehabilitated criminals but because they are politically powerful Communistic radicals. Their parole is the culmination of a sinister program of subversive politics, attempted bribery, terrorism and intimidation which has evidenced itself in so many ways during the past 3 years."

What warrant has Warren for believing that the Communist radicals are less potent now than in 1941? Or less sinister, less gifted in terrorism and intimidation?

Justice Black, with Justice William O. Douglas, concurred in the California Communist cases but went further because they had dissented when the Court held the Smith Act constitutional. As part of his concurrence, Black wrote:

"The first amendment provides the only kind of security system that can preserve a free government—one that leaves the way open for people to favor, discuss, advocate or incite to causes and doctrines, however obnoxious and antagonistic such views may be to the rest of us."

The statement, equating the right of the citizen freely to hold and present views, however obnoxious, with the disciplined utterance and schematic program of world communism's fabric of subordination, is either unbelievably naive or motivated by a hidden spring. Why should witnesses in 1957 with access to the methods and personnel which Moscow is using against us be relieved of the necessity of imparting when witnesses in 1936 were sternly enjoined to disclose all?

It has been said that the Warren Court could not more faithfully be advancing the Communist desire to conquer the United

States from within if each week the Justices met to con and effectuate the latest instructions from the American branch of Agitprop in Moscow. The intimation is insupportable and shameful but the Court has laid itself open to it.

I prefer, being an easy man, to take the charitable view that this Court can no more decipher the will of the Kremlin than it can bring into workable knowledge the appalling fate of those countries which have fallen to communism from internal corruption.

WARREN-BLACK-DOUGLAS AXIS

Chief Justice Warren made his sure-footed way through the depression politics of California, the ham-and-eggs, Upton Sinclair's End Poverty in California, and the old-age pension gimmicks, opportunistically. Black, a former Ku Kluxer, is somewhat suspect in terms of integrity. Douglas, intellectually on the blowsy side, conditioned the Yale Law School to its current social relativity and dogmatic leftism. He has been a kind of open-faced rube among the artiful dodgers of Soviet persuasion. Alone among ranking Americans, Douglas rejoiced at the Soviet Embassy last November over the anniversary of the October revolution when Hungarian women and children were breathing their last under the shards of Red army tanks. Douglas seems to me incurably frivolous.

I doubt that the opportunistic Warren and Black and the faintly absurd, mountain-climbing Douglas would deliberately deliver their society and culture to the wolves of Moscow. I think it very likely that they would do so inadvertently, striving to make time with, for example, the intellectuals of the Washington Post, which, from condemning McCarthyism at the top of its lungs, went on to pillory something it called committeeism.

The Warren-Black-Douglas axis on the Court lies, in my judgment, under the nihilistic blight of fashionable liberalism. Intellectually inadequate, the Justices of the childish left mistake the liberty of the citizen for the franchise of the Soviet subversionist. It pains me to say this, but I fear that we have a dumb core of the Court and a timid fringe. Justice Burton, who should know better, I put in that fringe.

CONGRESS HAS RECOURSES

The remedy lies, as always in a free society, with the people and their tribunes in the Congress. The Congress can scarcely forbear taking up the gage thrown by Warren et al. If Pat McCarran and Bob Taft were alive and functioning, I would have greater assurance regarding the outcome. The Congress cannot take the assaults in the Watkins case, the California cases, and the Jencks case lying down unless it is willing to abdicate its constitutional functions and historical prerogative.

The issues are joined. To put it in vulgar terms, they lie between the arrogating political accidents in the plush-lined Supreme Court Building and the freely elected Representatives of the people across the Capitol Plaza.

The Congress has many recourses if it is bold enough to assert them. It controls the purse. The Congress could, if it so willed, reduce the salary of Associate Justices from $35,000 to $3,500 a year. That would inflict severe pain. The Congress could institute an inquiry into how the Court has become so indulgent toward persons associated with communism. It could subpena and punish for contempt before the Court could get around to interdicting such processes.

It would be illuminating to know why the Court exhibits such invariable tenderness toward citizens, or aliens, called before congressional committees to render an accounting of their commerce with the devil. We probably never shall know unless Congress finally reasserts its power as a historically coequal branch of the Government that constrains us all.

Brooklyn as an Industrial Center

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a very informative article which is a study of Brooklyn as a center of industry. This article is published in the June 1957 issue of Commerce Review, published monthly by the New York State Department of Commerce.

Many of the achievements listed in this article are directly due to the selfless efforts of our Borough President, the Honorable John Cashmore. His ability, devotion and deep interest in every cause for the good of Brooklyn and its 3 million population have contributed vastly to the progress and achievements in our borough for nearly 2 decades.

The article referred to above reads as follows:

BROOKLYN AS AN INDUSTRIAL CENTER

The New York State department of commerce has recently prepared an analysis of Brooklyn as an industrial center. The major conclusion of this report is that Brooklyn, the second largest manufacturing county in the State, offers definite locational advantages for a variety of industries. Some of these advantages are as follows:

1. Brooklyn is the major segment of the Port of New York, the largest port in the United States. Nearly 200 piers handle an estimated 45 percent of the commerce of the entire port of New York. In an average month, 52 steamship lines send out about 180 ships from Brooklyn piers to some 250 overseas ports, and have an equal number of vessels arriving from all parts of the globe. Its excellent port facilities make Brooklyn an ideal location for durable-goods manufacturers who produce in substantial quantities for overseas markets, and for manufacturers and food processors who depend on imported raw materials.

2. A Brooklyn waterfront location is advantageous, too, for durable-goods manufacturers who depend on rail transportation to and from markets and sources of supply in the South and Middle West. Rail-freight rates to and from Brooklyn waterfront locations on carload lots are identical with those to and from New Jersey railhead locations, despite the additional haulage via barge or car-float across a portion of New York Bay. From a rail-freight point of view, a Brooklyn waterfront location may be even better in some cases than a location with a siding on a major railroad, because it offers the equivalent of a siding on each of the nine major rail lines that converge on the New Jersey shore of New York Harbor.

3. Brooklyn is also well served by truck and air transport lines.

4. Brooklyn's labor force, totaling 1.2 million in 1950, constitutes a huge reservoir of manpower of great diversity and adaptability. There are highly skilled and experienced workers to meet almost every industrial requirement from garment making to the building of intricate machinery; ample supplies of semiskilled and unskilled labor, both male and female, to meet even peak-season demands in seasonal industries such as confectionery; and young people who are good learners and can be fitted quickly into any industrial situation. Brooklyn manufacturers agree that they can always find labor of high quality to meet almost any need.

5. The heavy concentration of so many different manufacturing industries in Brooklyn and the rest of New York City has given rise to a great deal of functional specialization in the form of auxiliary industries and service enterprises. Brooklyn manufacturers, even those of small and medium size, have ready access to a wide range of specialized services of growing importance in both production and marketing—industrial research laboratories, technical consultants, industrial designers, consulting engineers, packaging experts, advertising and market research agencies, banking, and other financial services, mills and warehouses that can deliver materials and supplies on very short notice, freight forwarders and general management consultants. The availability of such services makes it possible for small and medium-sized manufacturing firms in Brooklyn to realize economies in production and distribution which in less concentrated industrial locations would be attainable only by very large enterprises.

6. Brooklyn manufacturers are at the center of the largest industrial and consumer market in the country, with ready access to other important domestic and foreign markets via truck, rail, air and water transport. A Brooklyn location is particularly advantageous for firms in the shopping goods industries, whose immediate markets are in New York City, where buyers from all over the country gather at various seasons to compare competing lines and make their selections for the new merchandise season. Such industries include women's apparel and accessories, children's clothing, shoes, costume jewelry, house furnishings, dry goods and notions, furniture, toys and miscellaneous specialties.

Another conclusion was that the need for more space, deriving in many cases from competitive pressure to shift to streamlined operation in a single-story plant, appears to be a principal reason for the movement of manufacturing firms from Brooklyn. However, space can be made available in the borough for industrial development, for the construction of modern one-story, garden-type structures in sections readily accessible to labor supply and transportation facilities. Some of these areas are eminently suited to the development of research parks because of the relatively short travel-time distance from Manhattan with its specialized services and talented personnel.

NATURE OF BROOKLYN'S INDUSTRIAL STRUCTURE

Kings County, which is identical with the borough of Brooklyn, is seventh among the leading industrial counties of the United States. Measured by total volume of employment in manufacturing industries in 1954, it is outranked only by Cook County, Chicago, Los Angeles County, New York County, Manhattan, Wayne County, Detroit, Philadelphia County, and Cuyahoga County, Cleveland, in the order given. Within New York State, Brooklyn's volume of manufacturing employment in 1954 exceeded that of Erie, Buffalo, the State's third leading manufacturing county, by nearly 59 percent.

Brooklyn's share of the 1954 New York City totals of both manufacturing employment (production and other workers) and value added by manufacture was nearly 25 percent.

Brooklyn's industrial structure is characterized by diversity and stability. All but one of the 20 major manufacturing groups are represented in the borough, and there is a better balance between the durable- and non-durable-goods industries than in the city as a whole. Non-durables normally account for about 60 percent of the borough's manufacturing employment, while durable-goods industries (including miscellaneous manufactures) provide 40 percent of the job opportunities. For the city as a whole the ratio is 69 to 31 in favor of non-durables.

When compared with New York State or the United States, however, Brooklyn has a high concentration in nondurables. In the State, employment is almost equally divided between the two classes of industry. In the country as a whole, employment in durables exceeds that in nondurables by a ratio of 56 to 44.

While 19 of the 20 major manufacturing groups are represented in Brooklyn, nearly 70 percent of total manufacturing employment in 1954 was concentrated in these broad lines:

	Percent
Apparel and related products	24.4
Food and kindred products	13.4
Machinery	10.4
Metal products	9.7
Miscellaneous manufactures	9.2

In 1947 there were 34 industries in Brooklyn that reported more than $11 million in value added by manufacture for the year. (Unfortunately detailed industry data by borough are not available from the 1954 census.) Heading this list was women's and misses' outerwear, followed by beverages, men's and boys' suits and coats, ships and boats, special industry machinery, drugs and medicines and bakery products. Comparisons of the leading industries in various census years indicate that Brooklyn's present industrial pattern was already well delineated at the time the borough became part of New York City in 1898.

Over the years there has naturally been some shifting in the relative importance of various segments of the overall pattern. Sugar refining, for instance, which ranked first in 1899, had dropped to about 20th place by 1947, while women's and misses' outerwear rose from 29th place in 1899 to 1st place in 1947. But despite such shifts in the standing of specific industries brought about by changes in technology, marketing areas, consumer demand, and various other factors there has been very little change in the general nature of Brooklyn's economy through the past half century.

Stability in industrial structure during this period has been matched by a remarkable stability in Brooklyn's share of the city's total manufacturing employment. In 1899, 22.5 percent of the city's production workers were employed in Brooklyn establishments; by 1919 this proportion had risen to 26 percent, where it remained through 1954.

Although Brooklyn's portion of the State's total manufacturing employment declined slightly between 1947 (13.0 percent) and 1954 (12.4 percent), there was a high degree of stability during the same period in the borough's share of employment in New York State by major industry groups. On the plus side for Brooklyn are 11 industry groups: in textile mill products, the borough's share of total employment in the State rose from 10.3 percent in 1947 to 18.2 percent in 1954; in the other 10 groups, Brooklyn's share increased slightly.

On the minus side are 6 industry groups: 4 show relatively minor declines in Brooklyn's share of the State total, while in 2 other groups, the borough's proportion dropped substantially, for transportation equipment, from 18.9 percent in 1947 to 4.7 percent in 1954 and for nonelectrical machinery, from 12.9 percent to 8.7 percent.

RECENT TRENDS IN MANUFACTURING

Manufacturing employment in Brooklyn totaled 235,634 at the time of the last census (1954), a gain of 6,002 or 2.6 percent since 1947. For the State as a whole the comparable increase was 6.9 percent.

Trends in employment by major industry groups over the 6-year period show substantial gains for the borough in 6 groups: electrical machinery (40.2 percent); stone, clay and glass products (31.5); textiles (29.3); miscellaneous manufactures (26.5); fabricated metals (25.4); and apparel (10.0). Six other groups had more modest gains—lumber, food products, furniture, paper, chemicals, and primary metals. These 12 industries provided 25,034 more jobs at the end of the period than at the beginning, a rise of 15 percent. Of particular interest is the 29.3-percent gain in textile-mill employment in view of a statewide decline of 26.6 percent. Brooklyn's growth in this field appears to be due primarily to expansion in the knit outerwear mills there.

For five other major industry groups—leather goods, printing and publishing, instruments, nonelectrical machinery, and transportation equipment—Brooklyn employment declined between 1947 and 1954 by 17,727, or 31.6 percent. More than half of this decrease, 10,387, was concentrated in the field of transportation equipment and is attributable to a serious decline in the business of the borough's ship and boatbuilding and repair yards.

Curtailment of the Federal Government's defense program, which began in July 1953, with sharp cutbacks in Government contracts through the ensuing fiscal year, was the major cause of the large drop in employment recorded for nonelectrical machinery and instruments in 1954. For 2 years preceding July 1953 these two industries had devoted a considerable proportion of their facilities to defense work, and in 1954 civilian orders were insufficient to take up the slack created by the cancellation or curtailment of Government contracts.

The relatively small decline in leather-products employment from 1947 to 1954 (5 percent) is attributable to the general recession that hit the Nation's shoe industry in the latter year. Percentage decreases were somewhat greater for this industry group in the State as a whole and in the United States.

Printing and publishing is the only industry group in Brooklyn for which there is evidence that out-migration may have contributed to the decline in employment recorded between 1947 and 1954. In the 7-year interval three of the larger firms in this industry moved to new locations within the New York metropolitan area.

The 7,851 manufacturing establishments in the borough in 1954 exceeded the 1947 total by 553 or 8.1 percent. Relative increases in this measure varied considerably according to size of establishment, as shown in the following table:

Employment size	Increase in establishments, Brooklyn, 1947–54	
	Number	Percent
1 to 19 employees	212	4.2
20 to 99 employees	372	20.2
100 employees and over	−31	−7.7

The very substantial increase in the number of medium-sized manufacturing establishments in Brooklyn is attributable to two factors: (1) The rapid growth of many enterprises started on a very small scale immediately after World War II; (2) adverse economic developments that forced numerous large establishments in shipbuilding and in industries making apparel, nonelectrical machinery, instruments, and shoes to curtail employment rather sharply in 1954, thus falling from the largest size group to the middle one.

More indicative of what has happened to the larger manufacturing firms in Brooklyn is the material obtained from a tally of firms there with employment of 100 or more as listed in the Industrial Directory of New York State for 1946 and 1953.

The first table shows the 1953 status of the 431 larger firms located in Brooklyn in 1946. Of that total, 271 were still in Brooklyn in 1953; 216 still provided employment for 100 or more workers each, while the work force of 55 had dropped below the 100 mark. Of the remaining 160 firms, 30 were located elsewhere in New York State, and 130 were not listed in the 1953 directory. Some of these 130 undoubtedly went out of business in the interim, others may have reorganized under a different firm name, and some moved out of the State.

The 1946 status of Brooklyn's 462 larger manufacturing firms in 1953 is shown in the other table. Of this total, 326 were in the borough in 1946, 216 having 100 or more employees at that time and 110 having less than 100. Another 38 were located elsewhere in the New York metropolitan area in 1946, 28 with less than 100 workers, 10 with more than that number. Another 98, not listed in the 1946 directory, would include new businesses, some reorganized firms and some that moved to Brooklyn from other States between 1946 and 1953.

This material may be summarized as follows:

Between 1946 and 1953, 160 larger firms changed their names, moved out of Brooklyn or liquidated, while 136 larger firms changed their names, moved to Brooklyn, or started there, with a net loss of 24 firms through migration and liquidation. During the same period, however, 110 small firms in Brooklyn moved up into the top employment class, while 55 were forced back into the smaller employment groups, with a net gain of 55 larger firms. This net gain of 55 through growth more than offset the loss of 24 firms due to migration or liquidation, so that the net result was an overall gain of 31 in the number of larger firms.

REASONS FOR LOCATING IN BROOKLYN

Complete data on the migration of manufacturing firms to Brooklyn are not available. Investigation of the 1946 status of the 462 larger manufacturing firms located in Brooklyn in 1953 shows that 38 of these firms moved to Brooklyn between 1946 and 1953: 33 from Manhattan and 5 from other parts of the metropolitan area. For the 98 larger firms in Brooklyn in 1953 which were not included in the Industrial Directory for 1946, there is no indication of how many moved there from out-of-State locations.

Material submitted by the Brooklyn Borough president in March 1956 listed 15 manufacturing firms that moved there from Manhattan between January 1955 and March 1956. It also included two others which migrated from Queens and one from New Jersey during the same period.

Most of the manufacturing firms that move from Manhattan to Brooklyn do so to acquire more space. When Eagle Clothes, Inc., one of the Nation's leading manufacturers of men's clothing, moved to Brooklyn in the spring of 1951, it consolidated, in a new 2-story plant with 167,000 square feet of floorspace, the operations previously carried on in several scattered shops in Manhattan. The firm was able to increase floorspace per worker to 70 square feet in contrast to the industry average of 40 square feet. Nearly $2 million was invested in equipment for the new plant, which was scientifically designed to increase productivity and employee earnings through highly efficient flow of raw and semiprocessed materials in various stages of completion.

Two firms which moved to Brooklyn from New Jersey in 1955 cited as the principal reason their desire to be nearer the center of the market for their products.

In 1950 the Brooklyn Standard Bag Corp. bought a loft building at 62–114 Imlay Street, Brooklyn, with 250,000 square feet of floorspace from the New York Dock Co. to house its main eastern plant. The firm's president stated that in his opinion a good labor supply and facilities for shipping, plus the added convenience of the Brooklyn Battery Tunnel, made that part of Brooklyn

one of the best in the New York metropolitan area for medium and light industry.

RECENT OUTMIGRATION AND REASONS FOR MOVING

Most firms ceasing operations in Brooklyn have gone out of business. However, records maintained by the New York State department of commerce list 28 removals from Brooklyn to out-of-State locations between January 1954 and July 23, 1956, with another 15 for the period January 1950 to December 1953. Twenty-seven of these 43 firms employed 100 or more workers at the time of their migration; 16 employed fewer than 100. The records of this department also include the names of 11 firms which moved from Brooklyn to other locations in New York State during the period January 1951 to July 1956.

Reasons given for moving from Brooklyn fall into eight main categories. First is the need for more space. All of the 11 firms which moved to new locations in this State, and 18 of the 43 which moved to other States, cited the need for more space or the competitive pressure to shift to streamlined operation in a single-story plant as a principal reason for moving. One firm which moved to a less densely settled county reported that 16 man-days were required to unload a car of paper in its former multistory plant, whereas the same operation was accomplished in only one-half of 1 man-day in its new one-story plant.

Some of the smaller firms in this group might well have preferred to remain in Brooklyn—near the center of their markets, sources of supply and various business services concentrated in the city—if they had been able to find modern, single-story plants within the borough. Once a firm reaches a certain size, however, its very bigness may compel it to move from Brooklyn to an area where land values are lower. (A study of industrial migration in the New York metropolitan area between 1900 and 1922, published by the Regional Plan Association, Inc., in 1924, shows that an outward movement of large manufacturing establishments has been underway at least since the turn of the century.)

Other facets of the space problem were cited by 10 firms. Six moved out of the State because their Brooklyn plants were condemned for local public improvements and they were unable to find suitable substitute quarters within the borough. Another four stated that lower rent in their new location was their principal motive in moving.

The second major reason for removals to out-of-State locations was purchase of family-owned firms—usually by large, multiplant corporations—and subsequent consolidation of Brooklyn operations in a more modern, streamlined plant of the parent company in some other State. A good example of this is the Kirkman Soap Co. This firm was established in Manhattan in 1837 by John Kirkman. In 1894, it was moved to Brooklyn where it grew until it occupied several large buildings. In October 1930, after 94 years under family control, the enterprise was sold to Colgate-Palmolive-Peet, which continued it in operation for 20 years as its Kirkman & Son division. In the fall of 1950, however, operations at the Brooklyn plant were transferred to Jersey City for consolidation with the main Colgate-Palmolive-Peet plant. More often such consolidations are made within a much shorter period following purchase of a family-owned enterprise.

Eight firms cited personnel matters as a consideration in their decision to move out of the State, although in no case does this appear to have been the principal determining factor. Five of these eight firms expected to benefit from lower wage rates in the States to which they were moving; one planned to employ non-union labor in its new location; the others were not specific in stating the nature of their problem.

Seven firms mentioned high State and city taxes as another factor in their decision to move, but only one of these cited excessive taxes as the principal reason for its change in location.

Traffic congestion in Brooklyn was listed by four firms. City laws and regulations covering chemical manufacturing appear to have been an important consideration in another four cases. Four other firms cited lower workmen's compensation and unemployment insurance rates in other States as a significant factor in their decision to move.

A miscellaneous group of reasons, each of which was cited by only 1 or 2 firms, included the following:

Need for a railroad siding	1
Lower utility rates in new location	1
To be nearer sources of principal raw materials	2
Decline of market for burlap and cotton bags in the New York area	1
Cost of doing business in New York State too high	1
Principals' desire to live in Florida	1
Proximity to residences of workers or principals	2
More desirable location out of State	1
Attitude of landlord	1

RECENT PLANT CONSTRUCTION AND EXPANSION

Industrial structures completed or started in Brooklyn in the period 1946–53 numbered 455, according to data compiled from the records of the New York City Department of Housing and Buildings by the New York City Department of City Planning. This was 31.7 percent of the city total. Brooklyn stood second among the five boroughs in the addition of new factory buildings, being outranked only by Queens. The latter borough added 675 industrial structures during the period, 47 percent of the city total. The department of housing and buildings lists 51 factory buildings and 32 warehouse and storage-type buildings completed in Brooklyn during 1955.

New-factory construction in the borough since the end of World War II has been concentrated in the following areas: Greenpoint-Williamsburg, East Flatbush, East New York, and along McDonald Avenue. A report released by the borough president on July 22, 1956, stated that 21 industrial structures have been built on a 24-acre tract in the East New York section since 1951. The assessed valuation of these buildings totals $1.2 million. They are occupied by firms manufacturing cellophane bags, aluminum products, automobile accessories, hardware, office appliances, display cases, metal furniture, and laboratory equipment.

More recently, a Brooklyn builder and realty investor assembled a 15-acre parcel of undeveloped land in the New Lots section for development into a modern industrial center of streamlined 1-story factory buildings. He plans to erect at least 10 buildings on this site, with an average floor area of 30,000 square feet. One of the buildings already completed is occupied by Palmer Plastics, Inc., a toy-manufacturing concern which employs 400 workers during its busy season. Another building nearing completion will be occupied by Milo Mills, a weaving firm now at 570 Broadway, in Manhattan. The New Lots section is served by two subway lines and has a good potential labor supply in three low-income housing projects nearby.

Complete figures on capital invested in new-plant construction in Brooklyn since 1946 are not available. A survey made by the Regional Plan Association, Inc., however, covering the period 1946–50, indicates that Kings County ranked eighth among the 22 counties of the New York metropolitan area in value of new factory buildings erected during the 5-year period. The 230 new plants built in Kings County during those years represented a capital investment of $10 million, or an average of $43,700 per building. This was 30.7 percent of the total investment of the 5 counties of New York City. The relatively small size of individual manufacturing plants constructed in the borough is indicative of the important role the small manufacturer plays in Brooklyn's economy.

In expenditures for new plant and equipment in the census years 1947 and 1954 Kings ranked third among the 62 counties of New York State in 1947, following Erie and New York, and fourth in 1954, after Erie, Monroe, and New York counties, in the order given. The Kings County figure for 1947 was $53.5 million, or 10.7 percent of the State total. The 1954 figure for Kings County—$45 million—was 7.9 percent of the State aggregate.

Unfortunately, data of this nature are not available for other postwar years. More than 50 plant expansions completed in 1955 or scheduled for completion in 1956 are listed in material supplied by the Brooklyn Borough president in March 1956. These include:

1. An investment of approximately $1.6 million by Esso Standard Oil Co. in expansion and modernization of its Greenpoint terminal.

2. Expansion of existing plant at an estimated cost of $1.5 million by Joseph Schlitz Brewing Co.

3. Purchase by Classon Metal Products Corp. of the United States Coast Guard Supply Center annex—6 buildings with total floor space of 140,000 square feet. This firm previously occupied about 85,000 square feet in several older buildings.

4. Charles Pfizer & Co., which has spent several million dollars on plant expansion in Brooklyn in recent years, has purchased additional land adjoining its plant for still further expansion.

5. Additional plant expansion by American Machine & Foundry Co., which has already considerably enlarged its manufacturing facilities in Brooklyn since the end of World War II.

6. Late in October 1956 the Coca-Cola Bottling Company of New York, Inc., announced plans for a new 1-story, block-square bottling and distribution plant to be erected on Linden Boulevard in Brooklyn at an estimated cost of $2 million. The new structure is scheduled for occupancy by mid-1957.

SUMMARY

An analysis of Brooklyn's manufacturing industries points up these facts:

1. The industrial structure of the borough is characterized by a high degree of stability derived in large part from broad diversification and the importance of consumer-goods industries. The great variety of industries located there tends to serve as a built-in stabilizer which minimizes the impact of changes constantly occurring within various segments of the economy. Moreover, consumer-goods industries tend to fluctuate less with cyclical changes than do those making industrial goods.

2. Brooklyn has maintained its 25 percent share of the city's total manufacturing employment since the end of World War I. The city's shares of the national and State totals, however, have declined somewhat during this period.

3. Employment in 12 major industry groups increased in Brooklyn between 1947 and 1954 by 25,034, or 15 percent. This sizable increase was partially offset by a decrease of 10,387 jobs in transportation equipment (mainly shipbuilding and repairing) plus a drop of 7,340 in four other industry groups. The total gain in manufacturing employment during the period amounted to only 6,002, or 2.6 percent.

4. Brooklyn had 553 more manufacturing establishments in 1954 than in 1947. This was 21.4 percent of the State increase of 2,583 establishments during the 7-year period. The largest gain occurred in the medium-sized group—employing from 20 to 99 workers. Brooklyn's expansion in this group amounted to 372.

5. More than 500 new factory buildings have been erected in Brooklyn since 1946. Expenditures for new plant and equipment in the borough amounted to $53.5 million, or 10.7 percent of the State total in 1947, and $45 million, or 7.9 percent of the State total in 1954.

6. A tally of larger manufacturing firms—employing 100 or more—listed in the Industrial Directory for 1946 and 1953 revealed a net increase of 31. A net loss of 24 through migration or liquidation was more than offset by a net gain of 55 in the number of small Brooklyn firms which moved up into the top employment class between the 2 years studied.

Slighting Jamestown

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 11, 1957

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I extend my compliments to the Boston Herald, which I understand is a Republican newspaper, for its editorial comment on June 18, 1957, that President Eisenhower should have made plans to attend the recent international naval review held in connection with the 350th anniversary celebration of the founding of Jamestown, Va.

I also compliment the fact that this Boston newspaper was kind enough to point out, in its editorial, that Jamestown was founded 18 years before the colony at Plymouth. We in Virginia know of the great contribution made to the founding of America by the colonists of Plymouth Rock, and are indeed pleased that this powerful newspaper in Massachusetts has taken public note of the celebration we are now having at Jamestown. The editorial follows:

SLIGHTING JAMESTOWN

Vice President NIXON is expected to come up and take a look at the *Mayflower*, but the best the administration could do about the vast naval review down at Norfolk last week was Secretary of Defense Wilson.

Of course the President's stomach upset would have precluded his presence anyway, but evidently, he never had plans for attending and the White House showed no particular interest in the affair.

The review, which was part of the 350th anniversary celebration of the founding of Jamestown, 13 years before Plymouth, was the largest pageant of its type in America in 50 years. Ships representing all the NATO countries and many of our South American neighbors were present. Bands played, flags flew; it really was something.

We can't imagine Mr. Truman or Franklin D. Roosevelt missing such a show, and the Republican Roosevelt would have been there from start to finish. Mr. Eisenhower should have had it on his calendar, and, in his absence, should have been represented by the Vice President, especially since the latter is scheduled to see our one little ship next Sunday.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Early Americans Had Vision

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. JOHNSON of Texas. Mr. President, one of the strongest and most moving Independence Day statements I have ever seen appeared in a small town weekly newspaper in Texas last week. The newspaper is the San Saba Star, and the statement consists of five brief paragraphs written by Stewart Rivers.

I commend this statement to all Members of Congress and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLAIN TALK

(By Stewart Rivers)

When we look back over the works of the Founding Fathers, we are impressed with their independence of thought and action. Washington, Jefferson, and Franklin knew the weaknesses of all the ancient civilizations and planned what they thought would be best for the colonies; they had no blueprint to guide them neither were there good fairies at their elbows.

They did not idolize their difficulties, they did not say their problems were insoluble, they worked, they sacrificed, they fought, and they had faith. They discarded Old World prejudices and set up a new conception of freedom and justice.

They had a vision of balance of power in Government; there had never been anything like it; they produced their great drama without rehearsal.

There is no guaranty that our Nation, or any nation, is going to have rights and liberties unless it has the mentality and courage to fight for them. One generation cannot guarantee the future for the next.

We must never forget "Eternal vigilance is the price of liberty."

Death of Clyde E. Palmer

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. JOHNSON of Texas. Mr. President, in the passing last week of Mr. Clyde E. Palmer, publisher of the Texarkana (Tex.) Gazette, the Southwest lost a man who was outstanding for more reasons than his success in the newspaper-publishing field.

Among the many editorial tributes paid Mr. Palmer by his fellow publishers was one in the Dallas Morning News that succinctly summed up the career of a man who undoubtedly would have achieved success in any field of endeavor he entered. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

C. E. PALMER

Those who fear that old-style individualism has faded from the American scene might consider the life of C. E. Palmer, who has just died in Texarkana at 80.

The newspaper-radio-television owner has long been a colorful figure as publisher of the Texarkana (Tex.) Gazette and seven other newspapers in Arkansas. Coming to Texas from his native Iowa as a youth, he began his career as a telegraph operator for the Cotton Belt Railway at Greenville. He established the Gazette in 1909, later creating the publication empire that amassed a fortune for him.

Fifteen years ago, the former telegrapher made newspaper history by being the first to introduce teletypesetting. He showed how news may be transmitted simultaneously by wire to eight or more newspaper plants, being converted electronically into metal type at each outlet without ever being touched by human hands.

During World War II, Palmer, at 68, became an accredited war correspondent. He covered developments in Europe as the oldest correspondent on the job.

After he was 70, Palmer learned to fly an airplane and received a pilot's license.

When the question arose of how to turn his increasing wealth to the public good, the publisher in 1944 created the Palmer Foundation, a research venture designed to find out how to develop children's moral sense without moralizing.

Not only Arkansas but the entire Southwest loses a notable citizen in his passing. The example of his life will long prove an inspiration.

Academic Unity

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Donald C. Power, president of the General Telephone Corp., to the 51st grand chapter banquet meeting of the Sigma Chi Fraternity on June 28, 1957, at Toronto, Ontario.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ACADEMIC UNITY

(Address by Donald C. Power, president, General Telephone Corp., to the 51st grand chapter banquet meeting of the Sigma Chi Fraternity, June 28, 1957, at Toronto, Ontario)

Senator GOLDWATER, Grand Consul Peterson, and other general officers, constantine and significant sigs, and other brothers and guests of Sigma Chi, I am highly honored to be invited to speak to you this evening. Indeed, I can think of no higher privilege than to occupy this position at this concluding banquet of this splendid biennial convocation of the fraternity—the 51st in its history.

It is altogether fitting, moreover, that this 51st grand chapter should take place in this beautiful city of Toronto. I am told that the name of this city comes from the word used by the old Huron Indians to signify a meeting place. It is fitting because this Canadian assembly symbolizes more than words could say the truly international scope of our fraternity and of its growth and strength over more than a century. At the same time, it should remind us of our humble beginning at that first gathering of our seven founders at Miami University in Ohio in 1855. Of them it might truly be said: "They builded better than they knew."

I should say, however, that I have been in some doubt as to why I have been selected to fill this role. I have decided that perhaps it is because, though a lawyer by profession, I am a telephone man in business. Since that business is concerned with the transmission of the spoken word, it may be that your arrangements committee has felt that it would be in order for a communications man to be on the program. If that be the reason, I certainly trust that, in the language of the industry, I establish contact with each of you and that my remarks come through.

This evening, therefore, I have the normal trepidation of the public speaker dealing with an untried subject in unaccustomed surroundings. I think that he is always fearful that his efforts may have the same reception as related in a story told by a friend of mine. It seems that a prominent public figure was invited back to the small town in which he was born to deliver the high-school commencement address. At the conclusion of the exercises, the local citizens lined up to shake his hand and congratulate him on his speech. Everything went fine until the town halfwit came by. He said in no uncertain terms: "That was the worst speech we have ever had here. It was stupid and made no sense at all." The school superintendent, overhearing these irreverent remarks, pushed the fellow aside. In an effort to atone for this disrespect, he said: "Pay no attention to Joe. He's the town halfwit. Never has a thought of his own. He's always going around saying what everybody else tells him."

So I implore you to be lenient on the judgments you pass on to your neighbors regarding my message this evening.

Seriously, I am primarily pleased to be here, because over the years Sigma Chi has meant much and stood for much in my life. I was initiated at Mu Chapter at Denison University and then transferred to Alpha Gamma at Ohio State. I attended law school there and also taught at the university. So as a student I had a somewhat longer experience with undergraduate fraternity life than do most. Thereafter I spent many years in

and around the university and participated extensively as an alumnus in the activities and the problems of the operations of the chapter.

Thereafter I was honored by being selected as a "significant sig." And, last but not least, I have served on the committee which has made possible the building of the new chapter house in Columbus which was just opened last fall.

Hence, since I believe I know something about Sigma Chi, I propose to talk about the fraternity itself tonight. What should it represent to all of us, alumni and actives alike? What is its place, not only on the collegiate scene but in our growing, vibrant, ever-changing society?

Perhaps my remarks will not seem particularly original or unique. Perhaps upon analysis they will represent nothing that each Sigma Chi, down in his heart, does not himself know and understand. But however that may be, it seems to me that this is the time and the occasion to enunciate again those essential values which have been the hallmark of this fraternity through the century of its existence.

If you are wondering just what specific thought lies behind the somewhat general title of my talk with you this evening, perhaps I should explain that it concerns the idea of preserving academic unity in an age of specialization. I say that because it seems to me that one very important function of Sigma Chi and every other Greek letter undergraduate college fraternity, should be to bridge the gap which is constantly widening between our professional and other college graduates in this day of more and more inescapable specialization.

In modern society all college men must specialize to some degree if they expect to operate successfully. And yet this very necessity imposes on the academic world a challenge—a need to find new ways and more ways for keeping open the lines of communication between those who travel the common path of undergraduate life. This pressure of modern technology and business life in general for more and more specialization does have its danger. It is the danger that we may be driven apart.

We hear many stories these days about the tendency to overspecialize. You have heard perhaps of the nose doctor who specialized on the right nostril rather than the left nostril. And right along this line, I heard recently about what happened at a diplomatic reception being held at one of the embassies in Washington. It seems that a Navy doctor, Commander Jones, was introduced to the wife of an embassy official as a very brilliant naval surgeon. The lady whispered in her husband's ear, "What did you say he was?" The husband whispered back: "I said he was a very brilliant naval surgeon." The wife blinked her eyes and then whispered back once more: "I say, John, don't you think that is carrying medical specialization too far?"

Well, it is possible, I suppose, for any one of us to carry our specialization too far unless we establish and maintain through life certain bonds of a common academic heritage which we share with our brothers. And these bonds are most effective when they are made at the time of our undergraduate life, when we all studied out of the same books and shared the same happy hours of formal education. And I know of no better or finer purpose to be served by a Greek letter fraternity than to preserve just such a community of interest, which I call academic unity.

I have sometimes wondered, in this connection, who among the ancient Greek philosophers and teachers would be the best choice as a symbol of the Greek letter fraternity, and what it stands for. Plato was a bit on the socialistic side. Socrates was a bit of a skeptic. My choice, I think, would be Aristotle. For it was Aristotle, you may recall, who gave us that magnificent ideal of the universal man, the whole man.

Aristotle visualized education in terms of such unity that he thought it might be possible for every truly educated man to become personally familiar with all the arts and sciences known in his time.

And he practiced what he preached. For Aristotle, who has been called the father of learning, was the outstanding physician, philosopher, metaphysician, logician, natural scientist, commentator on arts and ethics of his time. Needless to say, Aristotle was probably the last man who ever tried that, although we have had throughout history some amazing example of versatility. We had such examples in Leonardo da Vinci, Newton, and, in our own day, Albert Einstein. All of us realize, however, that it is no longer possible in this modern day of constantly expanding technology and research in every field of human endeavor, for any one man, however brilliant, to measure up to Aristotle's concept of universal knowledge. I say this with all due respect for those encyclopedic minds and collectors of such tremendous amounts of irrelevant information, who are able to win hundreds of thousands of dollars in prize money on television quiz programs.

And yet we can, I think, persevere in this ideal of the universal man which Aristotle had in mind. We can establish a community of intellectual interest. We can maintain an aristocracy of the spirit, if you will, whereby the broad friendship and understanding of our undergraduate days can last us an entire lifetime. We have done that very thing, or at least we aspired to do it, when we took upon ourselves the pledge of membership in Sigma Chi.

Yes, all of us took this pledge as young men at a time in our lives when we were still in our formative years—with open minds and eager hearts, looking forward with high hopes to a future before us. And the beautiful part of this wonderful thing is that it is happening today, all over the United States and Canada, wherever there are chapter houses of the brothers of the white cross. The same ritual is repeating itself, year after year, as if has for more than a century.

Oh, we did not have any trouble understanding each other then. Our communication was perfectly all right when we all walked together along the same road of academic learning, whether it was tramping with Caesar's legions through Gaul or taking our first timid steps across the pons asinorum of Euclid. We all traveled together; all too soon after, our paths divided. We have branched out into our specialities of business—law, medicine, engineering, teaching, divinity. But who among us is not able to recapture in his mind and heart those days of undergraduate understanding because it was made possible for us by this beloved fraternity?

Here, therefore, is true academic unity. There are all too few opportunities in life to maintain such lines of communication. I think we have every right to be proud that we find our solution to this problem in such a permanent, substantial, and practical form as Sigma Chi.

The modern ideal of the well-adjusted man, after all, is that he should be a man of personal integrity. That means that, while we cannot share each other's professional or specialized knowledge, we can and do have a mutual respect and understanding of what those professions and specialties are and what they represent. We are able to meet, at our chapter houses throughout the land or at grand chapter meetings, such as this one, and still talk the same language of brotherhood and fellowship which we spoke years ago. What better justification can there be for a fraternity than this?

And if it sounds a little bit as if I were pleading for the humanities in education, let me say that I do plead for them. For if we are to establish these lifetime bonds of understanding even under the protective ritual of our fraternity, we must first establish the conditions of mutual understanding at the educational level. We must build our common ground of intellectual equality before we can stand on it.

As a businessman who has also had my share of experience in the legal and teaching professions, I see, very often, examples of young men who have made mistakes about this. Unknowingly, perhaps, they have shortchanged themselves by trying to take short cuts into specialized fields without equipping themselves with the necessary background of arts and sciences. Such a mistake can be a tragic handicap for young men, otherwise highly qualified and naturally endowed with talents which could carry them to great success. There is no need to point at any line in particular. But I can tell you that the engineer, for example, who has trouble with his English construction and cannot write an intelligent or persuasive report, the lawyer who is deficient in ordinary logic and philosophical background, the doctor of medicine who somehow never got around to an appreciation for history—all can injure themselves for life because they did not take the little extra time or make that little extra effort to catch up with their full quota of traditional education at the undergraduate level. I think it is important to stress such basic educational values at this time, because the pressure of current events and the shortage of trained people, particularly in technical and engineering lines, may tempt young men to take unwise shortcuts. We are rightly concerned about Soviet Russia, for example, hatching out great numbers of technicians under a forced draft system of specialized education which ignores, in the typical Marxian contempt for traditional formal education, all reference to the humanities or preprofessional training.

But it would be a grave mistake, in my opinion, for us in the free Western World to imitate any such shortsighted hothouse approach to the education of our future professional people. Soviet Russia may succeed, for a while, in turning out large numbers of skilled technicians who know how, but do not know why. In this contest of ideology, the last thing we can afford to lose is our know why—for that is the great advantage, the secret intellectual weapon, if you will, which the Western World has over the totalitarian world—the tremendous appeal of free thought and comparative values. What would it profit a man if he were to gain all the technical knowledge in the world, if he did not understand what it was for or what it was all about or if he had failed to rationalize his life with some conviction or personal philosophy?

That is, perhaps, what I value most about Sigma Chi—that it is primarily an undergraduate fraternity. It is a fraternity which encourages young men to select each other's company, at a time of life when they are all engaged at the college level in training for their chosen career. It is a fraternity which provides these young men with a great opportunity, perhaps the last opportunity that most of us get before we branch off into our individual specialties—to meet and talk and eat together. It is a fraternity which enables these young men to learn by doing to regulate their own life and agree with each other to practice a code of conduct and principles worthy of gentlemen and scholars.

It is an interesting thing that Sigma Chi, and Greek letter fraternities in general, are peculiarly a North American educational development, although they have now spread, of course, to many other countries. But with all the tradition and prestige of the Old World universities, such as Oxford, Cam-

bridge, Sorbonne, Heidelberg, or Louvain, it is an odd thing that nothing quite like our North American Greek letter fraternities ever developed there. Now, as a believer in the natural law, my own philosophy embraces a conviction that nothing important ever really happens by chance and that there is a cause or reason or, at least, an explanation for everything. I like to speculate that our North American democratic concept may be responsible. In other words, isn't it a fact we have, in the United States and Canada, such undergraduate fraternities as Sigma Chi because there was spontaneous feeling among our college men that there was more to college life than passing grades and degrees in courses. They felt, as our seven young founders felt a century ago, a personal need for establishing their own independent rules of conduct. Born and raised in a free democratic society, they instinctively carried over into their academic life a desire to learn by doing, to manage their own houses, to choose their own company, to conduct their own affairs, and learn valuable lessons in the process.

I would carry this idea a bit further, without suggesting any odious comparison, by speculating that such a fraternity as Sigma Chi could not happen in a totalitarian society. There is no Sigma Chi in Russian colleges. There was no Sigma Chi at Heidelberg in Hitler's day, nor in Fascist Italy under Mussolini. Sigma Chi stands for a forum of free democratic self-discipline and individual responsibility that could not exist in an atmosphere of repression and faceless conformity under totalitarian dictatorship.

I would like to think that if there had been something like Sigma Chi in the universities of the Old World during the days when totalitarian of both the left and right was on the rise or on the march, there never would have been a Hitler, or a Stalin, or a Mussolini.

Perhaps that is carrying my idea a bit far. But in this clash of ideologies between the free Western World and Communist dictatorship, we are going to need all help we can get from democratic institutions which teach and encourage our young people to think for themselves and do for themselves. I do not have to tell this group that Sigma Chi is just an institution rendering valuable service at a most important place in our society—that is, the training of our young college men.

Before closing, I must recognize, in all fairness, that, in common with many Greek letter fraternities, Sigma Chi is today the subject of controversy and contention regarding the fraternity's place on the academic scene. We are facing criticism and condemnation respecting policies and practices of fraternity membership, operation and control. In certain specific situations these problems have resulted in grave crises. And in some cases they have gone so far as to obscure the true purpose and destroy the real usefulness of the fraternity.

I have no intention of discussing these issues this evening. I advert to them here because, based upon my experience as a trustee of Ohio State University, I have reached the considered judgment that our critics, including in some instances those charged with the administration of our colleges and universities, are either uninformed or misinformed as to our true purposes and objectives.

For certainly insofar as Sigma Chi is concerned, it seeks to deny nothing to anyone. Rather, its primary objective has always been to inculcate in that necessarily limited group of its members a higher appreciation for and realization of the abiding values of life. Quite naturally in the selection of our candidates for membership in the fraternity we seek to secure those who give promise of having those capacities which will enable them to ripen and develop into good citizens, good neighbors, and outstanding contributors to the life and affairs of their communities.

That Sigma Chi has discharged well its obligations in this respect is abundantly established by the record. For the history of the fraternity with respect to the generations of young men who have come to accept its tenets demonstrates that it has been an outstanding force in the development of men of high purpose and good will. Our members are scattered throughout all of the United States and of more recent years throughout this great Dominion of Canada. I think it fair to say that everywhere the name of Sigma Chi has become synonymous with good citizenship. Whether you explore the fields of statesmanship, of the professions, of business, literature, science, or philanthropy you will find among the leaders those who proudly wear the emblem of the white cross. Some of them are represented by the brothers who are being honored as "Significant Sigs" this evening. But countless thousands more of them are significant citizens and significant neighbors in the scattered communities where they live—where they have come to exemplify the high principles of Sigma Chi.

I think that the very repetition of the words which all of us have heard uttered so many times—"think no thought, do no deed which will cause the name of Sigma Chi through you to be dishonored. Cherish that standard of manhood which is noblest and best"—have never failed to leave their lasting impression upon all who have undertaken the obligations of the fraternity.

And, in closing, I would like to paraphrase remarks made on the occasion, more than 50 years ago, of the 50th anniversary exercises of the fraternity at Oxford, Ohio, in 1905: Full of faith in the future of our fraternity, which is begotten by the contemplation of its inspiring history of 100 years and by an assurance of the loyalty and devotion of its members, with joyful enthusiasm, with abounding hope, with loving hearts, we bid it Godspeed as it is entering upon the second century of its existence.

Maj. John L. Polereczky—1748–1830

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. LAUSCHE. Mr. President, the 10th Slovak Day of the eastern district of the Slovak League of America, on July 14, 1957, in Kenilworth Park, N. J., will be dedicated to the memory of Maj. John J. Ladislaus Polereczky, soldier and hero of the American Revolutionary War, who as a Slovak gloriously contributed to the cause of American independence and liberty 175 years ago. Maj. J. L. Polereczky—1748–1830—on July 21, 1782, in command of the cavalry of De Duc De Lauzan Legion, fought heroically for Kingsbridge.

I ask unanimous consent that a statement prepared by Joseph A. Mikus regarding Major Polereczky be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MAJ. JOHN L. POLERECZKY, 1748–1830—A SLOVAK WHO FOUGHT FOR AMERICAN INDEPENDENCE

(By Joseph A. Mikus, Slovak League, Washington, D. C.)

The American struggle for independence inspired to heroism many freedom-loving Europeans. Names like Lafayette and Rochambeau (French), Kosciusko and Pulaski (Polish), Kovac (Hungarian), Solomon (Jewish), Steuben (German), and others will remain forever connected with the history of American liberation. Their pictures will be admired in museums and their deeds exalted in schoolbooks.

But generals were not the only ones who had come from Europe to rally George Washington's fight. A number of officers, noncommissioned officers, and anonymous soldiers whose popularity has never reached up to art galleries, town squares, or history manuals were numbered among this group.

According to a penetrating research by Mr. Joseph G. Cincik, professor of history and art, Cleveland, Ohio, when soldiers of the defeated Cornwallis, in 1781, surrendered their rifles to General Washington, at Yorktown, it was done in an open field around which French Hussars had formed a circle. Included among them was a proud cavalier, a French major, dressed in an impressive Hussar uniform, in whose veins circulated Slovak blood. Strangely here was a Slovak, wearing the Rakoczy uniform, fighting with Frenchmen for American independence. It is known that Count Maurice Benyovszky de Vrbove, a Slovak by birth, was nothing less than the King of Madagascar in the 18th century; but there was no thought that a Slovak might have struggled for American independence. Yet, Professor Cincik's discoveries, proven with photocopies of original documents from Slovakia, France, and the National Archives in Washington, are convincing.

The story touches on the romanesque.

After Prince Francis Rakoczy had lost his struggle against the Hapsburgs in Hungary, he was in 1711 obliged to escape, first to Poland and later to France. To a great degree, Rakoczy was a pawn on the French chessboard against Austria. It was, therefore, natural for Louis XIV to take care of his distinguished protege. Rakoczy brought in 1713 to France, among others, two of his most loyal soldiers, Count Andrew Polereczky and Count Nicholas Bercsenyi.

As commanders of Rakoczy's light cavalry, both of these experienced soldiers were ordered by King Louis XIV to organize two regiments of riders in the region of Alsace. Count Andrew Polereczky, originally born in Polerieka, Turiec County in North Slovakia, organized a regiment of hussars in Rosenheim-Malsheim. After being appointed a German for his merits, he died in the service of the French King.

During his stay in Alsace, Andrew Polereczky fathered two sons—Frederick and John, the latter being the man of Yorktown. Both of them studied at the Royal Military School. While Frederick remained in the service of the French kings until the end of the monarchy, John, promoted to major by a decree of Louis XV (original in the National Archives), went to America with the Rochambeau expeditionary army. Rochambeau brought to Newport by ship not only men, horses and necessary ammunitions, but even a quantity of "Louis d'ors" to pay officers and men.

From Newport the expeditionary force went to Philadelphia, where they were honored by balls and concerts.

During the skirmish with Englishmen on the White Plains, New York, John Polereczky survived a dramatic event. While riding patrol, his horse was shot down from under him and he had to run away to save himself from being captured.

At the historical moment of the surrender of the British forces, Polereczky stood proudly alongside Generals Washington and Lafayette.

After the war was over, Polereczky, having renounced his titles and inheritance in Europe, became an American citizen. Then, by the favor of his good friend, General Dearborn, he was appointed deputy marshal in the county of Maine (at that time North Massachusetts). Later on, he founded Dresden Mills, a community near Viscasset. There, he spent 27 years as a municipal clerk.

Human destiny is unforeseeable. This brave rider who had led a very active life fighting for freedom's cause in America, had to spend his last years in complete seclusion as a lighthouse keeper on Seguin Island, south of Bath, near the estuary of the Kennebeck River.

Another personal tragedy: Shortly before Polereczky's death, Congress voted on his pension for which he had so many years bargained. But it was too late. The first payment reached his home only after he was buried.

Integrity—Man's Greatest Asset

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address made by the Honorable George E. Stringfellow on June 28, 1957, at Atlantic City, N. J.

I also ask unanimous consent to have inserted, following the text of the address, an editorial appearing in the Atlantic City Press of July 2, 1957, entitled "Reemphasizing Basic Virtues," which deals with the eloquent and pointed address of Mr. Stringfellow, who has contributed very much to the welfare and benefit of his fellow citizens.

There being no objection, the address and biographical sketch were ordered to be printed in the RECORD, as follows:

INTEGRITY—MAN'S GREATEST ASSET

(Address by George E. Stringfellow, active member, International Supreme Council, Order of DeMolay, and Imperial Chief Rabban, A. A. O. N. M. S., before the annual banquet, New Jersey Order of DeMolay, Atlantic City, N. J., June 28, 1957)

Mr. Chairman, members of DeMolay, and distinguished guests. It is a privilege for me to be here.

I should, at the outset, like to make a few remarks about my friends, Dr. Frank S. Land, 33d, Kansas City, Mo., founder and secretary general of the International Supreme Council of the Order of DeMolay, and George M. Saunders, Chicago, Ill., 33d, grand master of our fraternity.

Dr. Frank S. Land, 33d: I know of no one who has done as much to build character and leadership in youth of the world as "Dad" Land. If there was ever a God's nobleman, he's it. "Dad" Land believes a person can preach a better sermon with his life than with his lips. Because he is dedicated to decency and the principles of clean and gracious living, he commands respect and admiration of all segments of our human family. It is a privilege to call him my friend.

George M. Saunders, 33d: I know of no person among my travels who is connected with as many worthwhile projects as "Dad" Saunders. "Dad" Saunders likes to work with people and people like to work with him, and that in my opinion explains the secret of his great success. I have been associated with him in the work of the Shrine and that of the Shiners' Hospital for Crippled Children for many years, and as the years roll by my admiration for him increases. He is a top-flight citizen, the type person with whom you like to do business and go fishing. We are fortunate in having him as our grand master.

The International Order of the DeMolay has for its purpose encouraging the practice of virtues of reverence, love of parents, patriotism, courtesy, cleanliness, and fidelity. Its ultimate aim is to create leaders and develop character. It places special emphasis on love of God, love of home, and love of country.

In my opinion, now, more than ever, there is great need for such an organization as DeMolay.

There is a feeling of unrest in the world today not only among nations, but in individuals. This unrest manifests itself in crime, cruelty, hate, and gang wars. It is important that this energy be channeled into constructive accomplishment. We should start with our young people by showing them that it is more heroic to build than to destroy.

Young people should be given the opportunity to experience the satisfaction that comes from doing the right thing at the right time. We should help our youth to develop good character. One of the first things they should learn is respect for integrity.

What is integrity? It is that quality of mind and spirit which we associate with honesty and good faith either in public or private life. Integrity is the foundation upon which virtue and morality rest. Integrity is the cornerstone of good relationship between individuals and groups. Integrity is the cement which holds the structure of human life together.

Integrity is the first requisite for domestic tranquillity, good government, and international peace.

The history of human progress is the record of men who could be trusted and who trusted themselves, men who put righteousness, truth, justice, and freedom above selfish interest.

If our people should lose their fundamental honesty, business would collapse overnight.

Everything we are, everything we have, everything we hope for, rests upon the integrity of mankind. We should be more interested in what is right than who is right.

There is a false notion abroad today that men of sterling worth, men of honesty and noble character, are not successful in a monetary sense.

Only the honest physician is successful. Only the honest lawyer reaches the peak of his profession. Only those firms that turn out quality products and render honest service stay in business. The idea that honesty does not pay is false.

Companies seek men of specialized skills and specific training in the commercial world. If there were any scientific way of measuring integrity, employers would pay the highest premium for the candidate with the most integrity. If he has integrity in full measure, almost anything is possible; without it no amount of skill or training will compensate.

The growth of character and the development of integrity takes place in three fundamental units of our community life:

1. The home.
2. The church.
3. The school.

THE HOME

Of these three institutions, the first and oldest is the home. The family is the basic social unit. It is the center of early training of the child for cooperative living. Children learn from their elders. It is in the home that habits are formed and where the child is set in its ways of thinking, its tastes, its manners, ideas and ideals. Psychologists say that traits of character are developed during the early years of childhood which later condition adult behavior. "As the twig is bent, so grows the tree."

THE CHURCH

Integrity is one of the fundamentals of religion. We know that the pastor can function effectively only when he is so steeped in his faith that his sincerity illiminates those with whom he comes in contact. In the same way, the members, in accepting the tenets of their religion, do so with faith and sincerity.

THE SCHOOL

The school is a training ground for character as well as for the mind. In fact, from the days of Plato to the present, there have been those who hold that the ultimate aim of education is training in character. The school should include mental, moral, and physical instruction.

In many schools, the merit system encourages the development of honesty and sincerity, while group and team activities provide a base for loyalty and selflessness, which are all part of the integrity of which I speak.

There is still another training field of the young. It is their own circle of companions, who wield great influence on each other's behavior. Psychologists tell us that one of the needs of youth is to belong. He wants to be a part of a group and to be accepted as one of the fellows. To maintain his status in the group, he will strive to outshine the others in whatever they do. Obviously, if we want him to expend his energies in the right direction, we must provide him with the proper kind of outlet.

It is to this phase of training that the Boy Scouts, the YMCA, and DeMolay turn their efforts. It is encouraging to note that the membership of these organizations—along with church membership—is increasing. This indicates that a great majority of our young people are seeking wholesome activities.

The scouts, the YMCA, and DeMolay offer companionship and guidance in social activities.

The DeMolay boy is prepared to face the world with confidence and a feeling of security. His opportunities for success are vastly enlarged and his rewards multiplied many times.

He is ready to accept life's challenge with the most important equipment man can possess—character and integrity "man's greatest asset."

[From the Atlantic City Press of July 2, 1957]

REEMPHASIZING BASIC VIRTUES

A glance at statistics on the rising rate of crime perpetrated by the young should convince anyone that honesty and integrity are not among the things in oversupply today.

And when someone like George E. Stringfellow, imperial chief rabban of the Ancient Arabic Order of the Nobles of the Mystic Shrine, goes about trying to reemphasize these virtues, it seems to us that his efforts should not go unnoticed or unpraised.

Speaking before the New Jersey Order of DeMolay here, he said: "Let our people lose their fundamental honesty and business will

collapse overnight. Without integrity, our land would be a shambles * * *. Everything we are, everything we have, everything we hope for rests upon the integrity of mankind."

He defined integrity as that "quality of mind and spirit which we associate with honesty and good faith either in public or private life * * * the foundation upon which virtue and morality rest."

Why then do so many neglect these basic qualities? The reason perhaps lies in what Stringfellow called "a false notion abroad today that men of sterling worth, men of complete honesty and noble character, are not successful in a monetary sense in this so-called hard, cold, practical world."

Could it be that some of our impatient young men and women, seeking shortcuts to success, are allowing themselves to be influenced by the fast-buck gentry so frequently portrayed on radio and television? The fact that they usually wind up with nothing but regret may have escaped some misguided youth.

"The idea that honesty does not pay is false," says Stringfellow. "Only the honest physician is successful. Only the honest lawyer reaches the peak of his profession. Only those firms that turn out quality products and render honest service stay in business."

The growth of character—and with it the development of integrity—takes place in three fundamental units of community life: the home, the church and the school. But, as Stringfellow points out, there is still another training field for the young.

"It is their own circle of companions, who wield great influence on each other's behavior," he says. "One of the needs of youth is to belong. He wants to be a part of a group and be accepted as one of the fellows. To maintain his status in the group, he will try to outshine the others in whatever they do. Obviously, if we want him to expend his energies in the right direction, we must provide him with the proper kind of outlet."

It is to this phase of training, he says, that the Boy Scouts, YMCA and DeMolay turn their efforts. The fact that these organizations, as well as the churches, report increasing membership, should be a source of satisfaction.

Freedom of Debate in the Senate

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Friday, July 12, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the testimony of Hon. Merwin K. Hart, of New York City, president of the National Economic Council, delivered before the special subcommittee of the Senate Committee on Rules and Administration considering proposed changes in Senate rule XXII.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BEFORE SUBCOMMITTEE OF THE SENATE RULES COMMITTEE ON THE PROPOSED CHANGES IN RULE XXII, BY MERWIN K. HART, PRESIDENT OF THE NATIONAL ECONOMIC COUNCIL, 7501 EMPIRE STATE BUILDING, NEW YORK, N. Y., JULY 9, 1957

On behalf of the National Economic Council I thank this committee for the opportunity to appear and speak on the proposed changes in rule XXII.

While the Senate rules are primarily the concern of the Members of the Senate, yet in a larger sense this rule XXII is of vital importance to the whole people, since it insures unlimited debate. And unlimited debate always has been a guaranty against overhasty legislation.

Since the freedom the American people enjoy includes the freedom of speech, with the accompanying freedom to petition the Government against grievances, real or alleged, this freedom of necessity permits activities not only by those who wish to preserve, but by those who are willing, for whatever reason, to destroy, any of the freedoms we enjoy.

The movement to change rule XXII is of course championed by Communists. I say, of course, because, whatever its sponsorship in the past, it is presently one of the many measures that pattern the effort to bring all power into Federal hands, from which a Communist takeover could be most easily accomplished.

We hear incessant talk these days about the virtues of democracy. But the Constitutional Convention discarded democracy, just as it discarded monarchy, when it was considering the form of government to set up in the United States. It discarded democracy on the ground that throughout history democracy had always failed.

What they set up was a republic—a government with a separation of powers into legislative, executive, and judicial, with its accompanying checks and balances. Through its Bill of Rights it guaranteed the individual citizen against encroachment by either Federal or State Governments—even encroachment by a majority—on certain of the citizens' fundamental rights.

The lower House of Congress, with its 435 Members, is perhaps compelled to fix a limit on debate. Hence, as a rule it has been possible for certain measures, that many think unwise, to slip through the House, because of insufficient consideration and debate.

But the Senate, with only 96 Members, is different. By rule XXII the Senate has reserved to itself the right and duty of examining, at length and without reference to the time spent in debate, measures, unwise or inadequate, some of which may have come from the House.

This, we take it as private citizens, is the reason for the existence of rule XXII. We agree thoroughly with Senator RUSSELL, of Georgia, who said in 1951 that, "Grave evils often result from hasty legislation, rarely from the delay which follows discussion and deliberation."

During the past 20 years many important measures have been passed by Congress, under the pressure of war or depression or some other crisis, real or alleged. We can see now that it would have been far better for this country if some of these measures had not been passed.

As things are today, the existence of rule XXII, is about the only remaining bulwark the people have against unwise legislation by the Congress.

I spoke a few moments ago of the right that any group, or whatever turn of thought has to organize and petition the Congress—that is to say, engage in lobbying. For the past 30 or 40 years this country has been under constant pressure from collectivist influences, Socialist and Communist. And it has been shown that these influences have no lack of financial support. Some of this support may come from outside the United States. Americans who give money to strengthen these influences certainly receive their initial inspiration from outside the United States. Thus the Communist Internationale in 1922, established the International Red Aid (the IRA) in order to promote the weakening of the immigration laws of various countries, particularly the United States. The American section of IRA, organized in 1925 as the National Labor Defense, within 10 years has developed 800 subsidiary organizations. These, as we well know, included in their membership a tremendous number of well-meaning and often well-heeled Americans, who have worked aggressively at times to persuade this Congress to weaken its immigration laws.

And while the highly organized leftwing groups are working on Congress, directly or indirectly, those conservative groups that wish to retain the more stable factors in our form of government are inadequately organized and financed. Many indeed of the leftwing internationalist-Socialist groups have secured deductibility before taxes for their individual contributors, while hardly a single conservative group has secured such deductibility. In fact, such deductibility has been specifically denied many of them.

So rule XXII, which permits continued and unlimited debate is an absolute necessity if we are to prevent a bare majority from wiping out all those minority rights guaranteed by the Bill of Rights.

Many efforts have, of course, been made in the past to change rule XXII. Presumably in each of these cases the reason for the effort to change it has been some pending legislation of very great importance on which feeling on both sides has run high.

The legislation which has apparently stimulated the present drastic effort to amend rule XXII is the demand for so-called civil rights. The present civil-rights bills would bring about:

1. A grant of power to the Department of Justice to intervene directly by employing Federal injunctions and contempt proceedings in cases of alleged violation of civil rights.

2. The establishment of a Federal Civil Rights Commission with subpena powers.

3. Creation within the Justice Department of a special Civil Rights Division.

All of these provisions are an invasion and preemption of States rights.

Federal intervention in these State and local rights would deprive the citizens of the right of trial by jury, one of the most important rights guaranteed by the Bill of Rights.

Now what is back of all this is, of course, the National Association for the Advancement of Colored People, an organization formed at the instance of the Communist Party for the very purpose of stirring up friction and discord. I am advised that there was only one Negro member of the original committee, and throughout its history its main motivation has come from white members.

The Supreme Court of the United States in the school segregation case, turned its back completely upon long-accepted principles of American constitutional law and of American custom, and instead adopted the views of sociologists as "experts." One at least of these, who was of foreign birth, had expressed contempt for the Constitution of the United States. The Court has likewise turned its back on established law and custom in such cases as the Steve Nelson case, the New York Slochower case, the Michigan so-called "dirty book" case, the bus segregation case, and the Girard College case. Hence there is reason to believe that any of these civil rights bills that are pending would, if passed, be sustained by the Supreme Court, even though it meant the attempted repeal by the Supreme Court of vital provisions of the Bill of Rights.

For the Senate to modify rule XXII, thus rejecting unlimited debate, would assuredly lead sooner or later to the passage of some one or other of these objectionable civil rights laws. Then the Supreme Court, having usurped, as would be likely, the role of the Congress and the legislatures of the 48 States, would arrogate to itself the power to amend the Constitution and would remove the last bar to the destruction of the Amer-

ican Republic. And the Senate, if it weakened rule XXII, by such action would literally abdicate in favor of the communist-socialist influences that are abroad in the land.

It will be asked by some, do we not all believe in rule by the majority?

The answer is, on all ordinary day to day matters, yes. But on the great underlying principles of the Constitution there are some questions so grave and involving rights so vital to the people as a whole that experience shows it is not safe for all the people to leave these to the decision by majority vote. In the past we have prospered as a nation because we have held these rights sacred and above and beyond all other rights.

The idea underlying this thought is one of the fundamental ideas in the Constitution—in fact, in the idea of even having a written Constitution. The Constitution gives vast powers to both the legislative and executive branches and implied powers, at least, to the Supreme Court—which powers incidentally the Supreme Court is now trying to expand and augment.

But in certain provisions of the Bill of Rights, notably amendments IX and X, and in the terms of article V of the Constitution providing ways in which the Constitution can be amended, it is perfectly clear that the framers of the Constitution intended to make it difficult for the Constitution to be amended. These safeguards have been observed practically throughout our history—until very lately.

Now, since the obvious purpose of the efforts to amend rule XXII is to clear the way for the passage of pending civil rights legislation; and since the civil rights legislation would to a large extent throw amendments IX and X down the drain, there is all the greater reason why rule XXII should not be tampered with.

Human experience has taught that speedy action on ordinary matters is often required and is reasonably safe. But there are certain fundamental matters of the kind dealt with in the Constitution itself and in the Bill of Rights, which according to the theory on which we have always gone, should not be changed except over a long lapse of time, in order to give plenty of time to the people and to the people's representatives in Congress and in the States, to weigh them carefully.

This is why we have had only 22 amendments to the Constitution in 168 years.

If this rule XXII should be amended and if the present objective of those who wish to amend it were obtained, namely the passage of the civil rights legislation, then some of the most vital rights of the American people as a whole would be destroyed.

Therefore, we of the National Economic Council respectfully ask the Senate but with all possible emphasis, not to amend rule XXII, but to leave its present wording intact.

Texas, the Source of Half of the Synthetic Rubber Supply of the United States

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Half of United States Synthetic Rubber Comes From Six Texas Plants," published in the Beaumont, Tex., Journal of July 8, 1957. The article gives statistical information showing the importance of this production to United States industries.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HALF OF UNITED STATES SYNTHETIC RUBBER COMES FROM SIX TEXAS PLANTS—RAPID INCREASE IN DEMAND CITED

AUSTIN.—About half of the synthetic rubber produced in the Nation each year comes from six Texas plants.

The Bureau of Business Research at the University of Texas predicted today that when a seventh plant is completed the State will account for a majority of the national output, plus production for the foreign market.

"Demand for rubber is increasing so rapidly that greatly expanded output from Texas plants already in operation and others still to be built can be expected," the Bureau said. "Total United States rubber production in 1957 may reach 1½ million tons, most of it synthetic. An additional 2 or 3 hundred thousand tons may be needed by 1960."

FEDERAL FUNDS

Most Texas plants were built with Federal funds during the war, but now are privately owned and operated. Texas could provide most of the major raw materials from within its own borders. These include petroleum, gas, byproduct gases which yield butylenes and other chemicals, sulfur for vulcanizing, and other needed materials such as salt, clays, and lime.

Two types of synthetic rubber are made in Texas.

Butyl rubber is a combination of 89 percent isobutene and 2 percent isoprene. It is used primarily for automobile innertubes. The plant operated by Humble Oil at Baytown is the only 1 manufacturing this type in Texas and 1 of 2 in the Nation.

CHEMICAL COMBINATION

The other type, known as GR-S, is a copolymer, a chemical cominbation of butadiene and styrene. The output of rubber of this type in Texas is very large and is used extensively in tires. General Tire & Rubber Co.'s Waco plant is a major consumer in the Southwest.

Goodyear recently completed an expansion program at its Houston plant to give an annual production of 220,000 long tons.

A copolymer plant owned and operated by the General Tire is building at Odessa, along with a styrene plant and a butadiene plant. The original investment in the 3 plants will total more than $40 million. An annual production of 40,000 long tons is planned.

Other synthetic rubber plants in Texas include the Goodrich-Gulf Chemicals Corp, at Port Neches, Phillips Chemical Co. at Borger, Tex., United States Chemical Co. at Port Neches and United States Rubber & Chemical Co. at Baytown.

Convention of Catholic War Veterans in Milwaukee, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. WILEY. Mr. President, I am happy to state that the 22d annual national convention of the Catholic War Veterans of the United States is scheduled to be held August 14–18 in Milwaukee, Wis.

I am pleased to extend a hearty welcome to these war veterans to Milwaukee, one of the finest, most progressive cities in the country. Moreover, I wish them a most successful convention.

The Catholic War Veterans, organized in 39 of our 48 States, is one of the great veteran organizations in the country. A very active group, they engaged in welfare, patriotic, youth development, and other fine programs to strengthen our country in peace just as they fought for its victory in war. With great zeal they are carrying forward constructive work to serve God, country, and home. To their credit, it should be emphasized that their efforts are not restricted by discrimination as to race or creed.

Bound together by a common faith, this veterans' organization is governed by the principle on which our country was founded and for which we continue to strive: The freedom of the individual to worship according to his own conscience.

As always, I am glad to pay tribute to our war veterans as they close ranks in peacetime to further our great country.

Today I received from Peter J. Whelan, past State commander, a brief résumé of the history of the Catholic War Veterans and of their basic objectives and projects. The report also gives a picture of the fine activities proposed for this year's convention.

I request unanimous consent to have this report printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE CATHOLIC WAR VETERANS OF THE UNITED STATES OF AMERICA

The Catholic War Veterans of the United States of America will have the privilege of holding their 22d annual convention in the hospitable city of Milwaukee, Wis., August 14 to August 18, 1957.

The Hotel Schroeder will be the convention headquarters, but various State delegations will also be housed in the Hotels Wisconsin, Medford, and Plankinton. Some 3,000 delegates are expected from 39 States.

The convention will include business, religion, and social sessions, scheduled for various parts of the city. The fifth annual golf tournament will take place August 14. Highlight for August 15, one of the great Catholic holy days of the year, will be a special religious service at the national outdoor shrine of Our Lady of Fatima, at 68th and Stephenson Streets. That same evening Milwaukee will open her hospitable arms to visiting delegates with special entertainment at the new Veterans' Memorial Building, and at the Brooks Memorial Hall of Marquette University.

Competition of color guards, drill teams, drum and bugle corps, and bands will take place Friday afternoon and evening at Marquette University Stadium. A colorful parade is scheduled for Saturday afternoon that will feature floats of historical, religious, and patriotic interest. The day's events will culminate in the convention banquet at the Schoeder Hotel and the annual ball at the Milwaukee Auditorium.

Highlight of the convention will be the solemn pontifical high mass to be celebrated by his excellency the Most Reverend

Albert G. Mayer, archbishop of Milwaukee, at St. John's Cathedral.

Convention business will include reports of officers and committee chairmen on the past year's activities, passage of resolutions, administrative matters, and election of officers for a new term. Officers will report on the Catholic War Veterans' accomplishments in Americanism, Catholic action, leadership, membership, veterans' affairs, and youth welfare.

A partial list of CWV activities includes participation in civil affairs, especially in events of a patriotic nature; cooperation with other veterans organizations in various allied councils; welfare activities for the benefit of veterans in hospitals, widows of veterans, orphans; religious projects in support of church; development of leadership through special programs; participation in the Veterans' Administration Voluntary Service (VAVS); and youth projects, which include essay and other contests, sending teen-agers to summer camps, and furnishing educational scholarships.

The Catholic War Veterans of the United States of America have received commendation and encouragement from agencies of the United States Government, especially the Veterans' Administration; as well as business and welfare groups for its work in welfare and hospital work, in rehabilitation, in child guidance, and in patriotic, fraternal, veteran, and religious affairs.

Every President of the United States since 1935 has commended the work of the Catholic War Veterans. The organization also enjoys the approval of His Holiness, Pope Pius XII. The Veterans' Administration has approved it for handling veterans' cases, and has appointed accredited representatives among its membership.

The Catholic War Veterans of the United States of America has published much informative material of a patriotic nature, including pamphlets exposing fascism, nazism, and Communist propaganda; bulletins on veterans affairs; and literature designed to strengthen the moral fiber not only of members, but also of the people of the United States.

The Catholic War Veterans of the United States of America was founded by Rt. Rev. Msgr. Edward J. Higgins, LL. D., of Astoria, N. Y., back in 1935, in the words of its own constitution:

"To promote zeal and devotion for God, for country, and for home:

"(a) For God: To promote through aggressive organized Catholic action a greater love, honor, and service to God; and understanding and application of the teachings of Christ in our everyday life; recognizing the wisdom of the church in all matters of faith and morals.

"(b) For country: Through a more vivid understanding of the Constitution of the United States of America and through the active participation in the promotion of its ideals of life, liberty, and the pursuit of happiness, develop a more zealous citizenship; to encourage morality in government, labor, management, economic, social, fraternal, and all other phases of American life; to combat aggressively the forces which tend to impair the efficiency and permanency of our free institutions.

"(c) For home: To promote the realization that the family is the basic unit of society; to aid in the development of an enlightened patriotic American youth; to assist all veterans and widows and dependents of deceased veterans.

"(d) These objectives are encouraged without regard to race, creed, or color."

Initiated only 22 years ago, Catholic War Veterans has spread until today it is organized in 39 of the 48 States. In the course of its two decades of existence the Catholic War Veterans has been part of the fierce war of ideologies seeking to capture the minds of men. It is to the commendable credit of this organization that it has spotted and fought totalitarian and brutalitarian philosophies of both the right and left, and stood firm on the solid stand of freedom of the individual and personal independence of its citizens, under the law.

The CWV creed from the now-famous speech, Catholicism and Americanism, of the late Archbishop John Ireland, of St. Paul, Minn., states:

"My religious faith is that of the Catholic Church—Catholicism, integral and unalloyed—Catholicism, unswerving and soul swaying, the Catholicism taught by the supreme chieftain of the Catholic Church, the Pope, the Bishop of Rome.

"My civil and political faith is that of the Republic of the United States of America—Americanism, purest and brightest, yielding in strength and loyalty to the Americanism of none other American, surpassed in spirit of obedience and sacrifice by that of none other citizen, none other soldier, sworn to uphold in peace and in war America's Star Spangled Banner."

The current program of the Catholic War Veterans of the United States of America is strictly positive. The Catholic War Veterans of the United States of America are not anti anything; they are protagonists of right, truth, and justice. Their whole philosophy is based on the recognition of man's dignity and rendering "to God the things that are God's." They insist on the recognition of the moral basis, underlying all political, economic, and social themes.

Their emphasis lies in action. "It is better to light one candle than to curse the darkness." They feel that no program, no matter how magnificient, can be effective unless it is acted upon.

As can be readily seen, the two decades of Catholic War Veterans' existence have proved fruitful for our freedom. And the future of America is safe, when public spirited, patriotic citizens who have fought for their Nation in war, can continue to serve in peace.

The Catholic War Veterans is organized to serve the individual and the Nation. Size is not the measure of its service, its reputation, its loyalty, its faith, or its spirit of fellowship.

As they celebrate that 22d anniversary milestone of their history, Catholic War Veterans take pride in their past—are confident of their future.

Provision for Presidential Disability

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated June 21, 1957, entitled "Presidential Disability," written to the New York Herald Tribune by Harry J. Carman and James Kerney, Jr., cochairman of the American Liberal Association.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of June 27, 1957]

PRESIDENTIAL DISABILITY

To the NEW YORK HERALD TRIBUNE:

The ambiguity in the Constitution concerning the transfer of the duties and powers of the Presidency in various obvious contingencies, whether temporary or permanent, should be removed by congressional action during the present session.

Although the Constitution provides that the Vice President shall discharge the powers and the duties of the office in case of the temporary disability of the President, it makes no provision as to how such disability should be determined or when it shall have been deemed to have been removed. Further, although it is obvious that the President should be able himself to declare such disability, there should also be provision for dealing with the situation where the President might be unable or unwilling to recognize such disability.

It is, therefore, important to entrust the decision, both as to the fact of disability and to its removal, to a duly constituted authority possessing the confidence of the people, for in such a possible crisis public support would be essential.

This authority might well include the Vice President, the three senior members of the Cabinet, namely, the Secretary of State, the Secretary of Defense, and the Attorney General, the leaders of both major political parties in both Houses of Congress, and the Chief Justice of the Supreme Court who might act as chairman of the group, making nine in all. There would thus be represented in the group with the power to make the necessary decisions the three branches of the Government and both political parties.

The problems involved call for careful, sound, and prompt action.

HARRY J. CARMAN,
JAMES KERNEY, JR.,
Cochairmen, American Liberal Association.

NEW YORK, *June 21, 1957.*

Cooperation of Government, Industry, and Labor To Halt Inflation

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, July 12, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "O. K. Men—Cooperate," published in the Washington Daily News of July 11, 1957. The editorial points out how vital it is that there be conferences, in the highest patriotic spirit, between Government, industry, and labor, in order to hold back inflation. Calling each other names will not do the job, but cooperation will.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

O. K. MEN—COOPERATE

Senator ESTES KEFAUVER, Democrat, Tennessee, has started an investigation into so-called "administered" prices as factors in inflation. His first witness, testifying Tuesday, was the respected economist Dr. Edwin G. Nourse.

Dr. Nourse's contribution was a statement that he was equally worried over labor unions pushing wages up and industry pushing prices up, and that he doesn't believe the Government alone can prevent inflation by keeping money tight.

In Chicago the same day, AFL-CIO President George Meany called inflation "the real threat to our way of life at this time," and

came out strongly for labor-management cooperation to choke it off.

Well, how about it? We mean how about some purposeful and determined conferences between leaders of labor and leaders of industry, with high-echelon Government representatives sitting in? And how about these three groups working out a concerted attack on the slow but steady and deadly decline in the dollar's buying power?

Government, industry, and labor, working together, could halt this creeping inflation. It's high time for them to get moving, before the creep turns into a gallop.

West Germany Aids European Unity

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, July 12, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "West Germany Aids European Unity," published in the Dallas, Tex., Morning News of July 8, 1957. The editorial points out:

The overwhelming vote by which the West German Parliament ratified the European Common Market Treaty last week brings the Union within striking distance of success.

* * * * * *

In the long run the new western European move may prove the most lasting defense against Soviet designs and threats. In the end it should attract Britain, Spain, and the Scandinavian countries into its orbit.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WEST GERMANY AIDS EUROPEAN UNITY

The overwhelming vote by which the West German parliament ratified the European common market treaty last week brings the union within striking distance of success.

Equally favorable is the prospect within France. The rejection of crippling amendments in the French National Assembly Sunday foreshadows final passage in Paris this week. Italy, Belgium, Holland, and Luxembourg—the other four partners in the plan—are well disposed to go along with the two more powerful members.

An economic united states of Europe can not come into existence overnight. This initial treaty to wipe out customs barriers calls for gradual steps strung out over a 12-to-17-year period. But the impetus is there. And the tremendous advantages in creating an internal market of 160 million is proving an almost irresistible magnet. The example of results from absolute free trade within our union is, of course, the guiding one for present day European leaders.

Packaged with the customs treaty is a second one that would pool atomic power projects of the same six nations. Euratom, as it is called, is a natural outcome of the first.

The enthusiasm with which the West Germans adopted both treaties is the greatest yet shown. Chancellor Adenauer's Socialist opponents joined him almost to a man in the standing vote. Perhaps many Germans were casting a backward glance at their own history. It was the customs union set up among German states and principalities back in the last century that led to formation of the German Empire of Bismarck and the Kaisers.

In the long run the new Western European move may prove the most lasting defense against Soviet designs and threats. In the end it should attract Britain, Spain, and the Scandinavian countries into its orbit.

Iron Ore in Central Montana

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, July 12, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article and two editorials which appeared recently in the Lewistown (Mont.) Daily News. The article is entitled "Iron Ore in Belt Mountains Ranks With Best in World." The editorials are headlined "Iron Ore and Central Montana" and "A Steel Industry for Central Montana?"

The ore being mined in this new Montana industry averages out well over 64 percent, and has a low phosphorous content. Experts believe this Montana field to be one of the richest iron sources in North America.

I call to the attention of my colleagues, and the industrial leaders who read the CONGRESSIONAL RECORD, the fact that Montana heartily welcomes the steel industry to Montana. As the editor of the Lewistown News says, this rich ore "ought to be processed by industry right here in central Montana and used in the development of this State, the great Northwest, and the west coast."

Industrial leaders cannot know, until they investigate, the many advantages of locating in Montana, the Treasure State.

The well-known phrase of Horace Greeley still applies, particularly for men who seek bright business and industrial opportunities. "Go west, young man, go west."

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

IRON ORE IN BELT MOUNTAINS RANKS WITH BEST IN WORLD

(By Bud Conley)

The Young Montana Mining Co., Inc., headed by Ernest A. Young, Hibbing, has brought added wealth to central Montana with its iron ore mining on Willow Creek in the Belt Mountains 16 miles from Stanford.

And there are indications that this industry, which now employs 25 men, will be around for a long while.

Thursday, Young, who has 3 mines in Minnesota and who now heads 3 mining companies, was on hand to watch his pet project in action.

Young, who had arrived that morning from Minnesota, was literally here, there, and everyhere at the crushing and screening plant site where the ore was being processed and sent to Great Northern Railroad cars in Stanford by truck.

In between inspections and instructions he explained that he was sorry he couldn't take time to tell more about the plant's operation, but he wanted to see what the boys could do when things were going right.

Dewey Whittaker, Seattle, Wash., contractor, who leased the claims to Young, meanwhile took time to explain a few things about the plant's operation and a moment later his brother, Norman Whittaker, who is working for Young at the plant, and also owns a number of iron ore claims in the Belts, appeared with a specimen of ore.

"This ore perhaps doesn't mean much to you," Norman said, "but it's the kind of ore that makes an ore-man drool. This type ore—ranking with the best in the world—is the sole reason Ernie Young is here. This ore averages well over 64 percent, with a low phos. This makes it about the finest ore in the world."

Young walked to our group then and confirmed Norman's remarks.

"Gentlemen," he said, pointing to an ore sample he had picked up near the crushing and screening plant, "you are now looking at one of the finest ores in the United States. This high-grade ore is awarded a premium of $3.50 a ton and nearly pays the freight back East."

Joe Lovallo, vice president of the Young Mining Co., said that the Mesabi range miners in Minnesota are amazed when they see the quality of the ore from central Montana.

Young said that his operation was definitely in Montana to stay. From all indications there are years of mining ahead, with top-quality ore plentiful, he pointed out.

Young said that you could thank the Whittaker boys, Norman and Dewey, for bringing iron ore mining to central Montana. They showed us the claims and pointed out their tremendous possibilities.

"Some of my friends wondered why I would be interested in mining in Montana. There is the big problem of freight, but this high-quality ore is a real challenge to me. I have plenty to keep me busy in Minnesota, but this ore is just too good to overlook," Young explained.

And it is certain that Young is no novice when it comes to iron ore. In the business since he was a teen-ager, Young now owns the E. A. Young Mining Co. in Virginia, Minn., and the Haley and Young Mining Co., in Chisholm. The two companies were established in 1943 and 1944.

The iron ore setup on Willow Creek is already big.

"The crushing and screening plant is worth about $100,000," Lovallo said. "We have 25 fulltime employees, all but 2 are from Montana, and 18 are from this immediate area. Our payroll here for 2 weeks was about $5,000, and will be more than $100,000 for the year. This isn't including the truckers."

The Young Mining Co., Inc. got its start last year. First load to be taken out was in last July. The company took out 3,000 tons for testing purposes in 1956. Up until Thursday the company had taken about 6,000 tons out in 1957.

The company's quota this year is 60,000 tons, with perhaps the quota increasing to 100,000 tons next year and the years following, Young said.

The ore has been running about 8½ cubic feet in the bank to the ton. Lovallo explained. "The carloads that we've been shipping out have been between 52 and 55

tons. "We hope to ship 500 tons a day," Lovallo said.

Young was not unhappy with the way things were developing. "We've been doing all right considering the troubles we've had. It rained so much that we couldn't keep the crusher on the road to the plant site. We started out with the shovel and ran into a 2-foot snowfall in the Belts. A bridge caved in on us. Yes, we've had our problems.

"However, we're not discouraged. We have an excellent ore and we know we have a vein of ore now that averages 25 to 30 feet in width, 1,100 feet in length, and we know that it is at least 300 feet in depth. How much deeper it is than that only the Lord knows."

Young said that there is a great future for iron ore in Montana. The quality here rates with the finest in the world.

As for stupendous plans for the Young Montana Mining Co., Inc., Young said, "Right now I'm fairly happy with 10 cars a day. Remember we're only in our infancy here, we're only beginning to walk. Perhaps by next year we'll be able to run."

Iron Ore and Central Montana

Prospects for an iron ore industry in Montana are not the pipedreams of courageous prospectors any more.

The first step for the success of the industry has been taken as the Young Montana Mining Co., Inc., has been established and is shipping iron ore out of Stanford.

The Young Montana organization was established last year and 3,000 tons of test ore were sent back East. The results of the tests in 1956 were gratifying. The ore in Central Montana is top rate ore—ore that has no trouble in finding a market.

Ernest Young, Hibbing, owner of the Young Mining Co. in the Belt mountains 16 miles from Stanford in the Willow Creek area, is optimistic over the future of the iron ore industry in Montana. In the years to come, he said Thursday, it would not be far-fetched to foresee the time that Montana can take over for the Mesabi range in Minnesota, which has showed some sign of eventually being depleted of ore.

Central Montana is fortunate to have someone such as Young interested in mining here. Some persons scoffed at this prominent Minnesota iron miner coming to the wilderness to open a new mine. (Young already has three mines operating in Minnesota.) But Young came out and looked at the ore here, and from that time on "the mine has been a real challenge to me," he said.

Credit should also be extended to Dewey and Norman Whittaker, who have done much of the exploration in the Belts and hold the iron-ore claims there. The present mining site is owned by Dewey Whittaker, who has leased the claims to Young.

The ore that is coming from the Young Montana mining setup averages 64 percent iron with a low phos. This amounts to a premium lump ore that is not matched in the United States. In fact, the only ore to match or surpass this ore would be found in Sweden and South America.

From exploration done by the Young organization in the Belts and from reports from Dewey and Norman Whittaker, there seems no end in sight for the iron-ore industry here. Samples taken from the area continually stress an outstanding ore.

However, this high-type ore must be maintained throughout the mining operation here because of the high cost of shipping the ore back to the Lake Erie port.

The big problem for Young here is freight rates. The ore is definitely outstanding, but the high rates present difficulties. The whole shipping process to a Lake Erie port amounts to $9.86 a ton, $7.45 a ton going for freight rates.

The irony of the situation is that the central Montana iron ore must keep its top-notch grade or probably be abandoned.

It seems to us that the iron industry would have been so much better off by having iron mills and steel plants decentralized. The plants are nearly all clustered in the East.

By having its plants in one region, the industry itself has not encouraged exploration such as the Whittaker brothers have made. It took great persistence by these two men to get the iron-ore industry to risk the chance of coming to Montana.

But Young is the type of individual who loved the challenge this tremendous quality ore provided. And Young feels that the mining operation here will continue indefinitely. There seems to be no indication that the ore will decrease in quality.

The possibility of an iron mill in this area is remote, but if the industry continues to develop and grow here this cannot be ruled out.

Certainly the iron industry will do everything in its power to keep this ore being mined, for it is among the finest in the world. If the freight rates should continue to increase, an iron mill in this area in the future could be the answer.

This is long-distance thinking, but the prospects for the iron-ore industry in central Montana are promising—and big.

A Steel Industry for Central Montana?

In the front window of the Daily News office there is on display a sample of the iron ore about which this newspaper first told the world in last Sunday's edition.

The heavy, metallic ore looks and feels like the almost-solid iron that it is. It is an example of the ore now being mined by the Young Mining Co. in the Belt Mountains 16 miles from Stanford in the Willow Creek area.

This ore, which averages an amazing 64 percent, is from what is believed by experts to be one of the richest iron sources in North America. Indeed, if the stuff were not so full of metal, it wouldn't be feasible to pay $9.86 a ton in shipping costs to Lake Erie ports where it is processed into steel and other products.

Shipping such high-grade ore at such high costs to the East doesn't make sense when the west coast is starving for steel and iron.

This ore, because of our undeveloped industrial situation, is being shipped the wrong way. It ought to be processed by industry right here in central Montana and used in the development of this State, the great Northwest and the west coast.

Perhaps Senators Mansfield and Murray can help us persuade the steel industry to build a plant in this area to gain the tax benefit which the Federal Government offers industry for defense dispersal, not to mention other benefits which await new industry in this rich and untapped field.

Cotton Statistics

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following cotton statistics:

United States by cotton States: Percent of State total number of counties and percent of State total cotton acreage allotments accounting for approximately 50 percent of total value of cotton produced in each State and related data, 1955

State	Total number of cotton counties	Number of counties accounting for approximately 50 percent of State total cotton production	Percent of total number of counties in State	Percent of State total cotton allotments in selected counties	Total value of cotton produced in selected counties (thousand)	Percent of total value of cotton in State produced in selected counties	Range in average value per allotment [1]
Alabama	67	23	34.3	30.7	$86,402	48.5	$1,495–$3,732
Arizona	10	2	14.3	20.7	49,768	43.7	38,000–62,582
Arkansas	71	7	9.3	21.6	137,456	50.4	7,313–13,929
California	12	5	8.6	30.0	100,619	50.5	13,748–31,011
Florida	25	7	10.4	25.4	1,844	44.5	586– 1,183
Georgia	150	34	21.4	29.0	60,032	50.4	1,656– 4,299
Illinois	2	1	0.98	49.8	160	56.3	532– 693
Kentucky	7	1	0.83	34.6	1,483	87.8	3,506–
Louisiana	56	9	14.1	21.8	47,649	50.1	2,904– 6,707
Mississippi	79	9	11.0	9.8	168,571	49.2	9,374–27,766
Missouri	8	2	1.8	29.7	35,551	52.9	6,947– 7,586
Nevada	2	1	5.9	94.4	323	98.8	19,000–
New Mexico	16	3	9.4	30.3	23,543	55.6	12,668–14,133
North Carolina	76	12	12.0	29.6	27,883	49.5	715– 1,713
Oklahoma	70	9	11.7	28.2	35,967	53.4	1,737– 4,361
South Carolina	46	14	30.4	32.5	50,296	53.0	1,493– 4,639
Tennessee	54	8	8.4	27.6	58,627	56.0	2,385–11,557
Texas	241	52	20.5	18.5	311,066	51.2	4,733–30,824

[1] Range in average value per allotment for selected counties indicated in col. 1.

Source: Compiled from daily Congressional Record, June 17, 1957, pp. A4758–A4769.

For a "Family Conscious" Country

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. PORTER. Mr. Speaker, the basic social unit in our society is the family. It is there character is formed, character on which the success of our Government and hence the continuance of our way of life depend.

I deeply appreciated receiving the following letter from Rt. Rev. Msgr. Irving A. DeBlanc, director of the family life bureau of the National Catholic Welfare Conference, whose national headquarters are located at 1312 Massachusetts Avenue NW., Washington, D. C. The letter is as follows:

Hon. CHARLES O. PORTER,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. PORTER: Was delighted to see a new development in the field of family allowances. Somehow this country has never been too family conscious. We have worked more on individual needs. Even the Constitution and Declaration of Independence fail to mention the family. Your efforts and the efforts of others then to promote a study of family allowances in Canada is more than a historical fact. It may be a symbol of a new emphasis in our Government.

With over 8 million families earning less than $2,000 a year, it seems this fact involves the rights of these people to have children. We have freedom of worship, freedom of speech, etc. I would like to think that couples should have the freedom to have children within the law. For many of our American couples that is economically impossible.

Our bureau is associated with thousands of Catholic organizations. I am sure that the majority will favor and support your efforts and those of Senator NEUBERGER.

Respectfully,
Rt. Rev. Msgr. IRVING A. DEBLANC,
Director.

White House Conference on Urban Renewal Is Greatly Needed

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, national support has developed in recent weeks for a White House Conference on Urban Renewal Problems. Such a conference was first called for by the National Planning Association at a meeting on December 10, 1956.

A recent report by the NPA declares that urban centers of the United States are becoming obsolete because of increased traffic problems and slums, as well as inadequate schools, parks, and hospitals.

The proposed White House conference would include experts from agriculture, business, labor, the professions, and the arts, as well as representatives from Federal, State, and municipal governments.

The chairman of the Philadelphia City Planning Commission, Albert M. Greenfield, the National Retail Dry Goods Association, and other individuals and groups have been working on plans for the proposed conference. I include here some recent communications which I have received on this matter:

CITY OF PHILADELPHIA,
CITY PLANNING COMMISSION,
Philadelphia, July 9, 1957.

The Honorable FRANK THOMPSON, Jr.
House Office Building, Washington, D. C.

DEAR CONGRESSMAN THOMPSON: It was very thoughtful of you to write to me as to the National Retail Dry Goods Association's resolution supporting my proposal for a White House conference on urban renewal. I am glad to have your expression of interest and support for this program.

Enclosed are copies of correspondence which I have carried on with several national organizations, the President and others on this matter to give you background as to my feeling.

I have reviewed these problems, as well as the programs seeking their solutions, in several of our major cities in which the companies of which I am executive head have substantial business interests, including Boston, New York, Washington, New Orleans, Memphis, and Miami, Fla. The problems are common in each of these cities. In each instance, they go beyond the resources of the individual cities and require Federal assistance, both as to redevelopment money and technical help in the dedevelopment and rebirth of these areas. In turn, the strength of these cities reflects directly the economic health of our Nation. Private investment, substantial enough to do the job, will not be found to undertake renewal programs unless given the assurance of Federal participation. It is for this reason that a conference at the national level and under White House sponsorship is so important to the success of these endeavors.

I hope you will continue your good work and encourage among your colleagues support for this proposal.

Sincerely yours,
ALBERT M. GREENFIELD,
Chairman.

JUNE 21, 1957.

Hon. GEORGE M. LEADER,
Governor of Pennsylvania,
Harrisburg, Pa.

DEAR GOVERNOR LEADER: Several months ago I undertook to encourage the convening of an appropriate conference under White House sponsorship for a thorough discussion, broader understanding, and more concerted action in our various cities' needs for urban renewal. In this program I have received substantial encouragement from the leading merchants of our Nation, from the National Retail Dry Goods Association, and from the chambers of commerce in several of the major cities of the country. These groups are joined by a large number of prominent industrialists, architects, engineers, businessmen, and community organizations on both statewide and local levels.

As I see it, the reason for such a convocation goes far beyond a review of the Federal Government's proper participation in urban renewal, although, of course, it would include such a program. A White House Conference would, rather, be a joining among leaders in the fields of architecture and finance, and economists, sociologists, city planners, Government officials, and business organizations so that pooling of their common experiences, as well as their unusual approaches to urban renewal throughout this country—indeed, in other nations as well—might serve to enable those concerned with these problems to do a better job.

Obviously, the goal to be served by this Conference transcends consideration purely of participation of the Federal Government in urban redevelopment; however, it may well serve to guide the Congress, the Federal agencies, as well as other levels of government, in addition to private investment resources, as to a more fruitful approach to the problems and the responsibilities which we all share to an equal degree.

At his press conference on June 19, President Eisenhower indicated that he would discuss this program at the governors' conference on June 24. I hope that you will find an opportunity to participate in this discussion and encourage the convening of such a conference for the benefit of the major cities in your State, for the State itself, and for the good of the Nation. I enclose copies of statements which I have previously made on this subject, assuring you, at the same time, that the sizable response to my appeal for such a convocation, in itself, indicates the great need for it.

With warm personal regards.

Sincerely,
ALBERT M. GREENFIELD.

APRIL 15, 1957.

The PRESIDENT OF THE UNITED STATES,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: I have become very much interested in the proposal which the National Planning Association has made to you that there be convened a White House Conference "to deal with the rising tide of urbanism and metropolitan growth." I know that the problems of urban renewal and the importance of the solution of these problems to the very continuance of our cities has been a matter of concern to you for some time.

The entire question of urban renewal, while important from an economic point of view, is of even greater substance in its cultural and social implications in the lives of our citizens in urban communities and for the generations which will follow. I know of no better device to provide the proper atmosphere in which various cities may have the benefit of the combined guidance and information available through their separate programs than through the forum of a White House Conference.

You will want to know that I have received expressions of support for such a convocation from the National Retail Dry Goods Association, as well as the chambers of commerce, merchants' associations, and important business leaders of a number of major cities throughout the United States.

I hope that you will see fit to promulgate such a convocation as early as it can be organized in order that neither delay nor neglect diminish the enthusiasm and energy which will be required to develop the proper kind of imaginative and successful development to which we look forward in our cities.

Be assured, Mr. President, of my good wishes and desire to be of service in accomplishing so splendid a program.

Sincerely,
ALBERT M. GREENFIELD,
Chairman, City Planning Commission, Philadelphia, Pa.

CITY OF PHILADELPHIA,
CITY PLANNING COMMISSION,
Philadelphia, Pa., March 30, 1957.

Mr. H. CHRISTIAN SONNE,
Chairman, National Planning Association, Washington, D. C.

DEAR MR. SONNE: I have been most interested to read the proposal of the National Planning Association that there be convened a White House Conference to deal with the rising tride of urbanism and metropolitan growth. As you may know, within the past year Philadelphia has moved forward to take a very vigorous and realistic position among the cities of our Nation in planning and in execution of its program for central city renewal and, more generally, urban redevelopment.

The problems incident to such a program transcend all others facing the major cities of our country; indeed, the solutions to these problems hold in their grasp the very continuance of our cities.

In this whole concept of urban renewal it must be recognized that our goals are not served by the clean-up, paint-up, fix-up programs of yesteryear; rather, they depend upon a realistic approach and evaluation of the part which the central districts of cities play in our economic philosophy of life. Accordingly, we must be concerned with the economic, cultural, and sociological development of urban life.

I have taken occasion to communicate with Mr. Philip M. Talbott, president of the United States Chamber of Commerce, and Mr. Richard H. Rich, president of the Na-

tional Retail Dry Goods Association, as well as the presidents of each of the units of the City Stores Co. to speak of my great personal and business interest in this problem and to urge their support for this proposal of the National Planning Association. Further, in my capacity as chairman of the City Planning Commission of the city of Philadelphia, I want you to know of my belief that discussion and resolution of urban renewal problems within the atmosphere and at the level of White House participation is most important at this time. When such a conference is convened under direct or indirect sponsorship of the White House, and with the cooperation of your association, I will be anxious to participate in its program and to lend the resources of our staff and their thinking as our contribution to its success. More than this, I bespeak the interest of the mayor of Philadelphia, the Honorable Richardson Dilworth, and the entire City Planning Commission in this proposed meeting.

I hope that you will keep me closely advised as your program moves forward, and I give you my assurance that I will cooperate in every way to promote its success.

Sincerely yours,

ALBERT M. GREENFIELD,
Chairman.

CITY STORES CO.,
March 30, 1957.

Mr. RICHARD H. RICH,
President, National Retail Dry Goods Association, New York, N. Y.

DEAR MR. RICH: For sometime the National Retail Dry Goods Association, principally through its committee on downtown development, has been concerned with the problems of central city renewal, urban redevelopment, and such measures as need be taken to buttress the economic life of our metropolitan districts, both in the interest of our industry and, in a fuller sense, for the economic security of our metropolitan cities.

Indeed, it is no exaggeration that the very continuance of our cities calls upon us to put forward the most imaginative and dramatic planning to accomplish these worthy objectives. Our local merchants' associations and individual merchants, representing, as they do, substantial commercial interests in each city, have participated locally in discussions and planning for various redevelopment programs concerned with the rebirth and renewal of our cities. And, yet, in many instances, the various programs undertaken in our principal metropolises have been piecemeal and lacking in that kind of coordinated effort which must be undertaken to assure their success.

In this whole concept it must be recognized that our goals are not served by the clean-up, paint-up, fix-up programs of yesteryear; rather, they depend upon a very realistic approach and evaluation of the part which the central districts of cities play in our economic philosophy of life. Accordingly, we must be concerned with the economic, cultural, and sociological development of urban life.

Recently the National Planning Association put forward a proposal for a White House conference specifically designed to deal with the rising tide of urbanism and metropolitan growth. At the same time, we have become alarmingly aware of efforts among certain governmental officials to cut back the already inadequate program and planning on the part of the Federal Government in support of urban renewal.

I believe it is in the best interests of our industry that the National Retail Dry Goods Association, either through their standing committees or through a special ad hoc committee, undertake to further this proposal as to a White House conference so that the problems involved in this question may be put in their proper perspective and realistic solutions sought from which a sound national policy may evolve. This whole question goes so deeply into the future of all cities that it is beyond partisan considerations; in fact, beyond the interests of any single industry. I want you to know that I, personally, and the City Stores Co. organization are prepared to support such positive and constructive action as may be undertaken by the National Retail Dry Goods Association in this regard.

With every good wish.

Sincerely yours,

ALBERT M. GREENFIELD,
Chairman of the Board.

NATIONAL RETAIL
DRY GOODS ASSOCIATION,
New York, N. Y., June 28, 1957.

The Honorable FRANK THOMPSON, Jr.,
House Office Building,
Washington, D. C.

DEAR MR. THOMPSON: Retailers throughout the United States are vitally concerned with the necessity for dynamic center city renewal and recognize it as a problem which can best be overcome by the combined efforts of all business, civic, and governmental bodies.

The board of directors of the National Retail Dry Goods Association, which represents 8,200 department, specialty, and chain stores in every State, feels that the review and resolution of these problems within the atmosphere and at the level of White House participation would be in the best interests of the Nation.

Accordingly, the directors, at their June meeting, adopted a resolution supporting the efforts being made by Mr. Albert M. Greenfield, president of City Stores Co. and chairman of the Philadelphia City Planning Commission, to secure a White House conference to explore this matter. A copy of the resolution is attached.

Because the problem of urban renewal affects every section of the country, the NRDGA directors asked that their views be brought to your attention in the hope that you will support the conference proposal.

Very truly yours,

RICHARD H. RICH,
President.

RESOLUTION ADOPTED BY THE BOARD OF DIRECTORS OF THE NATIONAL RETAIL DRY GOODS ASSOCIATION, JUNE 10, 1957

Whereas Mr. Albert M. Greenfield, president of City Stores Co., has advocated a White House conference on city planning and metropolitan growth and development; and

Whereas it is our opinion that this effort on the part of Mr. Albert M. Greenfield is both praiseworthy and timely and should be supported by everyone interested in the preservation of values and in business districts; and

Whereas all firmly established concentrations of population, great and small, here at home and all over the world, very naturally have established for themselves areas commonly referred to as "business districts" and "residential districts"; and

Whereas if any one of such districts is to be complete, it cannot possess certain things which, under every law of God or man, are the exclusive property of the other district; and

Whereas all our principal cities are now trying to adjust themselves to a national highway system found necessary to our common defense and to the safety and speed compelled in the affairs of everyday life; and

Whereas in the exercise of the right of eminent domain, the Federal Government is now in a position to do much that is important to the fate of many business districts and residential districts; and

Whereas the greatest and best service to the general public has always come from a dominant downtown business district, with its wider range in all things so necessary for proper selection: Therefore be it

Resolved, That the National Retail Dry Goods Association, in regular meeting assembled, approves the efforts now being made by Mr. Albert M. Greenfield, president of City Stores Co., to secure a White House conference on city planning and metropolitan growth and development.

The Need of Returning Responsibilities to the States

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. COLLIER. Mr. Speaker, on June 24 President Eisenhower made what I regard as one of the most significant speeches of his tenure in office as President. It was a speech to the National Governors' Conference and dealt with a problem which many of us in the Congress have wrestled with during the past few months and which most of us, I am sure, will tie into during the closing weeks of work here, and when we return to our home districts.

The President discussed a subject which was calculated to stir interest among his listeners, the governors of our 48 States. He discussed States rights. But, more important, he discussed States' obligations and responsibilities.

There has been much talk here in this Chamber and in the State houses all over the Nation about the rights which are being taken away from the States. There has been much talk about restoring those rights to the States.

The President, I believe, made a clear and pertinent point when he told the governors, and I quote:

> Those who would be and would stay free must stand eternal watch against excessive concentration of power in government.

That principle is the sound basis of our American democracy; but it is a principle that in recent years has been shredded almost beyond recognition.

Why has this principle of the decentralized Government been so tattered in the past 25 years?

I submit that to a degree it is our own fault: the fault of individual citizens in individual States and the fault of State governments which have turned ever more often to "good old Uncle Sugar" to help them out of the hole.

When times of trouble arise, the local governments increasingly find themselves incapable of coping with the situation. They find their treasuries strained to meet the problems and their citizens so heavily taxed at the State and Federal level that they cannot be gouged further. Additionally, the writers of State constitutions have in many instances placed in them safeguards against property-tax levies going up and up; there is a certain point beyond which they cannot go. There is also in most States constitutions a bonding limit, beyond which the local governmental unit cannot go. There is

none of this rigidity in the Federal taxing system. If we want a new program, we simply add another tax to finance it.

For that reason, many local governments are abdicating their powers and privileges to the State capitol; the governors are abdicating their powers to Washington, and our national-tax level and national-debt limit keep climbing until now they are beyond imagination.

During the thirties the situation was bad enough. Deficit spending had replaced sound finance and the theory of tax and tax; spend and spend; elect and elect had taken command here in Washington. Then came World War II and the skyrocketing budgets to meet our obligations on two fronts. Again it was deeper in debt, and deeper into the taxpayers' pocketbooks, only this time with a new wrinkle. The Government tapped the new sources of income before the worker ever got his paycheck. It was easier, less painful that way.

But the end of World War II saw no end to this spiral of spending and taxing and borrowing. It has climbed steadily higher and higher since. I have recently seen figures showing that prior to 1945—and that includes most of World War II—the Government had collected a total of $250 billion in taxes. In the 12 years since, we have collected a total of $494 billion.

The President in his Williamsburg speech makes the suggestion that a joint Federal-State commission be created to attempt to restore the historic balance between State and Federal rights. He suggests as a first step a study to designate functions which the States are ready and willing to assume and finance that are now performed by or financed wholly or in part by the Federal Government.

His second suggestion to the commission is to recommend the Federal and State revenue adjustments required to enable the States to assume such functions.

I submit, however, that the President's second recommendation should have come first. As long as the Federal Government has the unlimited taxing power it now wields, new programs will constantly be developed to eat up the money which seems so readily accessible.

An example in point: The last Congress enacted a multi-billion-dollar highway-building program and promptly slapped a new tax on gasoline to pay for it. Now, had there been a clear delineation of taxing authority in force at the time, the new Federal incursion into the taxpayers' wallets would not have been possible. Instead, the States themselves would have been forced to face the responsibility of moving heavy motor traffic from city to city, from State line to State line. The State of New Jersey faced up to that responsibility and before it, the States of Connecticut and Pennsylvania had built their toll highways which those who wish to travel speedily use and pay for.

I do not question the need for more and better highways. I do, however, wonder seriously if this is a function the Federal Government should undertake, when State administrations, if willing to face up to their responsibilities, would do a better, more economic, and faster job. There are hundreds of other instances in which the Federal Government has on its own or through neglect or abdication by State governments, undertaken services which should of right belong to the States. But the Federal Government has been able to make these excursions into new pastures only because financing was readily available. Limit the Federal Government's right to tax, and you take away from it the power to expand. Return some of this taxing power to the States, and they will be able to undertake those services which their people need and must have.

The responsibility, as the President noted, rests with the States. It rests, too, I believe, on us. It is up to us, as well as to the States, to determine in what areas we have allowed the Federal Government to incur obligations which should be met by the State or local governments, and in what areas we are taxing to pay the bills. When we have determined this, it is up to us in Congress to act to restore the principle of less government and more freedom.

Small Business Is Fed Up With Study Groups and Political Oratory

---

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, whenever this administration wants to avoid coming to grips with a problem which it should have tackled months or years before, it appoints a study group.

We see this tactic at work again in the testimony of Chairman William McChesney Martin of the Federal Reserve Board before the Senate Banking and Currency Committee. Mr. Martin promised to make a comprehensive study of the small-business financing problem.

The House of Representatives passed H. R. 7963 recently with only 2 dissenting votes. This bill was developed by the Banking and Currency Committee of the House of Representatives under the able leadership of Chairman BRENT SPENCE. The work of the subcommittee of the Select Committee on Small Business of the House of Representatives was a highly significant and important factor in the deliberations of the Banking and Currency Committee.

I am convinced that the 4 million small-business men and our country are fed up with study groups and campaign oratory and want the Small Business Administration made permanent. I am certain they are as unanimously in favor of H. R. 7963 as was the House of Representatives.

The editor of the Journal of Commerce and Commercial consulted only his own intuition in reaching his conclusions which he spelled out in his July 11, 1957, editorial which I include herewith. If he took the trouble to poll the small-business men of the country he would come up with entirely different conclusions. His editorial is an outstanding example of an advanced case of ivory-towerism.

The editorial follows:

NEW TURN FOR SBA

The Senate Banking and Currency Committee has rejected the proposal for a permanent establishment of the Small Business Administration. In an unexpected move it voted to give this agency only a 1-year added lease on life.

This was contrary to the Administration's request for permanency. The Senate group also rejected the House-passed SBA bill, which set the agency up without time limit and with widened powers.

Nonetheless, the action of the Senate committee is to be commended. Now that the Federal Reserve Board has promised a comprehensive study of the small-business financing problem, the obvious step was to postpone any decision for or against the permanency of the agency.

This promise grew out of testimony by Chairman William McChesney Martin of the Board before the Senate Banking and Currency Committee. In addition to the SBA renewal legislation, the Senate committee was studying proposals to fill the alleged gap in long-term credit facilities for small business by special new institutional devices. Among such plans is the proposal by Senator JOHN SPARKMAN (Democrat, Alabama) for the establishment of a system of national investment companies. Other plans contemplate that the Federal Government might seek to provide funds through State development credit corporations rather than through nationally chartered companies.

What the discussion in the committee disclosed above all, was that at present not enough facts are available to provide the basis for adopting specific legislative measures. Even within the Federal Reserve Board, Mr. MARTIN conceded, there are significant differences of view as to the need and the solution. Personally, Mr. MARTIN expressed preference for a setup which would work through State development rather than federally chartered companies, but he made it clear that this did not represent any consensus in the Federal Reserve Board.

A probe into the financing facilities available to small businesses as well as into their need for new ones, was to have been part of the national monetary probe President Eisenhower requested earlier. While Senator HARRY F. BYRD set out recently on a probe of his own, through the Senate Finance Committee, politics succeeded in killing off the broader Presidential plan. It is gratifying, therefore, that the Federal Reserve Board will at least tackle the small business problem, which is an important part of the broader probe that needs to be made.

The Committee for Economic Development has suggested that, if it were possible to develop a suitable long-term financing mechanism, it might be desirable that the SBA lending operations be severed altogether.

In any case, it would be prejudging the issues to freeze the SBA into permanency just as the long overdue study is about to be undertaken.

In voting the 1-year extension, the Senate Banking Committee has wisely avoided any additional innovations in this governmental area, except for setting up an additional $75 million fund for business loans. This will not sit well with the House, which has made a number of changes. These include the completely unsound provision for lowering the interest ceiling from 6 to 5 percent. The House members actually should be grateful to Chairman MARTIN for getting them off this limb.

Direct lending through the SBA has never been a sound solution; but it has been a

means of filling a gap. It is now time to find out whether channels exist or can be developed which will be more consistent with the private enterprise approach.

It would be a mistake to scrap the SBA lending facilities until the size of the gap is assessed more accurately and until it is certain that there are better ways to fill it. But it would be remiss to assume that no alternatives exist and to vote the existing apparatus in for all time without the kind of study that is now being undertaken. That is why the 1-year Senate Banking Committee extension is the wisest approach for the present.

Rear Adm. Webb Cook Hayes

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. BAUMHART. Mr. Speaker, scarcely more than a year ago, my congressional district mourned the death of an illustrious native son, Fleet Adm. Ernest J. King. Regrettably, we now pay final tribute to still another 13th District naval hero and benefactor, the late Rear Adm. Webb Cook Hayes, great-grandson of Rutherford B. Hayes, 19th President of the United States. He won renown in his own right during World War II both as a great administrator and as commanding officer of the Navy's famous transport ship, the *West Point*.

Webb Hays brought new distinction to one of the most illustrious family names in Ohio annals. He was born in Toledo on September 25, 1890, 3 years before the death of his famous great-grandfather, who had served as a major general in the Civil War and had served in Congress from the years 1864 to 1867 before reaching the White House in 1877.

Aspiring to a naval career, Webb entered the United Sttaes Naval Academy in 1907, graduating in June 1911, and receiving an ensign's commission the following April. Prior to our entry into World War I, he served for 6 years on the U. S. S. *Delaware*. During the conflict, he saw service on the U. S. S. *Melville* and U. S. S. *Trippe*, and in the closing weeks of the war, was executive officer of the newly commissioned U. S. S. *Mahan*. Early in 1919, he was transferred to duty as executive officer of the U. S. S. *Champlin*, assuming command of the destroyer a few months later.

From late 1919 on, he handled a succession of important command assignments on land and on sea. It was in the twenties that he also built up valuable experience in recruitment-experience which later proved invaluable to the Navy when that service faced its greatest challenges in World War II.

Having completed nearly 21 years of naval service by 1928, Webb Hayes resigned in that year and returned to civilian life with a USNR commission as a lieutenant commander. In 1930, he became associated with Pemiscot Land and Cooperage Co.; at his death he was the firm's president and one of its directors. He became a director and chairman of the executive committee of Baker Bros. Machine Tool Co. in 1933, holding those posts until his passing this week.

Shortly before Pearl Harbor was attacked, he returned to active naval duty, assigned as Assistant to the Director of Recruiting in the Bureau of Navigation—predecessor agency of the Bureau of Naval Personnel. He served as Director of Recruiting and Induction between April 1942 and March 1944, winning a commendation for an outstanding personal contribution to the Navy's wartime effort. The citation he received referred to his "outstanding skill and ingenuity in reorganizing the recruiting service to meet the object demanded by a rapidly expanding Navy" and identified him as having been "instrumental in establishing the policy and entire induction system of the Navy, Marine Corps, and Coast Guard for maximum effectiveness." He received credit for the success of the WAVES enlistment program, as well as for having "procured skilled and technical men for various organizations connected with construction and repair."

On April 1, 1944, he assumed command of the Navy's renowned transport, the *West Point*—formerly the luxury liner, the steamship *America*—and proved that he was equally proficient at sea. In awarding him the Bronze Star Medal for meritorious achievement as commanding officer of the *West Point*, the Navy credited him with "the expeditious transport of more than 175,000 troops to forward combat areas thereby contributing immeasurably to the successful prosecution of the war." The citation made special note of the fact that he had operated his ship "skillfully, without escort throughout waters partrolled by enemy submarines and though constantly threatened by heavy gales and mountainous seas."

Relieved of active duty on May 26, 1946, Webb Hayes returned to civilian life, reassumed management of his business enterprises, and turned his talents to promoting a variety of civic and humanitarian projects. At his death, he was president and trustee of the Rutherford B. Hayes Foundation, as well as a trustee of the Ohio Historical Society and the Birchard Library of Fremont, Ohio.

He and his family lived in Fremont at Spiegel Grove, his family's ancestral home and the birthplace of President Hayes. Appropriately, the Navy Department has assigned the name U. S. S. *Spiegel Grove* to a dock landing ship christened in November 1955 by Admiral Hayes' wife.

Elevated to the rank of captain in September 1942, Webb was named commodore in November 1945, and was transferred to the honorary retired list of the Naval Reserve in that rank in August 1951. By act of Congress 2 years ago, he was promoted to rear admiral on the United States Naval Reserve retired list.

In recent years, Webb earned increasing local esteem for the support and guidance which he gave to the Memorial Hospital of Sandusky County in Fremont. A few short weeks ago he suffered a heart attack while yachting at sea. He was returned to Fremont for care and appeared to be rallying, but on Wednesday morning he died in Memorial Hospital, the institution which owed so much to him. Fittingly, his family has asked that his friends and admirers make donations to Memorial Hospital in his memory.

A great naval administrator and courageous seagoing captain, a successful businessman, a leader in civic, historical and humanitarian activities—Webb Hayes earned universal respect and admiration. To his devoted wife, Martha Baker Hayes, and to his sons, Webb C., III, Arthur and Scott, I extend my own personal deep-felt sympathy, which is shared by a grateful community, State, and Nation.

Resolution Adopted by the American Flint Glass Workers Union

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. McGREGOR. Mr. Speaker, the American Flint Glass Workers Union recently passed two resolutions in their 80th convention in New York City. One had to do with import quotas and the other with the OTC—Organization for Trade Cooperation.

For many years Harry H. Cook guided the Flint Glass Workers Union as its president in its uphill struggle to prevent the domestic handblown glassware industry from being destroyed by cheap imports from Czechoslovakia and other foreign sources.

At its most recent convention the national union retired Mr. Cook and made him president emeritus, electing in his place Charles M. Scheff who has been its secretary for a number of years. The fight against unfair import competition will continue under the newly elected president as is evidenced by the two resolutions adopted, one in support of the Lanham general import quota bill and the other in opposition to United States membership in the proposed Organization for Trade Cooperation—OTC.

Few industries have experienced more relentless competition from abroad over the years than the glassware industry. The introduction of machinery helped prevent the outright destruction of the industry by imports; but today glass-making machinery installed by foreign manufacturers is beginning to pose a threat to the so-called machine branch of our industry.

The Flint Glass Workers Union is to be commended for its tireless efforts to keep the domestic industry that gives employment to its members alive in the face of harsh competition.

We of the Congress should be more active and do everything within our power to protect American industry and

American workers from this unfair foreign competition.

Under leave to extend my remarks in the RECORD, I include the two resolutions adopted by the American Flint Glass Workers Union:

LANHAM IMPORT QUOTA BILL—RESOLUTION ADOPTED BY THE AMERICAN FLINT GLASS WORKERS UNION

Whereas for years the imports of hand-blown glassware have hampered employment in the domestic plants devoted to the production of such glassware, both by darkening the outlook for the future and by pressing down on normal wage increases such as are necessary if this industry is to keep pace with other industries;

Whereas younger people are discouraged under such circumstances from entering and learning the trade, for fear that imports will continue to encroach more and more and absorb an increasing share of the market unless such imports are regulated more effectively than is the case under the reduced tariff rates now existing;

Whereas it has been found from experience that it is all but useless to seek relief under the escape clause of the Trade Agreements Act since the recommendations of the Tariff Commission are nearly all rejected by the President under advice of the State Department: Therefore be it

Resolved:

1. That the American Flint Glass Workers Union of North America in convention assembled give wholehearted support to the Lanham import quota bill (H. R. 2815) as representing the most sound and suitable method of regulating the importation of hand-blown glassware;

2. That copies of this resolution be sent to the members of the House Committee on Ways and Means and the members of the Senate Finance Committee of the United States Congress, to President George Meany of the AFL–CIO, to the director or research, the director of the legislative service, and to the resolutions committee of the AFL–CIO; and

3. That the officers of the American Flint Glass Workers Union be and hereby are urged to do all within their power to promote passage of H. R. 2815 by the Congress of the United States.

OPPOSITION TO THE OTC—RESOLUTION ADOPTED BY THE AMERICAN FLINT GLASS WORKER UNION

Whereas it is a fundamental and hallowed principle of the Government of the United States that the Congress reflect the will of the people as expressed in elections and petitions on matters of national concern;

Whereas the power of Congress to convert the will of the people into policy and into law expressing such policy without coercion, circumvention, or schemes of administrative procedure, is of supreme concern to all whose vital interests are at stake;

Whereas the American Flint Glass Workers Union of North America has witnessed the passing of power over tariffs and trade, clearly invested in the legislative branch under the Constitution, from the Congress to the executive branch wherein the Department of State is the predominant arm dealing with foreign affairs, thus resulting in reducing Congress to the virtual status of a mere onlooker;

Whereas such deprivation of Congress is directly contrary to the best interests of all who are engaged in economic activity, whether as workers, employers, or others who are dependent upon them;

Whereas the proposal contained in H. R. 6630 which calls for congressional approval of United States membership in the OTC (Organization for Trade Cooperation) would produce the result of confirming the transfer of power over the regulation of foreign commerce and the determination of foreign trade policy and its administration from the Congress to the State Department and then into the proposed international trade body to be called the Organization for Trade Cooperatiton in which the United States would have 1 vote in 35: Therefore be it

Resolved by the American Flint Glass Workers Union of North America in convention assembled; That:

1. We do oppose in all vigor United States membership in the proposed international Organization for Trade Cooperation, known as the OTC, and the bill, H. R. 6630, that would authorize such membership;

2. Copies of this resolution be sent to the members of the House Committee on Ways and Means and the members of the Senate Finance Committee of the United States Congress, to President George Meany of the AFL–CIO, to the director of research, the director of the legislative service, and to the resolutions committee of the AFL–CIO; and

3. That the officers of the American Flint Glass Workers Union be and hereby are urged to do all within their power to prevent the enactment of H. R. 6630, the OTC membership bill.

VFW Honors Two New Jersey Representatives

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I include here an excerpt from the convention minutes of the Veterans of Foreign Wars, Department of New Jersey, June 29, 1957, session. I had the great pleasure of attending the session of the VFW convention at which awards were presented to Mr. Addonizio and Mr. Rodino, my colleagues from New Jersey. I was delighted to join in the rising ovation which greeted the presentations of well deserved awards. I am very pleased, therefore, to bring this occasion to the attention of their friends and colleagues in the House of Representatives by including the following material in the Appendix of the CONGRESSIONAL RECORD:

EXCERPT FROM THE CONVENTION MINUTES OF THE VETERANS OF FOREIGN WARS, DEPARTMENT OF NEW JERSEY, JUNE 29, 1957, SESSION

Department Commander KINNEY. Comrades of the 38th annual encampment, the Veterans of Foreign Wars do not give out awards promiscuously, and we do our very, very best to give those awards only to the people who deserve them. This year, by the action of the department council of administration at their last meeting in Trenton, they unanimously adopted a resolution to present to these two comrades of ours—who have not forgotten they are comrades of ours—two distinguished Congressmen from the State of New Jersey, a suitable award. These are the highest awards that are going to be given by the department of New Jersey this year.

Very few of these awards have been made in prior years, but in both of these cases the men receiving them are well deserving of them. If you recall, a few months ago in our VFW magazine a record of the Congressmen throughout the entire country indicated their voting as far as veterans' legislation was concerned. Our two distinguished comrades, the Congressmen who are with us here this morning, had a 100 percent record as far as voting for the things that the Veterans of Foreign Wars believe are right for this country.

In addition to that, they have taken up the cudgels on a number of other matters.

I would like to read to you the citation—and I think it's fitting and proper, since these two Congresmen are known as "The Twins," that they receive their awards together, even though there are two single awards. These men were elected the same year, in 1948, and for the past 9 years they have been serving in the Congress of the United States. They were reelected in 1950, reelected in 1952, 1954, and 1956—a real tribute to the excellent service that they are giving to their constituents and the State of New Jersey.

Will Congressman PETER W. RODINO, of the 10th Congressional District, and Congressman HUGH J. ADDONIZIO of the 11th Congressional District, please join me at the microphone?

(Congressman PETER W. RODINO and Congressman HUGH J. ADDONIZIO came forward. Applause.)

Department Commander KINNEY. The awards, the silver medal of merit, of the department of New Jersey, Veterans of Foreign Wars, was authorized by its council of administration, April 18, 1948. Since its authorization 10 years ago, only 3 silver medals have been presented. Today the fourth and fifth awards of this highly cherished token of sincere aprpeciation is made. We have spelled out the citations so that they explain exactly how we feel about these comrades and why we so feel, and I will read:

"The Department of New Jersey, Veterans of Foreign Wars of the United States, awards the Silver Medal of Merit to PETER W. RODINO, Member of Congress, Post No. 848, VFW, in recognition and sincere appreciation of his consistent and favorable voting record as a member of the Congress of the United States, from the 10th New Jersey District, in matters concerning the veteran and his dependents; for his sponsorship of legislation to insert the phrase 'under God' in the pledge of allegiance and legislation designating February 4, as 'Dorchester Day,' commemorating the heroic sacrifice of the chaplains of the four faiths who gave their lives so that others might live; and for his prompt action in obtaining an appropriation to refurbish and repair the Museum of the Unknown Soldier at Arlington National Cemetery, when report of condition of said museum was made by this department.

"Ordered by the council of administration and presented at the department encampment in Asbury Park, N. J., this 29th of June 1957.

"CHARLES E. KINNEY,
Commander.

"BENJ. P. THOMAS,
Adjutant."

The other citation, equally as well deserved is the awarding of the Silver Medal of Merit to Congressman HUGH J. ADDONIZIO. It reads as follows:

"The Department of New Jersey, Veterans of Foreign Wars of the United States, awards the Silver Medal of Merit to HUGH J. ADDONIZIO, Member of Congress, Post No. 8670, VFW, in recognition and sincere appreciation of his consistent and favorable voting record, as a member of the Congress of the United States, from the 11th New Jersey District, in matters concerning the veteran and his dependents; and for his determined and successful effort to bring about the full utilization of facilities at the East Orange Veterans' Administration Hospital, thereby increasing the hospital's capacity by 100 beds, effective July 1, 1957.

"This action by Congressman ADDONIZIO which is of inestimable service to the veterans of the State of New Jersey and environs was instigated by a report of said conditions by this department.

"Ordered by the council of administration and presented at the department encamp-

ment in Asbury Park, N. J., this 29th day of June 1957.

"CHARLES E. KINNEY,
Commander.
"BENJ. P. THOMAS,
Adjutant."

Congressman RODINO, it gives me a sincere pleasure, because we have been friends for so long, to give you this well-deserved tribute.

I think you comrades out there on the convention floor, know me, and Congressman RODINO knows me. There is nobody who can buy this medal; there is no one who can get the medal because he is a friend of somebody's or anything like that. This tribute has to be earned, and it has to be deserved. This is a most valuable award as far as the Veterans of Foreign Wars is concerned, and it gives me great pleasure to present the silver medal of merit of the Department of New Jersey, Veterans of Foreign Wars, to Congressman PETER W. RODINO, of the 10th Congressional New Jersey District. [Applause.]

Chief of Staff CAFFREY. Comrade Commander, I would like to, from the floor of this encampment, extend our deep appreciation to Congressman RODINO, by a rising vote of thanks, for his outstanding work in behalf of good citizenship in the United States.

(The entire encampment arose and applauded.)

(Congressman RODINO addressed the encampment.)

Department Commander KINNEY. Just in passing, Congressman RODINO was a member of an armored division. He went overseas as an enlisted man and received a battlefield commission. A real fighting soldier.

The next award, the silver medal of merit to the Congressman from the 11th Congressional District of the State of New Jersey, certainly is well deserved because, as you heard the citation, through his efforts, for the first time since it was built, the full complement of beds will be in use at the East Orange Veterans' Administration Hospital as of July 1, 1957.

Congressman HUGH J. ADDONIZIO was a quarterback behind the "Seven Blocks of Granite" a few years ago at Fordham University, a very, very fine football player who took his knowledge into the Army. He was with the 9th Infantry Division in eight campaigns, starting in North Africa and ending when they met the Russians at the Elbe River.

These two men, as I have told you before, are not only distinguished Congressmen, distinguished Americans, but distinguished veterans; and in your name, it is my distinct pleasure to present the silver medal of merit of the Department of New Jersey, Veterans of Foreign Wars, to Congressman HUGH J. ADDONIZIO, of the 11th New Jersey Congressional District.

Will the encampment join me in a rising tribute for Congressman ADDONIZIO?

(The entire encampment arose and applauded.)

(Congressman ADDONIZIO addressed the encampment.) [Applause.]

Better To Scrap the High Court

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Fort Mill, S. C., Times of July 11, 1957:

BETTER TO SCRAP THE HIGH COURT

A reporter asked the President at his press conference the other day about the possibility of Russia making clean atomic bombs and do we have any assurance they would use them on us.

"I would hope," the President replied, "that they would learn how to use clean bombs and would use them for the simple reason that then at least we make them specific weapons instead of weapons of general and uncontrolled destruction."

Press Secretary James C. Hagerty later corrected the first part of the foregoing quote to read: "I would hope that they (the Russians) would learn how to use clean bombs, and if they ever used atomic bombs, would use clean ones—"

But, with or without this refinement, this exchange would seem to typify the United States attitude at the London Disarmament Conference in which we seem trustingly eager to believe that the Russians would live up to any agreements that might be arrived at.

The latest United States idea is that each of the Big Four—United States, England, France, and Russia—make up a list of nonatomic weapons they are willing to scrap. Our original proposal was 10 percent of all such weapons, the Russians raised the ante to 15, but no one would agree. Hence the latest Stassen brainstorm, which we are told the Reds have accepted "in principle." These would include only the latest and best weapons—planes, missiles, naval vessels, tanks, and heavy artillery—to be assembled at depots in each country, held for a year and then destroyed or converted to peaceful uses.

The concurrent unanimous demand of the United States and 23 other nations that the U. N. General Assembly take up as soon as possible the blistering U. N. special report on the Hungarian revolt, reminds us that the Russians employed 4,000 of their tanks in this massacre of the patriots. And current reports from Hungary, Poland, East Germany, and from inside the U. S. S. R. itself indicate that many more yet may be needed.

On the other side of the world, the renewed and furious bombardment of the Nationalist-held offshore islands by the Kremlin's Red Chinese allies, the arrogance of the Red North Korean demands that we withdraw all troops from Korea, new threats by Chou En-lai of further blood purges in Red China and growing tension between Japanese civilians and United States service men combine to make the London performance look even more idiotic.

If the Reds can beguile us with worthless promises into throwing our arms away, cutting our fighting manpower, stopping atomic tests, they will certainly do so. And we cannot expect them to trouble about making "clean" bombs so long as they can clobber us more disastrously with dirty ones.

Death of Most Reverend Michael J. Ready, D. D., Bishop of Columbus

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. McCORMACK. Mr. Speaker, 60 years of devoted service to God and the Catholic Church came to a triumphant close on May 2, 1957, when Bishop Michael J. Ready, of Columbus, gave back his soul to God. He was a great priest, whose ideal in life was fitly summed up by the official motto he chose as bishop of Columbus, "Render unto God the things that are God's."

Though Bishop Ready's Americanism was not limited by any sectional feeling, I take a warm pleasure in claiming him as a New Englander by birth, since he was born in New Haven, Conn., on April 9, 1893. Ohio, Pennsylvania, and New York State share the credit for an education that helped to shape his powerful mind and direct his firmly disciplined will to the exclusive and lifelong service of God.

It was in Cleveland, in 1918, that Michael Joseph Ready achieved the great ambition of his life, ordination to the priesthood. No honors that came to him afterward, no authority, no fame, could turn his thoughts or feelings for an instant from the pursuit of that high calling. To those who knew him most intimately, he seemed the very incarnation of the ideals of the priesthood.

For 5 years he served his priestly apprenticeship as curate of St. Mary's Church, Painesville, Ohio, and then for 4 years taught in the Catholic Latin School in Cleveland before his talents were offered a larger scope by his appointment as diocesan director of the propagation of the faith. He served in this position for another 4 years, and then, in 1931, first achieved a position of national importance with his appointment as assistant general secretary of the National Catholic Welfare Conference.

Father Ready's service in this position was so outstanding that in 1934 he was awarded the dignity of papal chamberlain by His Holiness, Pope Pius XI. Shortly after the death of the general secretary, Rt. Rev. Msgr. John J. Burke, C. S. P., in 1936, Monsignor Ready was appointed to succeed him, and continued in the post of general secretary of the National Catholic Welfare Conference with spectacular success until, in 1944, His Holiness Pope Pius XII called him to the post of bishop of Columbus. Here, as in the National Catholic Welfare Conference, he evinced those qualities of mind and spirit that drew from his close associate and successor as general secretary, Msgr. Howard J. Carroll, these growing words of eulogy:

Without exception, those who enjoyed the privilege of his association esteemed his talents, admired his stature, cherished his friendship and, from his direction, example, and encouragement, as from a wellspring, drew, day after day, strength, confidence and refreshment.

Mr. Speaker, in connection with the recent death of Archbishop Ready and under unanimous consent I insert a fine tribute to Archbishop Ready made by the noted commentator, Tris Coffin, and broadcast over local station WWDC in Washington, D. C., on May 8, 1957:

TRIS COFFIN FOR MAY 8, 1957

A newspaper morgue is not a good place to hunt for greatness. You are misled by yellowed clippings and headlines. They are only the hollow echo of yesterday's noise.

By this test—how much space a newspaper gives each name in the hurried, frantic rush

of news—Al Capone would be a greater man than Dr. Albert Schweitzer.

No, in this search for greatness, the seeker must go elsewhere. He must look into the small and forgotten lanes where his candidates have walked, and find what was left behind. Was it joy or tears? Was it ashes or flowers? Was it gentle, loving affection for other men, or was it the crude passions of power and hate?

Last Thursday, in the quietness of the night, a great man died. There was no splutter of bulletins at his passing, no rousting of reporters to dig up quotes. His name was Mike Ready, and he was a priest. That was the way he thought of himself, although he was a bishop.

The measure of his greatness was that Father Ready had a heart, a clear mind, and courage. He loved people. Their tears, their struggles were his. All the oppressed and unfortunate were his children.

He lived in a dangerous and confused age. In it were intolerance, depression, and mass killing; it was never quite free of fear and want.

Father Ready became secretary of the National Catholic Welfare Conference—his offices were here in Washington—when the stain of bigotry darkened America. The awful flames of fiery crosses, symbol of the Ku Klux Klan, burned on lawns and hillsides across the land. The white-sheeted, masked cowards paraded the streets. Their members sat in Congress.

Mike Ready rallied men of all faiths to break this rotten grip on our society. Quietly, he helped turn America away in disgust from rule by demagogs and brutal mobs. This experience shaped a love of freedom and tolerance that guided his life.

Father Ready was one of the first to speak out against the obscene persecution of Jews by a strange little man named Hitler; against the crude and ugly stamping out of religious freedom in Russia. He attacked what he called "the brutal denial of justice to millions" by the new dictators of Europe.

But there was something else about him. Wherever you sit and talk to people who knew him, their faces light up. They use such words as "kindly, gentle, thoughtful." There was the aged Negress, a servant, who could neither read nor write. She would find excuses to come into his presence, for, as she said, "Father Ready is a good man." And there is the man I saw in the Capitol. He was not of Bishop Ready's faith. But his eyes filled with tears, and he said simply, "Mike Ready was a Dr. Schweitzer; perhaps an even greater man."

Part of Mike Ready's age was lost in the depression—the melancholy lines before soup kitchens, empty freight cars loaded with gaunt hoboes looking for jobs and a bite to eat. There was hunger and want in a land of plenty. Father Ready said this was not just or fair. He was a crusader for social justice in the pulpit, on Capitol Hill, and at the White House. He said, "Society has a responsibility to establish a social program of checks and balances so that man's dignity can be guarded and the common good best served. No man can be indifferent to the moral and economic conditions under which our citizens live."

He was an early friend of labor unions, saying, "Christ, the workman toiling in honorable labor at the humble carpenter's bench at Nazareth, established the dignity of man as a laborer. The power of unionism to unite worker with worker in the battle for justice is based on spiritual brotherhood."

And, he said, "Greed for material good degrades mankind." This was a part of his creed to "teach truth fearlessly."

Father Ready's hope for man was expressed simply at President Roosevelt's third inaugural. "Inspire him to persevere in promoting justice and halting iniquity. Deign mercifully to reward his strivings and desires for peace."

Mr. Roosevelt's 4 freedoms—of speech, of religion, from want, from fear—might have been written by Father Ready.

Long before the holocaust of war was ended, Father Ready said thoughtfully, "Our work is not over until the great human needs left in the ruins are met. There will be 10 million homeless, deserted refugees. We must find a useful life for them."

With an energy that seemed almost superhuman, he aroused churchmen and statesmen, and, through them, the conscience of America. He told an assistant, "We'll stir every county in America." When others were tired and frustrated, he would say gently, "Don't be discouraged. We've got to keep pushing. This must be done."

And, it was done. Gifts of clothing, food, money, jobs poured out from an aroused country. The Government accepted his recommendations for a displaced-persons program.

Today, there are literally millions scattered over the globe leading useful lives because of Mike Ready. This is true greatness.

This is Tris Coffin reporting from Washington.

Forthright Action on Hungary

EXTENSION OF REMARKS
OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. SHELLEY. Mr. Speaker, the unanimous action of both bodies of the United States Congress in passing House Concurrent Resolution 204 on June 26 with regard to the problem of Hungary and other nations under the yoke of Soviet communism was an accurate reflection of the feeling of all Americans that this country and the United Nations should take positive steps to further expose to the world the ruthless oppression which still grips Hungary today. The objective yet horror-filled report of the United Nations Committee on the Problem of Hungary made public on June 20 makes the need for such action crystal clear.

The world should not be allowed to forget the bloody events of October and November of 1956 which tore the mask of smiling deceit from the face of the Kremlin. The failure of the United States and the United Nations to move forcefully at that time, despite the ill-fated Suez blunder, was a tragedy of major proportions and one which may have changed the course of history. Strong and courageous action then, when the curse of communism was exposed in all its weakness, its cruelty, and its hypocrisy, might have saved this generation and those to come from endless grief. We might have snatched Hungary and its brave people from behind the Iron Curtain and have set the stage for the final collapse of the Communist conspiracy. It is sad indeed that those who control this administration and its foreign policy were caught completely unprepared for the great uprising of the spirit of freedom in Hungary, that they did not know how to cope with it, and that the world saw its greatest power reduced to a pathetic spectacle capable of doing no more than mouth words when deeds were needed.

It does no good, however, to talk of what might have been when the opportunity still exists to take positive action to retrieve a part of the ground lost by our early wavering, delay, and helpless inaction. The reconvening of the General Assembly of the United Nations for the purpose of considering the report on Hungary presents that opportunity. Happily our representatives to the United Nations have taken the lead in calling for such a special session and it now appears that a meeting will be held later this summer. Let us hope and pray that at that time we will be better prepared with a program for vigorous and forthright action by the community of democratic nations to condemn the Communist aggression against Hungary, to demand that the Soviets withdraw from that country, and to call for free and unfettered elections under the supervision of a United Nations force so set up as to guarantee democratic voting procedures.

It is only by throwing the gauntlet in the faces of the rulers of the Kremlin that they can be brought to brook. Now is the time to wield the force of world opinion and of the united strength of the free peoples of this earth in the cause of freedom for the satellites. Now, when the Russian Communist hierarchy is split from top to bottom and its weakness is again laid bare, is the time to force their hands and by exerting pressure upon pressure to widen the breach between the U. S. S. R. and her helpless hostages, and the breach within the Kremlin walls. I strongly urge that the planned meeting of the General Assembly of the United Nations be convened at the earliest possible moment in order that the greatest possible advantage be taken of the present weakened position of the Soviet Union. I trust that our Department of State is moving rapidly in that direction now and that they are leaving no stone unturned in planning action by the Assembly.

Although the terrible and trying situation of the Hungarian people is a matter of concern to all Americans and to free peoples everywhere, their plight is particularly heartrending to their friends and relatives exiled from their native land or voluntary emigrants who fled during the many years of oppression by Fascist and Communist dictatorships. One such group in San Francisco has telegraphed to me a plea in support of direct action to relieve Hungary such as I have advocated. I ask that it be printed in the RECORD at the conclusion of these remarks as evidence of the deep and abiding hope in their hearts that we will not abandon their countrymen to the merciless mercies of their present rulers.

Should the U. N. act as I hope they will in demanding elemental justice for Hungary, and should Russia reject those demands in the face of world opinion, it should certainly serve to convince those so-called neutral nations who have acted as her protagonists of the vanity of any hope that bolshevistic commu-

ism can ever take its place as an acceptable and accepted form of government for any people. Such a world move to the side of western democracy and against the farcically termed "people's democracies" would be a long step forward in the struggle for containment of communism. Certainly also it should serve to weaken further the Communist domination over the satellite countries—a domination visibly shaken at the time of the rape of Hungary and waiting only a reawakening of the free spirit of the subject peoples and active urging from the outside world to crumble forever.

SAN FRANCISCO, CALIF.,
July 1, 1957.

Hon. JOHN F. SHELLEY,
House of Representatives,
Washington, D. C.:

We, the Hungarians of San Francisco Bay area, acting as one committee, representing every man, woman, and child of Hungarian origin living in this region, do respectfully beg and urge you in view of the tragic developments in Hungary that you use the power of your office to support a U. N. resolution effecting the end of terror in Hungary by the immediate withdrawal of Soviet troops and the holding of free elections under the supervision of a U. N. police force.

GEORGE J. RATTY.
LESLIE B. HADFY.

Hells Canyon

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. MILLER of Nebraska. Mr. Speaker, under permission to insert my own remarks in the Appendix of the RECORD, I include a letter with charts and tables from the Honorable Fred Seaton, Secretary of the Interior. The following letter deals with many of the problems surrounding Hells Canyon. You will note that the Secretary estimates that the construction and transmission costs of the Senate bill to be approximately $525 million. That this would call for an annual appropriation for the next 6 fiscal years at an average annual rate of more than $87 million for construction and transmission alone.

The Secretary pointed out that the Northwest power supply has been short. That it was necessary to interrupt electric energy to some of the plants last year and it affected more than 3,000 jobs in the area. There have been a number of brownouts. The area is short of the necessary electric energy.

The private power company would have this energy on the line late in 1958. It could not possibly be supplied by the high Federal dam for 6 or 8 years.

The Secretary pointed out that in the final analysis the controversy over Hells Canyon should not be one involving private versus Federal power. Personally I do not oppose Federal construction either in Hells Canyon or the great power sites on the Missouri River Basin or in the Colorado River project. I would favor them if there was no private enterprise to do the job. We do have private enterprise ready to do the job and do it more efficiently. I have supported Federal power projects all over the country. I will continue to support them. The list of the projects included with the Secretary's report has found me supporting at least 98 percent of them.

I feel the Federal Government should not be building hydroelectric plants when private industry can and will do the job. Nebraska is a public power State, but not Federal power. The directors are elected at the local level. They are doing a good job. There is a vast difference between local control and control from Washington, D. C.:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
Washington, D. C., July 1, 1957.

Hon. ARTHUR L. MILLER,
House of Representatives,
Washington, D. C.

DEAR DR. MILLER: In response to your request, I am pleased to send to you my views concerning the enactment of S. 555 or other similar legislation which would authorize the construction of Hells Canyon Dam and other facilities.

On March 27, 1957, this Department reported to the House Interior and Insular Affairs Committee that we opposed the enactment of this legislation. In addition to the reasons set forth in the Department's report, I believe that the tremendous cost of construction of a Federal dam at Hells Canyon as compared to the amount of funds made available by the Congress for reclamation projects throughout the West in the past, and the fact that the Northwest needs and can use the power to be provided by the Federal Power Commission licensed Idaho Power Co. projects, militate against favorable action upon these bills.

The Bureau of Reclamation has estimated the construction and transmission costs authorized by S. 555 to be $525 million, $472,500,000 for Hells Canyon and $53 million for Scriver Creek. A schedule of appropriations for these purposes if construction should be authorized is attached as table I. These amounts do not include interest during construction, annual operation and maintenance, or any funds to reimburse the Idaho Power Co. for its investment or damages, as the case may be.

Appropriations would be necessary during the next six fiscal years at an average annual rate of more than $87 million for construction and transmission alone. According to the preliminary schedule of the Bureau of Reclamation (table I) the actual request for the works authorized by S. 555 in 1961 ($140,484,000) would exceed 87 percent of the appropriation request for all reclamation projects in all 17 Western States in the 1958 budget. In comparison, during the past 20 years Congress has appropriated an average of $124,046,270 for reclamation construction and rehabilitation. During the past 10 years the average has been $183,604,012 annually. (See table II.) If S. 555 is enacted, appropriations for the next 6 years, for reclamation projects, will have to be 60 percent higher than those appropriated for the last 6 years.

Reclamation projects already authorized or under construction (see tables III and IV) will require appropriations of $2,267,189,015 for construction and rehabilitation. Thus, such projects need almost as much as the total amount of construction funds that the Congress has made available for reclamation projects throughout the 17 Western States over the past 20 years. These figures do not include projects currently under consideration by the Congress, such as the $300 million San Luis project in the State of California. Authorization of Federal construction of Hells Canyon Dam would place these bona fide reclamation projects in competition with a project the major purpose of which is power production. The Hells Canyon project would not provide additional water for or reclaim 1 acre of arid land; it has nothing to do with reclamation, yet the funds therefor would be provided out of the amounts made available for reclamation construction.

Furthermore, as you know, the Northwest power-supply situation has been somewhat spasmodic in recent year. For instance, in 1952, beginning August 19, the Bonneville Power Administration curtailed interruptible loads until by September 8 the total of such loads (388,000 kilowatts) had been turned off. I am informed that such interruptions may have affected more than 3,000 jobs in that area. Bonneville started picking up the load again in February of 1953, and by March 31 of that year service to such loads was restored. Fourteen out of fifteen of the industrial loads currently carried by Bonneville include an interruptible portion. In fiscal 1957–58, the interruptible load will be 619.5 megawatts out of a total industrial load of 1,623.3 megawatts. This means that over 38 percent of the industrial power delivered by Bonneville is subject to interruption and accompanying unemployment during such periods.

This situation is again important because even in median month-year hydroelectric conditions, unless the West group customers of the Northwest power pool wish to utilize and pay premium rates for energy generated by old, small, and inefficient steam plants, there will not be enough power available to meet loads predicted for that area without again seriously curtailing interruptible loads. Hydro projects under construction, including the Idaho licensed projects, would aid the West group area to continue to carry all existing firm and interruptible loads under such conditions. The loads and resources prediction for the West group area does not include provision for any new large industrial loads, yet with normal growth, the deficit in average energy capabilities, without the utilization of expensive steam generated energy, will continue to increase unless all hydro projects are completed as scheduled.

I am informed that power supply in East group of the Northwest Power Pool will be deficient in the 1959–60 fiscal year unless the Idaho Power facilities already licensed are permitted to continue to completion. This situation could become serious because I am further informed that the existing transmission facilities from the West group to the East group will, even in the most favorable conditions, permit the exportation of no more than about 150 megawatts from West to East to meet the growing deficit in the East system. The facilities under construction by the Idaho Power Co. include a new 230 kilovolt line which would help alleviate this situation and would permit an interchange of larger loads between the West and East group. Tables V and VI attached to this letter show the load and resource predictions for the West group and the Idaho Power Co.

Due to the dominance of the Federal facilities in the Northwest at the present time, whenever a power shortage occurs, the bulk of the interruption falls upon Federal customers. We believe that the addition of non-Federal facilities now under construction by the Idaho Power Co. will bring about greater diversity in the power supply picture in the Northwest.

In the final analysis, the controversy over Hells Canyon should not be one involving private versus Federal power. We do not oppose Federal construction of Hells Canyon because it would provide more Federal power. We do oppose such construction because the Federal Power Commission found that the Idaho Power facilities presented the best plan for the com-

prehensive development of that portion of the Snake River. That Commission, the bipartisan arm of the Congress created to regulate and control private development of hydroelectric power, the need for which was pointed out for us by such great conservationists as Theodore Roosevelt and Gifford Pinchot, protects the interests of future generations because their licenses are issued for only 50 years and the Government reserves the right to determine who should operate the hydro facilities after the license expires.

In 1956, Federal generation amounted to 63.5 percent of all the power produced by principal electric utility systems in the Pacific Northwest Power Pool. Private utilities generated only 27.8 percent of the total. In our opinion, the preponderance of Federal activity and the resultant heavy reliance of the area upon Federal spending to meet increased demands for power supply helped bring about the curtailment of interruptible power in 1952 and may well bring about a further critical power shortage in the future if the Congress does not permit the utilization of non-Federal funds for power construction when such funds are made available.

Ten years ago and from time to time since then, the Congress had a choice between Federal construction of the Hells Canyon Dam and the alternative of permitting the Federal Power Commission to license non-Federal construction. During this 10-year period the theoretical benefits dramatized by proponents of the high dam have been repeatedly considered by the Congress. The Congress did not heed their pleadings and refused authorization for Federal construction.

Today we are not faced with a theory. As a practical matter it would be impossible to justify to the taxpayers of the Nation, overburdened as they are, the extravagant waste of authorization of Federal construction at this time. The Brownlee and Oxbow projects are in the advanced construction stage; production of the electrical energy is scheduled to begin September 1958. One million acre-feet of flood-control storage should be available for the spring runoff in 1959. I am informed that more than $48 million has been committed for this construction and for turbines, generators, switch gear and other equipment for which orders have been placed. Many man-hours of engineering design have been employed. Factory employees are fabricating the equipment which will soon be ready for shipment to the dam site.

For these reasons and those set forth in our report to the committee, I do not favor enactment of S. 555.

Sincerely,

FRED A. SEATON,
Secretary of the Interior.

TABLE I.—*Appropriation requests necessary to complete facilities which would be authorized by S. 555*

Fiscal year	Dam and powerplant	Transmission
A. Hells Canyon Dam:		
1958	$5,800,000	$5,200,000
1959	35,600,000	25,900,000
1960	68,600,000	29,100,000
1961	89,100,000	29,100,000
1962	87,500,000	19,400,000
1963	39,500,000	13,000,000
1964	16,900,000	7,800,000
Total	343,000,000	129,500,000
B. Scriver Creek facilities:		
1958	700,000	0
1959	3,783,000	117,000
1960	9,466,000	234,000
1961	21,716,000	584,000
1962	10,590,000	2,510,000
1963	905,000	2,395,000
Total	47,160,000	5,840,000

TABLE II.—*U. S. Department of the Interior, Bureau of Reclamation*

Fiscal year:	Construction and rehabilitation
1937	$39,691,500
1938	76,570,000
1939	38,780,000
1940	74,521,783
1941	69,424,922
1942	95,852,059
1943	85,801,170
1944	34,131,339
1945	20,681,868
1946	109,430,740

TABLE II.—*U. S. Department of the Interior, Bureau of Reclamation*—Continued

Fiscal year:	Construction and rehabilitation
1947	$101,612,103
1948	128,950,229
1949	246,916,676
1950	335,659,738
1951	243,733,000
1952	207,602,725

Participating projects:	*Total estimated cost*
Florida, Colo.	$6,971,000
La Barge, Wyo.	1,747,000
Lyman, Wyo.	10,646,000
Silt, Colo.	3,377,000
Central Utah, initial phase, exclusive of Vernal unit	227,984,000
Total, upper Colorado River basin fund	400,094,000
Total, Bureau of Reclamation	673,752,000

On Eagles' Wings

EXTENSION OF REMARKS
OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the inspiring address of the Honorable Boyd Leedom, Chairman of the National Labor Relations Board, delivered at the spring commencement of the State University of South Dakota, on June 3, 1957.

The address follows:

One day not long ago while I was in a contemplative mood, I saw a middle-sized black bug come out of the mysterious world of bugdom into the astonishing world of human beings. Just where he was going and why he seemed so anxious to get there, only he or some other bug would know, but it was obvious to me he had a purpose.

He cut across the tile floor in a fairly straight line and made good progress until he came to the pedestal that supported the wash bowl. His first inclination was to surmount this tremendous obstacle. But the porcelain surface went straight up and was very smooth. The bug did considerable spinning of his rear wheels, so to speak. Then after a moment's serious consideration of his problem he turned in exactly the wrong direction and hastened on into another tremendous block—a wall of the room. Without much delay he retraced his steps to the stand of the wash bowl, felt his way around its edge, came to the back wall, did a left and a right and another left turn with some loss of motion, then sure of his direction, with his nose to the wall as a kind of guideline, he took the long way around to a door through which he went as if he had known from the first it was there.

With his feet on the carpeted floor of the adjoining room he made great haste, no doubt to meet Mrs. Bug at the grocery store, or perhaps to render some other great service to buganity; and out of my life he passed except for the lesson he taught me.

The bug, I thought, seemed quite stupid. The distance from the point where I first saw him, to the door through which he disappeared was so short, if he had gone directly to his objective. Furthermore he should have known that his indecision and final choice of the long way around only wasted his energy. He should also have known he could not get over the washbowl as easily as he could go around it—to say nothing of his first foolishness in going so far out of his way to find that particular trouble.

But on reflection I realized that his mistakes were much like those we humans make.

The bug is a pretty low form of animal life. While man might make the bug's mistakes, I knew we should not purposely imitate him; and so I tried to think of his opposite. I hit upon the eagle. Here was the symbol of strength and majesty. The eagle lives on a lofty plane. He has a vantage point that enables him to plot his course and execute the mission of his life with a directness, swiftness and effectiveness rivaling the best that man can do. He soars with tremendous speed and power. His remarkable flight is sustained with scarcely any flapping of his wings. His flight is in complete contrast to the wasted effort of his little black cousin, the bug.

And I knew with certainty, from a degree of wisdom gained in 50 years spent mostly along the path of the bug but with some satisfying attempts at lofty flight, that each one of you in this graduating class can, if you will, live a life equalling and even excelling that of the eagle in its grandeur, power and effectiveness. In fact the life of each of us is but a chance to choose between the course of the eagle and the course of the bug.

It was out of this kind of reflection I chose my title "On Eagles' Wings" and decided to try to show you how you can live like eagles, how your view can be the beautiful vista from the eagle's nest on the mountain top, or if you choose, but only if you choose, how you may have the dim and dismal view of the bug from the crevice alongside the bathtub.

My problem, of course, is to get you younger people to believe what I tell you, for even though you come from the ideal type of school, that is, a coeducational university in the great heartland of America, where early American tradition continues to prevail to a greater degree than in any other part of the world, you graduates have not yet learned all there is to know, though at this stage I anticipate you may show slight resistance to absorption of more knowledge.

Let me outline my case for the proposition that you can choose the high road over the low—that you can be an eagle if you will.

First, there is authority of scripture which today I ask you to accept only as ancient writing, rich in wisdom. Ancient writing is not authentic because it is ancient, rather it is ancient because it is authentic. Truth recorded lives through the ages. Second, there is conduct of nations within the framework of your own knowledge that help to prove my point. This conduct shows that the primary factor of an effective life for you has also produced the world's greatest civilization. And third, there are the wise words of contemporary men whose opinions you must respect.

First, the ancient word. About 3,000 years ago one of the wisest men of recorded history spoke directly to this proposition. His words, fresh as if spoken directly to you today, tell you in simple language how to live an abundant and effective life. He says:

"Have you not known? Have you not heard?

"The Lord is the everlasting God, the creator of the ends of the earth.

"He does not faint or grow weary, his understanding is unsearchable.

"He gives power to the faint, and to him who has no might he increases strength.

"Even youth shall faint and be weary, and young men shall fall exhausted; but they who wait for the Lord shall renew their strength, they shall mount up with wings like eagles, they shall run and not be weary, they shall walk and not faint."

That was Isaiah speaking. Endurance for all life's petty trials, strength for all life's glorious achievements are available in the inexhausible power that created and sustains the universe, says this prophet in his great wisdom.

The scope of this tremendous power staggers the imagination of most of us. Its mystery thwarts discovery of its limitless ramifications, except by those of greatest perception, and largeness of mind—those in closest harmony with God's laws.

Did you know that there is enough energy in 1 teaspoon of water to drive an ocean liner across the widest sea? All you need do to unravel the secret of the release of that energy is place yourself in the same scale of reference as the great Intelligence that put the energy there in the first place. Einstein has done a lot on that problem for you. He established this: that energy equals mass times the square of the velocity of light in centimeters per second. Something of the magnitude of the result involved is indicated in the figure produced by squaring light's speed in centimeters. The figure is 896,237,643,675,021,992,100.

Those who wait upon the Lord learn of His goodness. Its opposite is evil. God's goodness transposed into human conduct creates the abundant, effective life in the individual. This goodness of individuals is reflected in national life. Most of you may not quarrel with this proposition, but might regard it too nebulous or old fashioned to be taken seriously. If, however, it could be shown that this relationship of man to God in the order of the universe, is the basic reason for a drastic difference between a tremendous good and a terrific evil, both of which you yourselves recognize, the importance of this man-God concept should become more real and more acceptable to you.

Dr. Milton S. Eisenhower satisfied me on this point, and I pass on to you some part of the impact of his words. In a remarkable address given in the Statler Hotel in Washington last February 20, Dr. Eisenhower's premise was that Russian communism is evil and reactionary and that the American way of life, as a development of western civilization, is good and revolutionary in man's history. From this premise he argued with logic and persuasion that the difference between Russian communism and America is due to moral concepts resulting basically from differing attitudes and ideas regarding a Supreme Being.

He said:

"It is on the spiritual conviction that men are children of God, that the free nations of the West have built their social, economic, and political institutions. * * *

"Communism, however, denies the worth of the individual. It holds * * * that man has no God-given natural rights. Karl Marx proclaimed bluntly: 'The democratic concept of man is false. * * * [It] holds that each man is a sovereign being. This is the illusion of Christianity.' "

Dr. Eisenhower continued:

"In the Judaic-Christian view, ideas determine history. * * * Western man sees the world, not as the sum of things that are, but as the sum of things as they should be. * * * His eyes are on the stars. * * * He is committed to the ceaseless search for knowledge and truth."

In contrast, said Dr. Eisenhower:

"Communism's contempt for the idea of individual dignity has been revealed repeatedly in statements by Communist leaders, in political purges [and] in the ruthless, iron-fisted slaughter of human beings (such as we have just witnessed in Hungary * * *)."

He said: "Faith in God as a living reality is basic to Judaism and Christianity." while "The Communist philosophy rejects the reality of God and substitutes a materialistic absolutism. * * *"

Dr. Eisenhower's theme gets support from other well known contemporaries.

David Lawrence in the editorial "The Illusion of Permanence" in the U. S. News & World Report for May 25, 1956, just about a year ago, had this to say:

"Basically, there is only one permanence we can all accept. It is the permanence of

a God-governed world. For the power of God alone is permanent. Obedience to His laws is the only road to lasting solutions of man's problems."

"The destiny of the whole world," said Lawrence, "is in the hands of those statesmen who can interpret faithfully the commands of the Almighty."

W. Harwood Huffcut in an editorial in the Saturday Evening Post of May 18, 1957, deplored the inability of the average American prisoner of war to cope with the arguments made to him in support of alien isms. Huffcut wrote:

"We have drained American history and Government dry of the emotion and excitement of outstanding personalities in action. As students in schools and as adults in our communities, we have heard about America with our ears, but not with our hearts.

"It is high time that the leaders and teachers of the American way put some warm humanity and emotional appeal into their instruction. It is time to make our history and traditions glow and throb again.

"American democracy was born out of strong emotion and deep convictions. The men who mutually pledged to one another their lives, fortunes, and sacred honor were exciting and intense. American democracy can survive only among a people who are equally intense in their devotion to their heritage."

These well-known men say persuasively that deep conviction—simple faith in God—on the part of individuals is the essential ingredient in the creation and sustenance of our great Nation.

Now let us transfer our reference from these well-known men and their writings, to a man perhaps less well known, who comes from our own State, and to a publication much closer to home.

About the time that I came to the law school at this university, a friend of mine, Homer Surbeck, left Rapid City to attend law school at Yale. He graduated with exceptionally high marks and so after graduation went directly to the Supreme Court as law clerk for Chief Justice Taft. From there he went to the New York law office of Charles Evans Hughes. He has remained there, participating over the years in some of the most extensive and significant litigation in the whole country.

Less than 2 months ago the South Dakota School of Mines and Technology conferred on Mr. Surbeck an honorary degree and he delivered an address on that occasion which he entitled "Success on the Job." In it he analyzed some of the basic rules underlying success. He commended three general principles.

The first was the law of compensation. "That is the law," he said, "which governs what we get in relation to what we give." The most familiar statements of the rule, he quoted from scripture:

"Be not deceived; God is not mocked; for whatsoever a man soweth, that shall he also reap."

And another:

"Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom. For with the same measure that ye mete withal shall it be measured to you again."

Arguing that there will be some loss in return to you from the effort you put into your job, due to inefficiencies of your own and of your employer, he reached the conclusion that you can get almost anything you want—within reason—if you work effectively enough.

The secret of working effectively lies in his second great principle, the Golden Rule, which he took in its positive form, from the Sermon on the Mount:

"Therefore all things whatsoever ye would that men should do to you do ye even so to them: for this is the law and the prophets."

"What the rule really means," says Surbeck, "is this: Do for the other fellow what you would want done for yourself if you were that other fellow. Thus interpreted, it is the most profound rule ever put together in the field of human relations.

"But it will not work for you unless you think of the other fellow's interest first."

And the third great principle of "Success on the Job" was "Intellectual Honesty." In the development of this principle Surbeck said concerning man's attitude toward a kind of dishonesty he categorized as rationalization:

"We all know that there are two side to every coin. But, as long as we refuse to see anything except our side of the coin, and as long as the other fellow refuses to see anything but his side of the coin, we are led into useless controversy which advances the interest of no one. But we can reach that impasse only because we have already deceived ourselves into believing that there is but one side to this particular coin—our side."

And Surbeck quotes Laertes' lines from Shakespeare as the solution:

> "This above all: to thine own self be true,
> And it must follow, as the night the day,
> Thou canst not then be false to any man."

Now Shakespeare didn't write these lines—but do you remember them? They offer essentially the same choice I have been saying you can make:

> Would you rather swing on a star,
> Carry moonbeams home in a jar,
> And be better off than you are?
> or
> Would you rather be a mule?

Thus far I have dealt with the effect of belief in God, on men and nations, pretty much in the abstract. Now, in a couple of minutes, I would like to bring it closely into the reality of peoples' lives.

In the Rapid City Daily Journal for May 24, 1957, appeared an editorial entitled "Men, Machines, and God." It deals with the little boy who just the other day fell into a well and was buried in sand. The first line is, "Thy Kingdom come, Thy will be done * * *." The editorial develops the idea that God's hand was in the rescue of the boy. I quote a couple of paragraphs:

"Woodson, 39 a Negro construction worker, was at work Friday when he heard about the little boy pinned at the bottom of a newly dug well in the back yard of his Long Island home.

"'All of a sudden,' Woodson said later, 'I got this funny sensation all through me. It seemed to me that God was saying, "Sam, you must go and help get the boy out." It kept getting stronger and stronger. I left the job, went home and told my wife, "I'm going to see if I can help that boy in the well."'

"Hours later, when the rescue tunnel had been extended through the crumbling sand to within inches of the place where the boy was trapped, it was Sam Woodson who broke through and, with the help of the man behind him, John Arambo, pulled the child to safety.

"Assured later that Benny would survive the 23-hour ordeal, Sam Woodson expressed the grateful thought of countless persons when he said:

"'God walked with the boy this day.'"

I suppose many people would be very skeptical of the inference of this editorial. Most might scoff at the idea of a physical reaction to the presence of God in one's life such as Sam Woodson tried to describe. But I would not scoff at any one's honest conviction, because I myself have the conviction that anything—literally anything—is possible in this miraculous world in which we live.

Well, it seems to me, and I am sure you will agree, that I have labored here rather long and hard to get across my point. Perhaps like the bug of my opening, I should have taken a shorter route to my objective. Really my message is a kind of postgraduate short course to the one offered to all of us at our mothers' knees; and probably the good, if any, you may get from what I have had to say will depend on how much of a start you got from that childhood lesson your own mother tried so hard to teach you.

In a few sentences here is a summation of my message: Your real effectiveness in life depends mostly on a strong conviction that there is a supreme goodness and power present in your life, ready and willing to supply you all the direction and all the resources you need for great achievement. Of course, you must learn how to draw on the power. But that problem is not insurmountable. It is really quite easy if you take the assignment seriously and work at it.

The prophet of old has told us how. I repeat his formula: "They who wait for the Lord shall renew their strength, they shall mount up with wings like eagles."

Not any of you are yet committed to the path of the bug. So I regard you as eaglets, and how very fortunate you young eaglets are. What tremendous frontiers for human endeavor beckon to you. The limitless, beautiful expanse of all God's creation is your workshop. The sublimity of His ultimate and perfect truth is your goal. This is the vital question: How far into this bright blue sky of endless opportunity will each of you choose to soar?

Chemical Food Additives

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. OSMERS. Mr. Speaker, national attention has been focused on H. R. 4014, the Delaney bill, and similar measures designed to assure the safety for human use of the chemical additives often used in processing foods. This is a subject of vital importance to all of us.

My constituent, George T. Pack, M. D., of Englewood, N. J., one of our outstanding authorities on cancer, is chief of the Gastric and Mixed Tumor Services at the Memorial Cancer Center in New York City. Dr. Pack has written me calling specific attention to the need for tests to determine carcinogenicity—ability to induce cancer. The subject matter of his letter is so pertinent to intelligent consideration of the proposed legislation that, under unanimous consent I include the letter in the Appendix of the RECORD where all Members may have the benefit of his expert views.

The letter follows:

DEAR MR. OSMERS: I urgently request your support for the Delaney bill (H. R. 4014) to assure safety of chemicals in food. We urge you to take all necessary steps to amend the Delaney bill, any other food additive bill, and the Miller Pesticide Act:

(a) To specify that chemicals used in or on food be tested for carcinogenicity (ability to induce cancer).

(b) To specify that approval for use of chemicals in or on food be restricted to a limited list of selected substances for which the Secretary of Health, Education, and Welfare finds there is actual need and ade-

quate evidence of safety, provided that the Secretary shall not approve for such use any substance which he finds can induce cancer.

Need for these amendments arises from provisions permitting use of food of safe quantities of chemicals found harmful in higher concentration. A recent test case forced approval for so-called safe quantities of a chemical known to induce cancer when eaten.

Resolutions adopted by the International Union Against Cancer point out that safe doses cannot be established with confidence for chemicals that induce cancer. These have long delayed action. Single doses eaten by young test animals have resulted in cancer late in life.

The language of amendment (b) above, affords adequate provision for necessary chemicals. It affords the Secretary opportunity to exercise judgment in evaluation of claims for carcinogenicity.

Respectfully yours,

GEORGE T. PACK, M. D.

Budget Cuts—Did We Mean Business?

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. HIESTAND. Mr. Speaker, the last big appropriation bill will shortly be presented to us. Nominally, it requests $3.8 billion for foreign aid. But that is not all. The total spending authority, under direction of the State Department's ICA, requests another $1.5 billion to be borrowed from the Treasury for the development fund over the 2 following years, which will never be returned to us even if it is repaid to the fund.

We must add in $6.3 billion still unspent from foreign-aid appropriations of earlier Congresses.

Furthermore, under Public Law 480, there is mounting in the foreign countries where we are disposing of agricultural surpluses, large funds, also subject to ICA spending. This is already over $1 billion.

It all adds up to much over $12 billion. Every dollar of the money we give for foreign economic aid is taken from our own people. Every billion dollars is capital for roughly 10,000 jobs in this country and once given away, it will be lost forever.

Foreign aid is by all odds the most inflationary of all our inflationary Federal spending because very largely the dollars are spent here but the product in goods and services are sent overseas, thus increasing demand therefor and decreasing supply.

Mr. Speaker, this House did a notable job in cutting budgetary requests to the extent of nearly $4 billion. Lest the inflation get entirely out of hand, we simply must substantially cut foreign aid.

I am inserting an able editorial in yesterday's issue of the Los Angeles Times which might be deemed a sad commentary on the net result of our effort. Can we keep faith with the American people who really want economy in Government, who really want the budget cut, inflation restrained, and the day of tax reduction hastened? The editorial follows:

With temperatures in the nineties and humidity near the 100 mark, it is surprising that anything should evaporate in Washington; but the economy drive seems to have pulled this trick.

The billions which Congress started to cut out of the Eisenhower 1958 budget are being put back, apparently with very little shrinkage.

Symptomatic of what is happening is the action of the House in restoring $500 million to the agriculture appropriation bill, representing the amount to be paid to farmers for putting their lands in a soil bank. The House some time ago voted to eliminate the soil bank entirely. The Senate restored it. The House now goes meekly along with the compromise committee report; the soil bank stays in operation, though the Congress did include a limitation—no more than $3,000 may be paid to any one farmer.

A couple of weeks ago the Defense Department appropriation bill was passed; the House had cut about a billion dollars out of it, the Senate put nearly all of it back and the House acquiesced. The ultimate savings in the Labor Department figured out to about $31 million; in the Welfare Department less than a billion; there is a saving of about $250,000 from the requested amount for miscellaneous labor agencies. These are merely examples; the whole picture is about the same.

There were promises of great economies, performance of little ones. Probably in no case have the cuts exceeded what the Budget Bureau expected when they first projected the figure. A little is always added to allow for trimming by Congress.

Congress finally yielded on the post-office appropriation, giving the Department nearly all it asked for, but instructing the Postmaster General to trim certain services. However, Congress seems determined to give postal workers a boost in pay which the President calls inflationary. We think this raise is well merited, but it should be accompanied by an increase in postal rates to help pay for it. And Congress so far has balked on the postal rate raise, though it has elsewhere made allowance for the shrinkage of the dollar.

Meanwhile the recommendations of the Hoover report, which could save billions, continue to gather dust on the committee shelves; though whenever the subject is mentioned, some Senator or Representative proposes to see that the recommendations are carried out.

These administrative reorganizations are not being made; though everybody admits they ought to be. There is no outward opposition; but one suspects a vast underground opposition from bureaucrats whose empires might be contracted if the plans went into effect.

Nor is there any sign of reduction in the pork-barrel appropriations. Wasteful and unnecessary projects like the upper Colorado reclamation project go merrily along; the Interior Department has recommended the San Luis Dam as a Federal project though southern California is united in opposition; the high Federal dam in Hell's Canyon went through the Senate and is still being kept alive in a House committee though its sponsors admit there is little hope for it. These, again, are only samples. There are many other projects in the same category and many of them will be approved.

There is a crying need in the United States for reduction of the Federal budget and reduction of taxes. The capital to finance our growing industry can hardly be found otherwise, and once that flow of capital is halted the result is bound to be unemployment.

There is a crying need also for decreasing the size of the Federal debt; but there is no money to use in reducing this debt when Congress and the administration join in spending nearly every cent that can be wrung from the pockets of the public. Congress cannot even be brought to considering a reduction in tax rates, even though the result would almost certainly be an increase in revenue. Both our income and our excise tax rates are beyond the point of highest net return, and it would pay us to cut them.

Effective Defense Department Management

EXTENSION OF REMARKS

OF

HON. PAUL F. SCHENCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. SCHENCK. Mr. Speaker, with attention currently directed toward Government in business, I recall a talk made recently by one of my most distinguished constituents and ask unanimous consent that it may appear in the RECORD.

It has been a great source of pride to Ohio that one of our own Congressmen, the Honorable CLARENCE J. BROWN, introduced in the House the legislation which resulted in the formation of the Commission on Organization of the Executive Branch of the Government, commonly called the Hoover Commission. Congressman BROWN served as a member of both the first and second Hoover Commission. It is a further source of pride that another Ohioan was selected to direct one of the task forces of the Commission.

Mr. Charles R. Hook, of Middletown, Ohio, in my district, is chairman of the board of the Armco Steel Corp. He has served with distinction as chairman of the Hoover Commission's Committee on Business Organization of the Department of Defense. The following talk was made to the Third National Reorganization Conference sponsored by the Citizens' Committee for the Hoover Report on February 5, 1957:

THE HOOVER COMMISSION'S VIEW ON EFFECTIVE DEFENSE DEPARTMENT MANAGEMENT

(Remarks of Mr. Charles R. Hook)

The second bipartisan Hoover Commission's reports on Reorganization of the Executive Branch of Our Government—in their total, unquestionably constitute one of the most important documents of our time. Lack of implementation of these reports could mean in time that our free form of government would fall just through its inefficiencies and the weight of its own tremendous size.

At the time George Washington, our first President, left office, there was only 1 Federal Government employee for each 1,400 citizens. As of now, there are 20 such employees. Even as late as the administration of our great Chief, Herbert Hoover, the total Federal budget was only $5 billion a year, whereas the Federal budget for fiscal 1958 is approximately $72 billion.

True, today we have peace—even though uncertain—and prosperity on a scale unprecedented in history. Nevertheless, we appear to be paying a lot for Government, which alone can do no more than create a favorable

climate for industry and thrift, and the rewards thereof. We can be thankful that President Eisenhower has done much toward creating such a climate.

Because of the second Hoover Commission's unusually broad authority and the specific charge by the Congress to report on overlapping and duplication of activities, the task forces of that Commission made their investigations straight across the board on broad functional lines.

There was, however, one important exception to this, wherein—on realizing that over 60 percent of the Federal budget went to the military establishments, there was formed an overall Committee To Study the Organization and Management of the Department of Defense. It was my privilege to serve as the Chairman of that Committee, and it is on this phase of the Hoover Commission studies and the progress toward implementing same that I shall report to you today.

On this committee were all the chairmen of all the task forces whose functional studies had any important impingement upon the Department of Defense. In addition, we had other members with broad experience in industry as well as with the operation of the military services in both war and peace.

Early in our own investigations as well as the appraisal of the functional studies of the task forces, our committee recognized the great change that has taken place in military operations—the conduct of war and what now constitutes our national defense—wherein the support or businesslike activities of the military effort now far exceed in numbers of employees and dollars spent, the strictly tactical or combat side; activities and functions which not only have assumed far greater significance in the defense or war effort but in turn in the entire economy of the Nation.

This picture as it has developed technologically and through improved industrial know-how might be rather graphically shown as the horn of plenty in reverse. For example, in primitive warfare and even through perhaps the time of our own Civil War, only a very small part of our manpower, resources, and economy went into the small end of the horn, with the battle or combat activities being what came out of the large end.

Today, and as was certainly the case in World War II, the major portion of the manpower and resources of the Nation goes into the large end in a tremendous industrial effort to produce what comes out of the small end in a highly developed and concentrated battle or combat-ready activity. It is in the process, from what goes into the now big end and what comes out the other, that occurs the waste of manpower and resources and the duplication of functions and activities.

Among the support or business-type activities of the Department requiring general business management are found such as procurement, manufacturing, commercial activities, supply including warehousing and distribution, maintenance of equipment, nontactical communications, transportation, budget and accounting, legal services, medical services, personnel administration, public relations, research and development, and, last but not least, the disposal of surplus property.

These business-type activities are conducted to some degree in all of the 48 States—16,000 odd cities, towns and municipalities, and in 54 foreign countries.

The Department of Defense is factually a tremendous business enterprise—the biggest business enterprise on earth. In 1955, it spent approximately $42 billion which was roughly one-seventh of our national income. During that time, the Department employed over 4 million persons or approximately 7 percent of all persons gainfully employed, and over twice as many as employed by the 10 largest corporations.

Our Special Subcommittee on Research and Development found that slightly over $2 billion was spent yearly on direct research and development activities—which is about equal to the combined expenditures for these purposes of all private enterprise and endowed institutions.

In our studies of the military services, we found and reported upon the operation of some 2,500 separate business-type commercial and industrial activities with assets totaling more than $15 billion.

The subcommittee which made the detailed study in this area found that at least a thousand of these could be terminated as a Government function without injury to national defense or any other essential Government activity. Further, it investigated at some length the problem of 288 large industrial facilities in the military departments which were mostly held over from World War II and now constitute, in major part, the National Military Industrial Reserve. The Government investment here was in excess of $9 billion and the maintenance cost of these reserve plants exceeded $200 million annually. The subcommittee reported that 6 such plants previously disposed of had paid over $100 million in taxes during a 6-year period.

Some of these plants are competitive with private industry, some could be made to contribute to the private enterprise system. Others are essential to defense and must be retained for standby. The report of that special subcommittee proposed various methods by which a further part of these facilities could be disposed of to private industry on terms which would protect the Military Establishment, benefit the national economy, save the maintenance cost, and, by their private operation, add to the tax revenue of the country.

The report stated emphatically that: "We neither suggest nor subscribe to any proposal that might impair ever so slightly the military effectiveness or the reserve strength of the Department of Defense."

According to the latest information given our committee of Hoover Commission task force members by Mr. Kestnbaum, special assistant to the President on Implementation of Hoover Commission Report, the Defense Department has terminated 359 industrial and commercial type activities of the military services. This is a major step in the right direction, but we yet have a ways to go.

The Secretary of Defense has declared it to be his firm policy to get the military services as rapidly as possible out of commercial and industrial activities which compete with business enterprise. He has a program under way to accomplish this.

Mr. Brundage, the Director of the Bureau of the Budget, has issued a policy memorandum which says, in part: "Above all, the decision whether to continue or discontinue a Government activity solely on an apparent cost basis runs counter to our concept that the Government has ordinarily no right to compete in a private enterprise economy."

The President, in his state of the Union message delivered personally to the Congress on Thursday, January 10, 1957, said:

"The administration will through future messages either directly from me, or from the heads of the departments and agencies, transmit to the Congress specific recommendations. There will be special recommendations dealing with such subjects as atomic energy, the furthering of public works, and the continued efforts to eliminate Government competition with the businesses of taxpaying citizens."

The President and the Secretary of Defense need our support. Both they and the Congress need to know that it is the will of the businessman, the taxpayer and the citizenry as a whole that these commercial and industrial activities of the Department of Defense be discontinued and that their doing be left to free and tax-paying enterprise.

This is essential to overcome the natural opposition of those operating these business-type facilities and the local community immediately affected by their operation. Nearly every effort to get the Government out of business wins applause as a national goal but often becomes something else when it reaches the home community. Sometimes the local cry is: "Close the others and good riddance, but lay not the hand of efficiency on this one."

In its final report to the Commission, which I am proud to say was accepted without change as the Commission's report, the Committee on Business Organization of the Department of Defense proposed four major programs for the Defense Establishment:

1. The improvement and simplification of its organizational framework.

2. The integration of common supply and service activities.

3. Measures to increase the tenure in office, motivation and skill of both civil and military executives in the Department.

4. A program to establish clear financial control throughout all levels of the Department.

Within each of these areas, the committee made specific and very definite recommendations on how to aicomplish the four programs. The bases for these recommendations were only reached after nearly 18 months of study and investigation into the operation—past and present—and only after pulling together in one framework the findings and recommendations of the individual functional task forces of the Commission.

So as to give you a little blueprint of the committee's report, and progress toward its implementation, I will comment individually on each of the major program areas of the report as just referred to.

First, with reference to part I of our report—Program for Improving Business Management Organization of the Department, we found that the studies of the task force on procurement revealed the inadequacies of guidance being furnished the military departments in the matter of basic procurement planning. Our committee in its own deliberations with reference to both requirements determination and basic procurement planning paid particular attention, among other things, to President Eisenhower's message transmitting reorganization plan No. 6 in which he emphasized that one of its major aims was to improve "our machinery for strategic planning for national security."

The result was that the committee's No. 1 recommendation was that the Secretary of Defense create in his office a civilian position invested with sufficient stature and authority to insure the establishment and maintenance of effective planning and review of military requirements. In doing this, the committee recognized the fact that neither the Secretary nor the Deputy Secretary could possibly give sufficient time for such a review of military requirements.

The Secretary of Defense concurred in the objectives of the Hoover Commission as incorporated in this recommendation toward more effective planning and reviews of military requirements, but not in the specific part of the recommendation calling for the creation of a new high-level civilian position. The Secretary decided that the Deputy Secretary should be the focal point in the Secretary's office for an authoritative review of military requirements. Mr. Reuben Robertson, the Deputy Secretary, has today told you how opportunities for the Deputy Secretary to devote more of his time to requirements review have now been made possible by relieving him of many exacting duties which he formerly performed, these now being delegated to other Assistant Secretaries of Defense.

Now, as to part II of our report, titled "A Program for Improving Management of Common Supply and Service Activities," the recommendations for implementation of this program are probably not only the most far reaching of any in our report, but certainly the most controversial from the viewpoint of the military. Our report noted in some detail the many studies that had been made in this area as well as the numerous approaches over the years to the question of coordination of common supply and service activities of the three main military services.

After many weeks of consideration of the problem, our committee came to the conclusion that its recommendation should be for the highest degree of integration, namely, the establishment of a separate supply and service agency within the framework of the Department of Defense, to serve all departments equally in purchasing, inventory control, and distribution to the end of the wholesale pipeline. It would be charged at the start with the handling of only those things which were clearly common to all.

While, up to this point, the Secretary of Defense has not accepted this recommendation as such, he clearly indicated agreement from the beginning with the intent of the recommendation, and the Department of Defense under its Assistant Secretary for Supply and Logistics evolved the single manager plan under which they are trying the concept of one service having the full management of given common supply and service activities. Such single manager plans to date have been initiated in such areas as food, clothing, medical supplies and transportation.

While we do not believe that the single manager plan goes far enough nor would take the place of the recommendation of the committee for a separate common supply and service agency, we do believe that the Department of Defense is conscientious in its efforts under the single manager concept to accomplish the objectives of these recommendations of our committee. We do feel that this may be a major step in the right direction, and perhaps a necessary one. It is our intention to watch closely and see how it is working.

As to part III of our report—a program to improvement management personnel, we find that much progress has been made in direct implementation of the recommendations as made, or in acceptance of the recommendations in intent, wherein either legislation is necessary or further administrative action required for their full implementation.

During the closing days of the last Congress, there was passed legislation in the form of an executive pay bill which provides better salaries for many of those in key management positions.

We need to go further in this direction, and Congress should enact legislation to minimise present obstacles to Government service by outstanding citizens, and should provide positive incentives which will attract and hold able administrators.

To me, all of this is of primary importance, because the best way to secure competent management in Government—or industry is in the acquiring and assuring continuity in office of qualified managers and administrators.

The recommendations of the committee in the field of management personnel basically underlie many of the Commission's recommendations. Most important of those things remaining to be accomplished in this area are, I believe, a further revision and simplification of the Government's hiring and firing procedures, and the creation as recommended both by our committee and the governmentwide task force on personnel and civil service of a true and meaningful senior civil service. Nowhere is the provision for such a senior civil service more important than in the Department of Defense.

Both the study of our Personnel Subcommittee and the report of our overall committee expressed concern with the opportunity for outstanding civilians to rise to top-management positions in the support or business-type activities of the Department. I am happy to say that as a result of our findings on this question, the Office of the Assistant Secretary of Defense for Manpower has completed an inventory of key support management positions showing what the present career opportunities are for civilians as well as military in the support area. This study—a copy of which I've recently seen—supports very strongly the conclusions of our committee.

Part IV of our report—a program for improving financial management—has perhaps received more factual implementation to date than any other part. This is both with regard to administrative action by the Department of Defense, Presidential concurrence and legislation passed by the last Congress. This legislation should assure complete implementation of a major part of the recommendations for improved financial management within the Department but again we shall need to watch the actual implementation in several respects.

There remains, of course, the necessity for additional legislation particularly with regard to further fixing responsibility for the management of defense dollars. There has already been introduced in the Senate of the new Congress a bill designed to accomplish the remaining objectives requiring legislation. This is Senate bill 434, known as the Kennedy-Payne-Byrd bill. I would urge the full support of everyone. This support will be needed most when the bill is taken up by the House which last year did not concur on the full legislation as originally passed unanimously by the Senate with the result that at that time compromises were made on the legislation as finally passed.

I feel that I have talked with you seriously today about big and important things as they relate to the segment of the executive branch of our Government which, after all, spends almost two-thirds of our tax dollar. I have noted to you that it is the biggest operation on earth and it is certainly a complicated one and one which requires the best ability in its administration that our country can provide.

Make no mistake, we yet face major obstacles in assuring full implementation of the Hoover Commission report. To overcome them, the President, the executive branch of our Government, and the Congress need to know that they continue to have broad bipartisan public support.

The actual job of running the Department of Defense, and I speak not only of the responsibilities of the Secretary and the Deputy Secretary, but those of the entire Secretariat and both the military and the civilians who occupy key management positions, is enough to awe any man. They are entitled to know what you think, and to have your constructive advice and counsel.

Does the Kremlin Play It Cute: Strategic Team Out, Tactical Team In?

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. SIEMINSKI. Mr. Speaker, Malenkov has been shifted to a spot just north of the Red China border. He has not been liquidated. Nor, to our knowledge, have the other three horsemen of World War II been liquidated.

The question is, Are these four horsemen to work on Asia for the Reds while the new Kremlin lineup works on Europe and the United States?

The team that went out of the Kremlin was skilled in strategic gains for the Soviet. They knew how to hold territory for Russia while rebellion against it flared; East Germany, Hungary, and Poland went into spasms. And the Red army held its ground. In the Suez crisis Egypt's sovereignty was firmed up.

Their work done in the West, it was time for the strategic team of the Kremlin to work another flank, to firm up in Asia strategic gains for Russia while a new team of political, economic, and social charmers worked the European flank.

Remember the Berlin airlift? It glued the eyes of the world while China was lost.

Red China has spasms. The British and others woo it. Mr. Dulles threw dirt in its face.

With Malenkov just north of the China border, will a bear hug by the four horsemen keep China clasped to the Soviet bosom and bring into its sphere other parts of Asia as well?

While the tactical team of the Kremlin works the European side of the street for the Soviets, it would not be amiss for us to watch Asia, would it?

Billboards Block Highway Sites

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 12, 1957

Mr. NEUBERGER. Mr. President. I ask unanimous consent to have printed in the Appendix of the RECORD, an article which I have written for the Oregon Democrat of July 4, 1957, entitled "Billboards Blight Highway Sights; Senate Bill Provides Regulation."

In this article I have attempted to highlight and emphasize the urgent need for the Congress to protect roadside and scenic beauty along the new 41,000 miles of interstate highways which we have recently authorized in the Gore bill. The article for the Oregon Democrat was requested of me by Mr. John R. Churchill, editor of the Oregon Democrat, who shares my view that, if the Federal Government is to pay 69 percent of the cost of these roads, then the Federal Government has a definite stake in safeguarding scenic grandeur along these roads.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILLBOARDS BLIGHT HIGHWAY SIGHTS; SENATE BILL PROVIDES REGULATION

(By Senator RICHARD L. NEUBERGER)

Nobody's for billboard control but the people.

That is my conclusion after fighting for effective control of highway advertising both as a State senator in the Oregon Legislature and as a United States Senator in Washington, D. C.

Since I introduced my proposal for regulation of commercial signboards along the new interstate highway system which will be built during the next two decades, I have received hundreds of letters from individuals across the Nation enthusiastically endorsing my bill, S. 963. Scores of newspapers and periodicals have announced their support of such legislation. A national poll has indicated that over 65 percent of the American people favor adoption of effective control of signboards, while only 25.9 percent are opposed to restrictions. Even the President of the United States has declared his opposition to "billboards that mar our scenery."

Yet, despite this broad support, S. 963 is now languishing in the Senate Committee on Public Works. Why?

Economic pressure groups complain that the legislation would adversely affect roadside businesses and the outdoor advertising industry. Yet, under the provisions of the bill, signboards in appropriate commercial and industrial locations would not be touched. Only an estimated 10 percent of highway billboards are located in other than urban areas. The New York Thruway Authority found that business increased in volume after the throughway opened—even though billboard displays are prohibited along the superhighway.

No unattractive signboards blemish roadside scenery in Switzerland. The Swiss have recognized that effective billboard regulation which protects the grandeur of nature's handiwork is a major factor in promoting the tourist trade upon which the health of the economy of this small country strongly depends. Such reasoning applies equally as well to Oregon, where the tourist business is the third largest industry in the State and provided an estimated income of $140 million in 1956.

As amended by the Subcommittee on Public Roads, my bill provides that the Secretary of Commerce may enter into an agreement with any State to regulate signs along a Federal highway project which is part of the National System of Interstate and Defense Highways. A participating State shall receive from the Federal Government a sum equal to three-fourths of 1 percent of the total cost of the project.

Surely this mild measure cannot be the job-eating economic monster that lobbyists paint it. Nor do the provisions of the bill justify charges of violation of States rights, because State participation is entirely voluntary.

The issue is clear cut. Will we protect the over 40,000-mile-long interstate highway system from despoilment by garish commercial signboards or will we allow the natural beauty of our countryside to be blotted out by advertising artwork? I believe there is only one correct decision.

Hon. Earl C. Michener

SPEECH
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. FORD. Mr. Speaker, the passing of our former colleague, the Honorable Earl C. Michener, brings vividly to my mind the wonderful record he established in his long tenure as a Member of the House of Representatives. His accomplishments in the Congress will be long remembered. I know of no Member who was more respected or revered by his colleagues. His outstanding services should be a shining example to all new Members of this body. The pages of history will show his record to be the very best in all respects.

Earl Michener was a member of this body during my first term during the 81st Congress. He, during that 2-year period, taught me more than anyone else about the traditions, rules and practices of the House of Representatives. Furthermore he wisely counseled me on many issues and problems that came before us in 1949 and 1950. I owe him a tremendous debt of gratitude which can never be repaid except by following, to the best of my ability, his example and record.

Mr. Speaker, in closing may I say again Earl Michener's passing is very sad and takes from us one of the finest gentlemen I ever knew.

Khrushchev and the Russian Shakeup

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. SHEEHAN. Mr. Speaker, the events in Russia during the last week are certainly of great concern to all of the Members of Congress as well as the rest of the citizens of our country. Mr. Robert Siegrist, broadcasting over radio station WLS of Chicago, Ill., and 17 other network stations in the Midwest, has made an analysis of the current situation in Russia. He points out the fact that Khrushchev is now following the Tito line. As a longtime student of Russian affairs, Mr. Siegrist presents some very interesting ideas in his radio commentary of July 3. His radio broadcast is as follows:

It came, suddenly, today, in Moscow:

The biggest shakeup in the top echelon of Russia's Khrushchev-run Communist Party since the death of Stalin.

Deposed as full members of the Russian Communist Party's 15-man ruling Presidium (formerly known as the Politburo) were 3 long-time top associates of Stalin and 1 who gained recent power as a Khrushchev man.

The three Stalin men are: V. M. Molotov, Georgi Malenkov, and Lazar Kaganovich.

The Khrushchev man is Dmitri Shepilov.

Molotov, now 67, one-time editor of the Communist Party's official paper, Pravda (which means truth, Communist style), held power longer than any present Russian Communist leader.

Like Stalin, he became a Communist under Lenin and, after Lenin's death, rose rapidly, side by side with Stalin.

Like the name of Stalin, which in Russian, means "of steel," the name of Molotov, which means "of the hammer," is not the veteran Bolshevik's real name.

It is his Communist Party name—a name that he took back in the prerevolution days of 1917 when the Communist Party in Czarist Russia had to frequently function clandestinely—just as does the Communist Party continue to do in many of its more conspiratorial functions here in the United States today.

Through the costly years in which communism, under Stalin, was permitted its continued aggressions against the world, with the United States as its ultimate target, Molotov was properly considered as the chief dogmatist of the party line as well as the master architect of Stalinist Russia's foreign policy.

As such, he proved the master double-crosser of modern diplomatic history, having delivered a costly doublecross to every nation with whose representatives he was permitted to negotiate any deal—including Finland, Hitler Germany, the now-Red-enslaved nations of Eastern Europe, and the United States under Roosevelt and Truman.

Meanwhile, with Alger Hiss, Molotov played a master role in helping draft the charter for the United Nations.

As Soviet Russia's Foreign Minister, he served as Stalin's official mouthpiece against the world from 1939 to 1949, when he suddenly disappeared from public view in the early days of the cold war, but rose to new notoriety when, shortly after the 1950 Communist aggression in Korea, it was discovered that Molotov was playing a major role in its direction.

After the death of Stalin, Molotov resumed his post as Foreign Minister, while Georgi Malenkov rose to the Stalin-vacated Premiership, and the then relatively unknown Nikita Khrushchev assumed Stalin's position as Secretary of the Communist Party, from which Khrushchev quickly deposed and executed the other leader of the immediate post-Stalin ruling triumvirate, Lavrenti Beria, who had been a top member of the old Communist Party Politburo and the virtual czar of the dread and powerful Russian secret police.

Molotov retained his post as Foreign Minister even after the Khrushchev-forced deposition of Malenkov from the Premiership, which on the 8th of February 1955 went to Nikolai Bulganin, who became nothing more than the figurehead Premier for Khrushchev which Bulganin so obviously remains today.

It wasn't until June 1, of last year, that Khrushchev replaced Molotov as Foreign Minister with 50-year-old Dmitri Shepilov, whom Khrushchev moved up from the editorship of Pravda.

By that time, Khrushchev, confronted with continuing restiveness within Russia and the satellites, as well as within the Communist Party itself—restiveness compounded by myriad Communist failures—had found it necessary, in his efforts to solidify his growing personal power, to aline himself with Red Dictator Tito, who, though imposed upon Yugoslavia by Stalin, had broken with Stalin in 1948, when Tito and his Communist regime was at the brink of the bankruptcy from which the then-Acheson-run United States State Department saved Tito.

In wooing the American-financed-and-dignified Tito back into the Moscow fold, Khrushchev, who, with Bulganin, had made a hat-in-hand mission to Tito in May of 1955, found it necessary to clear the decks of the anti-Tito Molotov before Tito's official triumphal return to Moscow in June of 1956.

Meanwhile, pressed hard by Anastas Mikoyan, another long-time Communist Party and government leader, the power-grabbing Khrushchev openly laid down the Tito and Tito-ist wooing platform at the 20th Congress of the Russian Communist Party, in Moscow, in his major policy-making address of February 14, 1956.

At that time, Khrushchev echoed the line previously laid down by Tito, before, during and following the Khrushchev-Bulganin mission to Belgrade.

This was the line in which Khrushchev made clear that all of the things Tito had long said about Stalin were true and that

war with the United States led capitalist West was not necessarily inevitable, since Khrushchev, like Tito before him, laid down the line that Communist revolutions may be achieved, and the capitalist West be thereby overthrown, by other nonwarlike means, including even parliamentary means in some cases such as France, for example, where the Communists enjoyed over 150 open party members within the parliament.

And, also importantly, Khrushchev maintained, just as Tito before him, and just as Tito today, that, contrary to the dogma of Stalin, there could be various roads to the common goal of socialism—which, in the Aesopian jargon of communism, meant various nationalistic techniques toward international communism's ultimate goal of world domination.

And, regardless of Khrushchev's softer Tito-line sound, the Russian Red leader made crystal clear that, in his words:

"The socialist (meaning the Communist camp) is invincible," which was precisely what Tito had always maintained, and which he continued to maintain in his televised propaganda against the American people.

Meanwhile, Molotov remained close behind the scenes as a first deputy premier of the Soviet government as well as an important member of the Presidium of the Communist Party.

The 55-year-old Malenkov, while also remaining in the party's Presidium, had been retained in the relatively uninfluential government position of minister of electric power.

Replaced as foreign minister last February 15, by 47-year-old diplomatic hatchetman Andrei Gromyko, Dmitri Shepilov was assigned to the far lesser position of the head of Russian-style "culture," while retaining his position in the Presidium.

At that time, it was generally accepted as the best bet among international analysts and pundits that Shepilov's short-lived usefulness as foreign minister had ended with the enactment of the Eisenhower Doctrine for the Middle East—a doctrine which the Eisenhower administration had claimed to have found necessary by the ominous series of Red-forced Middle Eastern events which had their formal beginning with Shepilov's arming of Nasser Egypt.

And through all of the rise and fall of the various Kremlin personalities, 63-year-old Lazar Kaganovich, an oldtime Stalinist, a onetime brother-in-law of Stalin, and the only remaining Jew on the Presidium, had seemed to go on like Old Man River, until today.

However, today's official announcement, of the ouster from the Communist Party's ruling body, which came via the official government radio voice, Radio Moscow, made no mention whether Kaganovich, Shepilov, Malenkov, and/or Molotov would also be deposed from their high government positions.

And here it is extremely important that we keep firmly in mind that the high-ranking rulers of that which is permitted to be accepted as the Government of Soviet Russia are Communists, first and last, and that they gain, hold, and lose those governmental positions by virtue of no one but the top command of the Communist Party's hierarchy which, more than ever, do we see tonight, is firmly embodied in the iron grip of just one man (for the moment at least): First Secretary Nikita Khrushchev.

Significantly, importantly, and properly, the indication that this big shakeup was imminent came first this mornng, n the form of an editorial in Pravda, the Khrushchev-controlled official party voice.

Among other things, this Pravda editorial issued a stern warning against attempts to shake Red party unity "or divert it from its correct path."

It raised anew the Khrushchev-born demand for the "cult of personality" of which Khrushchev accused Stalin in his famous 20th Party Congress proclamation, and it reemphasized the need for party unity by demanding:

"This requirement equally concerns both the rank and file and leadership of the party."

And, throughout, it must be noted that the Pravda editorial roundly condemned all party members, however high ranking, who had opposed the Khrushchev-dictated decisions at that important and historic 20th Party Congress.

And then, the official Radio Moscow announcement of the shakeup which soon followed, an announcement, by the way, vaguely attributed to the 133-member Central Committee of the Communist Party; that announcement accused the four ousted leaders of "antiparty activities," of "wrong ideas," and promised that the action would strengthen the Central Committee as well as the party itself, which the committee promised would continue along Leninist lines to fulfill its tasks.

This announcement also made clear that there had been at least one semicasualty in addition to the top four complete casualties—he is Mikhail Pervukhin, who was only recently appointed as a First Deputy Premier and Minister of Medium Machine Building in the Soviet Government, but who today was reduced in party status, at least, from full Presidium membership to an alternate membership.

This official announcement has also named to full Presidium membership the following four:

Averky Aristov, Mikolai Belyaev, N. G. Ignativ, and O. Kuusinen, with the latter replacing Shepilov as Secretary of the Central Committee.

Alternate members promoted to full membership are:

Defense Minister Zhukov, President Eisenhower's old pen pal, who became an alternate only in the last shakeup; 47-year-old Ekaterina Furtseva, who, at least, can be described as a close personal favorite of Khrushchev, who has permitted her to rise to the informal position of the "first lady of world communism," via her recent promotion which, as a Presidium alternate—and now as a full member—has given her the dubious distinction of being the first woman ever to rise so high in Communist circles.

Also promoted to full Presidium membership today are Leonid Breshvev, Frol Kozlov, and Nikolai Shvernik.

All of these, considered as Khrushchev people, now theoretically share full Presidium honors with the holdover of the old guard:

Khrushchev, Bulganin, Kirichenko, Mikoyan, Suslov, and the old Stalinist political marshal, Voroshilov, who holds the rubber-stamping title of "President" of the Soviet Union.

Through all the odd public-admitted ritual one thing becomes completely clear:

Khrushchev is in complete control, not only of the Communist party in Russia, but of the Soviet Union itself.

And, despite all of the cries from Washington, and among journalists and other observers of the international scene tonight, that this is a sure sign that the Communist thieves are falling out, that the controlling machinery of the international Red empire is breaking down—it must be kept completely in mind that tremendous power remains within that machinery, and that it, indeed, is in dangerous and bloody hands in those of the hard-drinking and impulsive Khrushchev.

Furthermore, it must be noted that he could not do this without the sanction, without the approval, without the backing, of at least the top echelon of the Russian Red army, the top man of which is Zhukov, who got this new promotion to full membership in the Presidium only today.

And it must also be noted, as we have attempted to bear out in the brief time permitted for this report, that the Khrushchev line, please remember (and the State Department will clearly try to ignore it) is the same as the line of Tito, and it's the same as the line of Mao Tse-tung, and of Gomulka and of all the other Red satellite leaders.

Tito had it first, Khrushchev then took it, and the others have only recently taken it.

It is called by the State Department the Tito line—the line of separate roads to socialism, the line of peace ful coexistence, of competitive competition and so forth—but only hark back to the speech of Khrushchev before the 20th Party Congress in February of 1956, and you will find that that line set down as the bible for international communism by Khrushchev was the line first dictated to Khrushchev and Bulganin at Belgrade by Marshal Tito, who obviously now, as we have said before, is the dogmatist of the international Communist conspiracy and may well be the actual leader tonight.

Bob Siegrist. Good night.

Khrushchev Versus Zhukov

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. SHEEHAN. Mr. Speaker, a further analysis of the present happenings in Russia, as presented by Mr. Robert Siegrist of radio station WLS, Chicago, and 17 other network stations in the Midwest, was made on July 4 and Mr. Siegrist's radio analysis was as follows:

To no one's surprise, the Khrushchev-bossed Moscow Kremlin has blandly announced, today, that the three old-time Stalinists whom we learned, yesterday, had been purged from their top Communist Party positions yesterday, have also been ousted from their top positions in that which, unfortunately, is accepted as the Government of Soviet Russia.

V. M. Molotov and Lazar Kaganovich are out as First Deputy Premiers and Georgi Malenkov is out as Deputy Premier.

As yet, however, there is no official mention whether they have also been expelled from the Communist Party, or what's to become of them, assuming that they're still alive.

Nor did today's terse formal announcement which came, as did yesterday's via Radio Moscow, make any mention of the fate of Dmitri Shepilov, the Khrushchev man who also was ousted yesterday as Secretary of the Communist Party's Central Committee.

The 51-year-old- Shepilov, primarily a propaganda expert, had been considered as a protege of Khrushchev who promoted him from the editorship of the Communist Party's paper, Pravda, to replace Molotov as Foreign Minister, only to oust Shepilov after obvious failure from that high post a few months later, in favor of the 47-year-old diplomatic hatchetman, Andrei Gromyko.

Since that time, Shepilov, whose chief forte is propaganda, has been considered as the "czar" of that which the Russian Communists broadly classify as "culture."

The 67-year-old Molotov and the 63-year-old Kaganovich had come up with the late Stalin to their positions of leadership in the Communist Party and in the Soviet Government, with Molotov serving most of his time as Stalin's foreign minister, and with Kaganovich, Stalin's one-time brother-in-law, a

long-time industrial and transportation troubleshooter.

The ouster of Kaganovich signaled the end of the presence of any Jews in top positions both in Russia's Communist Party and in its government.

Until today's ouster, Kaganovich had been serving in the official capacity as Minister of Building Materials. Molotov had been serving as Minister of State Control, a nebulous position handed him after he was removed from the Foreign Ministry in favor of Shepilov 13 months ago.

The 55-year-old Malenkov, who had risen in Communist Party ranks until he became Stalin's personal secretary and head of the massively dictatorial and bureaucratic Orgburo, rose to the Premiership after the Stalin death in 1953.

It was Khrushchev, who took over the late Stalin's position as First Secretary of the Communist Party, who forced Malenkov out as Premier, and figurehead Bulganin in, in 1955.

Ironically and significantly enough, however, it must be remembered well that the so-called more liberal approach to Communist dictatorship of the world which Khrushchev professes to espouse, complete with more and better things for the Russian people themselves, is the very same line of approach for which Khrushchev ousted Malenkov.

Also importantly, if not ominously, it must be remembered, well, that Malenkov, who rose to the Premiership purely via Communist Party ranks, could not have attained that Premiership without the support of the top command of the ever-powerful Russian Red army.

Nor could Malenkov have lost the Premiership without the loss of that all-important support from the Red army's top command.

Please remember that the death of Stalin, in 1953, found Marshals Voroshilov and Bulganin in that position.

Simultaneously with Malenkov's assumption of the Premiership, Voroshilov assumed the title of President of the Soviet Union, and Bulganin became Minister of Defense.

Meanwhile, the younger, and militarily, much more able, Marshal Zhukov, Russia's hero of Berlin and mastermind of the Korean war, skyrocketed back to Moscow prominence after years of repression by Stalin who feared his tremendous popularity with the Russian people, but who recognized that he needed his equally tremendous military ability.

In 1955, however, another Stalinist, Nikita Krushchev, from his powerful vantage point as Stalin's successor as First Secretary of the Communist Party, had been able to consolidate the party behind him, and, with that, to manipulate sufficient deals with the Red Army to oust Malenkov and hand that top Government position to old Marshal Bulganin, who, although he had never been more than a political general, nonetheless meant that the army's titular head was then in top command.

This obvious Khrushchev maneuver, following by a few eventful months the Krushchev-forced deposition and execution of secret police czar and old Stalinist Lavrenti Beria, spelled the elimination of the then fantastically powerful secret police as a challenging force to total power, and therefore, a victory for the combined and obviously allied leadership of the Communist Party and the Red Army.

And at the moment of Bulganin's 1955 ascendency as the Khrushchev-manipulated Premier, it also became obvious to close long-time observers of the Moscow scene that the man of the future, if he continued to play his bright red cards properly, was the then 59-year-old Marshal Zhukov.

For it was Zhukov who replaced Bulganin as Minister of Defense, which meant, therefore, that he had finally risen to Russia's top military position.

And note, too, that in yesterday's announcement of the major Stalinist purge of the Communist Party's hierarchy that Zhukov was promoted to full membership in the party's ruling Presidium, to which he was named to alternate membership in the realinement of a few months ago.

This means, therefore, that as Premier, Bulganin is now a bigger figurehead than ever; that Khrushchev is more powerful than ever, not only in control of the Communist Party, but in control of the Russian Government which, at no time, as this reporter has been struggling to stress for years, has ever been anything but a cynical front for the Communist Party.

The Soviet Government is nothing. The Communist Party is everything—but, as we now see, rapidly rising in the ranks of the Communist Party is the top man of the Russian Army, the idol of the Russian peasants from whom he comes, is Marshal Zhukov.

And it is completely obvious that Khrushchev could not possibly have destroyed the three powerful old Stalinists, Molotov, Kaganovich and Malenkov, without the complete support of Zhukov, which means that Khrushchev has done this with the full weight of the Russian Army behind him.

The big question in the days ahead, therefore, will be:

Does Khrushchev need Zhukov more than Zhukov needs Khrushchev?

It is this reporter's belief that each needs the other at the moment, but, short of some costly blunder by Zhukov, a blunder which, in time, Khrushchev might well try to force, short of that—it is our belief that history will prove that Khrushchev will one day find, and perhaps soon, that he needs Zhukov much more than Zhukov needs him.

Ever since the death of Stalin, this reporter has publicly been of the opinion that, short of a blunder, or short of being victimized by a major coup against him, or short of ill health or death, that Zhukov, the brilliant tactician, was destined to eventually rise as Russia's top man.

Others have shared that opinion; in fact to many it has actually been a hope, a hope based on one theory, a theory based more on wishful thinking than on any biographical fact, a hope that history, perhaps, might one day prove Zhukov a Russian first and a Communist second, if at all really.

There is no question, as this reporter has stated on several occasions these past 2 years, but what Zhukov's World War II comrade in arms, President Eisenhower, has been one of the leading exponents of that wishfully founded but not impossibly founded theory.

There is no question but what Mr. Eisenhower, whether rightly or wrongly, employed that theory in going out of his way to have the most intimate and most highly personalized chats with Zhukov at the 1955 Geneva Conference that Red-secret-police-guarded circumstances would permit.

Nor is there any question but what Mr. Eisenhower continued to work upon this theory when Mr. Eisenhower followed up those chats with an exchange of personal letters with Zhukov, or when, for a while, it looked as if Mr. Eisenhower might even play host to Zhukov in Washington.

Yet it must be remembered that, with Khrushchev's abrupt ending of that vicious myth known as the Geneva spirit, and with his long series of loud threats and charges against us, Zhukov followed the Khrushchev tough line just as faithfully as he had followed the softer Khrushchev line.

That this new shakeup in the Khrushchev-run Kremlin may now result, for a while, at least, in at least a partial resumption of that softer line, there is little question.

For it is completely obvious that Khrushchev desperately needs more time for the solidification, not only of his own personal position, but for the solidification of the position of his communism and its puppet Soviet government in Russia, as well as in the restive satellites.

With this, as we pointed out last night, Khrushchev is following, therefore, the Tito-dictated line that war is not necessarily inevitable with the capitalist West, particularly with the United States, while at the same moment making completely clear, as has Tito—and, indeed, as has Zhukov most forcibly—that should war come (or should it become necessary as the Russians see it), as they put it, "the Socialist camp is invincible."

Here, again, however, those of the wishful thinking theory as far as Zhukov is concerned, may continue to alibi that all of Zhukov's brutal threats against us in recent months may well have been necessary to what the wishful thinkers may see as Zhukov's plan of ultimately overthrowing Khrushchev and the Communist Party and liberating the Russian people in the name of the mother Russia to which communism, in 1917, delivered matricide.

Yet, even these wishful thinkers recognize that one of the largest stumbling blocks to their Pollyanna, happy ending hopes is the hard cold fact that it was none other than Zhukov who determined to hurl the Red army he controls into Hungary for the so-called second aggression—that which became the real bloodbath—the real slaughter of the innocents which ended all hope of Hungary's liberation (which Mr. Eisenhower refused to permit via American intervention).

And there in Red Russian-enslaved Hungary tonight, puppet Premier Kadar, obviously at Khrushchev's command, has ordered his fellow Reds and the Hungarian people to remain calm and quiet, and to behave themselves in the face of the Kremlin shakeup; not to be heartened by it, and not, certainly, to take up arms once again.

At the same time in Czechoslovakia and in East Germany, the Communist Party central committees have been summoned tonight to emergency meetings, while two Romanian Stalinist officials have been fired today from high party posts on charges similar to those, of course, which were used to oust Molotov and company, as we learned yesterday, from their positions in the Communist Party in Russia, and now, as we see today, their positions in the Russian Government.

And tonight, a high diplomatic source in east Berlin reveals that a commission will be formed in Moscow almost immediately to prepare charges against First Deputy Premiers Molotov and Kaganovich and Deputy Premier Malenkov for Kremlin trial.

So, presumably, if this report is true, and it probably is, they're still alive.

And these dispatches go on to say that Khrushchev has already placed the three "antiparty" activities as they're now charged, under house arrest.

But the London Daily Mail foreign news service says that former Foreign Minister Shepilov, who was swept from the party secretariat in the downfall of the Stalinists, still was not under arrest.

But presumably they're all alive, and there's little question now, if these reports are true, but what now Krushchev, for his own personal gain, all the way around, will put up a massive show trial with those people.

First Deputy Premier Anastas Mikoyan, very significantly, meanwhile, uttering the first word from Russian leadership since the purge began, told newsmen in a United States embassy reception today in Moscow that the shuffle means, as he put it, that "things are going to be the same as before—possibly better."

Mikoyan said that those toppled from power had been "the ones who wanted changes."

So very clearly, we must keep in mind that regardless of how we feel about this situation, how we want to feel, how wishful our State Department wants to feel, or have us feel (and, boy, it's going to be a massive campaign of propaganda from out of the State Department diplomats, directly and indirectly for a while trying to prove to us that this may be a better situation).

It will not be a better situation, really, ladies and gentlemen, for anyone except Khrushchev and his fellow cutthroats in the Kremlin and for Communists everywhere, until communism is completely destroyed.

Whether it is a Communist state under Zhukov, whether it is a Communist state under Khrushchev, whether it is a Communist state under Joe Blow, it is a Communist state and therefore it is the heart of the international conspiracy against the world with particular emphasis on the United States.

And on this American Independence Day anniversary, in which we sadly, significantly have to devote practically all of our broadcast to what's going on in Russia, this we should remember:

As long as communism is rampant in the world under guise, under any direction, it is still communism and our independence is at stake.

BOB SIEGRIST. Good night.

Khrushchev Following Dogma Laid Down by Tito

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr SHEEHAN. Mr. Speaker, Mr. Robert Siegrist, in a brilliant analysis of the current happenings in Russia, points out in his radio commentary of of July 5 the fact that Khrushchev is following the dogma laid down by Tito, and further points out that in giving foreign aid to Yugoslavia and Tito that we may be falling into a trap.

Mr. Siegrist's broadcast of July 5 is as follows:

Khrushchev's Kremlin purge continues tonight.

Mikhail Pervukhin and Maxim Saburov have gone the way of Molotov, Kaganovich, Malenkov, and Shepilov.

Both Pervukhin and Saburov, ousted from the Communist Party's Presidium on Wednesday, along with the other four, have now also been ousted from their Soviet Government jobs.

Both Pervukhin and Saburov were deputy premiers, with the 52-year-old Pervukhin having succeeded Saburov only last December 27 as chief economic planner as a part of the Khrushchev shift at that time.

Although Pervukhin, like Saburov, had come up through party and government ranks under Stalin, it was widely accepted that, with his new high appointment, Pervukhin was a real comer under Khrushchev, just as it had been equally accepted in the case of the now-ousted 51-year-old Shepilov.

In Wednesday's announcement of the Presidium shakeup, Pervukhin was reported as demoted to an alternate membership, while nothing was mentioned regarding Saburov.

And with today's announcement of the governmental downfall of Pervukhin and Saburov, has come word of the promotion of Alexei Kosygin to alternate membership in the party's Presidium simultaneously with Kosygin's appointment to a Deputy Premiership in the Government, and of the promotion of Alexi Pavlenko as Minister of Power Stations, a job which Pavlenko lost to the now-ousted Malenkov at the time he was deposed as Premier in 1955.

At the same time, tonight's reports bring confirmation of this reporter's comments of last night to the effect that Khrushchev's purge was not without the complete support of Defense Minister Zhukov and the Red army Zhukov controls, and that Zhukov is now the man behind the Khrushchev throne.

For the official Red Army newspaper, Red Star, or Krasnaya Svezda and the official Red Navy newspaper, Red Fleet, or Krasne Flot, have today both given major space to reporting a speech made to Communist leaders of Russia's Army and Navy by Zhukov on Tuesday, the day before the purge was announced.

According to these official service publications, Zhukov violently attacked the now-ousted group, and "especially Molotov," as Zhukov put it, as leaders of what he called "this gang of antiparty people" which Zhukov charged, among other things, with opposing Khrushchev's favorite propaganda theme of peaceful coexistence.

"Our country," said Zhukov in that important Tuesday address now disclosed, "Our country has armed forces of the very first order. They are closely gathered around the Leninist Central Committee and the Communist Party, with absolute fealty to party and people.

"They are always ready," Zhukov continued, "at the first call of the party or government, to defend the interests of our state."

And tonight, Radio Moscow makes a big point of boasting that Lt. Gen. A. C. Jeltov, an obvious top aide to the powerful Zhukov, has punctuated Zhukov's vows by now stating:

"Today we can proclaim that all attempts to crack and undermine discipline and unity of the party will be met with lightning blows of the Communist Party and Soviet Army and Navy.

"They remain," says General Jeltov, and note this well, "They remain and always will be faithful to the great cause of Leninism."

This public Red Army pledge of continued loyalty to Khrushchev and Leninism, therefore, constitutes only further powerful punctuation of the perfectly obvious fact that, for now at least, Zhukov and his military underlings are completely satisfied, if not dedicated, to hurl their full prestige and power behind what Wednesday's Communist Party leadership called "the invincible banner of Marxism-Leninism," and "to bend all their energies to the successful fulfillment of the tasks of Communist construction." (As the Central Committee's communique on the party purge phrased it, and as we reported it to you at that time.)

As we have been trying to point out these past two nights, therefore, it is extremely important to the welfare and security of our Nation that our people, and certainly our Government, keep fully in mind the full meaning of these pledges by both the Red Party and the Red Army to their continued support of Marxism and Leninism.

For here, very bluntly, they, like Khrushchev, are again serving full notice upon up that they continue totally dedicated toward total world conquest in the name of the socialism and communism of which Marx and Lenin were the chief architects.

That they prefer to do this, for now at least, via so-called peaceful coexistence, or by professed and relative liberalization or relaxation of their policies, both foreign and domestic means nothing, really, except that they obviously do not feel that at this moment they dare risk more stringent or bellicose policies, both foreign and domestic.

In so doing, Khrushchev, Zhukov and comrades are strictly adhering to one of the basic tenents of Lenin, who, though more violent and impatient than Marx, strictly dictated that the Communist Party at no time could ever afford to engage in what Lenin described as "adventurism."

By "adventurism," Lenin made crystal clear, as a matter of basic dogma, that the Communist Party, in its march to world socialism via world communism, must never, at any time, launch forth with any overt military effort unless victory were absolutely assured prior to the launching of that same effort.

In the same spirit and interest of perpetual caution, Lenin made clear, as this reporter has noted before, that the Communist Party would find, as a most convenient technique, that which Lenin classified as the policy of "ebb and flow."

That is, to move forward, boldly if possible, whenever victory (whether political, diplomatic or military) was assured, but to be prepared to hold fast, or even to appear to retreat when a given advantage might not be at hand.

And in this very specific Lenin-dictated policy of retreat when necessary, under this Lenin policy of ebb and flow, Lenin made completely clear as a matter of prime tactical dogma, that the party and the Russian Government it had seized would find it extremely useful to enter into negotiations with opposing forces and states, to enter into agreements, and even to appear to make concessions.

But then, as Lenin also made clear, and as his disciples have followed so well, whenever the moment appeared when it would become advantageous to violate any such agreements, or withdraw those concessions, that that is precisely what should be done, and swiftly.

This means, therefore, as certainly should be powerfully established by this time, that it does not matter who may be in control of Russia or any other Communist state, or whether our State Department may elect to regard that state as a Moscow satellite or as a so-called independent Red state.

What does matter, what is important, what constitutes a perpetual threat to our security and survival, is that a Communist-enslaved state and empire exists at all.

But, as we pointed out Wednesday night, in all of this Kremlin shakeup, in all of this Kremlin propaganda about the so-called Khrushchev approach to things, it must be carefully, cautiously recognized, and remembered, whether the State Department wishes to do so or not—that this so-called Khrushchev line is actually the Tito line.

Therefore, it should be obvious even to the State Department, which, tragically enough, likes Tito, that in this new top command Kremlin purge and shakeup, we are now confronted with what actually amounts to a massively cynical and insidious bright red device (in the finest tactical tradition of Marx and Lenin) wherein Khrushchev, Zhukov and comrades have the highest hopes of presenting the following alternatives to the United States and its varishaded so-called allies:

"Coexist and compete with us or we'll soon grow strong enough to destroy you."

However, these at best, are only temporary alternatives as the Communists prefer to see them.

For, actually, if we do elect to coexist and compete with them on the terms which they so obviously need, the time which Khrushchev admits that they need, in fact, until they can grow so powerful that they will not be engaging in what, to them, would be the slightest bit of adventurism in lashing out with a new aggression—whether obliquely or directly against us.

Meanwhile, the Zhukov-backed Khrushchev gang fully recognized that we will actually be hastening the day when they may grow strong enough to launch such a new aggression if we are foolish enough to permit ourselves to relax, via permission of increased trade or various know-how exchanges with them, or with Red China or with the East European satellites—and certainly if, as in Yugoslavia and now in Poland, we grant actual foreign aid assistance to those Red regimes, which they'll now seek.

And, above all, Khrushchev, Zhukov, and company fully appreciate that it will be of the most vital assistance to them if we permit ourselves to enter into any form of disarmament agreement with them, as the Eisenhower administration is now struggling to do.

For the Communists, publicly rededicated to the so-called principles of Marx and Lenin, recognize fully that under those same so-called principles—those principles of total lack of principle—that they are compelled to violate a disarmament agreement above all other agreements—and, particularly, in the life and death area of nuclear weapons.

So here, indeed, in this Zhukov-backed strengthening of the hand of the drunken and dangerously impulsive base barbarian that is Nikita Khrushchev (here indeed) do we find Khrushchev and Zhukov, in tight concert with Tito, attempting to further lay the groundwork for an historically gigantic trap in which, by offering non-Stalinist communism as good, they hope to ensnare every liberal, every leftist, every socialist, every trade-hungry capitalist and every dumbbell in the world.

And here, again, it must be recognized, and remembered well, that Khrushchev is hoping that by following the dogma laid down by Tito, which, indeed, he is, that he may succeed in that entrapment of the United States and the West with all of the success with which the United States and the West has permitted itself to become ensnared as regards Tito and Titoism themselves.

Let us remember, as this reporter warned Wednesday night, that the official public alibi for this far-reaching new Khrushchev purge is Khrushchev-claimed abject refusal of the Molotov-led Stalinist-line faction within the top echelon of the Communist Party and its front government to agree with the Tito-founded Khrushchev approach:

The approach in which Khrushchev, like Tito before him, has maintained that "the socialist camp is invincible," and that it ultimately will rule the world—but, at the same time, and for obvious reasons of that same camp's recognition that it cannot survive a major global war at this time—that war is not necessarily inevitable, that peaceful coexistence, therefore, is possible and desirable (for obvious reasons) and—further—that individual nations may be permitted to pursue so-called independent roads to socialism.

It was for adherence to these concepts that Tito's mentor, Stalin, ousted Tito from the Kremlin-controlled Cominform in 1948.

Yet, as we recalled Wednesday night, it was Khrushchev, as Stalin's floundering and endangered successor who, with his government frontman, Bulganin, made a hat-in-hand mission of peace to Tito at Belgrade—a mission which lasted from May 26 to June 3, 1955.

It was Khrushchev, with Bulganin, who, in a joint communique with Tito, there in Belgrade at the end of that mission, announced that they agreed with Tito that communism and capitalism should peacefully coexist, that every nation had a right to develop its own path to socialism, and therefore, that economic ties and cultural relations should be resumed and promoted between Moscow and Belgrade.

It was Khrushchev who, at the now historic 20th Congress of Russia's Communist Party, bitterly denounced Stalin, as had Tito before him, and who, with that, formally adopted the Tito line as the Khrushchev line, while, at the same moment, Khrushchev, side by side with Zhukov, who there became a Presidium alternate, and side by side with Anastas Mikoyan, who forced Khrushchev's denunciation of Stalin (it was there) that Khrushchev and company made loudly clear that ultimately capitalism would and must be destroyed by united socialism.

And it was this same Khrushchev-accepted Tito line which was formalized upon Tito's triumphal return to Moscow on June 2, 1956, while Tito vowed that he would march shoulder to shoulder toward socialism with the Khrushchev-run Kremlin—while Zhukov boasted that they'd all march shoulder to shoulder in any future war.

This, ladies and gentlemen, as we shall certainly further document in subsequent broadcasts, will give you a basic idea of the real meaning of the solidification of the power of Khrushchev—via the dogma of Tito and the power of the Zhukov-led Red army of Soviet Russia.

Communism is still communism—and, indeed, more dangerous, more infamous, more cynical, more sinister, more threatening, than ever before.

Bob Siegrist. Good night.

Classification of So-Called Secret Government Documents

EXTENSION OF REMARKS
OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, July 12, 1957

Mr. YARBOROUGH. Mr. President, one of the leading weekly news magazines of the Nation, Newsweek, in its issue of July 15, 1957, in a very ably written article entitled "Who Keeps the Secrets?" analyzes the Wright Commission's recommendation that newsmen be fined not exceeding $10,000 and imprisoned not in excess of 5 years for printing articles or documents labeled "secret."

As is pointed out in this article, the effort to conceal information regarding the activities of Government bureaus strikes not only at freedom of the press, but, even more fundamentally, at the right of a free people to be informed as to the activities of their Government.

I ask unanimous consent to have printed in the Appendix of the RECORD the article to which I have referred.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHO KEEPS THE SECRETS?

It is impossible to estimate just how many employees of the United States Government may take a piece of paper and stamp it "secret." But according to best judgments, there are at least 1 million such secret makers, including 593 in the Commerce Department, 11,000 in the State Department, and untold numbers in the military.

No one knows how many secrets we possess. But according to one authoritative computation, 6 billion papers classified during World War II are still yellowing in warehouses. No one knows, either, how many papers labeled "secret" contain anything of value to an enemy, but Trevor Gardner, former Assistant Secretary of the Air Force, told the Moss Subcommittee on Government Information in July 1956: "At least half the documents that are classified need not be."

This much is certain: In some fields, including research into basic science, almost any piece of paper can be classified by almost anybody who writes it—just on his say-so. In Washington, the result is obvious: Almost nobody takes the existing multitude of classification rubber stamps at face value. Officials routinely leak some classified information. Reporters routinely print some of it.

Last week, Loyd Wright, Chairman of the Commission on Government Security and a distinguished attorney, charged that United States reporters, operating under this unwritten law, had in the past written some dark chapters of betrayal. His Commission proposed to jail and fine reporters for publishing classified information.

Was Wright's charge valid? And what about the entire system of secrets and leaks? How does it work? How harmful is it to United States interests? What can be done about it? Newsweek's Washington bureau examines these questions in this special press report.

The logical mind of Loyd Wright, attorney at law, found his dilemma understandably annoying. For 18 months, he had headed a blue-ribbon panel to scrutinize everything connected with the internal security of the United States. The most confidential records had been opened to him. His investigations had cost $732,000 and yielded an 807-page report. Surely he knew a secret when he saw one.

Yet, oddly enough, security expert Wright had a security problem last week. And this was it:

In his investigation Wright had become convinced that some American newsmen had been guilty of compromising defense secrets. To his 12-man commission[1] suggested, in addition to a general revamp of the loyalty and security program, a new law to clamp down hard on "leaks." This would apply not only to reporters but would cover anyone who leaked or passed on classified information, e. g., spies and loose-lipped barflies. The penalties: Fines up to $10,000 and prison sentences up to 5 years. Promptly, Congressman JOHN E. MOSS, an eager-beaver California Democrat who heads the House Government Information Subcommittee, challenged Wright to cite his evidence against the press.

SECRECY

Wright thought he had such evidence. In fact, he actually compiled a list of secrets which he thought had been "betrayed" by the press. Naturally, he took care to include only information which, as he put it, "no longer required secrecy." And then the annoying thing occurred. Attorney General Herbert Brownell, Jr., ruled that Wright's "evidence" was classified information and couldn't possibly be made public.

"I regret," said Wright, "that the information is apparently entombed forever, with the final rites of classified burial in the bureaucratic graveyard of a maze of files."

Loyal Republican Wright was not the only one who pointed out last week that secrecy in Government had gone too far. In the course of efforts to cut the defense budget, Democratic Senator PAUL H. DOUGLAS, of Illinois, displayed a picture on the Senate floor showing the pleasantly appointed cabin of a passenger plane. The photograph's extraordinary feature: Two rubber stamps

---

Footnotes at end of speech.

proclaiming that it had once been "secret." The Senator made the flat charge that the Air Force had classified the picture to "cover up" that defense funds had been used to buy plush "administrative aircraft."

SECRECY?

Then there was Ed Lahey. Washington bureau chief of the Chicago Daily News. He uncovered the existence of a report charging "profiteering" by foreign suppliers of United States military services abroad, but he could obtain no details. "The report," he was told, "is classified."

The same love for secrecy had also prompted classification of a paper by the Woods Hole Oceanographic Institution on "silent propulsion of whales"; the war injury record of the late Senator Joseph R. McCarthy while he was still a controversial figure; and, not too long ago, the mimeographed copies of a statement by a Defense Department official after he had read it at a public session of a congressional committee.

"It has become natural," says Congressman Moss, "to put a secret stamp on everything."

Like most Washington phenomena, this fact of the Capital's life has been investigated more than once. Only last year, for example, a committee appointed by Defense Secretary Charles E. Wilson and headed by former Assistant Defense Secretary Charles A. Coolidge came to this unsettling observation: "A subordinate may well be severely criticized by his seniors for permitting sensitive information to be released, whereas he is rarely criticized for overprotecting it. There is therefore an understandable tendency to play safe and to classify information which should not be classified, or assign too high a category to it."

BONFIRE?

Was it true, Chairman Coolidge was asked, that the billions of old classified papers bulging in United States warehouses go back to the Revolution? "I don't know that," said Coolidge, a cautious Boston attorney. "I have heard they go back to the Civil War."

What did the committee think should be done with such secrets?

"The best cure," Admiral William M. Fechteler, former joint chiefs member, told Congress, "is a big bonfire."

As for present and future classification of documents, the committee recommended: "Cease attempts to do the impossible and stop classifying information which cannot be held secret."

Two examples cited by the committee: The physical appearance of a bomber (the B–58) after it was rolled out of a plant near a busy Texas highway; and the speed of the Bell X–2 jet (1,900 miles per hour plus) after it had been widely touted by Air Force officers.

Not surprisingly, the security system as it stands satisfies neither the conscientious Washington reporter nor the official who thinks the public should have certain information which may be technically off limits. The result is the leak. And in the unwritten code of Washington journalism, a leak is:

Almost always a deliberate act on the part of the source.

Almost never the handiwork of a lower-echelon bureaucrat.

Virtually never the product of theft (i. e., of a document) or even cocktail-party eavesdropping.

In the case of the military, the Coolidge committee candidly admitted that leaks are generally motivated by a desire to further the interests of a particular service." Example: Col. John C. Nickerson, Jr., the recently court-martialed Army missile expert who slipped classified documents to newsmen and Congressmen to torpedo a rival Air Force missile project.

For celebrated cases outside the Pentagon, reporters like to recall Carl W. McCardle, who as Assistant Secretary of State for Public Affairs, habitually treated favorites to choice morsels, including the famous Yalta papers, which he handed over—in 2 volumes comprising 250,000 words—exclusively to the New York Times. Well remembered, too, is the occasion in 1953 when Attorney General Brownell called in four correspondents and told them that President Eisenhower had chosen Earl Warren to become Chief Justice of the United States.

Leaks, in short, may be motivated by intragovernmental rivalry, or favoritism, or an official's desire to unveil a new policy, trial-balloon style, at a private dinner for a group of hand-picked correspondents who will float the vehicle without naming its inventor. The point is: With the rarest exceptions, leaks are intentional and the techniques for receiving and publishing them are as ritualized as a presidential inaugural.

IKE ON LEAKS

The Eisenhower administration has tried to deal realistically with the realities. The President has said, for example, that leaks are not necessarily wicked. Questioned about the Brownell disclosure of the Warren appointment, he commented: "I think I have trusted subordinates who may occasionally leak news for purposes they consider proper." Mr. Eisenhower also acted to curb unnecessary secrecy. For instance, he withdrew authority to classify documents from 28 agencies, including the Railroad Retirement Board and the Arlington Memorial Amphitheater Commission.

But when the administration eliminated the classification restricted, the chief effect was the birth of some 30 new labels, including not for public inspection, for Air Force eyes only, and administratively confidential. And while some top scientists maintain that the air of secrecy in research laboratories has grown so thick that the A-bomb could not be invented today (because it grew out of free discussion between many researchers), a very real security problem for the press still stands. It is also Mr. Eisenhower's own major complaint against the press: That much—perhaps too much—information helpful to the Russians finds itself into print, particularly in trade journals.

Dealing with this weakness in a democracy is the most sensitive of problems because it involves, as the Wright Security Commission put it, "maintaining the proper balance between the guaranty of the first amendment, on one hand, and required measures to establish a needed safeguard against any real danger to national security."

In two world wars, public opinion never tolerated censorship as a safeguard except on a voluntary basis. The 1917 effort resulted in magnificent confusion, with Chicago censors, for example, killing a story which Kansas City censors happily O. K.'d. Yet George Creel, the chief censor of the time, said later that the press itself invariably acted in good faith. During the second war, even comic strips came under the censor's scrutiny: Superman was edited when one sequence exhibited excessive familiarity with cyclotrons.

The record of the press is not unblemished. In a list surveying news stories over a period of 16 years, Security Chairman Wright last week cataloged 25 chapters of betrayal without naming any publication. Most easily spotted by newsmen were two citations from the Chicago Tribune, then commanded by the ruggedly independent Col. Robert R. McCormick. One, published December 4, 1941, and headlined "FDR's War Plans," disclosed detailed estimates of manpower and materiel needs and their proposed use in case of conflict. The other, published June 7, 1942, indicated that United States naval intelligence had advance information about Japanese naval movements, thereby hinting that the United States had broken enemy codes. But even the "Trib's" ancient enemy, the Washington Post and Times Herald, leapt to the defense. In an editorial, the paper quoted from the Defense Department's Field Press Censorship Manual (1954). "As students of the Pacific war know, the Japanese did not realize that the code had been broken."

CONFIDENTIAL

Nonetheless, most newsmen have never been proud of these Tribune stories. Last week Byron Price, former executive editor of the Associated Press and wartime censorship boss, said of the second Tribune story: "In my opinion it was a violation of the censorship code." (The case went before a grand jury which failed to act.)

Yet for every controversial example of the type cited by Chairman Wright, including seven citations of often embroiled columnist Drew Pearson (he was the only individual named by Wright)[1] numerous examples could be cited of another sort. They, too, were dug out by reporters from "confidential" sources. But their publication was in the public interest.

In a speech before the Texas Press Association, Democratic Senator RALPH W. YARBOROUGH listed a few of them:

The Teapot Dome scandals as disclosed by Paul Y. Anderson of the St. Louis Post-Dispatch;

Franklin D. Roosevelt's plan to take the United States off the gold standard and set up the NRA, revealed by Arthur Krock of the New York Times;

Roosevelt's agreement at Yalta to admit the Ukraine and Byelorussia to the United Nations, which was exposed by Newsweek and Bert Andrews of the New York Herald Tribune;

Plans for the use of the veto in the U. N. (New York Times);

The Dixon-Yates power deal later canceled by President Eisenhower (the St. Louis Post-Dispatch and others).

The Wright proposal to persecute newsmen for such stories, said Senator YARBOROUGH, "cannot be condemned strongly enough. It is dangerous, not alone to the press, but to all of us because it strikes at the basic right of our citizens to know what their Government is doing." Yarborough's statement pointed to the basic flaw in the well-intentioned law: Its breadth. It might curb admitted careless slips of a tensely competitive press, but would it blackout legitimate digging for Government corruption and sloth?

The press was more critical than judicious about Wright's suggestion (see below). But it was not unduly alarmed, and with good reason: Chairman Wright had fired his betrayal charge without consulting his fellow commissioners and there were indications that some of them did not feel comfortable about the Commission's proposed fine-and-jail recommendation. For example, Republican Senator NORRIS COTTON, of New Hampshire, a Wright Commission member, in introducing bill S. 2417 to put the Commission's proposal in effect, told the Senate: "I am not defending that recommendation at this time. I am not at all sure that it is entirely correct."

Other congressional comment was more emphatic. Democratic Senator HUBERT H. HUMPHREY, of Minnesota, called the proposal superfluous in view of existing laws (example: the Espionage Act). Senator THOMAS C. HENNINGS, JR., the Missouri Democrat who heads the subcommittee on constitutional rights, thought it was of doubtful constitutionality. The consensus on Capitol Hill was that (1) Chairman Wright's indictment of the press was weak indeed, and (2) Senate bill 2417 was dead at birth.

Even in the bedeviled Pentagon, Murray Snyder, Assistant Secretary of Defense for Public Affairs, defended the newsmen who cover his domain: "There's no question that

---

Footnotes at end of speech.

they have the interests of the country at heart." The reporters themselves were unworried and they knew why. As Richard L. Strout, veteran correspondent for the Christian Science Monitor, explained it: "We all spy on each other down here, but it works."

[1] Commission was made up of 3 lawyers, 2 Senators, 2 Representatives, 2 Government administrators, 1 governor, and 2 educators.

[2] Pearson immediately printed a summary of his so-called betrayals and argued that they were healthy for the American people to know.

Disclosure of So-called Classified Information

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. KELLEY of Pennsylvania. Mr. Speaker, do the internal explosions in the Soviet high command represent a further de-Stalinization there—a step toward less repression—or just another incident of a power fight for control, with the Khruschev faction using Stalin's own tactics of destroying opposition by the direct approach of liquidating it? I am afraid we will have to wait a bit longer to see how these current developments turn out, before we can say for sure just what is happening.

But what strikes me is this: While we have seen some evidences—even though only perhaps surface evidences, it is true—that the Russian dictatorship might be desirous of easing slightly the repressive nature of their setup, we have the amazing situation of a governmental commission here in the United States proposing to put every newspaperman in the country under the threat of prosecution for espionage if he digs up and uses so-called classified or secret information.

Anyone who has been around Washington for any length of time, especially in a congressional or governmental capacity, knows what a temptation it is for some bureaucrats and officeholders in the executive department to slap a secret classification on a document which may or may not involve defense information, but may perhaps be embarrassing to the agency, or to the President, or to the political party in power. It is foolish to protest that this happens only occasionally; it happens very frequently.

Thanks to the hard digging of the newspapermen in Washington, from whom it is very hard to keep anything secret for very long, much of this capriciously classified material has been dredged out and brought to light so that the American people could have the facts about how their Government is run.

RECOMMENDATIONS FOR LEGISLATION

But the Commission on Government Security appointed by President Eisenhower late in 1955 to report on the whole question of Federal security, while recommending many changes in the Federal employee loyalty-security program to end some of the confusion and unfairness in this field and to tighten up other provisions, then goes on to make these 2 legislative recommendations to Congress:

First. To enact a new wiretapping law to enable the Government to use evidence collected by wiretapping in certain types of prosecution, overturning Supreme Court rulings on this.

Second. To amend the espionage laws to make it an offense subject to $10,000 fine and 5 years in jail for any person—in or out of the Government—to disclose information obtained in any manner which has been classified as top secret or secret.

At present, Government employees are forbidden—and properly so—from disclosing information of a security nature, even though this information has been arbitrarily and capriciously and unnecessarily classified. We cannot allow each Government employe to be sole judge as to what should or should not be classified and withheld. There must be reasonable standards.

NEWSPAPERMEN AWARE OF SECURITY NEEDS

But when a newspaperman gets hold of information he thinks has been improperly classified, and which he believes the public is entitled to know about, the average conscientious reporter will check and doublecheck with appropriate responsible officials to make sure that he is not going to hurt the country in publishing it. Newspapermen are generally very sensitive to actual security needs, as was demonstrated so conclusively by the voluntary censorship program during the war. Now the effort is made to make them subject to espionage prosecution for printing anything of a classified nature—and that is going overboard.

Similarly the wiretapping recommendation is a bad step. I will always be proud that I was among only 10 Members of the House to vote against such a bill in 1954—and was roundly attacked for it. Yet the bill died in the Senate as the hysteria of the moment subsided—and it should remain dead.

Has Inflation Become a Way of Life?

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I should like to insert in the Appendix of the RECORD an article appearing in the July 1957 issue of the Reader's Digest which discusses inflation by pointing out its effect on one of our basic industries, steel, which gives facts I believe every Member of Congress will find of extreme interest.

The article follows:

HAS INFLATION BECOME A WAY OF LIFE?

(Condensed from an address by Roger M. Blough, chairman of the board, United States Steel Corp.)

Have we, as a nation, unconsciously adopted inflation as a way of life? We all agree that something should be done about it, but we don't quite know who should do what. In probing its causes we find ourselves groping hopelessly in a maze of economic theories. But when we look at our own books and see what inflation is doing to our own business, whatever its size, there is nothing theoretical about it. The problem is all too clear.

Here, for example, are a few facts from the books of United States Steel. Since 1940 our total costs per employee hour (wages, materials, replacement, taxes, and so on) have increased by an average of nearly 9 percent per year. Meanwhile, our total production per man-hour has been going up at a yearly rate of less than 3 percent. This means that the gap between our rapidly rising costs and our slowly mounting output has been widening at a rate of almost 6 percent each year.

To bridge that gap we have had to increase prices at an average rate of a little less than 5½ percent annually—and even this has not been quite enough to do the job. Though 1955 was the best production year we have had since 1940, the profit was less per dollar. And for the entire 55 years of United States Steel's existence, this profit was not the second best, but merely the 26th best.

That is what inflation has done, and is doing, to one business. It has not only wiped out the financial benefits of all the technological progress in our plants and mills but has cut our profit margins far below those of the earlier years of our corporate life.

While shrinking our profit margin, inflation has also been generating the need for a substantial increase in profits. To understand this, we need to look at the problem of depreciation, which really means, "How do we get our seed back?"

Our farming forefathers knew that they always had to save enough seed for next year's crop. No matter how hungry they might get, they were out of business—and out of luck—if they ate up their seed corn. This principle holds true in any industrial enterprise today.

Our seed, in the steel business, consists of plants, furnaces, machines—all the things that we call capital equipment. These machines and facilities wear out a little each day. Unless we can put aside enough profit money to replace them when they are no longer usable, we, too, are out of business.

The Federal tax laws recognize, in theory at least, that the businessman, like the farmer, must be able to get his seed back. If we buy a $25 million machine that will last for 25 years, the tax laws say that the machine depreciates at the rate of a million dollars a year, and we are entitled to include this million dollars in the total cost of doing business that year. Thus at the end of 25 years, when the machine wears out, we have theoretically recovered the $25 million and can pay for a new machine to replace the old one.

That's the theory. But actually in the last 10 years the cost of equipment has been rising at the rate of almost 8 percent annually. If that rate of inflation continued over the entire life of the machine, replacing it would cost us not $25 million but more than $158 million.

Let me give you a concrete example. Twenty-five years ago we built an open hearth plant at a cost of $10 million. During the past 25 years, through the writeoff for depreciation, we have recovered those $10 million. But to replace that plant today would cost us $64 million. Where do we get the other $54 million? The answer, of course, is: Out of our profits after taxes. But in order to get $54 million in profits after taxes we had to earn $112½ million before taxes.

The law says that this $112½ million must be taxed as a profit. In truth it isn't a profit at all. It is our seed corn. It does not go to our stockholders, or to our workers or to expanded production for our customers. It is merely the cost of standing still. Like the Red Queen in Through the Looking

Glass, we have had to run faster and faster just to stay where we are. In varying degrees this problem of phantom profits has plagued every industry in America.

So, here on the books, we see a clear case of the irresistible upward pressure of inflation on steel prices.

Many people seem to believe that rising steel prices have contributed importantly to the march of inflation. Newspaper editorials keep telling us that steelmakers set the wage pattern for all industry. "As steel goes," they say, "so goes inflation." This notion is utterly false, as we found in 1948 by testing it. When our workers demanded a cost-of-living raise, we decided that instead of granting it we would reduce the price of steel by an average of $1.25 per ton. However, we made it plain that if the cost of living kept going up we would rescind the price cut and grant the cost-of-living wage increase.

What happened? Other unions demanded another big round of wage increases. Other companies, in other industries, granted them. Those companies then boosted their prices. And there we stood, like King Canute, commanding the tide to turn back, and pretending not to notice how wet our feet were getting. Eventually, we had to rescind our price cut, increase the pay of our employees, and raise our prices enough to keep our head above the swelling tide we had tried to resist.

But from this experiment we learned a few truths. One is that no one union or company or industry can stop the march of inflation. Another is that neither steel nor any other single industry ever sets the wage pattern in America. Every new wage agreement in any major industry immediately becomes the floor upon which the next union pyramids its demands for a still higher wage. And we learned that rising prices do not cause inflation; they are the result of inflation.

Just what can we do about it?

For one thing, it is time Congress recognized the urgent need for a more realistic treatment of depreciation, so that business may treat as costs those things which are costs, while Government treats as profits those things which are profits. Realization that inflation has destroyed the original purpose of depreciation provisions in tax laws has already prompted France, England, and Canada to adopt forward-looking legislation in this field.

Most important is the task of bringing home to every American an understanding that unearned wage increases serve only to fan the flames of inflation and can benefit no one in the end. If we are to escape these all-consuming flames, each one of us must understand the nature of the wage-price spiral called inflation. For where inflation is a way of life, it's a short life and a none-too-merry one.

Fresh Water From the Sea

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Water From the Sea," which appeared in the bulletin of the International Oceanographic Foundation, Sea Frontiers, June 1957, the article having been written by E. John Long, associate editor:

WATER FROM THE SEA

(By E. John Long)

Neither agriculture, nor industry, nor man himself can long exist without that most important of all minerals—fresh water. In many places the need for it is becoming desperate: in the Great Basin of Nevada and adjacent parts of the United States and northern Mexico; in most of north Africa; in western India; in central Asia; and in western Australia.

Only two summers ago water was so scarce in New York City that special restrictions on its use became mandatory; in drought-stricken Dallas, Tex., 5-gallon demijohns of drinking water sold in grocery stores for $1.25 in February 1957.

RESERVOIRS COSTLY

Yet engineers say the 1975 population of the United States will need about 453 billion gallons of water a day—almost twice the amount used now. Some of this increase will be met, of course, by increasing the number of reservoirs, large and small, throughout the land. The estimated 1975 demand, after all, is no more than a third of today's runoff. But dams cost money, and a reservoir holding a flood in Ohio cannot make up for a drought in Texas. Nor can we expect population to level off in 1975, any more than we can hope that runoff will increase.

So where do we go from there? More and more experts claim that there is only one practical solution—conversion of salt water from the sea, or from brackish wells or lakes of the interior. The idea of de-salting the ocean water at the shoreline, and then pumping it inland, is not new. The Office of Saline Water in the United States Department of the Interior, as well as several private corporations and laboratories, have been working on the prospect for some time. Several methods for such conversion have already been found. After all, the sea is the world's one huge reservoir of water, even if it is salt.

COOPERATIVE PROGRAM

"In a couple of the methods," Secretary of the Interior Fred A. Seaton told the National Farm Institute at Des Moines, Iowa, in February 1957, "the estimated cost is now down to 60 cents for a thousand gallons. A third method can convert certain types of brackish water for about 40 cents a thousand gallons. Because of the progress that has been made, we could today supply you with converted sea water for less than the price you now pay for bottled mountain water. And we expect to keep on bringing the price down."

The Government's saline water research program is primarily one of cooperation with private groups by (1) stimulating the interest of private and public activities in this field, and (2) conducting scientific research and technical development through grants to and contracts with individuals and laboratories, and in Government laboratories.

FIVE MAJOR APPROACHES

What are some of the main processes that have thus far been developed under the Government's saline water conversion program? Briefly they may be divided into five major groups: (1) Distillation, (2) solar (3) membranes, (4) freezing, and (5) osmotic or solvents.

The usual water still for removing salt from sea water creates steam under high pressure. This steam is then carried into a condenser. High temperatures are also necessary to create enough pressure to get a large volume of water.

New distillation methods promise to produce fresh water at greatly reduced costs through multiple-effect stills in large sizes (several million gallons a day), and through vapor-compression equipment of rotary type in small sizes. Control of scale formation remains a problem. Flash evaporation units also hold possibilities, especially if adapted to utilize low thermal differences.

PUTTING SUN TO WORK

Solar distillation processes of various types show promising results, but chiefly in areas where the sun is sufficiently strong for efficient operation, such as southwestern United States, North Africa and Australia. Simple designs, rather than complex mechanisms using mirrors or focusing collectors, are now favored. Still in the testing stage is a solar device with a dark plastic evaporating pan and a transparent film canopy supported only by air pressure. Heat from the sun evaporates salt water, and the vapor condenses on the inside of the canopy, running off into fresh water reservoirs.

Another series of experiments is being conducted with electric membranes. A positively charged electric pole, placed at one end of a pool of salt water, attracts the sodium ions of salt, while a negatively charged pole, at the other end, draws the chlorine ions, breaking up the salt or sodium chloride. This process works best with brackish water, where tests indicate its cost would be about 42 cents per 1,000 gallons.

FREEZING AND SOLVENTS

The original great hopes for an economical freezing process have not yet been realized. Salt water loses most of its salt when frozen, and, as it takes seven times as much energy to evaporate water as to freeze it, scientists expected that this might be a simple means of getting fresh water from the sea. Tests made thus far indicate that freezing processes are no more economical than methods using evaporators.

Research in the use of solvents discloses that tertiary octyl amine is an effective demineralizer, but progress in this field awaits the development of even more effective compounds, and better recovery of solvents from the residual brine.

PROGRAM EXTENDED TO 1966

So much for experimental work, past and present, being carried out under the provisions of the Saline Water Act of July 3, 1952. Experts believe that within the very near future the costs of large-scale distillation of saline water will be reduced to 50 cents or less per 1,000 gallons. When it can be reduced to 30 cents per thousand gallons—considered the maximum feasible for municipal use—the program might well repay the $10 million that Congress has set aside for it. The program has been extended to 1966.

Another phase of the overall problem, but not included in the saline conversion program, is the power necessary to pump water from the sea and to send fresh water to industries, farms and homes wherever it is needed. For nearby use, local steam or electric power may suffice. But when the day comes that water must be widely distributed, as are oil and gas, by gigantic pipeline systems, atomic powerplants will have to take up the load.

In April, the United States Army unveiled at Fort Belvoir, Va., a package power reactor developed jointly by the Atomic Energy Commission, the Corps of Engineers, and the Alco Products Inc., of Schenectady, N. Y. While the Army designed this mobile-type unit for use on remote islands, desert terrain, or in the polar areas, similar plants could be set up where the cost of obtaining ordinary steam or hydroelectric power is excessive or uncertain.

"CHEAPER BY THE DOZEN"

The Army's pilot plant cost $3.5 million, which admittedly is a bit steep, but like many other things, "they are cheaper by the dozen." When and if atomic reactors can be assembly-line produced, they unques-

tionably will fit into the sea-to-fresh water picture, not only for pumping power, but also to operate evaporators or other conversion process machinery. Cost is now definitely a limiting factor, both for the original plant and for the reactor fuel needed.

Meanwhile it is important to keep in mind the enormous drain on the fresh water resources of the world, a demand that is steadily increasing. Consumption in the United States, including industrial and farm uses, is estimated at nearly 1,500 gallons per person each day. Power plants alone account for more than a third of the industrial use—perhaps another argument for atomic reactors, which may require water-cooling, but can use sea water for this purpose.

USED YOUR 20 GALLONS TODAY?

Individuals use of fresh water, for drinking, bathing, laundry, and other needs, now runs up to 20 gallons a day. Water engineers predict that even this high rate will increase about a gallon a day for every man, woman, and child in the United States in the very near future.

Perhaps the most encouraging aspect of the expected water-shortage problem is a growing awareness of its serious consequences, plus a realization of the role that the sea can and must play to abate it. Already certain water conversion experiments are being moved from inland laboratories to test sites along the seashore, where large-scale operations can determine if they are economical and feasible.

To scientists in general and oceanographers in particular the prospect is exhiliarating. The New York Times, in a recent editoriall, takes this optimistic view: "Ever since Malthus, the prophets of doom have forecast the decimation of the world's people by starvation. They could not have forseeen the possibilities of atomic power or of the inexhaustible sea."

Speech of George P. Delaney, of the AFL–CIO, at the ILO Conference at Geneva

EXTENSION OF REMARKS

OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. McCONNELL. Mr. Speaker, it was my privilege to attend the International Labor Organization Conference in Geneva, Switzerland, in June of this year. One of the very good speeches given at the conference was that of the United States workers' delegate, Mr. George P. Delaney, of the AFL–CIO, which follows:

Mr. DELANEY (workers' delegate, United States). The Director-General's Report to the Conference surely deserves the high praise which it has received from so many delegates at this conference. I compliment the director-general on both the depth and scope of his report and particularly on its timeliness. The increased use of automation and the rapid developments taking place in all fields of technology are emphasizing old problems and causing many new ones. Indeed, the social, political and economic institutions of the world are feeling the impact of the new industrialization.

We face a time of great promise in which all men can enjoy more of the good things of life than ever before. We in the ILO bear a great responsibility for ensuring that the time will come to pass when our great opportunities and our high hopes are fulfilled. Therefore, it is entirely appropriate that we should discuss and seek solutions for the specific problems attending automation.

But this is not enough, for mankind needs more than the increased productivity of material goods which flows from new automatic factories. Of what value are more and bigger refrigerators to a man who is not free; to a man who lives in constant fear for his family's safety; to a man who cannot speak his mind; who is subject at any time of the day or night to deportation to a forced labor camp; who cannot organize into a free trade union; and who has lost the right to strike? Of what value is any material thing to a man, who has lost his liberty, his dignity, his essential human rights, and is indeed a slave of tyranny?

I speak of these things today for a very special reason. A few minutes ago in New York City the United Nations released what I feel sure will become one of the historic documents in the history of the world. It is the report of the United Nations Special Committee on the Problems of Hungary. Composed of eminent representatives of Australia, Ceylon, Denmark, Tunisia, and Uruguay, the Committee was established to investigate, in the words of the General Assembly, "the situation created by the intervention of the Union of Soviet Socialist Republics, through its use of armed force and other means, in the internal affairs of Hungary."

I do not believe there is a person in this hall who can fail to have the deepest interest in this document, for it sets forth in clear, complete, and precise terms an account of naked and brutal tyranny more dreadful than anything the world has ever seen. Furthermore, it is directly related to the matter of freedom of association about which we have heard so much in recent days and which is of such importance to the International Labor Organization.

I therefore propose to take the few minutes allotted to me in this debate to tell you briefly what the Special Committee discovered and I am sure you will agree with me that there is nothing more important that any of us could consider at this particular moment.

The report, first of all, sets forth the now familiar details of the heroic battle of the Hungarian people for freedom from Soviet Communist domination—the demands of the students and workers for national independence and basic human rights; the wanton massacre of demonstrating civilians by Soivet secret police; the effective attacks of freedom fighters, including old men and little children, against Soviet tanks; and the release of Cardinal Mindszenty. It goes on to describe the Soviet agreement to withdraw its troops; the declaration of neutrality agreed to by Nagy and the Soviets; and it tells us the hour-by-hour story of what will surely be remembered as one of history's greatest betrayals—the methodical, overpowering, and deadly advance of Soviet troops, who ruthlessly broke down every street barrier, routed the last desperate sniper, and crushed by sheer weight of numbers of uprising of the Hungarian people.

Now, I tell you, this has been set down on the record for all mankind to see for all eternity, attested to and confirmed by witnesses ,and sifted and judged by men of good will from the countries I have mentioned.

The report dismisses as absolutely false the Soviet claim that its troops had been sent at the request of the Hungarian Government to suppress what the Soviets called fascism and reaction. "There is no evidence," it says, "to suggest that any Hungarian groups opposed the actions of Mr. Nagy, which, in most cases, merely reflected what the revolutionary and workers' councils had insisted upon from the outbreak of the uprising."

Among the most heroic fighters in the battle were men whom no one in their wildest dreams could refer to as reactionaries. They were the workers at Csepel who refused several Soviet calls to surrender and, according to the report, held out until the evening of November 9, "despite the use of artillery against them from various directions, supplemented by aerial bombardment."

It tells further of the kidnaping of Nagy by the Russians and the Kadar puppet regime, and how on November 22 he was taken from his refuge in the Yugoslav Embassy in Budapest and has not been heard of since.

After the fighting was over the Kadar regime found itself confronted by a sullen people dedicated to national resistance. So, the report says, "the Soviet military command began by resorting to mass arrests. Many of the people thus apprehended had not been directly involved in the fighting. In numerous cases the captives * * * were crowded on trains or in trucks and deported, under Russian escort, to the U. S. S. R." "No accurate figures exist regarding the number of Hungarian citizens deported," the report continues, "but these certainly run into thousands."

The role of the workers in the uprising was extremely important, according to the report. It states very plainly that the democratically chosen workers' councils were at the very heart of the revolution, often themselves electing the revolutionary councils. The report states: "All witnesses confirmed that dissatisfaction with the trade unions of the regime was one of the most important grievances of the Hungarian workers. The workers' councils at once assumed important responsibilities in the factories, mines, and other undertakings, and they exerted a considerable influence upon the government * * *." The report went on to say: "The overwhelming support given by Hungarians to these workers' councils confirms the impression that they were among the most important achievements of the Hungarian people during their few days of freedom."

Following the Soviet conquest, the workers and their families suffered perhaps most of all, despite what the Soviet delegate has told us over and over again from this very rostrum about his country's deep concern for the benefit of working people. The 48-hour protest strikes of December 11 and 12 prompted the shaky Kadar puppet government to issue a decree abolishing all workers' councils above factory level. The report says that "decrees were also issued instituting the death penalty for a large category of offenses, including participation in strikes."

The report goes on to consider in detail the Soviet charge that the uprising had been instigated by what the Communists called "imperialist colonizers" bent on "bourgeois restoration." It brands this charge as absolutely false. It says the uprising was "not only nationwide but also spontaneous in character." It was the Hungarian workers, both men and women, who bore the brunt of the fighting against Soviet tanks—a fact which did not fail in several instances to impress the Soviet troops involved, the report says, adding, "workers in the steel factories of Dunapentale declared that they would defend against invading Russian forces the plant and houses which they had built with their own hands." And when the Soviets had done their worst, it was the Hungarian workers who continue to resist as long as there was strength in their bodies.

The committee concluded, among other things, and I am quoting here: "What took place in Hungary was a spontaneous national uprising, caused by long-standing grievances, of which the most important was the position of complete subordination of Hungary with regard to the U. S. S. R."

"The uprising," the committee found, "was led by students, workers, soldiers, and intellectuals, many of them Communists or former Communists * * * It is utterly untrue that the uprising was fomented by reactionary circles in Hungary or that it drew its strength from (so-called) 'imperialist' circles in the West."

And here I continue to quote the United Nations report. "It would appear that the Soviet authorities had taken steps as early as October 20 to make armed intervention possible. The demonstrations on October 23 were at first entirely peaceable," the report concludes; adding that the change "was due to the action of the AVH in opening fire on the people * * * Following the second Soviet intervention on November 4," it goes on, "there has been no evidence of popular support for Mr. Kadar's government. Mr. Kadar has proceeded step by step to destroy the power of the workers. Strong repressive measures have been introduced and general elections have been postponed for 2 years * * * Only a small fraction of the 190,000 Hungarians who fled the country have returned."

And the last of the committee's conclusions is perhaps most significant of all to us here today. "A massive armed intervention by one power on the territory of another," said the committee, "with the avowed intention of interfering with the internal affairs of the country must, by the Soviet's own definition of aggression, be a matter of international concern."

Yet in the face of these facts you and I on Tuesday heard the Soviet Government delegate complain that the Forced Labor Committee is not being fair to him and to his satellites. We hear him imply that he and his friends are shocked at the thought that they should be guilty of such practices. We hear him say, and I quote, "the ILO should pay greater heed than hitherto to the demands of the trade unions." And we hear him talk unctuously of peace and concord among all peoples. It is a miracle to me that these words can pass his lips when he, before all of us here, must have known the facts disclosed today by the United Nations.

How long have we to listen to such prattle? How long do we propose to allow member states of the ILO to violate at will every principle of this organization and yet come here and give us lip service and boast about ratification of conventions?

Let us now dedicate ourselves and this great organization to continue the fight for freedom so nobly waged by the workers of Hungary. Let the Hungarian investigation by the United Nations be the first of many such investigations through which United Nations organizations can expose the hypocrisy of some of their members. I propose that the ILO take steps to influence member states to give meaning to our vital objective of freedom of association. If full freedom is to be achieved for both workers and employers, states must accede to the 20th century necessity of permitting international organizations to conduct special inquiries within their own sovereign areas.

It has just been announced at the United Nations Disarmament Subcommission in London that my country and other Western powers have welcomed the proposal providing for a 2- or 3-year suspension on all nuclear tests, and, moreover, the admission of inspection inside the Soviet Union to insure that the moratorium is respected. Inspection teams would also be stationed in the United States, in the United Kingdom, and elsewhere.

Why not a similar arrangement as regards freedom of association? I believe that the ILO should develop a sense of responsibility among its member States by asking them to submit to thorough investigation by international bodies within their own borders. Certainly the delegate from the Soviet Union could not object to this after speaking so feelingly the other day in favor of these latest disarmament proposals.

Just as international inspection is the only real safeguard of effective disarmament, so it would insure freedom of association for workers. And it would make the Freedom of Association Conventions of 1948 and 1949 something more than just dead pieces of paper, for they can then become true international instruments, guaranteeing basic human rights to the workers of all lands.

Chemicals in Food Production

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. MILLER of Nebraska. Mr. Speaker, several articles have been entered into the CONGRESSIONAL RECORD recently, apparently on the assumption that very little is known about the effects of pesticide chemicals on humans and that the consumer is not now adequately protected against hazard from the use of these chemicals in food production. This is far from the truth. Some articles are distorted and tend to undermine public confidence in the food industry.

My amendment and other existing Federal legislation require thorough pretesting of pesticide chemicals and approval of both the United States Department of Agriculture and the Food and Drug Administration before they can be sold for use in food production. The Food and Drug Administration also has been given the authority to seize all crops which bear unapproved levels of pesticide residues before the crops reach the market place. The governing Federal legislation is embodied in the Federal Insecticide, Fungicide, and Rodenticide Act of 1947 and the Miller amendment to the Food, Drug, and Cosmetic Act. The Miller amendment was signed into law on July 22, 1954. Those who use the pesticides should follow closely all instructions as to their use.

The effectiveness of this legislation in protecting the health of the public has been recognized by the American Medical Association, as well as by the United States Department of Agriculture, the Food and Drug Administration, and the United States Public Health Service. This approval was affirmed recently by Dr. Bernard E. Conley, Secretary of the Committee on Pesticides of the American Medical Association, when he said:

Pesticides play an important role in providing the Nation's food supply and protecting the public health. Thanks to the Miller amendment to the Federal Food, Drug, and Cosmetic Act, the consumer is assured of an unparalleled degree of protection. The Miller amendment requires the pretesting of a pesticide chemical for the protection of the consumer.

What substance is there in insinuations that the controlled use of pesticide chemicals in food production is hazardous? Let us look at the record. Nearly all the insinuations no matter by whom they are made are based upon charges made at one time or another by Dr. Morton S. Biskind. None of Dr. Biskind's charges have been substantiated by serious scientific research by the United States Public Health Service. Dr. Biskind's specific charges against DDT—the main butt of his attack—have been disproved by extensive research on humans.

Apropos of this matter, under unanimous consent, I insert in the RECORD at this point a letter written by Dr. Leonard A. Scheele, in December 1953, when Dr. Scheele was Surgeon General, United States Public Health Service. The letter was addressed to the Honorable Glenn R. Davis, of Wisconsin, concerning Dr. Biskind's charges that DDT contributed to infantile paralysis, heart disease, cancer, x-disease of cattle, hoof-and-mouth disease, Newcastle disease of chickens, and other diseases. The letter follows:

DEAR CONGRESSMAN DAVIS: Thank you for your letter of December 28, 1953, requesting information concerning action taken as a result of the publication of Dr. Morton S. Biskind's article in the November number of the American Journal of Digestive Diseases. None has been taken thus far pending the confirmation of his assertions.

This article recapitulates charges against DDT made by the same author as long ago as 1949. These have been carefully considered by our toxicologic experts. In spite of continuous laboratory research on DDT in animals, and clinical study of cases of alleged "poisoning" with DDT, our toxicologists have been, thus far, unable to substantiate Dr. Biskind's allegations.

Some of the diseases claimed by him to have increased in prevalence since the advent of DDT have, in fact, shown no increase Others are now reported more frequently because of the changing distribution of age groups in our population—or because of procedural changes in morbidity reporting. Certain of the diseases of man and animals included in Dr. Biskind's list were well known long before DDT was introduced to this country and occur in places where DDT has never been used.

DDT is regulated at the Federal level by the Insecticide, Fungicide, and Rodenticide Act of 1947, which requires reliable evidence, before registration for interstate sale, that substances (1) will accomplish the purposes for which they are recommended, and (2) are safe when used in accordance with directions, and by the Food, Drug, and Cosmetic Act which forbids the unnecessary contamination of food and other substances taken internally or applied externally to man.

A subsequent research project involving 51 human volunteers was carried out by the United States Public Health Service and was reported in the Journal of the American Medical Association, October 27, 1956. In this research the volunteers ate up to 200 times the average daily intake of DDT in the diet for a period of 1 year. The United States Public Health Service reported, "During the entire study no volunteer complained of any symptom or showed, by the tests used, any sign of illness that did not have an easily recognized cause clearly unrelated to exposure to DDT. * * * The results indicate that a large safety factor is associated with DDT as it now occurs in the general diet."

The use of pesticide chemicals in food production protects food crops from destruction by farm pests. The Pesticides Subcommittee of the Food Production Committee of the National Academy of Sciences reported in November 1956:

No one knows exactly what would happen if use of pesticidal chemicals on the farm should be abandoned, but it is safe to say that we could not commercially produce apples, peaches, potatoes, citrus, and tomatoes, to mention only a few crops; and yields of many others would be drastically reduced. * * * It seems evident that the American people cannot be fed adequately unless crops and livestock are protected from insects and other pests.

Equally important it protects foods from contamination by disease-carrying flies and rodents, by harmful worms, fungus, and bacteria which have been proven by centuries of human experience to cause many dreadful human diseases.

The question is whether we want an inadequate food supply, many bearing worms, and fly and rat droppings, or a minute residue of a chemical whose safety has been proved by years of research by industry, by the United States Department of Agriculture, by the Food and Drug Administration, and by the United States Public Health Service.

These agricultural chemicals are necessary to produce food. The Miller law makes it possible for growers to use these chemicals safely. This legislation provides safety for you and your family every time you eat.

In a few days the Interstate and Foreign Commerce Committee will take testimony on the question of chemical additives to food. The bill that I have introduced has for its purpose the protection of the public. It spells out the rights and powers of the Food and Drug Administration. It sets up definite instructions as to the procedure in the use of new additives which may be added to the food supply.

Mr. Larrick, of the Food and Drug Administration, in a recent article in a current magazine indicated that there are about 750 different kinds of additives and chemicals being used in food and out of that number, approximately 150 to 200 had not been adequately tested or passed upon by the Food and Drug Administration.

There is a tendency on the part of the public to confuse Public Law 518, passed in the 83d Congress and commonly known as the Miller pesticides residue amendment, and legislation which will soon be considered to regulate additives or chemicals to food. In my opinion, Congress intended to regulate the pesticide chemicals entirely separate and apart from the so-called food additives. The pesticide chemicals are now classified and regulated. The public is protected. As to the use of these agricultural pesticides, they must, of course, follow the directions on the label.

The term pesticide chemical was defined clearly in Public Law 518. It does regulate pesticide chemicals in or on raw agricultural commodities.

I believe there will be good legislation to follow the pattern of the provisions of the pesticide bill when new chemicals in food legislation is enacted. It will be good practice to require that industry using additives furnish sufficient and ample scientific evidence that the additive is not harmful before its use is continued. I believe these safeguards should go into effect before and not after the additive has been used. There is no reason why a first and full report on the pretesting of such additives should not be submitted to the Food and Drug Administration.

Industry has made tremendous gains in producing a better food supply by the proper use of certain additives to that food supply. I have pointed out above the great contribution made to the production of food by the proper use of pesticides. Industry has made possible the full protection of many of the fine vegetables and fruits that we enjoy every day through the proper use of pesticides in controlling the enemies to that food supply.

I trust full publicity to the pending hearings before the Interstate and Foreign Commerce Committee will be given. I feel properly conducted hearings will put to rest many wild rumors that the public consumes daily dangerous amounts of poison at every meal. There have been too many unfortunate statements indicating that cancer, blood disease, and other mysterious ailments come from ingesting certain chemicals in our food supply.

It may be that there is a tendency that cigarette smoking might be one small factor tending to lung disorders. However, these ideas should not spread to the consumption of food.

I would repeat that the food industry has been most careful to protect the public. The Food and Drug Administration does an excellent job of handling the problems of protecting the public. I believe the food industry and the administration realizes that in a rapidly growing industry and a tough economic world, there may be some who might attempt to cut corners. Most of the industry and the Food and Drug Administration realizes that new food additive legislation is needed. The pattern set by the Miller Pesticide Act could well stand out as an example of an approach and a procedure for the adoption of a food additive amendment bill.

I am sure when the committee meets in the near future they will have an interesting and formative hearing. I look forward to presenting my views to the committee.

Ben Franklin's Prophecy

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD an article entitled "Ben Franklin's Prophecy," prepared by Paul O. Peters and published in the May 1957 newsletter of the Minute Women of the U. S. A., Inc., publication:

BEN FRANKLIN'S PROPHECY

On Monday, September 17, 1787, when the final draft of the Constitution was being read to the members of the Constitutional Convention, and just prior to the affixing of the signatures of the delegates who agreed to the document, Benjamin Franklin rose in his place and asked that a speech which he had prepared be read by James Wilson. This being agreed to, Mr. Wilson then proceeded to read Franklin's criticisms and prophecy, which were in part as follows:

"THE CRITICISM

"Mr. President, I confess there are several parts of this Constitution which I do not at present approve, but I am not sure I shall never approve them; for having lived long, I have experienced many instances of being obliged by better information, or fuller consideration, to change opinions on important subjects which I once thought right, but found to be otherwise. It is, therefore, that the older I grow, the more apt I am to doubt my own judgment and to pay more respect to the judgment of others. Most men, indeed, as well as most sects in religion, think themselves in possession of all truth, and that wherever others differ from them it is so far error. Steele, a protestant, in a dedication tells the Pope that the only difference between our churches in their opinions of the certainty of their doctrines is—the Church of Rome is infallible and the Church of England is never in the wrong. * * *

"THE PROPHECY

"In these sentiments, sir, I agree to this Constitution with all its faults, if they are such; because I think a general Government necessary for us, and there is no form of government but what may be a blessing to the people if well administered, and believe further that this is likely to be well administered for a course of years, and can only end in despotism, as other forms have done before it, when the people shall become so corrupted as to need despotic government, being incapable of any other."

On the day following the adjournment of the Constitutional Convention, a lady, Mrs. Powel, approached Dr. Franklin and asked:

"What have we got—a Republic or a monarchy?"

"A Republic," replied Franklin, "if we can keep it."

That is the situation which faces the United States today.

CAN WE KEEP THE REPUBLIC?

During the past three decades things have been happening in our country which have served to break down the moral fiber of the American people and to stifle those patriotic sentiments that made our people the most self-reliant and self-sufficient of any country in the world.

In the years between the end of World War I and the era of great speculation which culminated in the "big bust" of October 1929, our people were led to believe that in any great emergency which might arise, they could depend upon the might and power of their Government for deliverance from the evil, instead of being taught that in the long run dependence upon government is in the end nothing but dependence upon themselves. In a republic the people are the government.

To corrupt the government, therefore, it is necessary first to corrupt the people, at least in numbers sufficient to exercise control.

A review of events over the past 25 years indicates increasing corruption of the people by many new and socialistic devices, including so-called grants-in-aid to State and local governments and subsidies to farmers and selected industries.

The framers of the Constitution had faith that the blessings of Liberty which they

had secured for themselves would be transmitted unfettered to posterity. The document which they created was unique among the world's chapters of liberty in that it vested in the people's representatives in the Congress all legislative power, as well as the control over the public purse. By the 10th amendment, the Constitution was further strengthened by agreement that "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."

Today, the powers reserved to the States or the people are being challenged and compromised by decisions of the Supreme Court, and encroached upon by the executive bureaucracy which has the power to issue regulations having the force and effect of law.

By the 13th amendment, adopted in December of 1865, slavery and involuntary servitude, except as a punishment for crime, was prohibited throughout the land.

Never before in all history had the dignity and rights of the individual been so carefully and explicitly protected. But with the passing of the years, and the infiltration of foreign ideologies into the American scene, the American way of government has been slowly changing until now we have come to a sorry pass.

The blessings of liberty are now shackled by a public debt of more than $270 billion. A debt greater than that of all other countries in the world combined, which is in fact a mortgage on posterity which can only be wiped out by dishonest repudiation or by human drudgery to provide the taxes for eventual liquidation.

The general-welfare clause of our Constitution has been so prostituted in its interpretation, that it is now being applied to localities, organizations, and foreign governments instead of for all, and only the people of the United States.

By our continuing foreign-aid programs, labeled "mutual security" for the convenience of the promoters, we are providing aid to peoples in countries on every continent and the islands of the seas, and our taxpayers are compelled to foot the bills.

Never before has a Nation, so richly endowed by nature, been so skillfully looted for the benefit of others. And the looting will continue until all the people are made to realize that government per se produces no wealth but lives and thrives only upon the fruits of production—the people's production—not the production of the connivers, the politicians, and the agitators who have sold the American people a rotten bill of goods, a mess of socialistic pottage.

In the fight to save the Republic the Minute Women of the U. S. A. can render a greater service than did the minutemen at Lexington and Concord.

As mothers and homemakers, the Minute Women of the U. S. A. have a greater stake in America's future than any other group in our country. To know the facts and fail to protest against the betrayal of our country is more un-American than the acts of the lunatic fringe who seek to deliver our Government and its people into the ready hands of the one-worlders and the economic internationalists.

The Dangers of Khrushchevism

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. FORD. Mr. Speaker, Senator CHARLES E. POTTER has contributed to the July 1957 issue of the magazine Western World an article entitled "The Dangers of Khrushchevism." This is the Senator's statement in a debate with Pietro Nenni, of Italy, on the question, "Is Khrushchev less dangerous than Stalin?"

In view of the timeliness of the article and under leave to extend my remarks in the RECORD, I include Senator POTTER's statement:

THE DANGERS OF KHRUSHCHEVISM

(By Hon. CHARLES EDWARD POTTER, of Michigan)

The Soviet Union is a great world power. As such, it is potentially dangerous to the Western World in the same manner as is another powerful bull in a single cornfield.

The questions which face the West today are how dangerous is the U. S. S. R., and what makes it more or less dangerous? Are Russians fed on false propaganda more to be feared than would be an informed Russian people; a successful Soviet Union or an economically depressed Soviet? A Russia with increased relaxations and consumer goods, or a Russian people harnessed tragically to an economy geared solely to the production of a war machine and heavy industry?

I propose to defend these propositions:

That post-Stalin Soviet policies, economic, and political, are making the Soviet Union stronger industrially and militarily.

That there is no basis for believing that communism's objective of world domination has changed.

That, from the standpoint of the West, a little Soviet relaxation is more dangerous than none at all.

That while the very long-range, unforeseeable ultimate effect of post-Stalin internal relaxation may sometime modify the Soviet dictatorship and its goals, the West faces a period during which it will be more difficult, not less, to counter Soviet pressures clothed with smiles.

That if we do not have the stamina and staying power we will lose the battle.

TWO VARIANTS OF SOVIET POLICY

Up to the present time, we have observed two apparent variations of Soviet policy and attitude. They are sufficiently at variance to invite a comparison, and may afford some guideline as to a future course for the Western World:

The first is the one-man principle of dictatorship of Stalin and his predecessors, with its Siberia, its terror, its network of police, its iron fist that brooked no questioning and no discussion, its predominant policy of shouting and threats against capitalism and Western imperialism.

The second is what we shall for the purpose of definition call Khrushchevism, the policy which stems from the collective leadership of the group of men who, with some violent changes of personnel, have ruled Russia since the death of Stalin in 1953.

Now I believe this new facade of Khrushchevism is simply a new, more effective planned device to achieve Stalinist ends, and therefore is more dangerous than Stalinism.

THE SMILES OF THE SOVIETS

To the western observer, it has shown itself more responsive to experimentation, more accessible to its own intelligentsia and technical groups than did the Soviet with its former leadership. It has also shown itself apparently more flexible in its dealings with the rest of the world, and has given evidence that it can learn by its mistakes.

It is my opinion that in this added flexibility lies a much graver danger to the Western World than in the blunt iron fist of Stalin. And this is true principally because the Soviet Union itself has not changed in its objectives since Khrushchevism took over. The actions of the Soviet Union in the October revolution in Hungary indicated beyond a doubt that this smiling face of Khrushchevism is nothing more than a working facade.

Now, to put it in simple language, if the Soviet dictatorship wants to continue in power, it needs primarily several things. In peacetime it must be assured of continued economic health and greater production, and further perfection of its war potential. In time of emergency it must know that the bulk of its citizenry will say "my country right or wrong, free or slave," and take up arms in its defense. And it must so arrange its relations with the outside world that it can exist along with it, annex parts of it, and ultimately take it over completely.

Khrushchevism is furthering all three of these objectives.

First, let us look at how Khrushchevism has affected the Soviet economic picture.

The development of basic, heavy and arms industries is the principal objective of the Soviet economy, with consumer goods, manufactures, and living standards playing a secondary role. Every 5-year plan—and Russia is now in her sixth—has scored tremendously in this principal objective. I have been particularly interested in watching this phase of Soviet development because my own State of Michigan in the keystone of the Great Lakes industrial heartland. This vast midcontinent area, reaching north and south of the Canadian border, has been called the Arsenal of Democracy.

Now, from the best information we have available, let us take a quick look at Soviet achievements in this field during the 5-year plan embracing the 1951–55 period.

In 1950, Soviet production of steel was 27.3 million tons, and in 1955, 45.3 million tons. By 1955, the U. S. S. R. had nearly doubled its 1950 production of 91.2 billion kilowatt hours of electric power. In natural gas the Soviet went up from 6.2 billion cubic meters in 1950 to 10.4 billion in 1955. Crude petroleum output in the Soviet increased 75 percent from 1950 to 1955. In 1950, the country produced 261.1 million metric tons of coal, and in 1955, 391 million. Lumber production rose from 49.5 million cubic meters in 1950 to 70 million in 1955. Soviet cement production went from 10.2 million metric tons in 1950 to 22.5 in 1955. Iron ore production was 37.7 million metric tons in 1950 and no less than 71.9 in 1955.

British economist Peter Wiles sums up the picture pretty well in a consideration of the subject featured in The Soviet Economy, a Discussion. He says: "Perhaps the most important fact in all modern economics is that this rate of growth is higher in the manufacturing industry of the Soviet Union than in that of any free country at the period of its maximum development, let alone now.

"Rich countries—as the Communist countries will be, have more strategic and diplomatic strength than poor ones—as the North Atlantic Treaty Organization countries will one day be, relatively speaking. They can offer better terms of trade. They can bribe more politicians, finance more spies, entertain more delegations. The Communist threat is thus partly one of economic growth. In reply to it neither virtuous conduct nor cultural freedom are altogether enough. The western rate of economic growth must also be stepped up."

Let us now return to what has happened to this production since Khrushchevism took over in the Soviet. The one thing outside of an attack by an external power which would seriously impede this phenomenal production schedule in the fields of basic arms and heavy industries, would be the workers themselves. And what evidence do we have that the Russian people would undertake such an economic or political revolt more at this time than any other?

It is no secret that there has always been a hope in the Western World that political and social tensions within the Soviet Union

would develop which would eventually become the explosive Waterloo of the communistic dictatorship, and bring about a government more representative of the Russian people. And it is also very evident that under the Soviet planned economy, this phenomenal growth of basic, heavy and arms industries has not been paralleled by similar strides in agriculture, trade or service industries. Nor has it done very much to raise the level of living of the people.

So back in 1951 my colleagues of the Senate Committee on Foreign Relations tried to get some facts about the extent of the tensions which would normally develop under such a society. They had a study made by experts on the tensions then existing within the Soviet Union, and 4 years ago, right after the death of Stalin, brought it up to date.

In an early part of the analysis, the committee warns against the illusion that because dissatisfaction existed in Russia, an armed and organized revolt was imminent at that time. It even questioned if those who were dissatisfied would necessarily disaffect from the Soviet Union and its Communist regime in case of a military showdown with the West. It then identified and mapped the areas of tension within the Soviet society, pointing out and documenting the special grievances of the young people, intellectuals, religious believers, ethnic minorities, professional soldiers, workers, peasants, slave laborers and their families. It named these as the potential allies of the Western World who might eventually be appealed to and mobilized.

Now the question is, have these tensions decreased or increased under Khrushchevism? All available evidence points to the fact that they have decreased because Khrushchevism has given a few carrots to the Russian people in relaxations and consumer goods in order to keep them working. Reports indicate the relaxations have not been numerous, nor would they be particularly satisfying to us of the Western World. Any relaxations, nevertheless, tend to lessen tensions and make a people less disposed to revolt against their existing government, or desert in a war emergency.

So the people of Russia, long crushed in the vise of dictatorship which permitted them none of the normal freedoms and movement and acquisitions needed for the healthy life and comfort of human beings, are feeling a lot happier about things when some of their human contours are permitted to stretch a bit at long last. It is hard for somebody in the Western World to accept the fact that freedom to talk a little more freely in a cafe, to criticize Government policies even mildly, and the indulgence in an occasional orange, a lipstick, gadget or bowl of strawberries can make a people forget its grievances. But when you haven't had these things for as long as the Russian people haven't, they do. They are in fact a useful, perhaps an essential safety valve.

NOTHING NEW IN KHRUSHCHEVISM

Now, what has happened in the rest of the world since Khrushchevism went into effect?

To begin with, the world needs reminding that the blow-hot blow-cold foreign policy of the Soviet Union under Khrushchevism is not by any means a new policy.

Under Stalin and his predecessors communism also played the opportunist game and jumped on any bandwagon headed for the locale it wanted to penetrate, and put on any mask necessary to achieve its ends. Under Khrushchevism the collective leadership has been climbing on all the bandwagons at once, or climbing off all of them. And the Soviet has been changing mask after mask, until it is increasingly difficult for the rest of the world to find out when the thing is peeled down to the skin.

In the months before the Hungarian debacle, Khrushchevism had begun to persuade the Western World that Russia might be willing to play fair ball. It was only when the Hungarians took them at their word and tried to step out from under the pressure of the Soviet Union that it had to pull off all its masks and reveal the same brute dictatorship which existed before Stalin's death—or as an alternative lose satellite Hungary, and probably all of the satellites in a chain revolutionary reaction.

Confusion piled up on confusion as the Soviet monster began talking more than ever out of both sides of its political mouth. Segments of the Western World began to break off from other segments on important issues. Khrushchevism may very well have had an influence on what happened at Suez. And before the policy of the Soviet Union in Hungary pushed Tito back to his normal state of belligerence to the brand of communistic dictatorship across its borders, the Yugoslav leader was relaxing sufficiently to permit a visit from the Soviet chieftains. It prevented any lag of production in the Soviet Union, thus enabling the Kremlin massively to industrialize Red China, and through this, help to head off any possible revolt in this brother Communist dictatorship.

Under other than Khrushchevism, I do not believe that NATO would have dared reduce its forces. Ceylon would not have invited the British out. Iceland would not have asked the United States to remove its bases. And certainly the U. S. S. R. would not have responded to our open skies proposal, however deceitfully, under any but Krushchevism.

This respectability has permitted the President of the United States to shake hands with the Russian rulers, and Queen Elizabeth of England to entertain them. Smaller and less developed countries have increasingly thrown out a more or less nervous red carpet for the Soviet chieftains.

Under the increasingly blow-hot blow-cold foreign policy, more goods are actually going to the Soviet Union itself, and to its fellow dictatorship, Communist China.

EXCHANGES BENEFIT U. S. S. R.

Announcement was made soon after the debut of Krushchevism that books from the Western World would now be permitted in the Soviet Union. Outside the Iron Curtain there was rejoicing. Now books of political science and political and social philosophy would bring new hopes to the Russian people. Histories would be read—histories written with a minimum of bias; novels and critical literature depicting civilizations other than their own would bring them vistas of freedom.

But what actually happened?

Evidence clearly shows now that in 1955 the Leningrad Public Library in ordering its books aimed at supplying Soviet scientific workers and engineers with information on the latest achievements in science and technology and not history, philosophy or belles lettres. Industrial establishments and research institutions in Leningrad were given first consideration, and the Library of the Academy of Sciences. Primarily the library was satisfying the requests of the leading branches of industry—aircraft and transportation, machinery, metallurgy, machine building, electric machinery, turbines, ships, radio engineering, and so forth. Books were ordered on problems of automation, telemechanics, electronics, television, the production of artificial fibers, fabrics and footwear, the food industry and the mechanization of agriculture. An attempt was also made to incorporate in the library's collections continuations of multivolume works in chemistry and the physical and mathematical sciences, including atomic physics.

There has been a wider exchange of technologists and scientists between the Soviet and the West under Khrushchevism. But it looks as if the advantage has been pretty much on the side of the Soviet Union. They have learned how to breed better cattle, build better tractors and houses, collect some good technical information. I cannot speak for other countries in the Western World, but when the United States sent my colleagues, Senators Russell Long of the State of Louisiana and Henry Jackson of the State of Washington along with Gen. Nathan F. Twining, Chief of Staff of the United States Air Force, into the Soviet, they saw very little of what they wanted to see.

What about the new underdeveloped nations groping for a way of life which will put them in step with modern living and technological development?

For long, the new bureaucratic technicians and managerial classes of these countries have been looking over the western democracies and the communistic dictatorships and making a rather observing checklist as to the debits and credits of both in relation to their own countries.

One of the things which has kept have-not nations eager to expand economically, away from communism, has been the apparently necessary rigidities of Stalinism required to attain a technological success. These underdeveloped countries eye the Soviet technological progress with considerable envy, but nevertheless cringe at the picture of Stalin whipping the people of a nation into a higher technical development, like animals at a plow.

EFFECT ON FREE PEOPLES

At the same time these groups were well aware that their underdeveloped countries needed stable governments, and a degree of planning of the consumption of goods and the investment of money and power. They felt if they were to attain the same goals as the Soviet in the same period of time, they needed a strictly disciplined order.

But with the relaxation of controls in the Soviet, the individual's freedom did not seem to be so much threatened. These nations began to roll the thought around in their top level conferences that perhaps they could have a degree of planning and a disciplined social order, and still have the substance of individual freedoms.

Not the least sensitive target of Khrushchevism are the free peoples. These peoples dearly want peace—so dearly that they are prepared to grasp at the slightest indication of Soviet good will in the hope that it will turn out to be the real thing, or at least a forerunner of that domestication of the Soviet bear which they have constantly been told is inevitable. Not even the savage Hungarian repression has quite destroyed their faith that the Kremlin, if only in self-defense, will soon agree to call its offensive off and settled down to some sort of peace with the rest of the world. Therefore, these peoples instinctively support any move for negotiations with the U. S. S. R., leap at any disarmament hint, however phony, and even, to some extent, swallow any domestic suggestions that the free countries can now safely cut their oppressively heavy armament budgets since the Soviet under Khrushchev is no longer a military danger, or is not so much of a danger.

This is Khrushchevism at its most effective, for I cannot believe the free peoples and governments would be quite so eager if the situation in the U. S. S. R. had remained the same as under Stalin and his predecessors.

This attitude certainly raises vital questions: will the Western world remember that Stalin's face and all it means lies behind the smiling mask which Khrushchevism intermittently shows to the world? And will the underdeveloped nations who are checking the debits and credits of democracy against those of communism remember what is under the future changing masks of Khrushchevism?

Probably not, unless the West remains continually alert and reminded.

George F. Quinn, a Distinguished Citizen and Great American

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. MINSHALL. Mr. Speaker, the citizens of Lakewood, Ohio, recently suffered a great loss when one of their most dedicated and devoted public servants passed away. Not only was George Quinn an outstanding councilman of the city, but he was held in the highest esteem by those who knew him in the practice of his profession as a lawyer. George Quinn served his community with distinction. We all miss him, and I should like to express my deepest sympathy to his family. An excellent editorial, written by my good friend, John Shissler, appeared in the Thursday, July 11, issue of the Lakewood Post. The editorial follows:

GEORGE F. QUINN: EXAMPLE OF SOUND CITIZENSHIP

George F. Quinn, who died unexpectedly last Thursday, was a man of character in the finest and rarest sense of the term. In Lakewood his service as councilman had long ago come to be accepted as a notable example of constructive public service. Throughout Greater Cleveland, and beyond, he was more and more coming to be looked upon as this area's foremost lay authority on hospitals and institutions for the unfortunate and handicapped. Of late, Mr. Quinn had been devoting intensive study to increasing problems of older citizens. His ability, plus the knowledge and experience he had acquired in this field, represented one of the soundest reasons for hope of progress in and far beyond Lakewood.

Mr. Quinn's career as practical humanitarian not only gave his life unique meaning, but is destined to constitute a living influence through the foreseeable future. He has helped shape welfare policies and initiate procedures which will be productive of increasing good. He has created a memorable example of a successful man who made contribution to human betterment an objective in itself, separate from his professional, political, and social goals. Many men do constructive things because they believe so doing is proper, because they, often unconsciously, are spurred on by love for applause or a feeling of self-righteousness, because real or imagined sacrifice preens pride. Not George Quinn. His devotion and his contributions to human betterment were reactions to an inherent urge which was insulated from personal aspirations. Some years ago, when Mr. Quinn's status as a lawyer was firmly established and an expanding political career his for the asking, he told the writer of this editorial of the need he felt to concentrate on some activity more substantial than winning acclaim or earning personal success. In the years which have passed since Mr. Quinn so obviously came to terms with himself, there has been no mistaking his sense of values.

Even those who knew Mr. Quinn were surprised and even amazed when confronted with imposing number and varied character of charitable activities listed in his obituary notices. These catalogs were far from complete, but even had they been all inclusive they could not have reflected his constant concern with phases of charitable and welfare endeavor he felt were being neglected or could be more effectively served. Mr. Quinn's efforts paid extra dividends because he was objective and practical; he had no patience with cant, dramatization, or overt emotionalism in any form which might detract from securing maximum return for effort and money invested in welfare and charity.

Older people, in Lakewood in particular, as well as in the county at large, lost a valuable friend indeed in Mr. Quinn's passing. Long before importance of the problems inherent in increasing longevity and earlier retirement were generally realized, Mr. Quinn instituted a continuing, searching study and personal investigation of the developing situation. He was one of two Ohio representatives appointed by then Gov. Frank J. Lausche to attend a national conference called by President Dwight D. Eisenhower in Washington several years ago; he made regular visits to institutions hereabouts which served the aging; he sought firsthand information from countless sources and was looked upon as the potential initiator and leader of a pioneering municipal program in Lakewood, where percentage of older citizens is greater than in any comparable Ohio community. Some months age he prepared an editorial for the Post on the unique Lakewood situation, and he made a number of addresses before groups here calculated to increase awareness of what he considered the city's obligation to safeguard welfare and make enforced leisure more rewarding for older people.

Mr. Quinn served in Lakewood Council for 14 years, and from the start won respect and was accorded support which had no relation to political or any other sort of identification. He ranks with the ablest municipal legislators in Lakewood's corporate history.

The Post knows that it speaks for all of Lakewood, and the surrounding communities as well, when it extends deepest sympathy to members of Mr. Quinn's family. In a very real sense, every citizen shares their loss, shares their love and respect.

Egg Prices Too Low for Comfort

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, Mrs. Roy Pearson, of Pencer, Minn., writes "the highest price on eggs in their community this year was 24 cents per dozen for grade A, which is still too low for comfort." Her egg receipts show that the price dropped to 19 cents in May and went to 21 cents per dozen in June. Grade B eggs hit a low of 13 cents per dozen, later going to 15 cents.

Under leave to extend my remarks, I ask permission to insert in the RECORD this letter from Mrs. Pearson:

PENCER, MINN., *July 6, 1957.*

Hon. COYA KNUTSON,
Ninth District, Minnesota,
House Office Building.

DEAR MRS. KNUTSON: Enclosed you will find two sales slips from our local producer which speaks for the local egg prices. Prices were as high as 24 cents, grade A, a couple times this year.

I will try to get information from other market areas in this vicinity. It is approximately the same although Warroad Market as it is reported daily by radio is from 3 cents to 5 cents higher than our market here.

Sincerely,

Mrs. ROY PEARSON.

Chiseling on Charity

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. GROSS. Mr. Speaker, I desire to associate myself with the fine words of praise for the Republican Senator from Delaware, the Honorable JOHN J. WILLIAMS, as contained in the following editorial from the July 10, 1957, issue of the Des Moines (Iowa) Register:

The United States Senate would do itself credit if it set aside a corner in one of those ornate, guided rooms adjoining the Senate floor as the JOHN J. WILLIAMS Hall of Fame.

The Delaware Senator's calm, determined, one-man crusade for good government and the husbanding of taxpayers' dollars over the past 10 years is deserving of more than the usual rewarding words of commendation that come to an outstanding public servant.

If his colleagues feel that it would be unseemly for them to single out a Member of the Senate for honors during his term in the Senate, then the public ought to take matters in its own hands and demonstrate its appreciation for his services.

Our present burst of enthusiasm over Senator WILLIAMS' accomplishments springs from his latest exposure of the frauds that have been committed in Texas in connection with drought-relief payments.

The Delaware Senator has brought to public attention the fact that farmers, ranchers, feed dealers, and local Agricultural Stabilization Committee (ASC) members chiseled on the Nation's sympathy and compassion to line their pockets with undeserved cash.

The money was advanced to help them buy feed to maintain their drought-starved herds of livestock. In one instance a county ASC committeeman is alleged to have assigned himself approximately $6,000 more in credits than he was entitled to receive.

A relief recipient used the Government credit to pay for food for a dog, a saddle for his polo pony, a polo mallet, and a number of other items obviously used for his personal pleasure and recreation.

A few crooks and chiselers can be expected to show up whenever easy money is being spread around. But the extent to which these drought-stricken Texans thumbed their noses at sympathy and kindness is almost beyond belief.

A spot check of only 600 cases in which feed relief credits were extended revealed probable irregularities in the $212 million

drought relief program totaling approximately $2 million.

True, that is relatively small, approximately 1 percent of total expenditures. But where charity and generosity on the part of others are concerned, fraud and chiseling in any amount is the kind of explosive substance that threatens to wreck extremely valuable programs of Government aid.

Senator WILLIAMS' disclosure of this shocking scandal should, we hope, result in a vigorous investigation into the methods of administering such emergency programs, a tightening of the laws and regulations governing them and the vigorous prosecution of the individuals who took advantage of the opportunities for fraud that obviously exist.

A relatively small discrepancy in the Internal Revenue Bureau's handling of his own income tax account started the Delaware Senator on a series of private investigations that ultimately resulted in:

Disclosure of a widespread practice of income tax fixing and failure to prosecute fraudulent delinquencies.

Dismissals, resignations, and convictions of numerous Internal Revenue Bureau officials and employees.

Revelation of laxness in the collection of Federal alcohol taxes and prosecution of violations.

Disclosure of discrepancies in accounts of the Commodity Credit Corporation and grains stored in warehouses.

The existence of a hiring and firing scheme in several Government agencies enabling employees to collect cash for accumulated leave.

Putting the spotlight on careless accounting for funds allowed Members of the Senate for office stationary expenses.

The above accomplishments add up to quite a record for any one-man hall of fame, even without Senator WILLIAMS' latest contribution.

Remarks of Walter P. Reuther on the Price Increase of the United States Steel Corp.

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. HOLLAND. Mr. Speaker, in inserting the remarks of Walter P. Reuther, chairman of the economic policy committee of the AFL–CIO and president of the UAW, on the price increase of the United States Steel Corp., I am hoping that they will be read by all recipients of the CONGRESSIONAL RECORD.

The relation of price increases to wages and profits is a moot question today, and only by throwing light on what is happening in the steel industry in these three fields can the public be well informed on the subject.

Mr. Reuther's remarks are as follows:

The price increase announced by the United States Steel Corp. is unjustifiable, socially irresponsible and dangerously inflationary.

It is big business' contemptuous and defiant response to the appeal of President Eisenhower only last Wednesday for restraint by industry in initiating price increases.

The facts on steel prices and steel wages prove conclusively that United States Steel's effort to blame the price increase on increased labor costs is completely false and that this price increase, as other price increases in steel, autos, and other industries in the postwar years are nothing more than an unconscionable and greedy grab for higher and higher profits at the expense of American consumers.

This is further proof that the crushing burden of inflation imposed on American consumers by the steel and other key, price-setting industries is a rigged inflation arbitrarily fixed by industrial management. It does not grow out of the free interplay of normal economic forces.

Clifford S. Hood, United States Steel president, could well take a leaf out of the book of C. E. Wilson, now Secretary of Defense, who said in 1952, when he was president of General Motors: "I contend that we should not say the wage-price spiral. We should say the price-wage spiral. For it is not primarily wages that push up prices. It is primarily prices that pull up wages."

It is particularly significant, in view of this announced steel price increase, that the steel industry, along with other price-pacing industries, and the NAM and United States Chamber of Commerce, have consistently and vigorously fought tooth and nail against a congressional investigation into the wage-price-profit relationship, which the AFL–CIO and many of its affiliates have proposed and urged.

Such an investigation would reveal that this present and other postwar price increases by the steel industry and by other industries are completely unwarranted and cannot be justified by increased labor costs. That is why these industries fear and fight against such an investigation. Labor has no fear of what such an investigation would reveal.

A simple and brief recital of the profit figures of three of these price-administered industries prove the point that blaming price increases on labor costs is propaganda rather than economic reality. They prove that such increases in labor costs, if any which are not offset by increased productivity, can easily be absorbed out of profits and still leave these corporations and industries with record or near-record profits.

United States Steel is an admirable example. In 1939, United States Steel's profits per man-hour worked by each employee was 13 cents. In seven-league boot strides, this profit has advanced through the years, despite wage increases and other economic benefits to steel workers, to an annual rate in the first 3 months of 1957 of $1.80 for each hour worked by each employee—a fabulous increase since 1939 of 1,284 percent. And these profit rates include not only hourly rated workers, but supervisory, clerical, and executive personnel as well.

General Motors raised its prices in 1955, using as an excuse a 20 cents an hour wage and fringe benefit package won by its employees in collective bargaining that year. This action was taken during the first 9 months of the year, after the benefits won by workers had gone into effect, and during which period GM earned $2.93 in profits before taxes for every hour worked by each of its hourly rated employees. For the whole year of 1955, GM made more than $2½ billion dollars profit before taxes, highest in the history of any company in the world, representing a 79 percent return on investment. In the first 3 months of this year, which has been a comparatively bad period for GM because of a slump in sales, the company made $2.80 in profits before taxes for each hour worked by each hourly rated employee.

The spiraling profits of the oil industry is another example which deserves Presidential and congressional attention. Standard Oil of New Jersey's profits are not readily broken down into profit per man-hour, but its net total profits after taxes show the following rate of progression: 1954, $584,793,000; 1955, $709,310,000; 1956, $808,535,000.

And in the first 3 months of the current year, this same company is making net profits after taxes at the rate of $948 million—a 17-percent increase over last year.

If President Eisenhower is truly concerned about inflation and unwarranted price increases, and I believe he is, he should turn his attention, not to workers whose economic gains increase mass purchasing power to the benefit of the country as a whole, but to such corporations and their managements as those listed above and make his appeal to reason and social responsibility to them.

The classical reasons for inflation are not present in this situation. There is no excess of demand over production or capacity to produce. In fact, in the last 2 years the automobile industry, the largest single consumer of steel, has suffered a decline in sales. It is currently operating at about 60 pecent of capacity—despite a need for new automobiles and trucks.

The steel industry is operating at less than capacity.

The electrical-appliance industry, the textile industry, and other basic industries are operating at well below capacity and the workers in these industries have been suffering unemployment and underemployment.

There is a desire and need for these products but the great mass of consumers do not have the purchasing power to buy what they want and need.

The present inflation is artificial because it has been artificially rigged by a few corporations who, because of their dominant positions in industry, set the price of their products without any relation to the laws of supply and demand.

A continuation of the propaganda contest between management and labor, in which each tries to pin the responsibility for rising prices on the other, will not stop the inflationary spiral nor will it protect the American consumer against higher prices.

Both management and labor ought to be prepared to present all the facts before a congressional committee so that the American public will know all the facts and in turn fix the economic and moral responsibility for inflationary pressures which are forcing up the cost of living.

The American labor movement will continue to press for such an investigation.

Bastille Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. MULTER. Mr. Speaker, on July 14, the people of France will celebrate Bastille Day.

In July 1789, the French Revolution reached the peak of its disorder and chaos, when enraged French mobs stormed the Bastille, ancient fortress prison of Paris, razing it to the ground. But this was not a simple act of physical destruction; it symbolized the triumph of the forces of liberty over those of brutality and corruption. It marked the beginning of freedom for the people of France from the abuses of the French royalty, the beginning of a revolutionary storm which was to engulf vast areas of the world.

Today, Bastille Day is the most important French national holiday. And, perhaps, at no other significant point in world affairs, could the world be more keenly aware of its real meaning. As the French forebears of present-day France resisted the oppression of decadent and self-seeking overlords, so, too, did the unarmed citizenry of Budapest, Hungary, seek to wrest despotic control from their overlords less than a year ago. History may not always repeat itself, it is true, but of one thing we all are sure: Man will not submit indefinitely to the irrational actions of a small clique of ruthless dictators whose main concern is to suppress freedom and justice, denying audience to the voice of the people. So, today, we are particularly proud to salute the French on Bastille Day, an international symbol of the unceasing fight for democracy and justice.

The Importance of the Flood Control Dams

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. ULLMAN. Mr. Speaker, one of the most dedicated and courageous supporters of a program of adequate development of the Columbia River Basin has been Mr. Cyril G. Brownell, of Umatilla, Oreg. It is because of such support and dedication that a beginning has been made of the proper development of the Pacific Northwest. The support typified by Mr. Brownell also insures that further development of this region will continue.

Mr. Brownell recently wrote an excellent article entitled "The Importance of the Flood Control Dams." I think his comments will be of interest to my colleagues as they spell out some of the reasons for the needed development of our resource heritage in the Columbia River Basin. Under unanimous consent I ask that this article be included in the Appendix of the RECORD:

THE IMPORTANCE OF THE FLOOD CONTROL DAMS

How many people that reside in the area known as the Columbia River Basin are aware of the fact that the flow of the main stem of the Columbia River, below the mouth of the Snake, during high water in June is more than 10 times the amount that flows during low water in December?

That is the reason the control of the flood waters is so important in the 308 plan of the Corps of Engineers of the United States Army in development of the Columbia River Basin with the greatest benefit to all.

The floods must be controlled by storage in every available location in the upper reaches of the tributaries of the Columbia River to prevent terrific damage during unusual high waters. It will take approximately 25 million acre-feet of storage to give the Corps of Engineers sufficient control to guarantee safety along the lower Columbia River.

In order to avoid the heavy demands by Canada if storage is made on their side of the boundary line, it is necessary to build the storage dams within the confines of the United States. This clearly means we need the Nez Perce and Hells Canyon high dams on the Snake River along with dams on other tributaries of the Snake. All our damaging floods have been caused by delayed runoffs of the Snake River at the same time the Columbia high water occurs naturally. As a rule the high water of the Snake preceeds the Columbia River runoff.

The construction of numerous dams in the upper reaches of the Columbia and Snake River tributaries that will store 25 million acre-feet, or more, would make possible, not only to prevent damage during flood stage, but to increase the firm power of all power dams downstream and also to increase the depth for navigation.

The large number of irrigation projects in existence and in prospect throughout the Columbia River Basin will also become a feature of storing water that returns to the streams gradually. Very often, like the Yakima Valley, the water can be used again and again.

The suggestion of the Corps of Engineers that the navigation dams should be built from downstream up, has been proven that it would have been more feasible in the development of navigation.

It is a shame that the administration and Congress are failing to build the missing link in our navigation of the main stem of the Columbia River by delaying the construction of the John Day Dam which was approved at the same time that the Dalles Dam was approved.

It is recognized that navigation, on a large scale, can be used from tidewater to the Chief Joseph Dam on the Columbia and Nez Perce on the Snake. And also, when complete, smaller boats may be portaged around the high dams and have safe usage of the rivers for many miles above.

The public is quite familiar with hydroelectric power that can be created in such vast quantities in the Columbia River Basin and they also know that the moneys from the Government to build these dams is not appropriated but only loaned and will be paid back with interest to our Government.

On the other hand the public is not making much effort to secure the much needed navigation and no attention, in Oregon, is given irrigation by pumping from the McNary pool like the pumps used at Grand Coulee Dam.

The planning in the 308 plan to develop the Columbia River Basin included power, navigation, irrigation, and flood-control dams. If you build a building the first thing you need is a good substantial foundation. The foundation of the 308 plan is flood-control dams.

It is absolutely necessary to have flood-control upstream in order to create the greatest amount of firm power in each and every dam.

It is just as necessary to have flood-control dams in the upper reaches above in order to maintain as even a flow of water as possible for navigation.

And the construction of dams for the purpose of providing water for irrigation is in itself flood control.

The 308 plans for developing the Columbia River Basin in the great Northwest was made by a strictly nonpartisan group, the corps of engineers of the United States Army. There was no idea of creating a system to be controlled by any certain group but it was for the benefit of all the citizens of this great Nation.

Build the foundations first, build ample flood-control dams where we have complete control within the confines of our Nation. Make the Snake River and its tributaries the real flood-control area of the greater part of the Columbia River Basin.

Reds' Activities Arouse Honduras

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following news story written by Paul F. Kennedy with the dateline Tegucigalpa, Honduras. Mr. Kennedy's story appeared in the New York Times of July 11, 1957, and is as follows:

REDS' ACTIVITIES AROUSE HONDURAS—LABOR AND POLITICAL LEADERS SAY 25 TO 30 ORGANIZERS PUSH COMMUNIST LINE

(By Paul P. Kennedy)

TEGUCIGALPA, HONDURAS, July 10.—The growth of Communist activities in Honduras is becoming a source of concern to anti-Communist labor unions and political organizations.

Competent observers report that from 25 to 30 organizers are carrying on a campaign here and in northern parts of the Republic among labor and students syndicates. The organizers are not admitted Communists but they follow the party line. Apparently they have access to more funds than do the anti-Communist organizations.

There are widespread complaints that the Honduran military Government is not exerting itself to stamp out the growth of the movement, which is illegal here under two statutes.

One source of complaints is that known organizers who operated in Guatemala under the ousted Communist-infiltrated regime of Col. Jacobo Arbenz Guzman are making frequent trips to Honduras for organizing purposes and are not being challenged by immigration authorities.

Two labor leaders said Abel Cuenca, one such organizer, made periodic trips to Honduras during February, March, April, and May. They said the object of the Communists was to organize an elaborate May Day parade May 1. The parade, with anti-United States overtones, was boycotted by labor organizations here.

The parade was one of the biggest demonstrations staged thus far by the Communists and the organizers, according to union leaders. They said it had succeeded because it incorporated the patriotic motif of Honduras' protracted border dispute with Nicaragua, which was just easing at that time. Nicaraguan political exiles received places of honor. Organized labor was put in the position of not being able to denounce the demonstration for fear of being thought unpatriotic.

Efforts are being made by Communist-infiltrated groups to start a central syndicate to attract labor and students away from non-Communist organizations. The campaign is being carried on by radio, pamphlets, and a weekly publication known as Octubre.

Octubre, which follows the Communist line closely, recently printed in serial form a book entitled "Syndicalist Unity."

This book, which blueprints Communist syndicate organization, was written by José Manuel Fortuny, one of the outstanding Guatemalan Communists and an adviser and speechwriter for former President Arbenz. Thousands of copies of the book are being distributed in the northern section of Honduras, where labor is strongest.

Another source of apprehension regarding the activities of the Communists is the electoral statute expected to be decreed by the military junta shortly. The law, which pro-

vides for the election of a constituent assembly, has a provision permitting any group to run candidates as an established party provided it can prove it has 500 members.

Since the new law calls for election by porportional representation, there is a possibility that the Communist organization, under a front, could elect deputies to the constituent assembly.

The fear of the stepped-up Communist activities has become so pronounced that a group of young politicians and army officers is contemplating the formation of an anti-Communist organization after the elections September 21.

Hon. Robert Crosser

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. WOLVERTON. Mr. Speaker, last month, upon my return from Geneva, Switzerland, where I attended the 10th assembly of the World Health Organization in the capacity of congressional adviser, I heard, with profound regret of the death of our distinguished former colleague, Bob Crosser.

Bob and I served together on the great Committee on Interstate and Foreign Commerce for 26 years. We fought together on many, many issues and occasionally we were on opposite sides. I got to know him very well. Bob was a man of indomitable courage and incorruptible integrity. He was a firm believer in democracy in the true sense of the word. He was a champion of the rights of labor, particularly railroad labor. He had a deep concern for the welfare of his country and his fellow men. In short, he was a great man, highly esteemed by his colleagues.

As a final tribute to the memory of our distinguished former colleague, the Committee on Interstate and Foreign Commerce, on which he served very ably and faithfully for over 30 years, including 4 years as chairman, unanimously passed a resolution, which was signed by every member of the committee, expressing profound sorrow on his passing. The resolution reads as follows:

RESOLUTION IN MEMORIAM, HON. ROBERT CROSSER

Distinguished American statesman and beloved former chairman and member of the House Committee on Interstate and Foreign Commerce, who passed away on June 3, 1957, ending a long and distinguished career of devoted public service as legislator, philosopher, scholar, teacher, and a leader of great ability, vision, and indomitable courage.

Born in Holytown, Lanarkshire, Scotland, on June 7, 1874, he immigrated to the United States with his parents in September 1881. He attended the public schools at Salineville, Ohio, and by his own effort overcame serious obstacles to achieve a higher education. He was graduated from Kenyon College, Gambier, Ohio, in 1897, and from the Cincinnati Law School in 1901. He was professor of law at the Baldwin-Wallace Law School in 1904–05.

Manifesting a keen interest in politics at a very early age, he was first elected to public office in 1910, when he became a member of the Ohio House of Representatives in 1911–12. He was elected a member of the Fourth Constitutional Convention of Ohio in 1912, served as chairman of the initiative and referendum committee, and was the author of the initiative and referendum amendment to the Ohio constitution. He was elected as the United States Representative to the 63d Congress from the State at large in 1912, and was reelected from the 21st Ohio District to the 64th, 65th, 68th, and succeeding Congresses and served with great distinction until his retirement in January 1955.

During his 38 years of service in the United States House of Representatives, he established a record of achievement that will be a source of inspiration to all generations to come. He served the people of his congressional district and, indeed, the people of this Nation, faithfully and with great ability. He achieved a position of great leadership and influence, culminating in his election as chairman of the House Committee on Interstate and Foreign Commerce during the 81st and 82d Congresses. He pioneered in the field of railway-labor legislation and was the author of, and led the fight for, the enactment of the Railway Labor Act Amendments of 1934, the Railroad Retirement Act, and the Railroad Unemployment Insurance Act. He blazed the trail for much of the great social-welfare legislation during Franklin D. Roosevelt's administration. He was the champion of the working people, especially the railroad workers.

In all of his actions, he sought to achieve right and truth and justice. He was a man of great sympathy, of broad understanding, of deeply religious convictions of the brotherhood of man and the unity of creation. He was a firm believer in democracy. He built bridges over which his fellow can could pass to a more abundant life: Therefore be it

Resolved, That the House Committee on Interstate and Foreign Commerce, as a final tribute to the memory of our faithful and beloved colleague, the Honorable Robert Crosser, express its sincere appreciation of his great accomplishments, express its profound sorrow on his passing, and extend its sincere sympathy to his family; and be it further

Resolved, That this resolution be spread upon the records of the committee as a memorial to our departed colleague, and that a copy thereof be sent to his family.

Mr. Speaker, during the many years I have had the privilege of serving my constituents of the First Congressional District of New Jersey as their Representative in the Congress, I have seen hundreds of men come and go in and out of this body. I can say in all sincerity that never have I been associated with anyone in the House for whom there has been a higher respect and admiration than Bob Crosser.

My sincere sympathy is extended to the members of his family.

The Emerging Role of Corporate Counsel

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following outstanding address by Leon E. Hickman, vice president and general counsel, Aluminum Company of America, made to the Corporation Counsel Institute of the Ohio State Bar Association held at Columbus, Ohio, on March 21, 1957:

THE EMERGING ROLE OF CORPORATE COUNSEL
(Address by Leon E. Hickman)

I. BACKGROUND

The topic for tonight's discussion is the role of the corporate counsel, the lawyer who functions for a corporation as a full-time, salaried employee. The practice of law within a corporation on a completely independent, fully professional basis is a relatively new development.

From a time antedating World War I and continuing through the 1920's, most high-ranking graduates of the good law schools practiced their profession as general practitioners, quite commonly with the large law firms.

Beginning with the depression and carrying through World War II, a career in Government was something of a fetish among the law-school graduates who were good enough to have a choice. This is not surprising because it marked the beginning of the era of big government, the emergence of the welfare state. New concepts of Government service had to be planned, enabling statutes of revolutionary scope drawn, lobbied through Congress and finally both administered and litigated. Government service is still a stimulating field for the lawyer because great responsibility comes relatively early in one's career.

The period since World War II has been the era of the salaried corporation counsel. His emergence was in response to the ever-increasing need for daily counsel on the legal intricacies of public regulation, both by statute and administrative agency. I am sure I need not labor the growing complexity of doing business lawfully in a period when regulation by the Securities and Exchange Commission, the Federal Power Commission, the Wage and Hour Administration, and Robinson-Patman, not to mention the revitalization of such oldtimers as the Sherman Act and the Clayton Act, followed each other in bewildering succession. The growth of corporations to a size where their impact on the social and economic well-being of the Nation gave them public responsibilities of a vast but indeterminate nature also made the detached and trained viewpoint of full-time legal advisers quite indispensable. Today most corporations which are more than local enterprises employ counsel on a full-time, salaried basis.

The gradual evolution of corporate counsel over this half century can be roughly traced by the popular characterization of him. In the 1920's the occasional lawyer who drifted into corporate employment was rather derisively referred to by most of the general practitioners as a "kept" counsel. It was assumed that such a lawyer had sold his professional independence for a monthly paycheck, that the hand which controlled the purse controlled his conscience and that he could not advise his corporation effectively because he was employed by it.

As we emerged from the depression, the corporate lawyer gradually assumed a greater variety of duties commensurate with the growing complexities of corporate life. In this period, he rose in professional stature to the dignity of "house counsel," an humbling but honorable title which implied employment on legal housekeeping tasks, the drafting of minutes or resolutions, the preparation or examination of routine papers, the drafting of contracts of a repetitive nature, but hardly responsibility for really complex legal problems.

Since World War II, house counsel has emerged as "corporation counsel." The head lawyer has commonly become the general counsel, usually an officer of the company, not infrequently a member of the board,

and, if circumstances are right, a party to the corporation's innermost councils and planning.

My background for discussing the developing role of corporate counsel is based on 26 years in the general practice of law and 6 years as general counsel of Aluminum Company of America, popularly known as Alcoa. In my years of general practice, I was a partner in the Pittsburgh law firm currently known as Smith, Buchanan, Ingersoll, Rodewald & Eckert, a partnership that is large and successful by Pittsburgh standards.

* * * * * * *

II. SOME POPULAR MISCONCEPTIONS

It has long been assumed by general practitioners that the corporate counsel forfeited his professional independence in accepting full-time employment, that he probably spent his time giving the advice that his nonlegal colleagues wished to hear and that, at best, he was no more than a slave to the dictum attributed to Elihu Root that—

"the client never wants to be told he can't do what he wants to do; he wants to be told how to do it, and it is the lawyer's business to tell him how."

I doubt if that picture was ever true; certainly it is completely false today. I know well the general counsel of most of the larger firms and have discussed with many of them their professional position and freedom. Kept they may be in the sense that the corporation pays their salary regularly and generously; kept they are not if one means that someone is the keeper of their conscience or of their professional judgments.

Freer men I have never known. Having staff rather than line functions, they are not subject to pressures to make a certain sales quota or to reach a production target. Often they alone are in a position within a corporation to stand out against wrongful business pressure. Their success does not depend on production or sales or a treasury balance; it depends upon being men of good judgment. That judgment must include a sound knowledge of law, the process by which both legislatures and courts make new law, and the ability to state one's convictions effectively but in good spirit.

These corporate counsel can and do take the long view. They are not entitled to exercise a veto power over corporate action and they do not aspire to that role. But if they are competent, they are listened to as one voice in the corporate family which is detached, analytical and objective, and which is raised with the corporation's overall and long-range interests always in mind.

I know of no corporate counsel who holds with Elihu Root's dictum. Mr. Root was probably right in his estimate that most corporate officials like to be told how to do what they have decided should be done, but the really responsible executives are equally appreciative of well-thought-out advice that a certain course of action is unsound, and that neither it not anything like it should be undertaken.

I suppose that many think he who controls the purse controls the mind, and that corporate counsel cannot have an independent judgment with respect to the plans of those who pay his salary. I have found it otherwise. A corporation counsel may not only reach an undesired conclusion, he is in a position to stay with it long after his brethren in the general practice might well find it the part of wisdom to rest on their record and the shield that the responsibility for error was not theirs.

The great danger to the professional independence of the corporate lawyer—and the only danger that I recognize—lies within the lawyer himself. It is that he may choose to subordinate his professional judgment to a commercial one; that he may forget that he is the lawyer but not the businessman. Yet if his interest in commercial considerations is kept in proper perspective, his value as a counselor increases. He becomes interested in keeping the company out of the red as well as out of the courtroom; in maintaining a trained, productive labor force as well as in Taft-Hartley; in employee safety as well as Workmen's Compensation; in effective salesmanship as well as Robinson-Patman; and in better production methods and new applications quite as much as in patents and infringements. This added comprehension improves his legal judgment. But he must never forget that his responsibility remains legal rather than commercial. Otherwise he is only the baseball pitcher who subordinates concentration on his curve and his control to the twice-a-season double.

A second misconception is that the corporate lawyer has a captive clientele. I have not found it so. If his judgments are not respected, if he is not available for consultation when wanted, or if he runs with the ball and makes the nonlegal decisions as well as the legal ones, his nonlegal brethren simply do without the advice of counsel when the need next arises. Of course, those corporate officials who deal only in matters of ultimate responsibility and with questions of obviously grave legal consequences, do not have this escape from lawyers; but nine-tenths of the matters that occupy the attention of a corporate legal department would simply be decided without the advice of lawyers if such counsel were not given cooperatively, promptly, and competently.

Another piece of folklore is that corporate lawyers are employed on salary to save money. I doubt that such an assumption is valid. The usual corporation lawyer would be less than human if he did not notice that outside counsel occasionally charge as much for a month's work as he may receive in a year. But such thoughts overlook the fact that corporation counsel is not only assured of a salary—and usually a good one—but of an office, a staff, a pension, possibly a stock option, and the variety of additional perquisites that go with his particular status as an official of his company. Corporate law departments have an increasing acceptance, not because of their relative cost, but because of the service they are in a position to perform.

If the corporation lawyer is to justify himself it must be on the basis that he renders a superior service. This I believe he does, not because he is a better lawyer, but because he is in a more favorable position than the general practitioner. For example, I am satisfield that I am a much more effective counsel to my corporation in my present capacity than I was as an outside general practitioner devoting almost full time to its work. The corporate counsel holds all the advantage in position, whether viewed from the standpoint of access to facts, understanding of personalities, comprehension of issues, or appreciation of long-range corporate policies and objectives.

II. THE UNIQUE ADVANTAGES OF THE CORPORATE COUNSEL

In most ways the corporate counsel functions like any other lawyer. He negotiates, drafts, and reviews contracts and written agreements of all sorts. He determines the legal meaning of statutes and written agreements. He participates in negotiations. He gives ad hoc judgments on an infinite variety of proposed corporate moves. He may or may not do courtroom work, depending largely on his own inclinations. He employs general law firms and work with them.[1]

But there are at least three aspects in which the corporate counsel is in a position to be uniquely effective. He may practice preventive law; he can be certain of his facts; and he can schedule his work on an acceptable timetable. How well he utilizes these advantages of his inside position is up to him, but the opportunity is there. If the possibilities in all three fields are fully developed, you have a lawyer at his maximum effectiveness.

1. A corporate counsel is in a position to practice preventive law: It has been said that a corporation needs a legal department in order to avoid the need for lawyers.[2] This is true for a variety of reasons.

Corporate counsel can be and usually is called into consultation early, commonly before any legal problem has arisen. He commonly participates for weeks or months in the planning, the discussions, the development of the corporate projects before legal difficulties arise. He has maximum opportunity to anticipate trouble. He may meet such legal difficulties either by counseling action that he regards as legal or by suggesting a change in the program that avoids the issue altogether. He is consulted in advance of legal trouble on an infinite variety of spot decisions; and this comes easily, both because he is available and because the advice does not add to the cost of the project.

It is not so natural for outside counsel to occupy this forehanded position. Commonly he is only consulted after a legal obstacle has arisen. While he could have been consulted earlier, there are difficulties. The corporate official who foresees the possibility of a legal problem may deprecate the time it takes to give outside counsel a correct feel of the facts or may be reluctant to incur additional expense. And perhaps the problem will never arise anyway. None of these considerations militate against a telephone call, a memorandum, or a conference with house counsel.

The long view is an important facet of preventive law. Much of a corporation's legal trouble arises from decisions to win today's battle and let tomorrow take care of itself. Consistent with this pragmatic philosophy, outside counsel, when retained, is frequently requested simply to construe a statute, draw a contract, or advise on the legality of a proposed corporate decision without being made a party to the total course of action of which the decision is but one piece. It is not so easy to limit the frame of reference of the corporation counsel. No fellow employee is in a position to tell him that he is not being asked to consider the long-range implications of a course of action or the effect of one department's moves upon the legal position of another. The frame of reference within which he operates, and must operate, is as broad as the interests of the corporation itself.

2. The corporate counsel is in a position to be sure footed on his facts: Most legal problems find their origin and their answer in the facts. One of the great values of corporate counsel is his ability to get the facts of a situation, not only promptly but accurately and fully. He has the advantage of devoting his full time to the affairs of a single company and of knowing its overall policies, programs, and problems with the assurance born of day-to-day relationship with them. He has a rather accurate basis for appraisal of the ability of his nonlegal corporate colleagues to give him the facts on which he must act. He is in a position to know who are objective and analytical, as well as those who are constitutionally optimistic or inclined to submit only those facts which will produce a predetermined answer. Additionally, house counsel is in a position to get data from any source within the corporation promptly and as a matter of routine.

Outside counsel does not commonly enjoy such advantages to an equal degree. His contact with the corporate organization usually cannot be as close or on as wide a scale. Normally, he cannot start with as thorough a knowledge of the company's overall position. The very existence of

Footnotes at end of speech.

Footnotes at end of speech.

factual investigations by outside counsel may arouse rumors, fears, and occasionally an effort to cover up mistakes. With rare exceptions, the ouside counsel considers only those problems which are brought to him and builds his factual background by a cross examination of the corporate employee who consults him. His knowledge of the facts is not apt to be much better or broader than the knowledge of the man which whom he talks, one who commonly is not a lawyer. Such further investigation as he may direct is likely to be on the basis of leads developed in these conversations. The general practitioner's preoccupation with the affairs of many clients, and his limited authority to probe behind the facts given to him, tend to limit rather severely the factual background of the outside practitioner. The files of many companies are replete with brilliantly reasoned opinions of general practitioners which have little or no value because of the incompleteness or the distorted emphasis of their factual assumptions.

The fact-finding advantages of the corporation counsel should be fully utilized. They are an indispensable tool to the practice of preventive law.

3. The corporation counsel is in a position to work on an acceptable timetable: I was somewhat shocked after 26 years in the general practice of corporate law to learn how little comprehension I really had of the importance of timing in corporate counseling. Litigation presents no problem, for the court determines the timing; nor does a Securities and Exchange Commission registration, for the underwriters and the Commission dictate the schedule. But in that great intermediate field of decisions on competitive problems such as the applicability of Robinson-Patman or the drafting of a contract or a deed, general practitioners, to a greater extent than house counsel, tend to view the assignment in isolation and as a timeless project. In a way this is not surprising, for the problem is usually submitted to them in isolation from the surrounding circumstances. And in the normal course of events, these legal assignments, artificially isolated from a current commercial struggle, take their place on the genefal practitioner's desk in competition with pending assignments, commonly for other clients.

Inside corporate counsel should have a better knowledge of timing. A Robinson-Patman Act question not uncommonly originates in a telephone call from a district sales office asking if a price may be cut or some other concession granted on a sale which, at that very moment, is being competitively sought by the company and its competitors on the basis of comparative price or terms. Unless the general sales representative can get legal advice within a matter of minutes, or, at most, of hours, he does not need the advice for the sale has been lost to a competitor by the company's inaction.

It is here that staff counsel has a great advantage. If a corporate legal department is well organized, there are at least 2, and preferably 3, lawyers in the department who are completely current on all decisions under Robinson-Patman and on the company's sales policies and problems. If certain commodities are under great competitive pressure, the house counsel should know it as a matter of daily liaison with the sales people with whom he regularly works, eats and plays. He is in a position to pass on the legality of a proposed sales gambit almost as soon as it is put to him. If more research is needed, he does it between legal assignments, knowing that the next problem in the same field will also come to him.

The ability to make the required legal decisions in timing with the nonlegal aspects of the same project is furthered by the common practice of assigning staff counsel to a corporate project at its inception, well in advance of any legal problem. Counsel sits in on the initial discussions between engineers, salesmen, or accountants, as the case may be. When a point of legal doubt is reached, counsel is not only there but he is completely conversant with the factual background and the personalities involved. On most such occasions, he will have had days or weeks of forewarning that at a foreseeable point in the project certain types of legal problems are to be anticipated, and when they are reached, should be able to pass upon them with a timeliness that will permit the project to continue without a break. I cannot stress too much the importance to a dynamic, competitive enterprise of a prompt legal decision.

Such speed is not often possible with outside counsel. Most corporations would be reluctant to retain a firm to absorb so much preliminary background before approaching the legal problem. The more normal procedure would be to await the legal impediment, then call in outside counsel, explain matters to him from the beginning, give him time to research the law, to get the matter on his own calendar in competition with assignments of other clients, and finally to give an answer.

Another advantage to a corporation in the employment of staff counsel is that these lawyers are available at all times for the company's work. More than that, their time can be marshaled so that they give priority to the problem that is most urgent. It is not always so with outside counsel who have a number of clients. It is no answer to one client to say that another's problem is more urgent or more important, for to the first client it is not. It is much easier within a single corporation to decide which problem is the most urgent, or, if there be a difference of opinion, to determine which corporate official takes precedence.

The timetable is also improved from the standpoint of the corporate official in that much less time must be spent with house counsel in explaining the problem than would be the case if a lawyer were called in from the outside. This makes the businessman much more ready to recognize a legal problem or the need for a lawyer's advice.

* * * * *

Thus far we have seen that the corporate counsel enjoys three unique advantages in working from within the corporate structure. If he lives up to his opportunities, he practices preventive law to the hilt; he understands the factual basis of his corporation's problems and their significance better than almost any man in the company; and he gives his counsel in a timely fashion that has an importance little understood outside the corporation. So much for the ability of the good corporate counsel to translate the advantage of his position into effective, day-by-day counseling.

The position and status of the corporation counsel give him another role to play, perhaps more significant than the ones already discussed. This is his opportunity, his right, indeed his duty, to counsel and encourage good corporate citizenship. The importance of this role can hardly be overstated.

IV. THE EMERGING ROLE OF THE CORPORATE COUNSEL AS AN ADVISER ON CORPORATE CITIZENSHIP

The corporate lawyer is in a uniquely effective position to counsel and encourage good corporate citizenship. The importance of an acceptable corporate citizenship in our delicately balanced capitalism cannot be overemphasized. Corporate freedom of action extends only so far as there is at least public acquiescence, and preferably public support; and the public is fickle. It is the corporation counsel's prime function to work toward maintaining the public's support and consent for the existing and evolving corporate form.

I do not mean to imply that his is likely to be a voice in the wilderness. Every good management is well aware of the pressures on our evolving corporate capitalism and is extremely sensitive in its appraisal of the consequences of compliance with or resistance to these pressures. But a corporation can proceed into this difficult area with much more effectiveness if its corporate counsel is also alert to the problem.

1. The growing contribution of modern corporate capitalism to the social and economic well-being of the Nation is matched by its increasing political vulnerability: The latter is its Achilles' heel. Our national mass-production industries have grown, not by any design of management, but in response to the spiraling demand of the American people for an ever-increasing standard of living. The goods and services that are required can only be produced in the quantity, the quality, and at the price required by the consuming public if larger and larger amounts of capital are pooled into single mass-production enterprises. Our corporate society has evolved as the servant of the people; not their master.

Yet the American public is worried by size. It yearns nostalgically for the horse-and-buggy days, the village blacksmith, and the corner grocery store. It respects the emergence of individuals—of human personality—and subscribes to the folklore that men develop more fully in an atmosphere of small business and individual effort. Yet, in truth, our people would not return to that earlier society if they could, for they would be repelled by the limitations imposed.

Today, the demands of the American people have brought into being an entirely different type of organization. In nearly every industry there is a hard core of mass production, on the periphery of which are thousands of suppliers, fabricators, and distributors.

The automobile industry is the classic prototype. Five manufacturers make the cars that are such a dominant part of the social and economic pattern of the United States in the 1950's. Employment by these five companies aggregates several hundred thousand men and women. Many times that number supply the raw materials, build the highways, and staff the garages and filling stations that are to be found on almost every busy corner of each municipality in this land.

Aluminum, steel, chemicals, electronics, and scores of other basic products currently in large demand present a similar pattern.

These vast corporate enterprises exist as an answer to a social and an economic need. But what has been created can be destroyed, obviously in the market place, but almost as certainly by political action.

2. Every abuse of corporate power, real or imagined, no matter how legally conceived or executed, is almost certain to be followed by governmental restrictions on corporate freedom of action: These restraints are the inevitable responses of a sensitive political apparatus to the wishes of any considerable segment of the American people.

The right of railroad companies to run their own enterprises according to their private judgments was taken from them by the creation of an Interstate Commerce Commission. The Sherman Act was a sensed and continuing judgment of the American people against monopolies. The issuance of corporate securities is strictly curtailed as a consequence of the excesses of the 1920's, albeit excesses within the law. Public utility holding companies paid for pyramiding with a sentence of corporate death. The pricing of merchandise is controlled, con-

fused, and confounded by the Robinson-Patman Act, which was an extreme response to what were believed to be abuses of corporate power in the pricing of products.

* * * * *

Another deeply significant facet of this emerging corporate capitalism is its ownership by millions of relatively small shareholders. Tomorrow's capital, which will support and extend our corporate society, will be provided in relatively small amounts by millions of people and by their collective savings channeled through pension trusts, labor unions, and life insurance companies.

One vital problem of the professional managers who have succeeded to the leadership of the great corporate enterprises of today is to conduct them in a manner satisfactory to this new class of shareholders; and, quite as importantly, to explain and justify their stewardship. The American Telephone and Telegraph Co. is owned by over 1,500,000 shareholders; General Motors Corp. by over 650,000; the Standard Oil Company of New Jersey by more than 400,000 people; and my own company, only recently emerged from a closely held ownership, by some 27,000 shareholders. The interests of these shareholders must be understood and protected. Corporate counsel should be their counsel, too. The problem is the more difficult because shareholders so fragmented are almost necessarily inarticulate. Yet their savings represent the capital on which our corporate society must depend. More than that, these shareholders represent in increasing percentage of the voting public, and their views will weigh ever more heavily in the shaping of the corporate future.

As a colleague [2] has put it:

"The point I want to make is that the court and jury that concerns the corporation counsel today is not sitting on an isolated case in a single courtroom. It sits as perpetual grand jury with powers just as sweeping. It sits continuously across the land; and with the speed of modern communications it can get and appraise the evidence very rapidly indeed."

3. The corporate lawyer is in a strong position to counsel and encourage legal conduct that will merit public support: It is here that corporate counsel can perform his greatest role. He is a student of the gradual enlargement of our common and statute law. If he is worth his salt, he knows better than most those economic and social pressures that will find their way into law, as well as those that are false and predatory.

The post of corporate counsel is no role for an appeaser; he must know just as well when to advise as when to yield a little in order not to lose a great deal more.

More importantly, he must know how to deploy corporate forces so that on most occasions battle lines will never be formed. He must rise above the cautious role of the lawyer who simply advises that a proposed course of action is legal or illegal and leaves to others the wisdom of the corporate policy.

The corporate counsel's voice should be insistent in favor of going beyond bare legal minima, when to do so will build for his company a reservoir of public good will, or minimize or eliminate what would otherwise be a widespread feeling of injury or injustice.

Corporate support of higher education, of hospitals, and of community betterment—explained to and supported by the shareholders whose money is being spent—are illustrations that quickly come to mind. The equitable sharing of one's own production with customers in times of shortage is another. The insistence upon the letter of a contract when the consequence is widespread distress in certain areas of our economy is an obvious example of a course to be avoided. In the long run, a corporate policy or program is not justified, and will not benefit the company expounding it, unless it benefits consumer, supplier, employee, and shareholder alike.

Corporate counsel is freer than anyone else in the corporate family from pressure, and his responsibility is correspondingly greater. He has no direct responsibility for production, sales or finance. He operates from a detached staff position. He is trained in analysis and is a student of the political processes out of which our laws and free capitalistic society have emerged. Like the abbott in the ancient monastery, the clerk to the feudal baron or the chancellor to the king, the corporation counsel is in a position to wield a unique influence. The fact that his number is rapidly increasing and the importance of his role recognized and utilized, leads me to believe that, as a group, corporate counsel are exercising their prerogatives constructively. At least, that is my hope.

Fantastically Foolish To Strengthen Red China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of June 29, 1957. It exposes convincingly the fallacies in the arguments advanced in some quarters for larger trade with Red China. When has our country ever benefited in the end by helping Communists?

TRADING WITH RED CHINA ISN'T NECESSARILY REALISTIC

Since the British Government served notice that it intended to permit its nationals to trade more extensively with Communist China than they have been permitted to do since the Korean war, an apparently coordinated chorus has risen to insist that the United States must eventually adopt the same policy. The British argument is that it is illogical to enforce restraints upon trade with Red China which we do not impose on trade with Soviet Russia.

There is a certain logic in this position as far as the British are concerned, although it might be more aptly stated backward: why not be as tough on Russia as we are on China? Surely Great Britain has as much reason as we to fear the triumph of communism in the world. Anyway the British argument hardly disposes of the reasons why the United States has up to now refused to remove, or significantly modify, the ban on trade with the Chinese Communists. Undoubtedly, however, Britain's action will step up the pressure upon our Government to follow suit. Indeed, we shall be fortunate if we do not find ourselves helping build up the Red Chinese war strength on the unique theory that this is the way to weaken it.

The Battle Act, which attempts to regulate trade with "nations threatening the security of the United States," has been more strictly applied to Communist China than to the Soviet Union for the simple reason that at the moment China presents the more immediate threat. After all, the Communists are holding Americans in their prisons, and in Korea are building up their war strength contrary to the terms of the armistice. Red China is still officially at war with the United Nations, having been formally condemned as an aggressor. It would be as fantastically foolish to strengthen Red China now as it was to provide Japan with the sinews of war in the late 1930's.

Another factor which is generally glossed over by advocates of more trade with Red China is the fact the West would have to accept the products of slave labor. The Committee of One Million Against the Admission of Communist China to the United Nations has pointed out that, according to an official report by Secretary General Hammarskjold to the United Nations Economic and Social Council, "the Peiping regime has literally enslaved 25 million Chinese—perhaps the greatest slave-labor force in modern times, exceeding even that in the Soviet Union." The determined opposition by labor-union leaders to recognition of Communist China rests largely upon ability of countries using forced labor to dump their products abroad at prices which cannot be met where free labor conditions prevail. Even those entrepreneurs who may be tempted by the prospect of a little competition for labor leaders would hardly welcome serious damage to the economy from an unequal contest with slave-produced goods.

Finally there is the fact that the Communist conquerors of China are widely reported to be in a political and economic crisis. If this is true, it is good news for us and the free world. Why curdle so desirable a possibility? Why fasten the shackles even more tightly on the Chinese people and destroy what is left of free Asia's confidence in American good faith?

United States and International Labor Organization

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the New York Times, New York, N. Y., on Tuesday, July 2, 1957, entitled "United States and International Labor Organization":

Failure of Congress to raise the ceiling on United States contributions to the International Labor Organization has put this country in a most embarrassing situation before the 77 other member nations. Our share of the burden of International Labor Organization expenses has long been 25 percent—the lowest proportionate contribution we make to any of the United Nations agencies. But for some time past our payments have been limited by act of Congress to $1,750,000 a year. Unless this ceiling is raised the United States will be $42,000 in arrears before this year is out.

Last week the International Labor Organization conference adopted a budget for 1958 of $7.9 million—an increase of only 4 percent over 1957. This was due almost entirely to adjustments in salaries and allowances to bring the International Labor Organization in line with U. N. scales. Our Government delegates had to cast 2 of the 3 negative votes (there were 148 yeas) because the present ceiling on United States contributions would make us fail by $214,000 to meet our share of the 1958 International Labor Organization's bills. How picayune can we be?

But it is not too late to save our pride and honor. Senate Joint Resolution 73 would raise the limit on our payments to $2 million, which would allow us to meet our obligations at least through 1958. This measure was approved by the Senate Foreign Relations Committee and has passed by the Senate without a single dissenting voice. It is now before the House—in the Foreign Affairs Committee. We urge immediate and favorable action.

Army Missile Development Should Be Continued

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. ANDERSON of Montana. Mr. Speaker, in recent days I have noted an increasing awareness of the move to guillotine the Army's missile development program, and some of the reasons for such action. Secretary of Defense Wilson's policy of cutting the Army's program is beginning to take effect in a number of ways.

It is my sincere hope for our Nation that Mr. Wilson or his successor, will take a whole new look at the missile program and give Army the go-ahead signal to proceed with its already phenomenally successful developments in this field.

It is disturbing to see that a top German scientist, Dr. Hermann Oberth, "the father of modern rocketry," may go back to Germany because the United States cannot watch a $2,400-a-year pension. After 2 years in this country, Dr. Oberth feels now that he is ready to start "my real work." I hope that some arrangements can be made to retain in the United States this scientist, who rejected offers of the Soviet and of Germany to work on missiles over there.

That, however, is a personnel problem for Army's Redstone project.

The underlying crisis, I think, is best described in an article which appeared in a recent issue of the Washington Post, entitled "New Weapons Question." Written by John G. Norris, the article indicates clearly the fundamental issues at stake in this crucial policy struggle.

The article follows:

NEW WEAPONS QUESTION

(By John G. Norris)

DISPUTE RAISED OVER ROLE IN DEVELOPING MISSILES

Shall private enterprise take over the entire job of developing new weapons for the Armed Forces, particularly the vital, new missiles that soon may largely replace conventional aircraft and guns? Or should the Government, the universities and other nonprofit institutions continue to do a considerable part of the job? The issue, analogous in some respects to the long standing fight between private and public power interests, promises to develop into a major national dispute.

According to Col. John C. Nickerson, Army missile expert who recently was court-martialed for leaking defense secrets, this underlying controversy had much to do with the Army-Air Force row over the Jupiter and Thor ballistic missiles and Defense Secretary Charles E. Wilson's decision in favor of the Air Force's Thor.

Nickerson testified that the Air Force and the aircraft industry want to scuttle the Army's missile program and maintain a profitable working relationship that runs into millions and millions of dollars. He did not suggest that the relationship or actions were illegal, but noted that many military men and civilians leave the Pentagon to take big jobs in the industry.

Beyond what the Army colonel said and hinted, there is the definite fact that the Air Force—and the Navy Bureau of Aeronautics—rely almost entirely on private enterprise for the development of new equipment, while the Army, along with the Navy Bureau of Ordnance, conduct much of their development work at Government plants or nonprofit institutions.

The Army's 1,500-mile Jupiter, which already has been successfully tested, was developed at Redstone Arsenal, Huntsville, Ala., largely by scientists and engineers on the Government payroll. The rocket powerplant for the Jupiter is a product of an aircraft company, and some other proponent parts of the Jupiter also were farmed out to industry. But the overall direction, much of the extensive engineering work, building of prototypes, and testing of the missiles have been in Government hands at Redstone Arsenal. When and if the Jupiter is perfected and authorized for production, private industry will tool up and build it.

Somewhat similarly, the Johns Hopkins University Applied Science Laboratory in Silver Spring has developed a whole family of missiles for the Navy Bureau of Ordnance under its basic "Bumblebee" research project. They include the antiaircraft missile Terrier, now in use in the Fleet, and the Tartar and Talos that will be ready in a year or so. Scientists at Johns Hopkins, a nonprofit institution, carry the development work on the missiles through the building of prototypes and testing stage, when private industry takes over actual production. Other leading universities have set up laboratories undertaking similar development work under nonprofit contracts.

The Air Force's Thor, in contrast, has been largely developed by private companies, headed by Douglas Aircraft, under USAF guidance and inspection.

Much of what Nickerson and other Army partisans have said is strongly disputed, but the heads of the Nation's aircraft industry make no secret of what they think about one point in his testimony. Retired Air Force General Orval R. Cook, president of the Aircraft Industries Association, brought the long standing internal controversy over missile development out into the open at a news conference this week.

"I personally think the Government arsenal has about outlived its usefulness," Cook bluntly told newsmen. He said flatly that the universities should confine themselves to teaching and basic research, and turn over all development work from conception on to industry. Cook said at the start of his press conference that he wouldn't comment on the Nickerson statements and "didn't want to get into a controversy." But it seemed clear that his words were aimed at answering the Army colonel and staking out his industry's claim for the growing missile field.

Cook argued that aircraft missiles were quite similar and that the aircraft industry can cut missile costs if given the whole development and production job. He conceded that nonprofit institutions can do development work cheaper than aircraft plants, but declared that this is more than offset by the long delays and costs incident to transferring a project from developer to the producer.

Cook made it plain that he thought all arsenals—not just Redstone—could well be abandoned. Nonprofit agencies like the Johns Hopkins Laboratory, he said, should confine their work to basic research—possibly carrying it forward to flying a handmade test vehicle but not through prototype tests.

Maj. Gen. J. F. Phillips, United States Air Force, retired, who heads the AIA's missile section, agreed that, under this rule, the Silver Spring laboratory might have developed the original Bumblebee ram-jet test vehicle but then turned over the job of developing the actual missiles that stemmed from it to private enterprise.

Proponents of the arsenal system have argued that Government engineers at Redstone save the Government money by providing a closer check on industry costs and profits. Some have compared the arsenals to maintenance of Government TVA powerplants as a yardstick to judge private power costs and rates. Cook said this was not a factor in his industry's attitude, and that "we're interested in keeping down costs."

Newsmen reminded Cook that Chrysler, an auto builder, has been slated to be prime contractor for Jupiter when and if it goes into production. They asked that when he argued for industry to take over the work of the arsenals and universities, did he mean all private enterprise or the aircraft industry? Cook said he was championing all private industry, but felt his industry was the best qualified for the job.

Basically, however, Cook is fighting for the survival of much of his industry as plane contracts dry up, and missiles become the thing. What the airframe manufacturers want is to be accepted as the developer and prime contractor handling the entire weapons system of new missiles. For the job of building the frames for missiles is a minor one and the big plane builders can only remain big by getting in on the ground floor and supervising the overall job of building the robot missiles.

Norman Chandler

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. HILLINGS. Mr. Speaker, Time magazine of July 15, 1957, contains a cover story concerning Mr. Norman Chandler, publisher of the Los Angeles Times. This article discusses the tremendous growth and impact of the Los Angeles area and points out the outstanding civic leadership rendered by Mr. Chandler in helping to make such great progress in southern California possible. I hope all of my colleagues will have an opportunity to read this interesting and thought-provoking article.

The article follows:

CITIES: THE NEW WORLD

Los Angeles wants no dudes, loafers, and paupers; people who have no means and trust to luck, cheap politicians, failures, bummers, grubs, impecunious clerks, bookkeepers, lawyers, doctors. We need workers. Hustlers. Men of brains, brawn, and guts. Men who have a little capital and a good deal of energy—first-class men.

Goatee aflutter, walrus mustache aquiver, Col. Harrison Gray Otis, 48, late of the Union Army and—in 1886—editor of the Los Angeles Times (circulation 2,500), fired his editorial cannon ball into the boom-frantic town by the Pacific. To the pueblo settlement seething with rainbow chasers, this shot barked out a gruff prophecy: Thenceforward, the Times and her guardians would man the lanyard of Los Angeles destiny.

Today—only 71 years later—Los Angeles groans in the echo of that cry. A once meager patch of sand in southern California, its rubber band boundaries stretch past a natural basin rimmed by mountains, flow over the hilltops and peaks into the valleys and deserts beyond, nudge the very Pacific beaches.

SATELLITES AND EARACHES

The "city," essentially, is no more; its 445-square mile area with 2 million inhabitants is only a mother country, and its satellites sprawl around its perimeter for 4,853 square miles—more than 3 times the size of Rhode Island—overreaching Los Angeles County, enveloping adjacent Orange County to the south. It is the Nation's fastest-growing megalopolis, with a population (6 million) exceeding that of Montana, Idaho, Wyoming, Colorado, New Mexico, Utah, and Nevada combined. And, like an emergized ameba, it is bewilderingly fertile.

Nourished by a generous soil and a benign climate, this open-toed, pastel empire last week beat with a great humthrumming vitality. On Wilshire Boulevard, rivet guns prattled into the fresh steel of new office buildings. The reiterated whop of the hammered nail rang out in a 6,000-house development on San Fernando farmland, in a 17,000-house subdivision in the tawny hills 40 miles to the southwest in Palos Verdes—and wherever bulldozers sliced down citrus groves to make room for more. From the swarms of workers in electronics and aircraft plants came one big, tumultuous earache. And millions of nerves throbbed with the nightmare of 3 million cars (one for every 2.2 people vesus Detroit's 1 for ever 3.2) cascading over 204 miles of multilaned freeways. Added to this was the arrival in Los Angeles last week of 4,200 pop-eyed newcomers (25 every hour of the year). Like the ever-moving, ever-changing populace that moved aside to make room for them, the new Angelenos eagerly got set to join the scurrying rhythms and busy polyphony: to work more change, to make more moves, more money, new houses, new businesses—and to crowd out of the way of next week's horde of 4,200.

MONOLITH AND CATALYST

In this bouncing scenery, the one unchanging force is the Los Angeles Times. Each morning it drops with a thick, self-assured plop on 462,257 doorsteps from Anaheim to Azusa,[1] like a faintly welcome striped-pants uncle (wealthy but voluble). Neither a great newspaper nor a poor one, the Times, from its downtown limestone monolith, serves as an unshakable herald, chronicling the region with loving detail, goading Angelenos toward the melagopolitan destiny ordained by Harrison Otis.

Presiding today over the Times is Norman Chandler, 57, a brawny, silver-haired man (6 feet ½ inch) with the sun-coppered frame of a Laguna Beach lifeguard. Grandson of Harrison Otis, Norman Chandler directs much more than the day-to-day region-raking of the Times. Individually, and with his wife Dorothy—and through the shareholdings of 4 sisters and 2 brothers—he rules a multi-million-dollar business network that glitters in paper manufacturing, real estate, securities, television, commercial printing, ranching, and oil. With his heritage and his holdings, Norman Chandler is the megalopolis' catalyst.

Beneath the foam spray of Los Angeles' motion, Chandler and the Times represent the floorless depths of calculated energy. Where other big cities grew at first into distinguished monuments only to lapse often into monumental despair, Los Angeles surges into endless patterns of change. Beginning with Harrison Otis, its builders reached out for new waves of pioneers, swept them into the dry-bed land, let in the waters and kept them churning. In shifting currents, they flooded new places and brought still more currents behind them. An endless stream of industry flowed in to tap the new buying power, and as industry expanded on a wide base of diversification, new manpower flowed in to energize it. Thus change begat change, and in an inexplicable response to the call of change, thousands of dissatisfied or adventurous Americans, rebuffing the peace of familiar surroundings, crossed the mountains and deserts to glory in a peace of change. With Chandler's powerful support, Los Angeles built the gigantic (capacity: 105,000) Memorial Coliseum in 1923—so that the city might one day house the Olympic Games (it did—with Times Reporter Henry in charge—in 1932). To end the jungle of railroad tracks and separate stations that marred the downtown area, Chandler helped push through the graceful, comfortable Union Station. Rolling briskly along, he pushed the "All-Year Club," which pulls more tourists (1,500,000) to Los Angeles in summer than in winter, as well as the mammoth (membership: 487,000), politically powerful Automobile Club of Southern California.

HOOVER AND HOT DOGS

With it all, Harry Chandler was an exceedingly practical man. Though he fought hard for the Hoover Dam on the Colorado River (7 percent of southern California's water), Chandler, who had vast land holdings below the border in Mexico's Baja California, fiercely (but unsuccessfully) opposed the building of the All-American Canal in 1934–1940, which diverted Colorado River water into the north-of-the-border Imperial Valley and thus robbed him of his Mexican development potential. He enraged his fellow Angelenos even more in the depression-ridden thirties when he sold the Times' site at Broadway and First Street to the city for $1,193,345, when the property was carried on the tax rolls for only $300,000.

But there were few to criticize; and anyway, Harry Chandler's fellow Californians were too busy being swept into wonderful new worlds of magnitude: Signal Hill, in Long Beach, had suddenly erupted with oil discovery in 1921, and other strikes followed. Geologists, homeowners and hot-dog hawkers went wild with new oil finds; corrupt politicians and dogged reformers exchanged office in a frenzied game of musical chairs; under its own klieg lights, Hollywood shimmered and shimmied in its greatest days of bosom-rattling hedonism—and was busy cranking out the newfangled "talkies."

HEAT AND URBANITY

The blusterous lead of General Otis had long passed. Harry Chandler, pulling the lanyard ruthlessly, triggered his way into the heated, frantic days of the 1920's and 1930's and, as World War II loomed, turned it over to his eldest son.

As today's scion of the Times, Norman Chandler is neither blusterous nor ruthless, casually fingers the Times lanyard with a friendly urbanity where his predecessors might well have shot the town to blazes. Under his father's no-nonsense hand, Norman plowed through boyhood farm chores, rode the range and punched cattle for a few happy years on the family's 300,000-acre El Tejon ranch 75 miles north of Los Angeles, went to Stanford University (business administration). In 1922 he married fellow student Dorothy Buffum (Buffie) dutifully settled down for a rough tour of workaday jobs at the Times, took over as boss when his father retired in 1941.

TICKS AND POLITICS

"The difference between Harry and Norman," says one oldtime Angeleno, "is that Harry sat in his office and ruled this city like a king. Norman doesn't rule; he isn't interested in ruling. What he wants is to become an institution." Yet in a town where the Times is one of the few enduring institutions, Norman Chandler knows better than to try to wield an overpowering political club. Today's Los Angeles is too amorphous for one man to rule, one newspaper to command,[2] or even one political organization to anneal. The Times itself is conservative, and, says Chandler, proud of it. "But no one can force anybody down anybody else's throat in this area. That's because we not only don't have, but can't have, anything resembling machine politics. If there's a bloc of votes that can be delivered in southern California, I certainly don't know about it." Mayor Norris Poulson exerts little personal political force, runs the city with a multipartisan 15-man council. An ultra-conservative, Poulson ticks along with the Times, but neither the Times nor Republican Chandler winds him up every day.

Nevertheless, in State and national politics the Times carries a lot of Republican weight at nomination time. It has been a strong backer in the past of such Republican sons as Gov. Goodwin Knight, Senator Bill Knowland, and Vice President Richard Nixon, and they well know that it can be a candidate's valued friend in an area that encompasses two-thirds of the statewide vote. For example, in the major fight that is shaping up between BILL KNOWLAND and DICK NIXON for the 1960 Presidential nomination, Norman Chandler's quiet word on 1960 may come as a political bombshell: "I think DICK NIXON would make one of the finest Presidents the United States has ever had. BILL KNOWLAND is a fine man, but if they are both candidates for the GOP nomination in 1960, Mr. NIXON will get the support of the Times."

POWERS THAT BE

By virtue of its overlapping and horizonless geography, Los Angeles has also grown beyond the conn of single powers like the chamber of commerce or even the select, sacred California Club, whose once-powerful members coached the city from the sidelines (and relegated newsmen—even Timesmen—to the real elevators of its pink brick sanctuary on South Flower Street). Instead, any random list of the most influential southern Californians would include both native sons and latecomers whose only connection with each other is that they find themselves appointed more or less to the same civic committees. For example:

Asa Call, 64, president of the Pacific Mutual Life Insurance Co., rock-hard conservative, long a behind-scene Republican political operator and a big and respected voice with the chamber of commerce, Auto Club, Standard Oil of California and the California Bank, who runs the University of Southern California board of trustees with a firm hand.

Reese Hale Taylor, 57, president of the Union Oil Company of California, conservative, tightfisted member of the Federal

Footnotes at end of speech.

Footnotes at end of speech.

Reserve Bank Board, but an enthusiastic spender and adviser on projects dealing with southern California development.

Edwin W. Pauley, 54, shrewd oilman and politico, onetime Democratic national committeeman from California, a mighty force with Democrats during the Truman administration, principal owner of the Los Angeles Rams pro football team, hardworking chairman of the University of California's board of regents.

Frank L. King, 59, president of the billion-dollar California Bank, conservative politically and fiscally, pioneer leader in bringing big capital investment into Los Angeles.

Edward W. Carter, 46, president of the Broadway-Hale department-store chain (14 stores), a handsome Ivy Leaguer (Harvard), a relative newcomer to the great circle; tough, confident, ambitious, hard worker for the unversity and community music activities.

Harry J. Volk, 51, who gave up his job as western boss of Prudential Life Insurance Co. last fall rather than move to eastern headquarters and the possibility of the presidency. Also a newcomer, now president of the Union Bank of Los Angeles and top ranker in citywide fund-raising ventures.

GERANIUMS AND BLESSINGS

But the people of Los Angeles, entranced by the magnetism of climate and the magic of a rootless but wholly accepted abandon, are beyond anybody's fiscal, political or intellectual control. They live on beaches (Malibu, Redondo), in canyons (Laurel, Coldwater), in foothills (Arcadia, Sierra Madre), on hilltops (Hollywood, Santa Monica), in valleys (San Fernando, San Gabriel), and on deserts (Antelope Valley, Palm Springs). Their new homes, built at the rate of 189 a day, range from picture-windowed crackerboxes, jammed together on vast tracts, to comfortable, everyday residences, to fancy ranches and split-level palaces perched on cliffs and ridges—and when grubby desert land 100 miles distant goes up for sale, they fall over each other in the grab. At home their gardens crawl with exotic plants, their lawns with flowers ("Goodby, California," wrote one fed-up Iowan, "and your damn geraniums").

Some segments of Los Angeles have yet to shake off the pan-cake make-up of the past: Forest Lawn Cemetery ("You can have the dignity of a Forest Lawn undertaking for as little as * * *") still schedules funerals and weddings with split-second precision in its chapels; revivalists pray to order for anybody who fills in a newspaper ad coupon; $3 high colonics have not yet fully given way to hi-fi; Hollywood, nearly torn apart at the scenes by the new assortment of prosperity makers—avionics, oil, heavy industry—is behaving itself, and, like a needy laundress looking for work, is now taking in television.

POCKETS AND BAUBLES

Fast disappearing, like Hollywood's old mask, are other symbols of the city's callowness. Its taxpayers spend more per capita than any other major city for art centers, museums. Its big but scattered pockets of industry (current annual output: $6 billion) and topflight universities have attracted one of the Nation's best pools of technical and scientific talent.

Some of the talent, like Norman Chandler's wife, Buffie, is homegrown and thrives on achievement. Trim and smart (dresses by Dior and Balenciaga) at 56, Buffie Chandler first dived energetically into public life in 1935 as a volunteer at the Los Angeles Children's Hospital, inevitably became a trustee. Inevitably, too, she became a regent at the University of California, almost singlehanded rescued the foundering Hollywood Bowl concerts, collected civic committee chairmanships like baubles on a charm bracelet. It was she, says her husband, who steered the Times into its long war on the great Los Angeles blight: smog. "Buff and I were driving downtown one day in 1946," says Chandler, "and Buff's eyes started to stream. She looked at me and she said, 'O. K., Norm, when are you really going to do something about this?' So we went to work."[3]

THE ASSISTANT

Serene as a smogless moment in the city, Buffie and Norman start their day with a swim in the Chandler pool behind the square concrete-block family mansion in the Hancock Park section of town. By 8:30 a. m. Norman rolls out his black Mercedes 300, heads off to the Times Building 5 miles away, where he imperturbably juggles the deskload of problems that reach out from all his financial and civic connections.

Not far behind, grinding downtown in her little black Simca, is Buffie. Efficient, charming, she carries the informal title of assistant to the president, works in a Chinese-modern office next to her husband's Spartan, oak-paneled room, "unofficially" runs the women's pages of the Chandler papers. Current pursuit: the drive to establish a $55 million civic auditorium and music center (against opposition that fairly cringes at the sound of her name).

Together, the Chandlers and the Times press their Otis-given faith in change and growth. In their phalanx too are the engineers, scientists, physicists, educators, artists, and managers who one day, say the planners, will stretch Los Angeles for miles beyond its explosive perimeter, embracing perhaps 20 million souls, and very likely leading the Nation in though and achievement as well as sunglasses and kidney-bean swimming pools.

SOMETHING NEW

Foremost in this design is Los Angeles' cry for more water. Underway now, with a big push from the Times, is the $2 billion project to bring Feather River water from the northern part of the State 600 miles into southern California. After that: more schools (needed: a 32-room schoolhouse each week for the next 15 years), smog research, a system to replace the area's laughably inadequate public transportation muddle, better medical and cultural facilities, and—Norman Chandler's pet project—more than 600 miles of new freeways.

Sums up Buffie Chandler: "I don't say Los Angeles is the most beautiful place on earth, or even the most desirable. I love San Francisco, for instance. But I could never live there, because everything that needed doing has long since been done. In Los Angeles, things will always need doing, things will always need to be made better. Los Angeles is a place for the kind of people who are willing to try something new. It's a place for people who want to build a new world."

---

[1] "Everything from 'A to Z in the U. S. A.'"

[2] Sharply aware of that fact, Times Boss Chandler launched a breezy, halter-and-shorts afternoon tabloid, the Mirror (now the Mirror-News), in 1948, changed it in 1954 to full size. Editorially independent, the paper (circulation 308,594) is self-consciously middle of the road, still in the red ink. Chandler's Los Angeles competitors: the Hearst Examiner (circulation 350,739) and Herald and Express (344,028).

[3] Ironically, Los Angeles' one big commodity, sunshine, helps infest the area with smog. Pollutants pouring upward give off hydrocarbons, react photochemically with the sunlight and oxygen in the air, creating ozone that burns Angeleno eyes like tear gas. City authorities now run a three-stage "smog alert," only the first of which has ever been declared: (1) when the ozone count reaches .5 for each million parts of air, all burning of rubbish is forbidden; (2) when it reaches one part per million, all but essential auto traffic may be halted; (3) at 1.5 parts, an emergency is declared (at which, presumably, a squadron of planes will sweep over the city and dust it with Miltown).

The Truth About Red China—As Reported by the American GI's Who Chose It in Korea and Have Now Returned to United States

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. JUDD. Mr. Speaker, there are few places about which more misinformation has been spoken or written by people who have not been there than Red China. Having been for 8 months in an area in China under Communist control in 1930, and having had rather intimate contact with their leaders on several occasions later, I have tried through the years to report what I saw, as a duty to my country and its decent and unsuspicious people.

It was too bad that a very few American boys in Korea—sick, hungry, afraid, disillusioned with a war that did not seem to make sense—were beguiled into choosing to go to Red China as a supposed utopia. But since they went and several have now come home in disillusionment, it would be folly for us not to read carefully their reports, and learn therefrom.

The U. S. News & World Report is to be commended for interviewing five of those who came back and publishing the verbatim answers to questions. I shall introduce the report of one such returnee each day. The first, after the introduction from the U. S. News & World Report of June 28, 1957, is included herewith:

THEY CHOSE RED CHINA, AND THEN—

(What is life really like in Red China? Is communism solving the people's problems and making them happy? In 1953, a group of 21 American soldiers chose life under communism in China in preference to life in the United States. Some were swayed by Communist persuasion. Others may have feared punishment for their actions in prisoner-of-war camps. Now, 4 years later, eight have come back, disillusioned, with a story to tell. The story of Red China through the eyes of Americans living with the Chinese people is told in the interviews that follow. This is a grassroots picture and gives you an understanding not to be had from reports of visitors to China, on 30-day tours with Communist guides.)

Eight Americans today can tell the down-to-earth story of Red China. They are Americans who have lived and worked with the Chinese people until recently.

These eight entered China as Communist heroes. They gave up the American way of life to accept the ways of communism. Today, they are back in the United States. The eighth man left Communist territory only a few days ago.

Most of these men came back not knowing the fate that might await them here—whether it would be jail for the remainder of their lives, or even the firing squad for having forsaken their country in time of war.

Out of 21 Americans who defected to the Communists at the time of the prisoner exchange following the Korean war, these 8 have come back so far. Most of the others are reported to be wanting to come back.

Out of the 8 who did return, U. S. News & World Report has interviewed 5, including Andrew Fortuna, who came out of China on June 15. Two others cannot be located. One prefers not to talk.

The five who tell their stories of life under communism are young Americans with average, commonplace backgrounds. In China, they experienced life as it is actually lived there. They worked in Chinese factories and on Chinese farms, attended Chinese training schools and universities. Theirs was not a guided tour, but experience with life as communism orders it.

A glance at the map shows where they went to work and live—spread over a broad area in populous northern and eastern China.

The America they once forsook looks good to them all today. The five who tell, in their words, why that is so are Richard R. Tenneson, of Minneapolis, Minn.; Otho G. Bell, of Olympia, Wash.; Lewis W. Griggs, of Nacogdoches, Tex.; David Hawkins, of Oklahoma City, Okla., and Andrew Fortuna, of Ionia, Mich.

"I HAD TO GET OUT OF CHINA" EVEN IF IT MEANT ARREST

Richard Tenneson, when offered a choice of countries during the long process of prisoner exchange, decided to stick with the Communists.

His mother, Mrs. Portia Howe, flew to Tokyo at the time and then tried, in vain, to go on to Korea in an effort to persuade Tenneson to return home.

On January 28, 1954, however, Tenneson left Korea, where he had been held as a prisoner of war by the Chinese, and entered China. He was 20 years old.

In the United States he had lived in several communities in southern Minnesota. In school he was rated as an intelligent boy. He quit the Alden, Minn., high school after his junior year to enlist in the Army. When taken to China he was put into a special school at Taiyüan for more than 6 months to be taught the theories of communism. Then he was sent to Tsinan to work in the machine shop of a paper mill.

Tenneson left Red China in December 1955. He now is working in a print shop in Minneapolis and reports that he is learning a trade and is getting on well, even though he feels that he could not return to his home town of Alden.

The interview that follows was recorded in Tenneson's room in a Minneapolis suburb:

"Question. What kind of job did you have over there?

"Answer. I worked in a factory in Tsinan. I worked in the repair shop, with a lathe, and I made little bolts and big bolts and middle-sized bolts—just various things like that—and washers. Nothing too complicated, because my skill wasn't enough.

"Question. How long did you work—how many hours?

"Answer. Forty-eight hours a week.

"Question. How much was your pay?

"Answer. Thirty dollars a month, Chinese money. That's $15 American—our dollars.

"Question. What could that money buy? For example, how much is a decent suit of clothes worth there?

"Answer. Well, that's a comparative question. A suit of clothes like we wear here would be about $350. Of course, a suit like you wear there was about $23.

"Question. How was the factory, the working conditions?

"Answer. It didn't have any windows—it had some windows, but some of them were gone. It didn't have any heat, we would take 5-gallon drums and saw them in half and burn wood in them to have heat in the wintertime. And we had a 60-watt bulb by every lathe and that's all the light we had.

"Question. How about safety conditions?

"Answer. We had the overhead-belt system. You know: One big motor pulled a string of pulleys up above, and then each machine had a belt from there. And there were guys all the time catching their hands in the belts and stuff like that.

"Question. Where did you live? Did you have an apartment?

"Answer. No. No apartment. We lived in a dormitory at the factory.

"Question. Was it pretty crowded?

"Answer. The Chinese lived pretty crowded. We didn't; we had special privileges. We had brick barracks built by the Japanese. We had four guys in a big, long room. We had our beds and we had about 4 feet in between the beds and about 6 feet on each end of the room. We even put curtains on the windows and stuff like that—and the Chinese used to come and just sit in our room to be in pleasant surroundings.

"Question. How did the Chinese live? What were the houses like?

"Answer. Mud—basically mud. They have a mud floor and have rocks around the bottom for a foundation, and then they use sugarcane stalks for the general frame and plaster them up with mud. Each house contains, usually, two rooms, and they are living rooms and bedrooms—both of them. And their kitchen consists of a little stove with one hole in the top which you put the pot on, and that's all they use to cook in—one pot.

"Question. They are pretty crowded, you say?

"Answer. Pretty crowded is right. The whole family sleeps in one room quite often.

"Question. How big a family?

"Answer. I suppose the average is about 6, but some families have 12 or 13.

"Question. These mud houses—do they have windows?

"Answer. They have windows, all right—but no glass in them.

"Question. The windows are just holes?

"Answer. Holes—and then in the wintertime they put in a piece of cardboard or something.

"Question. How do they keep warm in winter?

"Answer. Well, they put the cardboard in the window and line the door with pieces of cloth and then they heat the room—they burn charcoal and everybody almost asphyxiates.

"Question. But aren't there a good many Chinese who have luxuries? Do very many of them have cars or television—the richer ones—like Americans?

"Answer. Oh, no. Well, they know what cars are. After all, there is supposed to be 1 car for every 7,900 people in China. But television—they don't even have a conception of what it is.

"Question. There are no TV sets at all?

"Answer. No. They don't have television. Why, they just barely know the word.

"Question. How about refrigerators?

"Answer. Well, in the big hotels in Peiping I saw some. I didn't see any refrigerators anyplace else.

"Question. Such things aren't accessible to people at all?

"Answer. No. They couldn't afford them. Take cars. You know, in the factory where I worked they had a 1948 Dodge automobile. That thing cost 2.5 million Chinese dollars.

"Question. Who owned it—the Government?

"Answer. Yes. You see, the factory was a Government factory and the cars in it were also Government owned.

"Question. How did the health of the population look to you?

"Answer. The older people were in pretty terrible shape. People who were 30 years old looked like 60, but the kids, as a whole, were really quite healthy—the state was taking pretty good care of them. They are planning on making them the vanguard of the party in the near future and they want them to be in good shape.

"Question. Do people seem fairly contented?

"Answer. Well, I think—oh, I don't know. I don't think you could say for sure. I think that right after the revolution and the Communists took over, they were happy at first because they thought they were getting a good deal. At the time I was there, I think they were just beginning to wonder.

"Question. You think there is a change of atitude beginning?

"Answer. Yes. And I think that in 3 or 4 or 5 years, maybe, why, we'll have another Hungary—only in Asia.

"Question. Do you mean China, specifically?

"Answer. Yes. I definitely think so. And one thing about it in China—in China there will be more of a stirup than there was in Hungary, because there will be so many more people involved.

"Question. When did you first think you wanted to leave China?

"Answer. Well, I had desires to leave every time I wanted to do something and they said I couldn't.

"Question. Such as what?

"Answer. For instance, I wanted to go either to a farm or to a school—so they sent me to a factory. I don't know whether I was sent to the factory because I didn't want to go there or for some other reason, but anyway that's where I went.

"Then I was disappointed, and I thought, 'Well, maybe I should go home,' because I didn't think I would like factory life.

"Question. Was there anything you missed over there—things you couldn't get—that made you want to come home?

"Answer. I didn't miss anything great big you know, like the fact that I didn't have a car, or something like that. But I missed little things, like coffee when I wanted it. I could get coffee, sure—go uptown and pay 20 cents a cup for it. Customs is what I missed, actually—those things that we take for granted. We don't even think about them; we don't even talk about them.

"Question. In that why you decided to come home?

"Answer. The thing that brought about my decision to come home, the reason that I grabbed at, because I had to have one, was the fact that they were treating us better than they were the Chinese.

"One morning I went down to the mess hall to get my bottle of milk, and there was a Chinese there holding a baby, and I understood enough Chinese to hear what he said.

"What he said was, 'Look at that damn foreigner getting milk, and he's a grown man. And I can't even get none for my baby.'

"That sort of put a clincher on it. That day I went over to the party secretary, and I told him I didn't want any more milk. And he tried to talk me out of it.

"Question. Why? Couldn't you give up milk if you wanted to?

"Answer. They contended that I was being individualistic about that. They said that I shouldn't want to give up my milk until all of the Americans wanted to give up their milk—act as a group. I couldn't see that. I didn't want that milk after that joker complained about his baby not having milk. Anyway, that's when I realized I had to get out of there.

"Question. You decided to come home?

"Answer. Well, not just home, because I didn't care whether I went home or not. I mean, I just wanted to get out of China—that was my interest. Of course, I wanted to get home again, all right, but I didn't think I would. I didn't think I would get any farther than Seattle or San Francisco and I would have two MP's [military police] for boy friends.

"Question. The main idea was just to get out of China?

"Answer. That's right. Even if I was to face a firing squad when I got back. I didn't care—I had to get out of China, away from something—I didn't know what.

"Question. Now that you're back, are you settled down? Do you have a job?

"Answer. I'm a bookbinder's helper in a print shop and, right now, I get $41 a week. It's nothing stupendous, but the thing is that it's a trade—I'm learning a trade. And if I stick with it, why, a journeyman gets almost three bucks an hour right now.

"Question. How does your standard of living compare with that in China?

"Answer. Well, here I'm putting money in the bank. I've got much better clothes and I can eat much better. I've got my own room. Just everything is better. Before, in China, I didn't have to pay room rent—but I still had a rough time buying clothes even without putting money in the bank.

"Question. When you got back to the States, what impressed you most about this country?

"Answer. Pastel-colored cars, things like that. The first thing was pastel-colored cars.

"But I think the main impression—the biggest impression—I got was when we were flying into Minneapolis and it was daylight and we were over the western part of Minnesota and just the expanse of it and the fact that you could see so many little farms, each by itself. That impressed me. I think that impressed upon me the idea that there is individualism. I think that impressed me more than any single thing at all.

"Question. How did the standard of living strike you, as compared with China?

"Answer. It was about what I expected, actually, because I hadn't been gone so long that I had completely forgotten—but it made me realize—that swift a change made me realize—how poor off the Chinese are.

"Question. How did the Reds induce you to come over to their side and stay in China, in the first place?

"Answer. It's a matter of destroying your resistance. In the Korean prison camp they marched us for 7 months on the very poorest food—well, we just barely existed on it.

"And then I got double pneumonia and went to the hospital, and it was there that—I think, I don't know—that's the problem. I really can't say; I don't know what happened. I have thought all along I went to the hospital because that's where they told me I'd gone, but I don't remember anything about it.

"Question. What sort of brain-washing techniques do they practice?

"Answer. Well, they have various methods. I'm not sure any more what they did with me. I used to think that they didn't do anything to me, that they 'soft-touched' me into it, but I don't know any more; the more I read about it, the more I don't know."

Tax Relief for Low-Income Groups and Small Corporations

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. DINGELL. Mr. Speaker, in view of the revelation of the secret letter of the Bureau of the Budget detailing how the administration intends to keep departmental expenditures within the amount spent last year, it appears that there will be a budgetary surplus of on the order of $10 billion.

This is, of course, amazing in view of the fact that the Congress was constantly advised by the administration that no 1957 budget request could be reduced.

It is my feeling that a substantial portion of such surplus should be used to benefit the groups that are most in need of it by appropriate tax reductions. Accordingly, I urge the early passage of my bills, H. R. 7066 and H. R. 2541.

The first measure would offer tax relief to the low-income group by increasing the individual exemption from $600 to $800, and my bill, H. R. 2541, would provide tax relief to the small corporation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

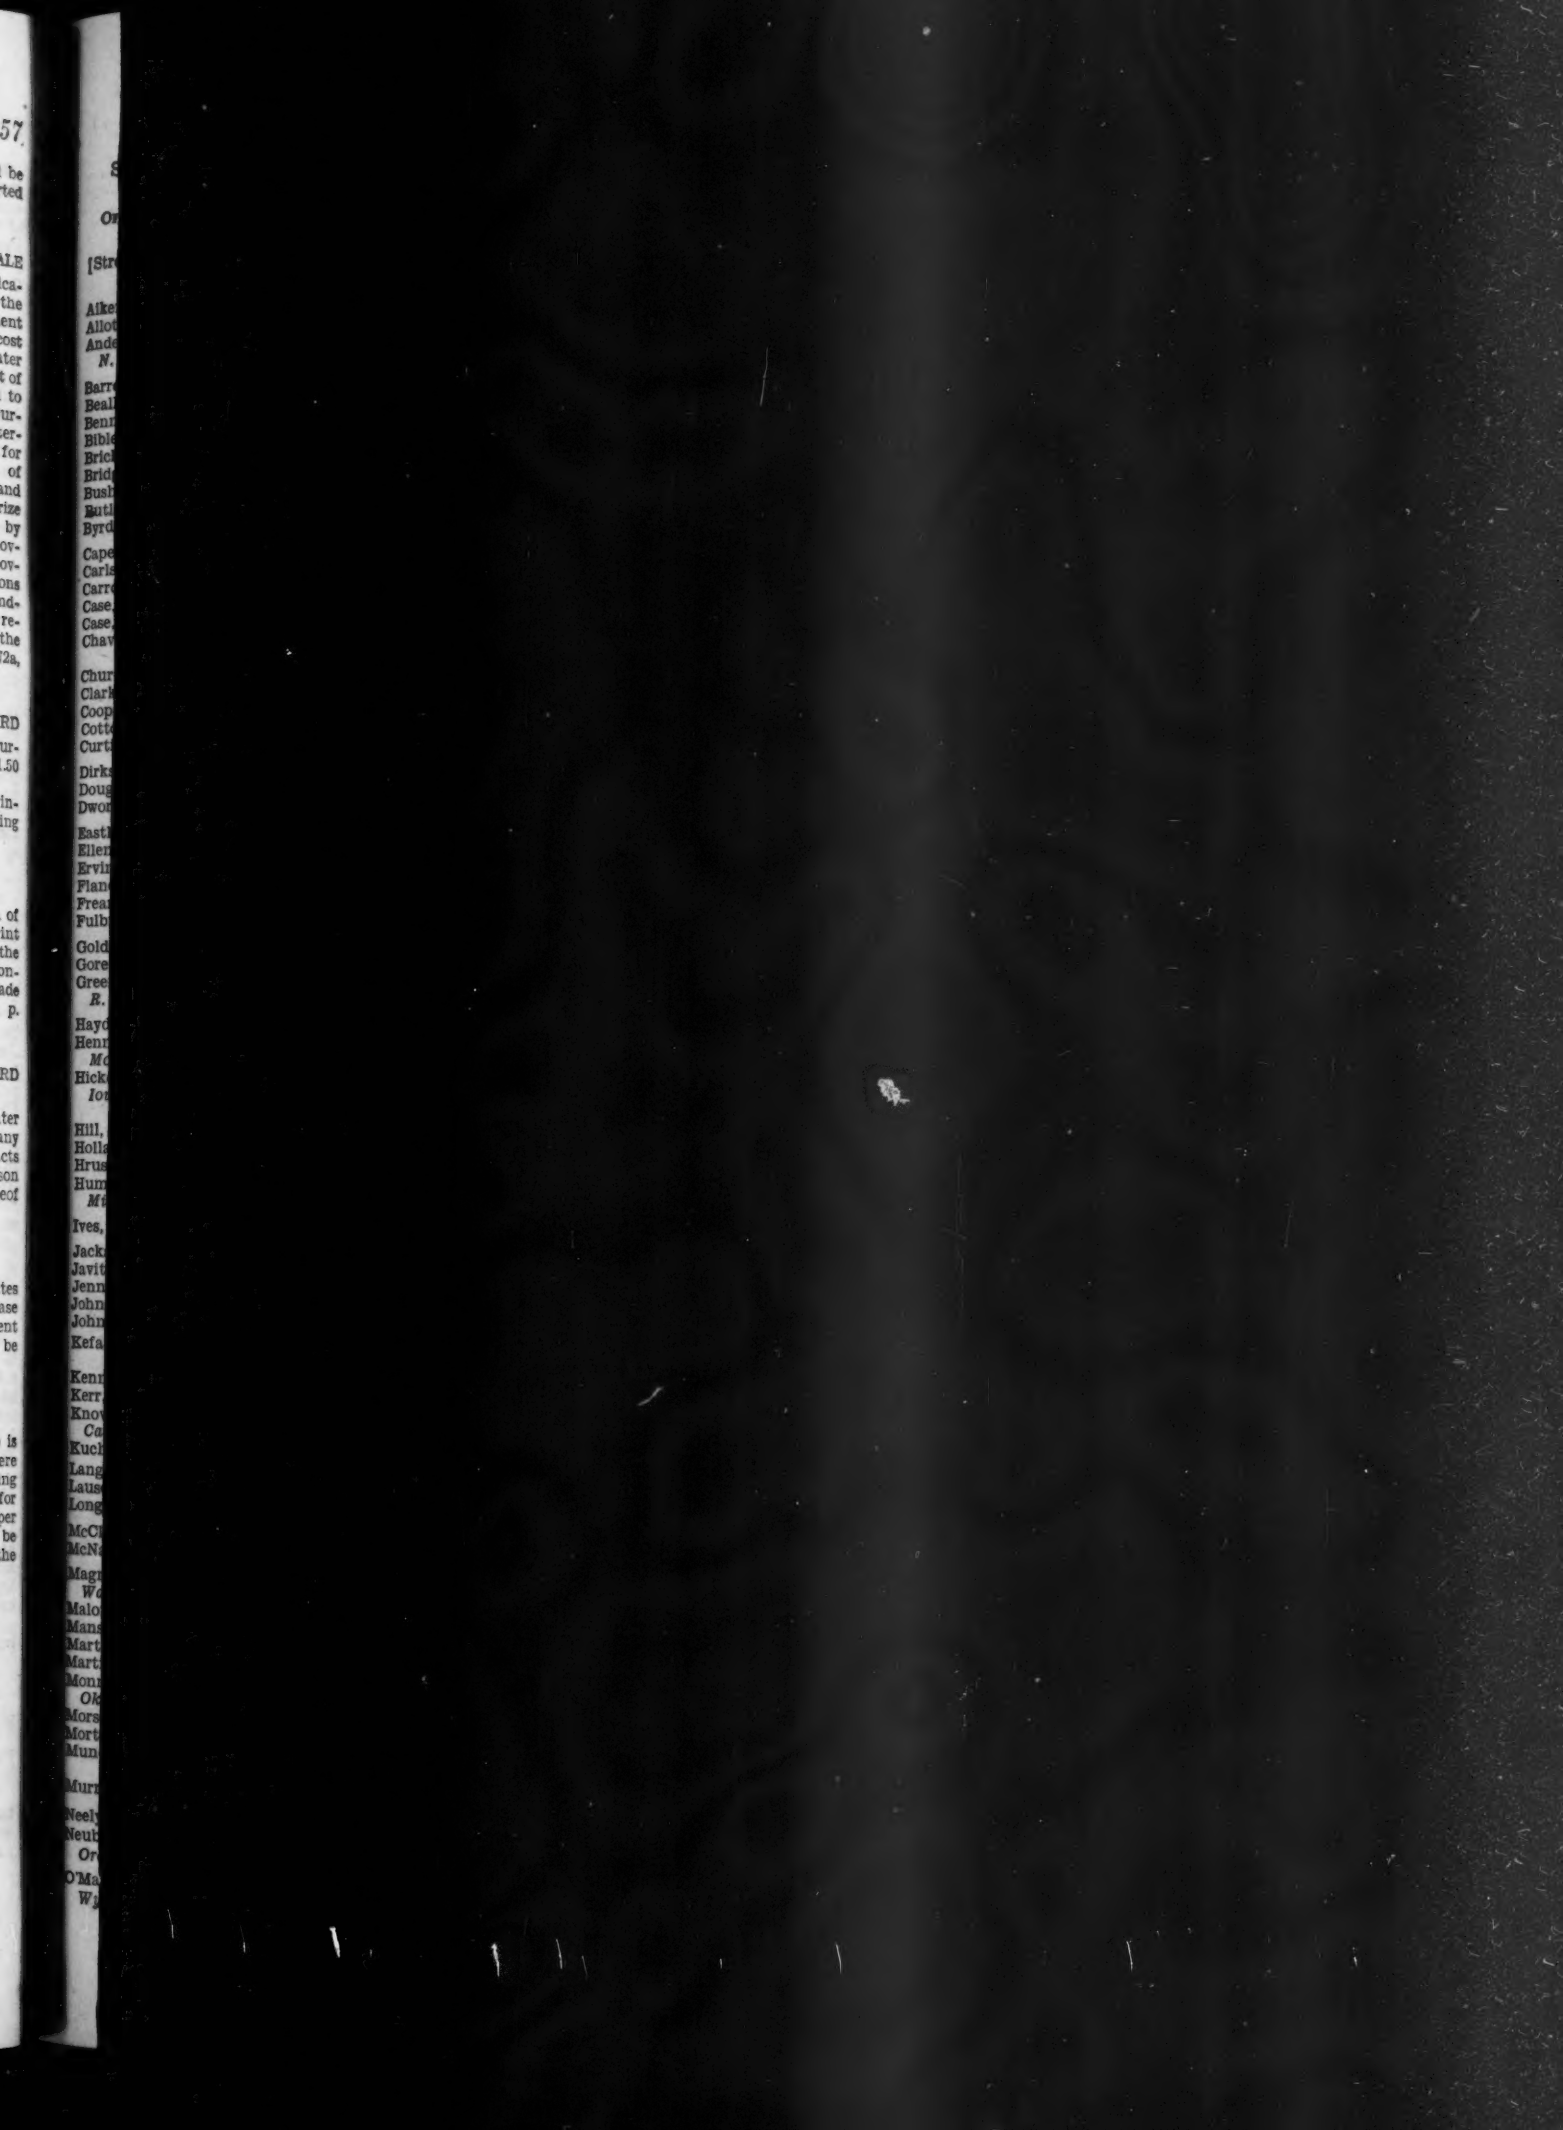
It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.



Appendix

Economic Nationalism

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, July 13, 1957

Mr. MUNDT. Mr. President, Americans, generally, and Members of Congress, especially, are vitally interested in developments in the Philippines. We have long cherished our friendship with the Filipinos, and having fought shoulder to shoulder with them in World War II, we know of their devotion to the cause of freedom.

A friend of mine in Manila has recently sent me an interesting address which Senator Claro M. Recto, of the Philippine Congress, delivered before the Manila Rotary Club. I ask permission that it may be printed in the Appendix of the RECORD, since it provides some insight on the thinking of at least one of the current leaders of our friendly ally—the Philippines.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ECONOMIC NATIONALISM

(Address delivered by Senator Claro M. Recto before the Manila Rotary Club, on March 28, 1957, in Manila, Philippines)

Mr. Chairman, ladies and gentlemen, I have been asked to speak before this select gathering of members and guests of the Manila Rotary Club on the subject of Economic Nationalism. The subject was well chosen because few can be found that are as full of interest and as important.

What is "nationalism"? Among the various definitions given by Webster I consider the following as the most appropriate: "Devotion to, or advocacy of, national interests or national unity and independence; zealous adherence to one's own nation or to its principles; patriotism."

A distinguished Filipino editorial writer, Jose Luna Castro, has recently defined "nationalism" in terms of Philippine history, saying: "Nationalism * * * was the driving force that propelled Bonifacio and his men in the revolution; it was the underlying sentiment in the works of Rizal."

And when that great American statesman, William H. Taft, onetime Governor General of the Philippines, then President of the United States, and later Chief Justice of the United States Supreme Court, admonished his countrymen in the early days of the American occupation, that the Philippines is for the Filipinos and those who did not believe so could pack bag and baggage and leave the country, he put in a nutshell America's true and correct concept of Filipino nationalism and laid the cornerstone of an enduring Filipino-American friendship and association.

If, according to Webster, "nationalism" and "patriotism" are synonymous, then, to be a patriot is to be a nationalist, and vice versa.

An economic policy must respond to basic economic problems, those arising from the economic realities in the Nation; for instance, the kind of economy that the Nation must have and the proper approach to the related questions of foreign investments and financing.

Have we settled these basic problems? During the 1955 session of Congress an attempt was made to have Congress declare as a national policy the maintaining here of an agricultural economy by means of an administration bill sent to Congress with a provision to that effect, contained in its section 2. The bill was favorably reported by the corresponding committee, but the Senate, timely alerted, frustrated the insidious attempt by eliminating the objectionable policy declaration. But despite this, executive officials continued regarding rural development not merely as a laudable Government pursuit but as the very economic policy of the Nation. Only a year ago it was authoritatively announced that "the rural-development program of this administration is in itself the blueprint for national socio-economic prosperity." On the other hand the National Economic Council announced almost at the same time—this was about the first quarter of 1956—that industrialization was the basic economic policy for the Philippines, the very one for whose adoption I have been battling for the last 4 years. But, shortly thereafter, as if in reply to said announcement, the local head of the ICA, who is supposed to be the Republic's top economic adviser, in his speech before the Sugar Technologists Convention made the following pronouncement with an air of dogmatic finality: "Agriculture will always be the major prop of Philippine economy, and as rural existence prospers, so will industrial, business and social activities. This is planning on a long-range basis, and we know it is going to pay off in benefits to the Filipino people."

But after 3 years of economic confusion the nation has at last pledged itself to the policy of "reshaping our economic structure with the industrial side accounting for a rising proportion of our total output in the years ahead." This was stated for the first time in the President's state-of-the-nation address of last January which contains this added declaration: "We must foster an economy in which industrial expansion and agricultural progress are complementary."

We were told in the state-of-the-Nation address that there was an "economic plan adopted at the start of this administration on March 20, 1954," but because "the plan was not inflexible," it had "to be updated periodically on the basis of * * * changing conditions and prospects of further advance," and, for this purpose, a so-called Government reorganization plan No. 10 was created in July 1955, but in view of "the end of free trade with the United States in 1955 and the forthcoming Japanese reparations," it was finally decided to entrust the National Economic Council with the task of revising the 1954 economic plan. Further difficulties, according to the address, continued besetting the revision of the 1954 plan, in the form, it was said, of "trends in the council not in harmony with the Chief Executive's fiscal policies," with the result that, to do away with such "trends," a change had to be made in the composition of the council in March 1956. And it was only on January 3, this year, that "the National Economic Council submitted its recommendations for updating the 1954 economic development program," but these recommendations were not accepted in toto, but only that part referring to what in the address is referred to as "industrial priority system."

But although the Government has not been able to make any definite planning for our economy, it has at least adopted a policy, which I hope will be permanent this time, and that is none other than industrialization.

If it would not be presumptuous on my part I should say that I was in some measure responsible for the adoption of this new national economic policy. In the last 3 years I have been trying to show in a series of public addresses why the Philippines must industralize, by citing America's own experience in developing her economy from the agricultural or rural to the industrial stage. For the benefit of those who still believe that to insure our prosperity we must remain producers of raw material for the use of industrial countries, and consumers of finished products manufactured by the same countries, I beg to state anew my position in this regard with the aid of unimpeachable historical facts and statistical data.

In 1820 the ratio of America's working force engaged in agriculture to her total working force was 71.8 percent. Which means that, as the case is with the Philippines today, her major activity in 1820 was agricultural. In the decades that followed there was a gradual reduction of the percentage: in 1830, 70.5 percent; in 1840, 68.6 percent; in 1850, 63.1 percent; in 1860, 58.9 percent; in 1870, 53 percent; in 1880, 49.4 percent; in 1890, 42.6 percent; in 1900, 37.5 percent; in 1910, 31 percent; in 1920, 27 percent; in 1930, 21.4 percent; in 1940, 17.6 percent; in 1950, 11.9 percent. Today the ratio is about 5 percent. These figures show that from 1820 to 1870 America was predominantly an agricultural nation, but that she became less and less so as she changed the quality, pattern, or structure of her economy in the last quarter of the last century, until she attained her present position as the most highly industrialized nation and consequently the wealthiest and most prosperous in the world.

These figures indicate not only that there has been a continuous reduction in the ratio of the agricultural labor force to the total working force but also that there is a necessary correlation between prosperity or higher production and reduction of the working force engaged in agricultural activities.

Looking at it from a slightly different angle, we shall find that in 1910 the farmer population in the United States was 34.7 percent of the total population, and the agricultural income was 16 percent of its total national income. Since 1910 the percentages of the farm population and of the agricultural income fell continuously every decade, so that in 1952 the farm population was only 13.4 percent of the total population, and the farm income only 6 percent of the total national income. According to the latest figures the farm income in the United States as of 1955 was only 3.8 percent of the total national income, and this despite the existence of agricultural surplus. From these facts it is clear that, as the share of its farm income in the national income has

decreased, the United States economy has prospered and progressed, and that in any given year or number of years the proportion of agricultural effort to the total economic effort has been always larger than the proportion of the agricultural product to the total product. It is for this reason that economists describe agricultural occupations as occupations of low marginal productivity. Conversely, the share of manufacturing industries in the total product is always bigger than the corresponding share of manufacturing effort (working force) in the total economic effort. Thus the economists describe manufacturing occupations as occupations of high marginal productivity.

We must remember that America's need for the raw material of the underdeveloped countries and outside markets for manufactured goods and investments is increasing at a tremendous pace. If the underdeveloped countries were to industrialize they would be using their own primary materials thus lessening the supply to the United States and other industrial nations which at present take up all that supply. The underdeveloped countries would, besides, find it convenient if not altogether necessary to start manufacturing goods which they at present import from manufacturing countries because it is with respect to those goods that there is a proven market at home, with the result that home manufactured products would crowd out the imported products depriving the exporting countries of their markets.

A Canadian economist from the United Nations who served for a short time as adviser to our own National Economic Council, called the attention of our people to the evident lack of dynamism in our economy and emphasized the strong need to bring rapid changes in its structure. He said that we need a bold and ambitious program of industrialization without which the rate and pattern of our economic growth would never succeed in outrunning population growth and in bringing prosperity to the people. He warned that unless the rate of job creation is raised, open unemployment (which does not include disguised unemployment) could, by the end of 5 years, approach one-third of our labor force.

In the face of these realities the official though belated announcement that our national economic policy should be industrialization, is most welcome. It took the first 3 years for the Government to realize that to peg our economy to its present agricultural structure is to peg the Nation to poverty.

From the experience of all industrial countries we have learned that economic progress requires the shifting of the major part of the people from the soil to industrial pursuits. Rural development program must go on, but we must always bear in mind that, as has been the case with other countries, increase in agricultural productivity and in agricultural production can never hope to keep up with the growth of our population. People in the rural areas should for their own benefit gradually turn to industry, for it is there that they will find deliverance from an occupation which, according to the U. N. report I have already cited, for the greatest efforts gives the least returns to the worker, outside of domestic servants.

We must, of course, begin with industries which will use primarily raw materials produced here, and will gradually fill the needs of our own local market, but heavy industry—base metals, power and fuel, machine tools, machinery and chemicals—should not be ignored. For obvious reasons, heavy industry is the basis of any industrialization, for it is heavy industry that insures greater potentialities for continued increase in the production of consumer goods.

I said in this connection, about 2 years ago, that there were two sectors in heavy industry in which we could enter once we firmly decided to industrialize. I was referring to hydroelectric power and iron and steel industry. With respect to the first we had already made a good beginning. With respect to iron and steel, there was no justification, I said, for our timidity to venture into this field. We have enough iron, and we can make steel out of it. We export 1½ million tons of iron ore to Japan, and can increase it to 2 or 3 million tons. But we could use this iron ore ourselves. We get 17 to 19 pesos per ton from our iron exports, and then we import steel at 400 pesos per ton. We have according to the director of mines, more than sufficient iron ore to justify the establishment of steel industry. We have not only the needed iron ore; there is an abundance of manganese, chrome, limestone, and coal which are vital raw materials in the manufacture of steel. The manager of the NASSCO attests to this fact. He says that the argument that we have no available coking coal is just a bugaboo because we can use "coke briquettes" from a blend of low grade and high grade coals, or use charcoal, or hydroelectric power.

For our industrialization foreign capital is needed. But by foreign capital I mean loans in the form of capital goods coming from foreign sources, not capital as investments owned by foreign investors.

Existing foreign investments here constitute vested rights which are as much entitled to protection under our constitution and statutes as those of Filipino nationals. And when I say protection for these alien investments I mean protection not only from direct assaults to impair them or discriminate against them, but from uncertain and vacillating policies and decisions: uncertainty is the worst enemy of business. But in the interest of both groups, particularly of Filipino nationals, and for the sake of the nation itself, I propose that it is alien investments in the form of loans that should be by all means encouraged.

The best examples of direct foreign investments are those of Puerto Rico and Venezuela. In every one of them the geographical product, as should be expected, far exceeds the national income. The appearance of national prosperity based on per capita of geographical product is, therefore, misleading. In Puerto Rico as well as in Venezuela the country, in geographical terms, is rich, but the people are poor.

The experience of Canada is worth examining. I take the following from the U. S. News & World Report. Long-term investments in Canada, mostly in mining, smelting, and oil, from overseas amounted to $13 billion of which $11 billion came from the United States. Much of Canada's iron ore, nickel, aluminum, oil, and copper is directly or indirectly under the control of American investors. "This fact has proved quite galling to some Canadians." (U. S. News & World Report, March 30, 1956.) The Canadians were disturbed to discover that of the 60 biggest corporations in their country, less than one-half are Canadian controlled. (New York Times Weekly Review, June 3, 1956.) Despite the fact that the inflow of United States capital to Canada has slowed down since 1953, United States interests now actually control about one-half of Canada's manufacturing, about one-half of the paper and pulp industry, and more than one-half of her mining and smelting. The Canadians have been in an uproar. They speak of domination, economic slavery, economic colonialism, alien stranglehold, and political leaders are calling on Canadians to declare their economic independence from the United States. (U. S. News & World Report, May 4, 1956.)

If we should only ponder on the experience of Puerto Rico and Venezuela not to mention that of Canada and others, we would cease clamoring for more foreign direct investments here. They are economically disadvantageous to the countries that receive them because whatever profits, dividends, and interests on direct investments are realized flow out of the country. Since much of this outward flow of investment income is generally from investments in mines and minerals, the final result is that besides losing this income to the foreign investor, the underdeveloped country loses its irreplaceable minerals. And what does it get in return? According to Economist Das Gupta (the Theory and Reality of Economic Development—C. B. News Digest, January 24, 1956), the only gain to the country is some employment and some tax revenue. Clearly, that is national suicide by slow degrees.

Secretary Dulles reported to the American people in March 1956 after the Karachi Conference that Asian nations in general would accept aid only if it were given without political strings. I believe it will not be long now when America herself will adopt the policy of granting loans as a form of investment. Wolf and Sofrin, authors of Capital Formation and Foreign Investment in Underdeveloped Areas (1955), already suggested that the United States Government subsidize the Government banks to enable the latter to lend to foreign nations at 2 percent interest. The banks are to receive 5 to 6 percent, the difference to be covered by the subsidy purposed. If this subsidy from the American Government cannot be had, then an interest of 3 to 4 percent would, perhaps, be reasonable.

If the attitude of the American Government on important policy matters such as the one under consideration is reflected in that of a competent Cabinet member, then it may be surmised that the suggestion advanced by Wolf and Sofrin and long advocated by me is looked upon with favor by the present Republican administration. Very recently, Secretary Humphrey of the Treasury, in a letter to President Eisenhower's Advisory Committee on Foreign Aid, outlined his plan by proposing that all future economic aid would be in the form of repayable loans handled by the State Department. Our Government and economic and financial organizations should lose no time making the necessary followup of Secretary Humphrey's proposal for its immediate adoption and implementation.

Although it must be admitted that there is need for dollars for the importation of capital goods from abroad, it should not be overlooked that in any industrialization we have to depend mostly on internal financing. The reason is obvious. For payment of wages, which constitutes the bulk of the cost of production, and of raw materials locally produced, we use our currency. We only need dollars or yens or pounds for foreign purchases. I am afraid we have become unduly dollar conscious as if our economy depended under all circumstances on the dollar. That is, I believe, a mischievous error, obviously inspired and fostered by those who will benefit from our continued dependence on the dollar. It is, therefore, necessary to emphasize the fact that in any economic development the chief instrument of the entrepreneur is the local currency—the peso, in our country—and not the dollar.

In our historical archives there is no declaration of independence except that of Kawit. When we regained our independence in July 1946, we did not make a declaration for the purpose; we were satisfied with a proclamation issued by the American President, and it was the American concept, not ours, of Philippine independence that was placed in the document: A grant, not an assertion of rights. We became officially independent in the community of nations, but are we truly independent, for instance, in the realm of foreign relations, national defense, finance, and economics? Shall we blame on others our own shortcomings and complacency?

But we must not despair. A true national awakening shall doubtless come. The ranks of nationalists cannot but increase; the collective conscience continues to grow; the day of realization nears, because the moving finger continues to write. And someday this nation will realize, and will shape in deeds, Mabini's puissant and uncompromising exhortation which that immortal architect of the First Philippine Republic made just before the turn of the century: "Strive for the independence of the country because thou alone hast real interest in its greatness and exaltation, since its independence means thy own freedom, its greatness thy own perfection, its exaltation thy own glory and immortality."

These are not my words, but they are my faith, if I may say with Churchill.

Boys Town 40th Commencement Exercises

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Saturday, July 13, 1957

Mr. HRUSKA. Mr. President, it was my great honor to be the speaker at the 40th commencement exercises of Boys Town, which is located 10 miles west of my home city of Omaha, Nebr. At that time there were graduated 115 boys from high school and 135 boys from grade school.

My home city of Omaha and my native State of Nebraska have many outstanding achievements and places and activities of interest. Among the most unique and best known of these is the world-famed Boys Town which, although it is primarily a school, is an incorporated Nebraska village in which the students, through a mayor and commissioners of their own election, share in governance.

This school was founded in 1917 by the late and beloved Right Reverend Monsignor Edward J. Flanagan. It started from a very modest and even faltering beginning to the very modern and outstanding institution of wide renown which it is today.

It provides a home and school for homeless, neglected, and unprivileged boys. While most of them come from homes broken by death, divorce, desertion, or neglect, the program is a preventive one rather than corrective.

The great regard and high place accorded Boys Town is testified to in many ways. For example, some 3,500 applications for admission are received each year, of which only 10 percent can be accepted. Also the all-round education program is regularly accredited by the State of Nebraska. In addition to regular subjects, it has an extensive and very effective program of vocational education which offers training in one of several trades to each of the boys.

Its program of athletics is known nationwide. Its football teams have played from coast to coast. It has a strong and vigorous intramural sports and recreation program. Its 50-piece concert band, and 15-piece concert orchestra have appeared throughout the Midwest. Its Boys Town Choir of 55 voices has made an annual tour of national scope since 1946.

The philosophy of the founder of Boys Town, the late Father Flanagan, as carried on by his successor, Msgr. Nicholas H. Wegner, has been summed up in this way: "Given the love, care, and guidance which is the heritage of every boy, and the opportunity for good moral, mental, and spiritual training, a boy will grow to useful manhood, a credit to himself, to Boys Town, his community, and to his country."

Mr. President, on the occasion of Boys Town 40th commencement exercises on June 2, 1957, Monsignor Wegner who has provided leadership of vision and devotion to this school since 1948—the year of the decease of its founder—made a statement which should be printed in the appendix of the CONGRESSIONAL RECORD. I ask unanimous consent that it be done.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

This afternoon we are witnessing the crown of many days, months, and years of arduous labors and toil, the fruit of many untold sacrifices and many eager hopes. The anxieties and worries, and at times, doubtlessly, the disappointments accompanied in the work of rehabilitation and education of these fine young boys are already forgotten because of their cooperation, their achievements, of their accomplishments, and because of the satisfaction they have given.

I know and feel that these young graduates are deeply grateful to all those who have helped them to arrive thus far, and that they appreciate, above all, the daily tasks and labors of their teachers who imparted into their minds and hearts, not only a sound and worthwhile secular education but also a genuine Christian and moral one, which will stand by them, I hope and pray, throughout life.

Every year the lives of thousands of our youth are determined in a great measure by their teachers. Students looking desiring knowledge and truth accept quite implicitly that which teachers impart to them. Too often teachers give their students anything but the truth, and correct philosophy of life and that is the reason we, so often, hear, given by people in justification of their action, "That's what I was taught by my teachers." Thank God we have teachers at Boys Town who are imbued with the correct philosophy of life, teachers who are interested, not only in the student's temporal success but also in their moral and spiritual welfare and, above all, their eternal happiness. And, I am certain, that if our graduates of this year as well as those in the past and of the future, conform their conduct and lives to the knowledge, spiritual and mental, imparted to them by their teachers at Boys Town, they will be a success in life; they will be a pride to their country, church and Father Flanagan's Boys' Home. As long as they keep before their minds the great eternal truths, they shall not fail. All of us at Boys Town are gratified and feel justly proud of our graduates of 1957, because 115 boys have given satisfaction and completed successfully the prescribed studies of our accredited high school, and 135 have done likewise, and are graduating from our grade school. My heartfelt congratulations and the felicitiations of our entire faculty and staff, I convey to you. We are immensely proud of you because you have shown to the world that homeless and underprivileged boys, if given an equal opportunity and proper environment, can make good, can succeed, and are able to take their places in the world, and accept the burdens of citizenship. May Father Flanagan, through whom the opportunities and advantages given you here, were made, to a great extent possible, be your guide throughout life, your inspiration, your hope.

This afternoon an event is transpiring at Boys Town that will always be held in happy memory. There are persons and people we meet in the highways of life whose character, manliness, high principles, and position impress us, influence our deeds and lives, and bring a very definite reaction in us to better and improve ourselves, to work harder to reach the top. Such a person we have with us this day at our commencement exercises. His life, his character, his Christian manhood, his family life have been an inspiration to millions. He is a true American and Nebraskan. He is a graduate of Omaha and Creighton Universities, and from the latter received his law degree in 1929. He served very successfully as Douglas County commissioner from 1944 to 1952. He was elected in 1952 to the United States Congress as Congressman from the Second Nebraska District in which position he gave outstanding and faithful service. The people of Nebraska recognizing his ability elected him to the Senate of the United States in 1954. Senator HRUSKA we are immensely proud to have you here this afternoon. It is of deepest pleasure for me to present you to the members of the graduating classes, faculty, and all our friends the Honorable ROMAN L. HRUSKA, Member of the United States Senate from the great State of Nebraska.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. HRUSKA. I yield.

Mr. ALLOTT. I should like to commend very much to the attention of my colleagues the statement which the Senator from Nebraska has made, and I should also like to join in that statement.

It is my privilege to know personally the great work being done at Boys Town by Father Wegner, who is doing an inspirational job of leading back into good citizenship these younger citizens of ours, who had wandered astray.

I could not let this opportunity pass without saying something in tribute to the fine work that is being done.

Mr. HRUSKA. I thank the Senator from Colorado. I am sure that the leadership and faculty of Boys Town, as well as the boys themselves, will join me in my expression of appreciation for his kind remarks.

Freedom of Debate in the Senate

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Saturday, July 13, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the testimony of Hon. Thomas F. Cadwalader, attorney, of Baltimore, Md., delivered before the special subcommittee of the Senate Committee on Rules and Administration considering proposed changes in Senate rule XXII.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF THOMAS F. CADWALADER

Anyone who has studied the American Constitution and its origin, as set forth in the debates of its founders themselves, and in the Federalist, must be aware of the fact that the chief function and purpose of the Senate as an institution is to defend the rights and interests of the States and more particularly of the small and weak States, against the large and populous ones. It was the then small States of New Jersey, New York, Connecticut, and Delaware that forced the compromise scheme of a Senate with equal suffrage of all the States as against a House with representation according to population. If this compromise had not carried, against the vigorous protest of the big States, Virginia, Pennsylvania, and Massachusetts, the convention would probably have broken up. Later when the amending article was under debate the same influences forced the adoption of the proviso which freezes the equality of States in the Senate beyond the possibility of repeal.

The Senate was therefore established expressly for the purpose of obstructing legislation hostile to minority interests, and especially to the smaller States. It was elected by the State legislatures.

The 17th amendment changed the method of electing Senators from the legislatures to the voters of the several States. This gave to the mass vote of big cities the real choice of the Senators from the big States and the Senators from those States are chiefly answerable to the industrialized and urban centers, and tend to reflect their wishes. The small towns and rural parts of the country can hope to rely only on the Senators from the agricultural States, and these are getting fewer all the time.

The checks and balances by which the framers sought to restrain the excesses to which governments are always prone have therefore been much weakened in the National Legislature. At the same time the legal and constitutional checks to be found normally in a judiciary sworn to support and defend the Constitution have become of little value. The reasons for this are perhaps more obscure but the fact is quite obvious. Even if in some spheres such as the right of free speech it may appear that individuals are being amply protected by the courts it is certainly true that individual rights to property, and the very basic right of local self-government have suffered curtailment such as the framers never dreamed of.

The powers of government when exerted in the direction of collectivism are rarely if ever restrained by the Supreme Court, and even the right of free speech is protected chiefly when the speaker advocates collectivism in some of its numerous forms.

Anything therefore that gives States or communities that are in the minority some sort of chance to defend their natural rights and the personal liberties of their people against the overwhelming power of a mighty government is to be safeguarded as a means of defending what liberty remains. For if liberty goes it matters not whether fascism or communism takes its place. In either event the days of American greatness will have ended.

One of the principal safeguards remaining is a Senate based on the equal suffrage of the several States and the right of almost unlimited debate of its members. No instance can be recalled in our history where this right of unlimited debate, or filibustering if you choose to call it so, has operated to the serious injury of the country, except in the opinions of a few disappointed people. In the past it saved the country from a renewal of the orgies of reconstruction when the force bill was defeated in the last decade of the 19th century. Actually the shame and crime of reconstruction itself could not have occurred if the several States had been allowed the senatorial suffrage that the Constitution guaranteed to them. If the aftermath of the Civil War had been as the aftermath of Great Britain's war against the Boers the hatred and disunity that now, 100 years later, still exist and increase between the sections of the Union, would long ago have been forgotten.

A free country must be governed by the consent of the governed, as the Declaration of Independence proclaimed. Otherwise it is not free. The right of cloture in a parliamentary body is only a right to impose the will of the dominant party on the unwilling minority. It is not necessary ever to invoke it unless the minority is convinced that the action under debate is so oppressive that it never should be advocated by any person professing his loyalty to free institutions.

Take the present case of the so-called (and miscalled) civil-rights bill. If the civil rights of citizens, white or black, cannot be protected in the ordinary course of law by the governments of the States in which they live, then we should abolish the United States altogether and substitute an all-powerful dictatorship in the hope that it might prove beneficent and treat everyone alike. Has any dictatorship done so? Yes, a few, for a short time perhaps. But you and I do not believe in taking this risk. However, if you make the protection of civil rights, however you define them, the duty of a central government through its appointed agents, attorneys, judges, marshals, and detectives, you are really opening the road to the development of a purely dictatorial form of rule, from which you may find yourselves beyond the point of possible return.

This bill is aimed now at the South but its principle is equally threatening to every part of our people.

If you overthrow the possibility of "talking to death" measures of this nature then you are voting to abandon one of the few remaining lines of defense established by the sagacious strategists of the Constitution and those who so vote may thunder against communism as much as they please—they will have presented it with a very useful key to unlock the storehouse of freedom, and despoil it.

The United States Chamber of Commerce and the TVA

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, July 13, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD letters protesting the position taken by the United States Chamber of Commerce opposing the TVA. These are letters from the president of the Columbia-Mount Pleasant (Tenn.) Chamber of Commerce written to Philip Talbott, president of the United States Chamber of Commerce, and a similar one written 3 years ago to the then president, Richard L. Bowditch, pointing out that local chambers do not agree with the action and questioning the right of the United States Chamber to take such a stand without giving its member bodies an opportunity to vote.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JUNE 19, 1957.

Mr. PHILIP M. TALBOTT,
President, Chamber of Commerce of the United States, Washington, D. C.:

In accordance with a request of the board of directors of the Columbia-Mount Pleasant Chamber of Commerce, I am writing to tell you of the formal action taken by our board Monday night.

The board went on record as condemning the recent stand of the Chamber of Commerce of the United States on the Tennessee Valley Authority situation, as exemplified by the highly publicized testimony of Mr. Louis V. Sutton at hearings of the Flood Control Subcommittee of the House Public Works Committee on May 7, 1957.

Our board also went on record with the opinion that the board of directors of the Chamber of Commerce of the United States did not have the authority under any policy declaration or referendum to take the stand voiced by Mr. Sutton, which, if carried out, would be disastrous to businessmen who have investments in the TVA area.

I was also asked to call your attention to a letter addressed to Mr. Richard L. Bowditch, then president of the Chamber of Commerce of the United States, under date of March 20, 1954, signed by Mr. Moscow Wright, then president of the Columbia Chamber of Commerce. A copy is enclosed. I was asked to do this to show you that we were opposed to the 1954 United States Chamber TVA policy, and we are therefore quite consistent in our strong stand against the 1957 proposals voiced by Mr. Sutton.

Very truly yours,
VIRGIL H. MOORE, Jr.,
President.

COLUMBIA CHAMBER OF COMMERCE,
Columbia, Tenn., March 20, 1954.

Mr. RICHARD L. BOWDITCH,
President, Chamber of Commerce of the United States, Washington, D. C.

DEAR MR. BOWDITCH: The board of directors of the Columbia Chamber of Commerce, a member of the Chamber of Commerce of the United States, took action at its regular monthly meeting in March 1954 deploring what appears to be the ingrained and, to our way of thinking, the unjustifiable antagonism of governing groups of the Chamber of Commerce of the United States toward the Tennessee Valley Authority, as exemplified by a recent report on the Tennessee Valley Authority and by other writings in official publications of the Chamber of Commerce of the United States.

Very truly yours,
MOSCOW WRIGHT,
President.

Alexander Hamilton Scholarships

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Saturday, July 13, 1957

Mr. MUNDT. Mr. President, as Chairman of the Alexander Hamilton Memorial Commission, it is a great pleasure for me to report that the Alexander Hamilton Bicentennial Students Constitutional Convention, a re-creation of the Constitutional Convention of 1787, held in Philadelphia's historic Independence

Hall, June 18–21, was a unique and highly successful enterprise.

The participants were 55 high school boys and girls, each the winner of a Hamilton scholarship in a State, the District of Columbia, or 1 of 6 territorial divisions. It has been conservatively estimated that at least 150,000 students took part in these preliminary contests with the result that at least this number of young Americans gained knowledge of Hamilton and the formative years of the Republic which they otherwise would not have obtained. Each of the 55 winners received a $1,000 scholarship, with an additional $1,000 going to the college or university he will attend.

In the course of the 4-day convention the student delegates discussed upward of 60 proposals to amend the Constitution of the United States in committee, and debated the merits and demerits of 20 amendment proposals on the floor of the convention. Of the proposals brought to the floor for action only 1, repeal of the 22d amendment, which limits the Presidency to 2 terms, was approved. The student delegates made it very clear that they like the Constitution as it is, and are opposed to change merely for the sake of change.

Out of the 55 delegates to the convention, 13 were selected to receive Hamilton fellowships, each representing a $2,000 scholarship, plus an equal sum to the college or university the student will attend. The 13 Hamilton fellows—the number is symbolic of the original 13 States—are:

Craig S. Bamberger, Jr., 805 Fifth Avenue, Selma, Ala.

Gordon R. Chester, 2268 Gekeler, Boise, Idaho.

James M. Copeland, Jr., 3717 Vorhies Road, Ann Arbor, Mich.

Carlisle H. Dick, 2615 East Manchester Street, Tucson, Ariz.

Harlan D. Hahn, 620 Vine Street, Osage, Iowa.

John J. Kirby, Jr., 609 Knollwood Drive, Falls Church, Va. (representing the District of Columbia).

Michael G. Marenchic, 305 Lawrie Street, Perth Amboy, N. J.

Dan E. McCall, 1122 Trinity, Modesto, Calif.

Karen E. Ordahl, 963 South Delaware, Springfield, Mo.

Shannon H. Ratliff, Box 5576, Sonora, Tex.

Allen R. Rule, 330 Lenappe Drive, Columbus, Ohio.

Samuel J. Stegman, 135 East Fifth Street, Peru, Ind.

Hastings Wyman, Jr., 2708 Highland Park Drive, Aiken, S. C.

To win the award in Philadelphia, each State winner had to qualify not only on the basis of public speaking, but also on the basis of general knowledge of Hamilton and his times.

At the dinner in Philadelphia the 55 delegates each received an award certificate entitling him to his $1,000 scholarship, and a bronze Alexander Hamilton medal. The certificates were presented by Dr. Bower Aly, of the University of Missouri, chairman of the advisory committee which planned and conducted the high school contests for the Commission. The 13 fellowship awards were announced by Hon. Laurens M. Hamilton, of Warrenton, Va., a member of the Commission, and a great-great grandson of Alexander Hamilton. J. Harvie Williams, Director of the Commission, was toastmaster.

Each scholarship winner at Philadelphia was asked to write a short statement summarizing his reactions and experiences at this Alexander Hamilton Memorial Student Constitutional Convention. I ask unanimous consent that six of these representative statements be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT BY JAMES M. COPELAND, JR., MICHIGAN

I am only sorry that more people cannot participate in the tremendously educational and successful students constitutional convention. Discussion and study of constitutional issues and the life of Alexander Hamilton have given to me new knowledge in the field of Government. If every one could participate in such a convention and in such learning, the future of the United States would be assured.

Although I only participated in a small segment of the program of the Commission, I feel that being a State delegate is one of the greatest honors to any student and certainly the highest honor I have yet to receive.

The Bicentennial Commission has certainly accomplished its objective. Alexander Hamilton is fast being accepted into the public hearts and minds as one of, if not the greatest of our Founding Fathers. With the fallacies exposed about Hamilton, the books written about him, the celebrations in his honor, and the contest held in his name, the American people, both young and old, are coming to recognize Hamilton's true worth. The Commission should be congratulated on a tremendous task well done.

STATEMENT BY CARLISLE H. DICK, ARIZONA

I am very proud to say that it has meant a lot to me.

At first, when I won the contest, I thought of it as nothing outstanding. But as I studied the books on Alexander Hamilton and the Constitution I gained a new insight as to the origin of my country.

When I came to the convention I met delegates from all the other commonwealths. Before I always had reflected my State's view on measures like civil rights etc. But when I talked with the other delegates I saw and tried to understand their reasons for their feelings on disputed issues—and now I partially understand and am glad I do.

I gained an insight as to the workings of Government. I better understood, through proposing and debating amendments, how our Government, our Senators and our Representatives work. This to me is the most important thing because if he does not understand or comprehend the workings of his own Government he cannot be an intelligent voter or American.

I am very thankful for the opportunity to come here and to say I know all these fine delegates.

I have not the time or the sheaves of paper it would take to convey my appreciation to the convention or for the fine companionship I have found here or for the insights I have previously mentioned.

I only hope and pray there will be another one in another 100 years for my grandchildren to enter.

STATEMENT BY JOHN J. KIRBY, JR., DISTRICT OF COLUMBIA

My participation has meant both the opportunity and inducement to learn about Alexander Hamilton and the Constitution. It opened up wide all the broad vistas of a self-course in political science.

The convention itself, even at this early date, has helped me to realize the problems, the differences, and the essential sameness of the residents of every State and Territory in the United States. It has been a real and, I sincerely hope, an abiding eye opener.

The reason I shall personally remember the Alexander Hamilton Bicentennial Commission is that in working at the convention and studying the Constitution and Alexander Hamilton, my decision to go into politics was finalized.

Through my entire life, the Commission will be a permanent milestone. It would be perhaps fitting to add that the scholarship has allowed to continue my education toward this goal. Another truly great memory.

STATEMENT BY SHANNON H. RATLIFF, TEXAS

Participation in the Alexander Hamilton Bicentennial Commission has meant three things to me. One is a greater understanding of our form of government and its mechanics. Two, a greater admiration for one of the truly great Americans. Third, a wonderful experience of associating with a fine, learned class of young men and women.

The first is important because I now can defend and understand my Government to a much greater degree. The second is of importance because I now believe that history has blackened a fine man's name. It also gives me a goal and a pattern which I would like to achieve and follow in life. The third has made me many friends, restored my faith in American youth, and enabled me to enrich my own life.

Because of the Alexander Hamilton Bicentennial Commission I now feel I have enriched my life greatly and am more capable now of being a good citizen and of being a true help to a world plagued by many terrific problems.

STATEMENT BY HASTINGS WYMAN, JR., SOUTH CAROLINA

Participation in the Alexander Hamilton Bicentennial Commission has been important to me for a number of reasons, but foremost of these is my participation has made me more conscious than ever before of the influence our forefathers had on our very lives. In almost every field of Government and politics, history is almost domineering in influence.

This program has also given me an opportunity to get a better understanding of our governmental setup. Though I had read previously about the organization and procedures of Congress, this convention has given me an insight into the work of Congress through firsthand experience.

My greatest disappointment of the convention to date has been the fact that because of limited time and a crowded schedule, the measures that we must discuss and pass on are never really even touched beyond the surface. This is probably something for which there could be no remedy.

Probably on important lesson that I have learned is that this great country of ours has as many different ideas concerning governmental policy as there are persons who entertain any such ideas at all. This was somewhat of a surprise to me, for as I have lived in my home State all my life, I did not realize the tremendous task in effecting one policy for the entire country from so many good opinions.

STATEMENT BY GORDON R. CHESTER, IDAHO

My participation in the Alexander Hamilton Commission has opened to my eyes a great new horizon of study, the Constitution of the United States, and the communications of wisdom set down by its proponents.

The uncomprising determination of Hamilton to do what he thought was right, and his versatility in so many facets of life provide an inspiration to me.

My selection as the constitutional delegate from my commonwealth crystalized a seemingly impractical idea that I might like to enter the profession of law and to enter the government of my native State.

More than anything else, I will have benefited from my contact with my contemporaries of this Nation, meeting with them, termining differences, likenesses and customs of our respective areas. And, too, I have realized the great power and scope of this Nation. And I have been impressed of my obligation to go forth to protect its right both from external force and from internal sedition, resulting from poor government, corruption, and compromise of principles.

The Fine Work of the American International Institute for the Protection of Childhood

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, July 13, 1957

Mr. WILEY. Mr. President, last month there was celebrated the 30th anniversary of the official inauguration in Montevideo, Uruguay, on June 9, 1927, of a very fine organization which is known throughout the Western Hemisphere. I refer to the American International Institute for the Protection of Childhood—the only intergovernmental agency in the world serving all the interests of childhood.

This splendid organization is the second oldest of the specialized organizations attached to the Organization of American States. It has been my pleasure in the past, as it is today, to highlight its good works, just as I have been pleased to highlight the fine job of UNICEF—the United Nations Children's Fund.

The institute's good works may be seen throughout Latin America—not simply in its encouragement and technical guidance to clinics, nurseries, hospitals, workshops, but in the healthy bodies of innumerable children throughout the Western Hemisphere.

The institute and the hemisphere owe an everlasting debt to the great individual who was its godfather, so to speak, Dr. Luis Morquio, a great pediatrician of the Republic of Uruguay.

I was pleased to note in the current July 1957 issue of the magazine Americas, published by the OAS, a fine article by Elisabeth Shirley Enochs, who has served as president of the directing council of the institute, describing the great job which it has done.

I send to the desk the text of this article, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO PROTECT OUR CHILDREN—AOS SPECIALIZED AGENCY IN MONTEVIDEO CELEBRATES ITS 30TH ANNIVERSARY

(By Elisabeth Shirley Enochs)

An institution, we are told, is "the lengthened shadow of a man." The truth of this saying has never been better illustrated than in the case of the American International Institute for the Protection of Childhood, second oldest of the OAS specialized organizations, which is celebrating the 30th anniversary of its official inauguration in Montevideo, Uruguay, on June 9, 1927.

The man whose shadow falls, through the institution he founded, in benevolent protection over all the republics of this hemisphere and extends even to European shores was the great Uruguayan pediatrician Dr. Luis Morquio. A monument erected to his memory by the Uruguayan Government, depicting Morquio with a child, stands in the beautiful park in front of the residence of the United States Ambassador in Montevideo. The statue is almost always flower-adorned, either with a formal wreath placed by a visiting official delegation or, more often, with simple bouquets put there by childish hands. This is as it should be. Nearly a quarter of a century has passed since Luis Morquio's death, but wherever America's pediatricians gather, his memory is revered, and there is scarcely a child in the hemisphere who has not benefited in some way from the life he devoted to promoting their health and welfare.

Luis Morquio was the son of poor Italian immigrants. His father worked for a while as a shoemaker. His mother had a hard time rearing her family, and Luis has been described as having been a puny child. I remember a touching incident I heard from a former Uruguayan naval attaché in Washington: "Shortly after Luis Morquio's birth," he said, "his mother came to work for my mother. Because of poor health, she could not nurse her baby. My mother had a child about the same age, and since she had an abundance of milk she offered to nurse the infant Luis too." But for this, Luis Morquio might not have lived to spread the doctrine of the mother-child relationship that is linked with his name.

Before the turn of the century, he entered the medical school of the free University of Uruguay. The school itself was struggling, and there was as yet no specialization in pediatrics. For this he later went to Paris. There pediatrics, though still in its early stages, was stimulated by ever-growing concern over the high infant-death rates prevailing in many European countries. After returning to Uruguay, Morquio worked with Dr. Francisco Soca, the first professor of pediatrics in the medical school, whom he later succeeded. As professor of pediatrics, he introduced theories that subsequently swept the hemisphere.

At that time few countries in the New World had reliable vital statistics, even in the larger cities, but it was assumed that in many areas more than half of the infants born alive died before their first birthday. (Not until 1910 was the first Ministry of public health established in an American country—in Cuba.) Because the life expectancy of adults was very low, many children became orphans at an early age. Inevitably, institutions were opened to care for them, but affection and good intentions were seldom accompanied by scientific knowledge of a growing child's needs. The unmarried mother customarily abandoned her infant. Many children, born in families in better circumstances, died because their parents knew little or nothing of the most elementary facts relating to child feeding. Luis Morquio was one of the first to recognize that the health problems of children are inextricably linked to the social and economic conditions of their families and the communities in which they live. He therefore tried to instill in his students an awareness of the child as a whole and advocated programs that emphasized all aspects of a child's life: health, welfare, education, and so on. His doctrine emphasized research and careful observation. "The most insignificant detail," he told his eager disciples, "may hold the secret of a diagnosis."

Morquio also believed in prolonging the mother-child relationship so that the child would retain the sense of security derived from the mother's continuing care. His insistence on avoiding unnecessary separation of a child from his mother from birth at least through the preschool years was an innovation that led to many advances in the philosophy and practice of child care.

A United States visitor to a Bogotá children's hospital a few years ago was surprised to find that adjacent to the cubicle with a crib for a sick baby was a tiny room with a cot for the infant's mother. "This is what Morkuio advocated," he was told. "The Uruguayan doctor said the sick baby needs the reassurance of his mother's presence. He also said that the mother is never more teachable than when she is worried about her baby." Today, more than a quarter of a century later, modern psychiatry is confirming Morquio's teachings.

Shortly after World War II, the World Health Organization began granting fellowships for study in the United States to European experts who had been cut off from the stream of scientific developments during the period of hostilities. One, Dr. Robert Montus of the French Public Health Service, told of having been in charge of a public-health district with a headquarters at Marseilles and of his concern for the high infant mortality in the area. "I did everything I had heard or read about to bring the rate down," he said, "but without much success. Then, by chance, I read a report by a Uruguayan doctor named Morquio, emphasizing the young child's need for his mother. We had been separating babies from their mothers at birth, especially the infants born out of wedlock, putting them in hospitals, nurseries, and other institutions and leaving their mothers free to work. I decided to try keeping the young infants with their mothers as long as possible. The decline in our infant mortality rate was immediate and striking."

To keep abreast of the time, Morquio maintained close contact with his colleagues in Europe and frequently attended scientific meetings overseas. In 1913, a big international child-welfare meeting was held in Brussels under the august patronage of the Belgian Premier, Carton de Wiart. In some of his writings, Morquio described this meeting, which formally recommended that Europe create an International Bureau of Child Welfare—a recommendation that could not be fulfilled because of the outbreak of the First World War.

Widespread concern over the welfare of children led to the organization of the First Pan American Child Congress in Buenos Aires in 1916. Although this first congress was not government sponsored, Dr. John Barrett, director general of the Pan American Union, stimulated participation by all the American Republics. The United States delegate described that congress as the first step toward the international interchange of ideas, which, if properly encouraged and supported, will result ultimately in the formulation of America's international ideals of childhood and its rights. Three years later, in 1919, the Second Pan American Child

Congress was held in the capital of Uruguay. In the minutes of a special plenary session of May 22, we find the following: "Continuing, Dr. Morquio presented for the consideration of the assembly the project to create an American International Bureau for the Protection of Childhood, which would be the center for study, action, and dissemination of information on all matters relating to children and which might be the official agency of the American nations which would sign the agreement."

After study by a special committee, the Congress formally approved the proposal, which invited the Government of Uruguay to serve as the host country. After many negotiations, the necessary legislation was enacted by Uruguay, a committee was appointed to draft statutes, and approval by the Fourth Pan American Child Congress, in Santiago, Chile, in 1924, opened the way for the actual establishment of the new agency.

The only intergovernmental agency in the world serving all the interests of childhood, the Institution is sanctioned by the Bogatá Charter as a specialized agency of the Organization of American States. Its work dovetails with that of UNICEF, which, of course, is a much larger organization. The Institute supplies technical information and advice; UNICEF supplies food, equipment, and training. The Institute makes studies and advises as to nutritional needs of children; UNICEF furnishes the milk that is lacking in such areas as Central America and the Andean countries. The Institute recommends standards for children's hospitals; UNICEF supplies medicine and equipment.

It was the institute that was responsible for inviting UNICEF to turn its attention to the Latin American countries as well as Europe and Asia. At the ninth Pan American Child Congress in Caracas in 1948, the institute sponsored a resolution urging the American countries to contribute generously to UNICEF and urged UNICEF to consider the needs of American children, which, though not caused directly by war, were no less compelling. UNICEF not only gave favorable consideration to this urgent plea but invited the Institute's Direcor General, Dr. Roberto Berro—who succeeded Dr. Morquio on his death in 1935—to spend several weeks at UNICEF headquarters in New York to help plan the Latin American program.

A small agency with a budget—for 1957—of $55,000 must operate with economy and discretion. The institute sees its role primarily as that of a gadfly, stimulating the responsible agencies in each country to develop an awareness of children's needs and seek practical solutions for their problems. Through surveys and field studies and research—its specialized library covers every conceivable facet of child life—the institute answers any kind of inquiry. If a women's organization in Cuzco, Peru, for instance, wants to start a day-care center for children of working mothers, a letter to the institute will bring them simple directions. Is Venezuela revising its children's code? The institute will review the draft and comment on it. No one knew how many children in Latin America had rheumatic fever until the institute made a survey, called the attention of pediatricians to the problem, and urged a Pan American Sanitary Conference to adopt a resolution making the disease reportable.

The institute touches both the child of the Bolivian highlands and the Haitian orphan. I have talked to country doctors in the interior of Ecuador who depend on the quarterly Boletin for information from the best specialists on child care. An adviser with the International Cooperation Administration in Paraguay reports that the most substantial material on social services for children in the Asunción School of Social Service library was found in the Boletin. Through the national Children's Bureau of Brazil, the philosophy of "the whole child" that Morquio bequeathed to the institute has found expression in services for mothers and children in the most remote areas of that huge country.

The institute has undertaken a number of major studies, some hemispherewide in scope, others restricted to a few countries. These have covered such subjects as Latin American Indian children (a study recommended by the International Save the Children Union); rickets; the incidence of infantile paralysis among children; medical services in school-health programs; institutions for delinquents; children's nutrition problems (in cooperation with the Argentine National Institute of Nutrition and the United States Children's Bureau); and a study of methods of caring for European children evacuated from areas under bombardment and brought to the New World (requested by the second meeting of foreign ministers at Habana in 1940).

Ecuador and the United States were the first countries to benefit when the institute introduced a microfilm service for member countries. A judge in Chicago had refused to sanction adoption proceedings for a child that was to be taken to Ecuador to live because he did not know what protection the child would have under Ecuadoran law. An appeal from the Children's Home and Aid Society brought by airmail from the institute a microfilm copy and an English translation of Ecuador's modern law, which the institute had helped Ecuadoran authorities frame. The judge was satisfied and the adoptive parents happy.

The institute's technical work is carried on at headquarters through its department of technical cooperation and five advisory committees: child health, legislation, statistics, social services, and education. These are headed by such eminent authorities as Dr. Lourenço Filho, a noted Brazilian educator; Miss Marta Ezcurra, of Argentina, probably the best known social worker in Latin America; and three Uruguayans—Dr. Adolfo Morales, a statistician of international repute; Judge Pedro José Achard, an expert in children's codes and juvenile delinquency; and Dr. Maria Luisa Saldún de Rodriguez, associate professor of pediatrics at the University of Uruguay. The acting director, Dr. Victor Escardó y Anaya, Luis Morquio's favorite disciple, has been with the institute since its first day and was in charge of technical cooperation until September 1956, when the untimely death of Dr. Roberto Berro left him acting as interim director.

One of the first OAS technical cooperation projects—known in OAS circles as Project 32—was launched to benefit the children of the member countries. Every year from 1952 to 1956, the Institute invited to Montevideo 1 specialist from each of 7 countries for a 2-month intensive workshop to study all aspects of child health, welfare, and education. The United Nations and UNICEF made extra fellowships available, so that each year from 10 to 15 people took the course. After returning to his country, the specialist, assisted by technical experts from the Institute, organized a national seminar to explore the needs of children. Agencies and institutions were visited and on-the-spot consultation offered. The governments have cooperated enthusiastically. In Colombia and Haiti, for instance, the governments provided air transportation to remote sections so that Institute experts and local specialists could visit institutions devoted to the care of lepers' healthy children. In Venezuela the seminar's daily sessions were broadcast, and the staffs of children's agencies and institutions in the various provinces held round-table discussions of the material reviewed by the experts in Caracas. Copies of lectures given at the Montevideo workshop were widely distributed by the Institute to fill the textbook gap. In some countries as many as 300 people participated in the national seminars that followed the Montevideo workshop.

When Dr. Alberto Lleras Camargo was OAS Secretary General, he liked to joke about a reception he received in Santiago, Chile, during an official trip around South America. The morning after, he sent for the papers to read the accounts of his arrival. Blazoned across front pages were such headlines as "OAS Discusses Child Nutrition." "I was dumfounded," Dr. Lleras said. "None of the welcome speeches had mentioned nutrition, nor had I in my response. Then I discovered that what the papers were full of was the Institute workshop."

The Institute's late Director General, Dr. Roberto Berro, always said that the American International Institute for the Protection of Childhood originated "in the fusion of two sentiments deeply rooted in our society and in our hemisphere—concern for children and the historic and traditional fraternity of the American peoples." For this reason, he predicted, its work will continue to receive even wider acceptance among nations, "because America clearly sees its future in the child."

Mayor B. F. Vance, of Bryan, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, July 13, 1957

Mr. YARBOROUGH. Mr. President, on Friday, July 5, 1957, Texas lost one of her foremost citizens, Mayor B. F. Vance, of Bryan, Tex. Mayor Vance passed away after a distinguished career of public service, covering more than a quarter of a century.

He was a national leader of agriculture and agricultural advancement in a period of change and adjustment, during the great depression, in World War II, and in the period of adjustment following World War II. He was a leader in the successful administration of the Agricultural Adjustment Act in Texas, and was the outstandingly successful administrator of the Production Management Act in Texas. In the latter capacity he was known to every farmer and rancher in Texas.

Because of his stanch stand for the farmers and ranchers of Texas and America, he was forced out of office by State and national administrations which were out of sympathy with Democratic measures which had resulted in such widespread agricultural prosperity.

So great was the personal integrity of B. F. Vance that he sacrificed himself rather than yield to measures that he knew were detrimental to the agricultural interests of his State and Nation. He sacrificed no principle.

In all of his courageous acts, he had the loyal support of a devoted wife and a closeknit family.

The recognition of his knowledge and integrity was spreading steadily over Texas at the time of his death. It is certain that, had he lived, he would have

been called to greater and greater spheres of service and influence. Just as his home city had placed him in her mayoralty chair before his death, his State would certainly have called him back to wider fields of service, had he lived.

I relied heavily upon B. F. Vance's advice in agricultural matters. He was my personal friend. We fought for good government together. Our joint efforts covered Texas from the Sabine River to El Paso.

Among the tens of thousands of friends who have helped me in Texas in the past 5 years, none was more patriotic or more unselfish than B. F. Vance.

Friend, good citizen, good father, patriot, good neighbor, he represented the best in American citizenship. His loss impoverishes Texas.

The Bryan Daily Eagle, one of the outstanding daily newspapers of the small cities of Texas, devoted much of its issue of Sunday, July 7, 1957, to the story of the life of this good man.

Mr. President, I request unanimous consent that there be printed in the Appendix of the RECORD the front page editorial in the July 7 issue of the Bryan Daily Eagle. The editorial is entitled "Vance Death Loss to Bryan."

I also ask unanimous consent to have printed in the Appendix of the RECORD the articles in the same issue of the Eagle, entitled "Mayor's Public Career Began 28 Years Ago," "Heart Attacks Fatal to Civic Leader," and "Tributes Paid Mayor by Many."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

VANCE DEATH LOSS TO BRYAN

In the untimely death of B. F. Vance, Bryan has lost more than an excellent mayor. Had he never held that position in the city government, which he took over only 2 months ago, B. F. Vance would be remembered as one who contributed heavily to the welfare of Bryan, Brazos County, and the State of Texas.

B. F. Vance came to Bryan 23 years ago as district agent for the Agricultural Extension Service of Texas A & M College, after service in three counties, including nearby Madison, as a county agent.

When the AAA mushroomed as a New Deal project for farmers, Vance was named assistant administrative officer and later chairman and chief administrative officer. He guided the organization for 18 years, and in few States was the AAA (or PMA, or ASCS as it is now known) more important to the welfare of farmers than in Texas.

He carried his stock of knowledge of agriculture to Greece at a time when the United States was building up that country as a bulwark against rampant communism.

Making his home in what was then open territory between downtown Bryan and College Station, Mr. Vance saw a need for more housing and did as much as any man to build up the area until now there is a solid residential area in the 5-mile trip. After leaving the PMA when the Eisenhower administration came into power, Mr. Vance devoted his full time to the creation of housing. To him it was more than building houses for profit, it was building homes to take care of families.

He did not withdraw from politics after leaving PMA, but continued to support the liberal wing of the Democratic Party to which he belonged, and stumped actively for Ralph Yarborough. Those who disagreed with his stand still admired his outspokenness.

When Mayor George E. Adams resigned, Mr. Vance entered the municipal field as a city commissioner, and was twice elected in his own right. He proved a good commissioner, carefully studying new questions as they arose and proving firm in his convictions once he had reached them.

Just 2 months ago his fellow commissioners named him mayor, and an outstanding administration seemed certain. But 2 weeks ago he suffered a heart attack, followed by complications as he determinedly fought his battle to live. He will be sorely missed.

MAYOR'S PUBLIC CAREER BEGAN 28 YEARS AGO

Mayor B. F. Vance's death at midnight Friday brought to an end a career of public service which began in Wise County in 1929, and set the stage here for a special election to fill the vacancy on the city commission.

The city charter provides for a special election to fill vacancies on the commission, but does not set the date for such an election. It is expected, however, that the commission will take up the matter at its meeting Friday night.

Vance, who had been elected to his second full term on April 2, got his start in local politics in June 1954, when Mayor George E. Adams resigned from the commission. He was named to fill the unexpired term, then was elected to fill a full term and stood for relection again this year.

He stepped into the mayor's chair on April 12 after the unanimous vote of his fellow city commissioners.

Although the mayor started his long career of public service as schoolteacher, county agent, district agent for the Extension Service, the old triple A and the Production and Marketing Administration, it wasn't until after he resigned as State director of the PMA on July 11, 1953 that Vance became active in State and local politics.

He accused former Governor Shivers and the Republican administration of forcing him to resign as State director of the PMA. After Vance's resignation, Shivers said the resignation was asked by Washington. Vance had said Shivers pressured him to resign and blocked his appointment to an overseas job under the point 4 program of foreign aid.

Tom Miller, Southwest area PMA director, said at the time Secretary of Agriculture Benson had asked for the resignation in order to name a director who was sympathetic with the Eisenhower administration.

After resigning from the State post, Vance became active in State Democratic politics, alining himself with the liberal wing of the party.

He campaigned for Judge RALPH YARBOROUGH, then seeking to unseat Governor Shivers. He continued his support of Judge YARBOROUGH in his unsuccessful campaign against Governor Daniel and was active in YARBOROUGH's successful campaign to win the United States Senate post vacated by Daniel.

Although elected to two full terms on the Bryan city commission, Mayor Vance did not campaign actively for the position. His activities as a real estate developer and his many civic services won him the admiration and votes of many Bryan citizens.

HEART ATTACKS FATAL TO CIVIC LEADER

Funeral services for Mayor B. F. Vance, 57, who died Friday at midnight, will be held today at 3 p. m. from the First Baptist Church, with the Rev. Dr. W. H. Andrew, pastor, officiating. Burial will be in Bryan City Cemetery.

The mayor died after an 18-day series of heart attacks. He was stricken on June 18 while at his farm near here.

The body will lie in state at the church from 1:30 p. m. until time for the services. One hymn, Asleep in Jesus, will be sung by a quartet from the choir of the First Baptist Church. Mrs. Imogene Nash Robertson will play organ music.

Pallbearers, selected from the members of the Men's Discussion Group of the church include S. A. Lynch, J. Frank Tucker, H. L. Heaton, V. M. Nelson, A. A. Wilbanks, and J. H. Sorrels.

Born June 2, 1900, at Boyd, Vance came to Bryan 22 years ago as district agent for the Extension Service. He later became chairman of the Agricultural Adjustment Administration and continued as director when it became the Production and Marketing Administration (PMA).

In 1947 he took a leave of absence and went to Greece as agricultural adviser with the American mission for air to Greece.

He resigned his post with PMA on July 11, 1953, and became a real estate operator and developer in Bryan. He is credited as being one of the major builders of Bryan, developing such residential areas as Meadowbrook Garden Acres, North Garden Acres, Highland Park, and Lakeview.

He was the first president of the newly organized Bryan-College Station Home Builders Association, and was holding the office at time of his death.

Mayor Vance was educated at Decatur Baptist College, Baylor University, North Texas State Teachers College, and Texas A. and M. He began his career as a school teacher in Wise County in 1929. Later he was county agent in Madison, Wis., and Young Counties.

Survivors include the widow, Mrs. Vonnie Ray Vance; a daughter, Mrs. Betty Vance Goff, Robstown; two sons, B. F. Vance, Jr., stationed with the United States Air Force at Marysville, Tenn., and William Ray Vance, of Bryan; two brothers, Charles Vance, Milam, and Ernest Vance, Elmhurst, Ill.; two sisters, Mrs. Frank Thurmond, Austin, and Mrs. Alice Lewis, Houston; one grandson, and a number of nephews and nieces.

Mayor Vance was a member of the First Baptist Church, Rotary Club, Masonic Lodge, and active in civic and cultural circles.

Burial will be under direction of Hillier Funeral Home.

TRIBUTES PAID MAYOR BY MANY

The death of Mayor B. F. Vance at midnight Friday brought many messages of sorrow and expressions of appreciation and affection for friends and close associates.

United States Senator RALPH YARBOROUGH late Saturday afternoon telephoned from Kansas City where he had gone to attend the dedication of Truman Memorial Library.

Senator YARBOROUGH, a close friend of Vance, said:

"I am shocked to learn of my friend's death.

"In the death of B. F. Vance, Texas has lost one of her most courageous public spirited citizens and a national authority on agriculture.

"He had dedicated more than a quarter of a century of his life to the improvement of agriculture in Texas and the Nation.

"His citizen's virtues were founded upon an unimpeachable character dedicated to the public good. This was the dynamic force in his life.

"He sacrificed much for Texas and its people. And he sacrificed much for me. I loved, admired, and respected him.

"All the people of Texas and the agricultural interests of the Nation have suffered a severe loss.

"I extend my deepest sympathy to the family of Mayor Vance during their hour of loss and bereavement."

Mayor pro tempore O. B. Donaho said:

"The mayor's death was a great shock to me. The community has lost one of its

finest men. Mayor Vance was a leader, a man of vision, unselfish and one who gave of his time and money for the betterment of his community. Mr. Vance was a Christian gentleman, a family man. I extend my deepest sympathy to his family."

Mike Barron, a member of the city commission who had served a number of years on the commission with the mayor, said:

"He was one of the finest men I have ever known. His death was a great shock and his passing will be felt by the entire community. I have lost a fine friend and the community has lost a great citizen."

Commissioner John Naylor, too, said that the "mayor's death is a great loss to the city."

He added, "I feel that I have lost a personal friend who never can be replaced. His guiding hand on the affairs of the city will be greatly missed. His death is a great loss to the entire city."

Dr. S. J. Enloe, a member of the city commission, said:

"He was a man of vision and a man who held the welfare of Bryan and the entire area near and dear to his heart. We have lost a great and good man. He will be missed by the entire city."

Mills P. Walker, president of the Eagle Printing Co., said:

"Mr. Vance was a strong and valuable member of the city commission and as a housing developer had contributed greatly to the growth of Bryan. His death is a real loss to the community."

Casey Fannin, city manager said, "I have known Mr. Vance since 1927. He was a fine gentleman. His death was a great shock to me. The entire community has suffered a great loss."

The Civil Rights Bill

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, July 13, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, two excellent editorials from the July 10 and July 11 issues of the Nashville (Tenn.) Banner. They are entitled respectively "A Principle of Rights: South Making Its Point" and "RUSSELL Stated the Case: There Is Hope in Assurance Given by the President."

This newspaper is published by Capt. James G. Stahlman, a great Ameriman who has always fought hard through his editorial columns to preserve constitutional government.

I also ask unanimous consent to have printed in the Appendix an outstanding editorial from the July 9, 1957, issue of the Augusta (Ga.) Chronicle. It is entitled "Threat of 'Force' Laws." This editorial is most pertinent to the motion now pending before the Senate.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Nashville Banner of July 10, 1957]

A PRINCIPLE OF RIGHTS: SOUTH IS MAKING ITS POINT

More Senators, it appears, are seeing the validity of the South's insistence on trial by jury as a fixed point of law and due process—bone of contention with the civil rights brigade. They are seeing, surely, what logic underscores; that if this principle falls under the impact of biased thinking against the South, it falls for all. It is not, therefore, a regional issue, but national. The southern protest is not addressed to a narrow, selfish view, but to a view exactly as broad as the Constitution—and as far reaching.

Senator O'MAHONEY, of Wyoming, has paid tribute to the fairness of southern colleagues—having spoken out prior to this showdown for the stated right of due process; and recognizing the progress already made, and voluntarily, on race relations. As a further point of edification, the fact of voting rights enjoyed and practiced in the South should be laid before him.

Who, influenced by propaganda to the contrary, has bothered to examine the record in State after State? By what process of competent investigation have these civil-rights firebrands arrived at a conclusion of wholesale indictment?

Voting is a privilege, as well as a duty, of citizenship, asserted and protected by law. With that principle there can be no quarrel. The issue is invasion by Federal authority, and methods of enforcement begetting strife by the measures of force contemplated in this iniquitous legislation.

There are States, outside the South, where people of voting age are denied the right to vote—Indians, for example. Negro citizens do vote, under the same rules of eligibility applied in the case of white citizens; and if any Senator doubts that, he should come this way and watch.

In Tennessee, and other Southern States, he would find Negroes holding public office. In Nashville they elect their own representatives to city council; they have membership on the school board. They staff their schools. They are employed on the police department and the fire department.

Facts, it appears, are coming out in the Senate and registering—and they are facts answering organized diatribe; substantiating both the concept of justice and of constitutional law.

The South does not stand at the bar of public opinion convicted—just accused. It is not on the defensive. It is defending a basic right of responsible treatment, and the place of that defense is the floor of the Senate.

As manifested by the implied readiness of opponents to concede the trial-by-jury point, its stand to date is influencing that decision. It cannot compromise any principle to the detriment of established, constitutional rights, much less yield to the whip of caprice.

[From the Nashville Banner of July 11, 1957]

RUSSELL STATED THE CASE—THERE IS HOPE IN ASSURANCE GIVEN BY THE PRESIDENT

President Eisenhower now has been given the other side of the civil-rights dispute, a conducted tour of factual study incorporating details which his legal advisors obviously had screened from view. Senator RUSSELL performed a service in presenting the facts in the case, and from that conference emerged with the reasoned hope of eliminating from this disputed legislation its force bill particulars.

Fairness demanded the respectful treatment accorded this presentation of the South's case, a quality of character on which Senator RUSSELL relied in seeking the interview and on which he rests the assurance that, in his own language, "The President has absolutely no purpose of seeking punitive action against the South."

It is none the less essential to strike from this measure those sections embodying vicious, punitive powers; for if enacted there could be no possible guaranty that a future incumbent would not employ them. Fairness and meticulous regard for principle are not the universal traits in political life, and the only safeguards are to restrict powers by the exercise of reason in the writing of law.

This is, after all, a Government of law—its statutory enactments, as its branches of balanced authority within their respective boundaries, limited to the domain clearly and properly spelled out by the Constitution. It is only when elements contemptuous of that restraint embark on power jags, or punitive expeditions of pressure and coercion, that the principle of law is imperiled.

President Eisenhower unquestionably is aware of that, and must understand the dangers implicit to any legislation that ever could be used, by some reckless successor dominated by the forces of irresponsibility, intrusion, and spite.

If the President recognizes the hazards of this mechanism as pointed out, he must realize that he has been sold a bill of goods by those devising it ostensibly under his sponsorship.

It is impossible to dispute the existence of threatening sections in the civil-rights bill, for there they are, and not just by interpretation. As enumerated by Senator RUSSELL, they are chiefly, part III, which he described to the President as authorizing the use of troops to integrate schools and all other public facilities in the South; and part IV, providing Federal injunction to protect voting rights.

It was as a Southern spokesman confident of Mr. Eisenhower's good intentions and instinctive dedications to principle that Senator RUSSELL sought this opportunity to put the facts before him.

He was receptive to those facts, for an enlightening appraisal that should have been accorded this far-reaching legislative proposal before it was advanced as an administration bill. That it goes far beyond the President's objectives, in its provisions of punitive means and ends, has not been doubted by any acquainted with his policy of moderation, and his concept of justice and constitutional restraint.

The Senator's declaration of hope, implicit to the spirit of good will and reasoned concern manifested, strengthens hope of the South to whose welfare it is addressed.

[From the Augusta Chronicle of July 9, 1957]

THREAT OF "FORCE" LAWS

Attorney General Brownell, who is opposed to guaranteeing jury trials in Federal court contempt cases, is the person who will gain the greatest power if Congress passes the civil-rights legislation.

Perhaps that is the reason why he discourages any attempt to point out the dangerous uses to which such legislation can be put.

He thinks that it is irresponsible to raise the question as to whether old "force laws," enacted at the close of the War Between the States, would be used to reenforce the power of the special court to be created under the new law.

The Attorney General asks the people to believe that the Federal Government would not use today the tactics that were employed during Reconstruction days in the South.

But those "force laws" are still on the books and the proponents of current civil-rights legislation are just about as fanatically unreasonable in their demands as were those who helped to make dark history in the South during the Reconstruction period.

The people cannot afford to accept pretty words in exchange for their right to jury trial. To sacrifice that right is to sacrifice liberty itself.

Those who are advocating current civil-rights proposals are either too ignorant to understand the full implications of the bill or they are deliberately participating in a program that would undermine basic constitutional rights.

The question is: Why are they demanding that State courts be bypassed and that supreme power to try and charge citizens by

unconstitutional methods be lodged in a single individual?

Are they so ignorant of the recent history of Italy, Germany, and Russia that they cannot recognize the kinship of the presently proposed civil-rights legislation with the methods used by Mussolini, Hitler, and Communist Russia?

Whether it be ignorance or deliberate intent to strip the people of their right to trial by jury, the results will be the same if the people permit their representatives in Congress to pass such legislation. Once the civil-rights proposals are enacted into law, citizens might not have the right even to express an opinion on the injustices that will mark its operation.

Why Inflation?

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, July 13, 1957

Mr. KEFAUVER. Mr. President, the No. 1 domestic problem facing the people of our country is the constant increase in the cost of living—inflation. The Subcommittee on Antitrust and Monopoly, of which I have the honor of being chairman, is holding very interesting hearings on this all-important subject. We have had a number of economists testifying before our committee who have presented, objectively, an overall view of the forces in the American economy bearing upon this issue. The hearings more specifically deal with administered prices as they affect our economy.

Bernard D. Nossiter, of the Washington Post and Times Herald, has written some splendid articles on the testimony at these hearings. He has put into understandable language the meaning and importance of what has been said.

I ask unanimous consent to have his thoughtful and challenging column, as it appeared in the Washington Post of July 13, 1957, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN ECONOMY—SENATE UNIT HEARS FRESH IDEAS OF THREE EXPERTS

(By Bernard D. Nossiter)

Three economists ambled into the Senate caucus room this week and recited a catalog of economic blasphemies that may shake the lobbyist, agitate faculty rooms, and tax the ingenuity of the public relations boys for years to come.

The mild-mannered heretics were Edwin G. Nourse, who quit as President Truman's chief economic adviser because the Fair Deal was too liberal; John Kenneth Galbraith, onetime Fortune magazine editor and now a Harvard professor; and Gardiner C. Means, an economist with the sophisticated, business-supported Committee for Economic Development.

Their testimony, along with the coincidental release of a voluminous study showing the rapid postwar growth of concentration in industry, amounted to a fresh map of the American economy's topography. Some will even argue that the map is useful because it fits the facts as many people know them.

Hardened observers at congressional economic hearings gaped as ill-assorted Senators swallowed without visible pain heady doses of heresy.

Senator ESTES KEFAUVER, Democrat, of Tennessee, a vigorous opponent of business bigness, heard the economists' argument that using antitrust laws to break up concentration and bring competition to prices was a waste of time. Means said the antitrust blunderbuss, if really brought to bear, could "pulverize industry" and cost the Nation the efficiency of large corporations. Means, Nourse, and Galbraith, be it noted, were saying these things at KEFAUVER's express invitation; he is Chairman of the Senate Antitrust and Monopoly Subcommittee before whom they testified.

Senator EVERETT MCKINLEY DIRKSEN, Republican, of Illinois, champion of free enterprise, barely blinked as the trio told him that most of industry's prices are not set in the free market. Instead, the economists said, prices are administered by conscious decision and can be held rigid at these levels for periods of time, regardless of fluctuations in costs and demand.

The three economists do not see eye to eye on many points. But in general, they pictured the midcentury economy as looking like this:

In most of industry—steel, autos, rubber, oil, aluminum, and meatpacking especially—the classical free market of many producers, no one big enough to affect the market price, is about as relevant as the Turkey Trot. Instead, industry is marked in varying degrees by concentration, a few large corporations.

In these areas, prices are administered over an unknown range and not set by the automatic interaction of supply and demand. (Means contends that administered prices also pop up in many competitive sectors, but he agrees that concentration does play some part in furthering this kind of price setting.)

Moreover, industrialists can at any given time charge several different prices for their products and make the same amount of profit. Of course, the higher the price, the lower the output and employment. So what particular price is selected in this range has vast consequences for general well-being.

Finally, unions have a similar degree of discretion about the price they charge for labor. Therefore, it is like running down phantoms to try and determine whether labor or management is currently the villain in the mystery of the depreciating dollar.

At any rate, the trio agreed, the biggest price jumps in the recent wave of advances have taken place in these administered-price sectors. Competitively set prices—in agriculture, cotton textiles, and the like—have not kept pace.

What public policy should then be pursued? The trio, in their profession's best tradition had little to offer. Although 2 of them have been or are now prominent Democratic Party advisers, all 3 voiced strong support for the Eisenhower administration's "jawbone" attack on rising prices.

Unions and big business, they reasoned, are very responsive to public opinion and temper their appetite accordingly.

Thus, they argued, public appeals for restraint will work. They all guessed that steel would have increased more than the recently posted $6 a ton if it had not been for the war of words. The three economists groped for some way of institutionalizing such appeals. They suggested Government forums where big industries would have to announce in advance and justify price increases.

From both sides of the aisle, Senators JOSEPH C. O'MAHONEY, Democrat, Wyoming, and ALEXANDER WILEY, Republican, Wisconsin, bespoke varying degrees of enthusiasm for such forums.

As for tight money, the economists either dismissed it or relegated it to an inferior role in curbing price rises. If money was tightened enough to stop prices, they said, it would produce unpalatable unemployment. The present, steady rein, they noted, has not halted prices' upward movement. They said this was to be expected, because big business either gets all it wants to borrow or raises what it needs to expand from higher prices or passes on to customers any increased interest costs.

Means offered the most forthright defense of big business while Galbraith and Nourse agreed by implication. Large corporations are most efficient, the story went, and are more likely to forbear from charging all the public will pay in the interests of public relations.

Senate labor-rackets hunters might well pay attention to this analysis. There is probably a strong connection between the emergent concentration in trucking, baking, and textiles and the unsavory unions leaders that are crudely acting as midwives to the birth of this phenomenon.

But all of this challenging diagnosis assumes that society's single goal is the greatest possible standard of living. As economic units grow in size, what, asked the romantic O'MAHONEY, happens to the individual? What are the implications of concentrated economic power for the spiritual aspirations of a society professing democratic ideals?

Nobody stayed to answer. They were economists, weren't they?

Freedom of Press in Jeopardy

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 13, 1957

Mr. YARBOROUGH. Mr. President, for weeks I have warned of the dangers to freedom of press and to the freedom of the peoples right to information about their Government, if the Wright Commission's recommendation for a penalty of not more than 5 years' imprisonment and not more than a $10,000 fine for any newsman printing a Government paper labeled "secret," were enacted into law.

The American people and press are being aroused to this danger. By today's mail, I received from Mr. George Todt, the Monday, July 8, 1957, issue of the Valley Times, in California, containing an ably written column entitled "George Todt's Opinion: Freedom of Press in Jeopardy."

I request unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

GEORGE TODT'S OPINION: FREEDOM OF PRESS IN JEOPARDY

"If the law is upheld only by government officials, then all law is at an end." (Herbert Hoover, message to Congress, 1929.)

Any attempt by Government bureaucrats or hired commissions to infringe on the people's right to know ought to be met with the stiffest kind of resistance by every newspaperman worth his salt—and by the public.

Contrary to superficial notions entertained by those who have not thought the problem through, censorship is more harmful—and more insulting—to the ordinary citizen who

reads the news than to the man who has to write it.

Yes, censor the press—muzzle it if you will—and its members will know how to stay within the rules imposed upon them from above, and they can survive.

But what about the Republic of the United States? Freedom and human liberty? Or the uniquely American concept that our Government is set up through the consent of the governed? Can these institutions survive the onslaught of bureaucratic censorship?

I doubt it and for that reason we all must take exception to anything which smacks of censorship in this country of ours—no matter how large or small it may appear at the time. And this is why I think the controversial security report of the Wright Commission deserves a long second look by each of us.

There may be some good features contained within the report. But one of them, at least, is so highly debatable and questionable that it should be disposed of first before going on to other phases of the matter. There is an old legal maxim which says, in effect, "if one part is false, all is false." This should apply here. And very definitely.

The part of the report which most thinking persons in the Nation are taking exception to with a vengeance today concerns the part wherein—actually a bill has already been drafted to this effect by the Commission—it would become unlawful for any person who has received "secret" or "top secret" information in any field "to communicate any part thereof" to anyone else not authorized to receive such information. A reporter or a publisher could be sent to prison for 1 year and fined $10,000 if the Commission's recommendation were to be accepted.

Prior to this time, the law has banned unauthorized disclosures by Government service personnel. But Chairman Loyd Wright, of Los Angeles, made it clear that this proposed law change was aimed at the press. In a somewhat remarkable statement, he said:

"An informed citizenry is a major premise of our Government structure. But that same structure may be destroyed if a potential enemy is supplied with information critical to national self-preservation. The final responsibility for the difficult decisions of what shall be secret must be confined in those loyal and devoted public servants who are qualified to make the judgment. No citizen is entitled to take the law, and the safety of the Nation, into his own hands. With near unanimity the American journalism profession has conscientiously observed these limits. But there are a few exceptional cases which for some reason have escaped prosecution."

Asked to name such cases, Mr. Wright promised to do so within a week.

But 10 days later we find that the former president of the American Bar Association was in the embarrassing position of being unable to deliver the goods.

What happened? Well, poetic justice, of sorts, seemed to have had its way in this case. Mr. Wright was forced to issue a statement in which he said he knew of certain "dark chapters of betrayal" but unfortunately cannot talk about them. Why? Because some loyal and devoted public servant who was qualified to make the judgment persisted in stamping all the cases referred to by Mr. Wright as "secret"—and had then buried same somewhere in "deep six." Or government bureaucracy über alles.

According to Mr. Wright's own suggested ground rules in this instance, there was nothing he could do about it except gripe—just like the rest of us working stiffs.

I hope that the next time Mr. Wright feels called upon to make a deep obeisance to those "loyal and devoted servants who are qualified to make the judgment" concerning classification of pertinent Government documents, he will take a long, hard second look.

What nearly everybody seems to know—and I think Mr. Wright may now be included in this category—is that much of the classification of Government documents is done just to cover up mistakes of bumbling and inept bureaucrats. And the public's "right to know" can go to.

This is something the journalistic fraternity has known for a long time—even if it has only recently begun to dawn on some of the more outstanding legal minds of the Nation.

The Late Honorable Earl C. Michener

SPEECH
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. BENTLEY. Mr. Speaker, I was very sorry to learn of the recent passing of Earl C. Michener, who for many years ably represented the Second Congressional District of Michigan in the Congress. While it was never my pleasure to serve at the same time as Mr. Michener, I had met him, following his retirement, on various occasions in his home town of Adrian.

I understand that, during his many years of public service here in Washington, he compiled an outstanding reputation as a statesman, a parliamentarian and a keen and conscientious legislator. His service as chairman of the two important House committees, Rules and Judiciary, shows the high esteem with which he was regarded by his colleagues.

I take this opportunity to express my sympathy to his daughter and other close relatives. Their loss has, of course, been made doubly hard by the recent passing of Mrs. Michener less than a month ago. They have my earnest prayers at this time of trial.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Address Delivered by Hon. Edward Martin, of Pennsylvania, Before Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the 38th annual encampment of the department of Pennsylvania, Veterans of Foreign Wars, at Harrisburg, Pa., on July 12, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE 38TH ANNUAL ENCAMPMENT OF THE DEPARTMENT OF PENNSYLVANIA, VETERANS OF FOREIGN WARS, AT HARRISBURG, PA., JULY 12, 1957

It is a great honor for an old soldier to be invited to address this outstanding organization of real Americans.

Your patriotism has been tested on foreign battlefields. You know what it means to face the enemies of our Nation in the hellfire of war. Sustained by loyalty and devotion to American ideals you have been willing to sacrifice everything that this Nation, under God, may live in honor, peace, and freedom.

The welfare of our country is always uppermost in the hearts and minds of the veteran. For that reason I want to discuss frankly with you some of the dangers confronting our Nation.

But first, let us look back with pride at the background of the United States. Let us review the magnificent achievements which in less than 200 years have converted a savage wilderness into the world's greatest stronghold of industrial and agricultural production. Let us be thankful that we have advanced to the highest cultural and spiritual levels ever attained by any similar area in the whole world.

The history of America is a glorious story. It tells of toil, sacrifice and heroism. It tells of victory produced by a people whose hearts and minds were aflame with the spirit of liberty and independence.

It tells of those courageous patriots who met in Philadelphia more than 180 years ago, and pledged their lives, their fortunes and their sacred honor to establish a new Nation. For the first time in all the world, government recognized the divine origin of man's inalienable right to life, liberty, and the pursuit of happiness.

For the first time a government was based upon the sound principal that governments derive their just powers from the consent of the governed.

The story of America is the story of George Washington, Benjamin Franklin, Thomas Jefferson, Abraham Lincoln, and all the dedicated statesmen of each generation.

It is the story of the heroes who offered their lives for independence at Lexington, Bunker Hill, Valley Forge, and Yorktown. It is the story of Gettsburg, New Orleans, the fields of Mexico, and Admiral Dewey at Manila. It is the story of Chateau Thierry, the Argonne, the Normandy beaches, Iwo Jima, and the frozen hills of Korea.

There is no story so glorious in all world history. It should be told and retold over and over again, in our schools and colleges, from the pulpits and lecture platforms, in meetings of fraternal and patriotic organizations, in labor meetings, political rallies and every other place where Americans assemble.

Therefore, it is most appropriate, in a meeting such as this, to consider the situation confronting the United States.

The course of history has placed upon the American people the responsibility for peace and progress in the world. The United States stands as the one strong barrier against the Communist conspiracy to dominate and enslave the entire world.

We must not allow ourselves to be lulled into a false sense of security by the mask of friendliness now worn by the masters of the Kremlin.

Recently there was broadcast into millions of American homes an example of Communist propaganda more flagrant than anything ever before attempted.

It was a brazen attempt to convince American listeners that Soviet Russia has no evil designs against the free nations of the world. We were told that the Russian dictators seek only friendship and peaceful coexistence.

Yes, my fellow Americans, the Communist boss talked of peace but real Americans were not fooled. The record denies their words.

The civilized world will long remember the ruthless slaughter of men, women, and children by Communist tanks and machine guns in crushing the Hungarian revolt of 1956.

Yet those guilty of this monstrous crime—those responsible for the wholesale execution of Hungarian freedom fighters—ask us to believe that this time they are sincere when they talk of peace. The record shows that the Communists have sabotaged every effort for peace and will continue to do so.

Their fundamental objectives have not changed. They have not abandoned their unholy ambition to destroy all human freedom.

Those of you who heard that broadcast will recall the prediction that the grandchildren of Americans living today will live under a socialistic system.

That was a grim warning that must not be ignored. It calls upon us to be constantly alert to the dangers of Communist influence here at home. We must fight disloyalty with every legal weapon at our command, and if our laws are not strong enough they should be made stronger.

You are all familiar with the decision of the United States Supreme Court made about a year ago, which held that the Federal Government has exclusive jurisdiction in the field of sedition and subversion.

This decision struck down laws enacted in 42 States and Territories under which those guilty of subversion could be prosecuted and punished by the State.

I believe that each State should have the right to combat sedition within its borders. I believe each should have the right to punish not only those who seek forcible overthrow of the State but also those who would overthrow the Nation by force.

More recently several other decisions of the Supreme Court have greatly weakened the Federal Government's legal drive against Communists and subversives.

I have no criticism of the Court. We are a Nation of law and under our system no individual is denied equal justice. But, I repeat, if existing law is not adequate to deal effectively with disloyalty, it is the duty and responsibility of Congress to enact legislation strong enough to do the job. I can assure you that Congress is taking steps in that direction.

Now I would like to direct your attention to some other dangers that threaten America.

First, inflation. Since 1939, the purchasing power of the dollar has dropped to less than 50 cents.

One of the most difficult functions of a free government is to maintain a stable currency. At the same time it is one of the most important objectives of government. Inflation has the power to crush any economy upon which it fastens its grip and thus it can destroy a nation. In fact, more great nations have been destroyed by inflation than by invading armies or destructive bombs. A nation destroyed by a military force can rebuild itself, if the people have the spirit and the will to work, but a nation where incentive of the individual is destroyed has very little chance of recovery.

Inflation damages all with fixed incomes and inflicts severe hardship on millions of our people. The person who lives on a pension, social security, or interest on savings cannot escape the evils of inflation. There are now in the United States more than 16½ million on social security, corporation and government retirement, veterans' pensions, veterans' survivors benefits, and military retirement pay. Many are widows and orphans. Continued inflation is a threat to the many millions of savers in the United States, the owners of bonds, owners of life insurance policies, and savings accounts.

Second—big Government and Government doing things that we should do for ourselves. More than 7 million now work work the three levels of Government, at an annual payroll of $40 billion.

The vast expansion in the size and cost of Government at all levels is leading us away from the ideals of the Founding Fathers. The people are constantly demanding more and more services and many believe that projects paid for with Federal funds do not cost them anything.

The cost of State and local government has been increasing more rapidly than the Federal Government. The tendency toward more and more expensive Government by taxes and borrowing must be stopped or we will drift into creeping socialism.

It has been proposed that consideration be given to a new division of the functions of Government and a new allocation of taxes to perform those functions. President Eisenhower in a speech delivered to the Governors' Conference at Williamsburg, Va., on June 24, called upon the governors to join in an effort to return certain responsibilities to the States.

Several years ago I suggested that national defense, foreign affairs, rivers and harbors and banking and currency be Federal functions with income taxes, import duties and liquor and tobacco taxes to furnish the Federal revenues. The States would build the roads, provide higher education, administer penal and correctional institutions and conservation with estate taxes, sales taxes and the gasoline tax to furnish them the money. Local government would provide police

power, sanitation, courts and public schools and have as its tax source real estate, admissions, mercantile and wage taxes. This is just a brief outline but I am sure that such a plan would mean a big saving for the taxpayers.

Third—too much private and public debt. Never before in the history of the world have any people owed so much as we owe today. It should be a matter of deep concern to every one of us that the American people now owe a total of more than $800 billion in gross private and public debt. This is an average of about $4,700 for every man, woman, and child in the Nation, or about $18,800 for the average American family of four persons.

Net corporate debt went up from $93½ billion in 1946 to $208 billion at the end of 1956.

People have been buying out of tomorrow's paycheck. At the end of 1945 individuals owed less than $6 billion which in 1956 had increased to $42 billion.

Net State and local government debt has increased from $13½ billion in 1945 to $42.7 billion at the end of 1956 and has greatly increased since that time.

Fourth. Moral decay among the people. Great armies and great navies will not maintain a nation's strength where the moral courage and patriotic fervor of its people are permitted to decay. Every student of history knows that great nations of the past have gone down to destruction when the moral fiber of the people was undermined by greed and corruption.

Fifth. Too little interest in Government. Unfortunately, there are too many misguided Americans who do not understand and do not appreciate the real meaning of America.

They do not seem to realize that our system of free Government places upon each citizen an equal share of responsibility for our security and our progress.

Good citizenship is the basis of patriotism. That is why I am constantly urging every individual to take more active, intelligent, and patriotic part in government.

I bring these dangers to the attention of this great organization of veterans because your patriotic service entitles you to leadership in civic responsibility.

We pray that America may never turn away from its historic mission—to defend liberty, to oppose oppression, to stand against injustice and to support the aspiration of all men of good will for a world of peace and freedom.

We hope and pray for the day when all nations will lay down their arms and live in brotherhood under God.

But until that happy day dawns we must be prepared to defend the God-given freedom that we hold sacred.

Eternal vigilance is still the price of liberty.

Communist Propaganda Fiasco in Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. JOHNSON of Texas. Mr. President, on Saturday there was published an article by the distinguished Texas writer, Stanley Walker, describing a misfire of Communist propaganda. It centered around an effort to prove that Texans of Czech birth are eager to go back to the land of their birth.

On Sunday, the New York Herald Tribune carried an editorial reviewing the incident and driving home a basic lesson. It tells the Communist propagandists: "Steer clear of Texas if you don't want your fingers burned."

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPAGANDA FIASCO IN TEXAS

Communist propaganda is often supposed to be devilishly clever, but it has fallen flat on its face in the great State of Texas. On Thursday the Czech Communist radio blandly claimed that a number of Czechs who settled in Texas have found, on return visits, that their homeland under Red rule was extremely attractive. So much so, in fact, that they planned to ditch everything in the United States and return there for good. The radio boldly went on to quote a Joseph Zvolanek, of Temple, Tex., who left the old country almost half a century ago, as saying just that.

There was a very simple way to verify this story, and Mr. Stanley Walker, the former city editor of this newspaper who now lives in Texas, was quick to do it. That was to ask Mr. Zvolanek if what the radio said was really so. It was no surprise that he labeled the story, as Mr. Walker put it, a coal-black lie. Mr. Zvolanek has been a successful shoe repairman in Temple. He likes the place emphatically and so does his son. What he actually told the Czechs was that he might return to Czechoslovakia for another visit some time.

We hope the point of this revealing incident is hammered home to the Czech people and others behind the Iron Curtain who are tempted to believe, out of sheer desperation, what their rulers tell them about the outside world. As for the propaganda bureaucrats of Prague—if they still have their jobs—there is a salutary lesson, too: steer clear of Texas if you don't want your fingers burned. The spirit of Texas is sometimes difficult for even other Americans to understand, admire it as they may. For some one behind the Iron Curtain, it's clearly a hopeless undertaking.

Foreign Policy Speech by Hon. Mike Mansfield, of Montana

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. JOHNSON of Texas. Mr. President, the full impact of the excellent foreign policy speech made by the junior Senator from Montana [Mr. MANSFIELD] on Saturday is gradually coming home to our country. The latest evidence is a Scripps-Howard editorial pointing out that Senator MANSFIELD operates in the best traditions of a loyal and constructive opposition.

It is an excellent editorial in keeping with the excellence of the speech itself. The theme of the editorial is Faith Must Replace Fear. There can be no better way to summarize in a few words the meaning of the editorial and the meaning of the speech than that caption.

I ask unanimous consent that the editorial, as carried in today's issue of the Washington Daily News, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FAITH MUST REPLACE FEAR

Senator MANSFIELD's long review of American foreign policy is praiseworthy, even though you may not agree with everything he said. The Senator operates in the best traditions of a loyal and constructive opposition. The Senate and the Nation are fortunate in having a man who devotes much time to thinking hard about our foreign problems—and periodically gives the Nation the benefit of his labors.

The keynote of Senator MANSFIELD's critique of last Saturday is twofold:

In recent months only a better outlook for peace—not peace itself—has been obtained. "We have checked the descent into international chaos • • • an important achievement."

In coming months the United States must begin the ascent toward international stability. To do so it must base its possibilities on faith in itself rather than just on fear of communism.

"I speak of faith in ourselves, in the people of this country," the Senator said. "I speak of faith in the capacities of human freedom to meet the challenge of peace which, in this 20th century, is the challenge of life itself. • • •

"It is time to recognize that if there are dangers to freedom in the ideology of communism, there are even greater dangers to communism in the doctrines of liberty."

Senator MANSFIELD asserted that in recent years—under both Democratic and Republican leadership—the major and generous moves by the United States in foreign affairs almost always were motivated by fear—"the grim specter of the advantage which would fall to communism if we did not act in some particular fashion."

That can lead only to what the Senator calls the present holding action for peace. To move toward peace itself requires policies that are formulated and carried out regardless of what the Soviets may or may not do.

The President, Secretary Dulles, and State Department officials could profitably devote some time to a study of the Senator's speech.

What he is saying, in short, is that the time is ripe for someone to speak out and lead with the same kind of fervor, faith, and confidence in ourselves as Nikita Khrushchev—with far less justification—is doing on his barnstorming trips.

What better time than when there is an upset in the Kremlin?

The Farmers' Home Administration

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. THYE. Mr. President, the Bank of Willmar, Minn., is one of the outstanding banks in the State of Minnesota. Its president, Mr. N. H. Tallakson, has served the community of Willmar very ably for a great many years. A letter I received from him under date of July 12, 1957, is most informative, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BANK OF WILLMAR,
Willmar, Minn., July 12, 1957.

Hon. EDWARD J. THYE,
United States Senator,
Washington, D. C.

DEAR MR. THYE: Your two recent telegrams have been received, and I want to extend to you my sincere appreciation for your effort and interest in behalf of the farmers of Kandiyohi County. I assure you that we all feel that Kandiyohi County should be in the flood area and while there may not be so many that will derive benefits, nevertheless financial assistance will be made available to a large number of our farmers who have suffered much loss.

Yesterday it was my privilege to attend the meeting that was held at Willmar, at which meeting Administrator Kermit Hansen presided, together with his deputy, Henry C. Smith. Much information was furnished by these men and encouragements to those attending the meeting, regarding the intention of the Government to assist the farmers that sustained losses, and especially those that had unusual heavy flood losses. Mr. Hansen is a very fine individual and I enjoyed very much visiting with him. I honestly feel that he is very sincere in his intentions to help the farmer and especially those that are in urgent need of financial assistance on account of flood water. He came to the bank and informed me that the meeting was to be held and naturally I appreciated his interest very much. I also visited with Mr. Smith and he gave a lengthy discussion on the benefits of the Farmers' Home Administration and the many assistances that can be rendered.

I have written a number of letters in behalf of the Farmers' Hhome Administration through the years, and I honestly feel that is one of the best agencies the Government has throughout the middle west, and I can assure you that your efforts in support of the agency, and urging Congress to allocate the required funds, so that the agency can continue to operate and not be out of funds, would be very much appreciated by we of the middle west, who recognize that the farming industry is one of the great industries of the Nation. When the farmer does well, small business does well, and when the farmers and small business do well, the large business in the large centers also prospers. I have been in bank work in Willmar for 46 years and I have always been very keen about the welfare of agriculture. I am convinced that the Farmers' Home Administration is one agency that the Government should always support. There will also be farmers that through some misfortune and financial difficulties need help, and it is that agency that is the one that can assist them and have done much in the past to do so.

It is not easy for a farmer to plan his work and his possible income, as he is dependent on the elements, which are beyond his control, and the results of his efforts and labor will, to a large degree, depend on the climatic and growing conditions. If there is a late and cold spring it sets back his crops and then it depends on the summer months, rain, good warm weather, too much or too little rain, draught and possible early frost. He has no control over any of these contributing factors to a good crop.

Thanking you for your letter and assuring you I appreciated receiving your telegrams regarding the meeting yesterday, I am,

Yours very truly,

N. H. TALLAKSON,
President.

Fourth National Boy Scout Jamboree at Valley Forge, Pa., and Dr. Arthur A. Schuck, Chief Scout Executive

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. NEUBERGER. Mr. President, on July 13 and 14 it was my privilege to visit the great national Boy Scout Jamboree at Valley Forge, the spot where the patriots of the Continental Army under General Washington bivouacked during the bleak winter of 1777–78.

I believe those brave soldiers would have been rewarded in full for their sacrifice had they seen 52,000 boys of our generation tenting over the Pennsylvania countryside and participating in the many varied and diverse activities of scouting.

As a former Boy Scout myself, I was particularly thrilled with this jamboree, which brings together youths from everywhere in the land. I think it instills in these boys a true sense of the greatness and variety of America—a feeling for the many traditions, faiths, backgrounds, and cultures which are blended into these United States.

I had the opportunity of eating, tenting, and talking with our fine Oregon contingent to the jamboree. I met hundreds of Oregon boys and their scoutmasters. This experience convinced me that the future of our country is in good hands. I am not one of those who weep and wail over the so-called delinquent generation. I think the present generation is fine—perhaps even more dedicated than our own generation. These Boy Scouts fortified me with hope and trust.

I should like to pay brief tribute here to the man whose genius and organizing leadership are mainly responsible for the fourth national Boy Scout Jamboree. He is Dr. Arthur A. Schuck, of New Brunswick, N. J., the chief Scout executive. Mr. Schuck and I had a most stimulating and pleasant conversation when I visited the jamboree. Dr. Schuck, I am happy to report, shares some of my views with respect to conservation of natural resources and its relationship to scout ideals.

A sketch of Dr. Schuck from the New York Times of July 15, 1957, demonstrates the versatility and capacity of the man who heads American scouting, and I ask unanimous consent that it appear in full in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A FIRST-CLASS SCOUT: ARTHUR ALOYS SCHUCK—MAN IN THE NEWS

VALLEY FORGE, PA., July 14.—In 1917 Arthur Aloys Schuck became a professional Boy Scout leader. He set as his goal the teaching of boys to live in friendship without regard for race, creed, or color.

Today, Mr. Schuck, smiled with satisfaction as he surveyed the fourth national Boy Scout Jamboree. As chief Scout executive of the Boy Scouts of America, he is the camp chief. At Valley Forge Mr. Schuck saw some 50,000 boys and leaders of various races and religions living, playing, and cooperating in brotherhood and friendship.

For Mr. Schuck, at 62 years old, the encampment represents a milestone in the cause to which he has dedicated 40 years of his life. It epitomizes what he considers the principal purpose of the Boy Scout movement:

"To give America a new generation of men of character, with ingrained qualities that make for good citizenship."

He feels, too, that it is imperative that boys be trained into citizenship, rather than to stumble into it. Over the years that task has become as much his hobby as his job.

Mr. Schuck is a stickler for punctuality and he adheres to a rigid time schedule. Nothing interferes with it if he can possibly help it. There was a time, for instance, when he marked on his calendar the date on which he had figured his first child would be born. Even when it became apparent that the child would arrive earlier, Mr. Schuck went off on a scheduled field trip. His wife, Olive, had their only son in his absence.

Today his son is Rev. Arthur Alfred Schuck of the Methodist Church at San Rafael, Calif. His other child, Virginia, is married to S. Dwight Curtis, a scout executive at Stockton, Calif.

Born in Brooklyn on June 20, 1895, Mr. Schuck grew up there and in several towns of New Jersey. At the age of 18, while living in Newark, where he worked in a factory, he became a volunteer Boy Scout leader. Four years later he began his career as a Boy Scout executive.

His ability in finance and organization brought him recognition and he rose through the ranks to chief Scout executive, the highest administrative office of the movement. He has held that post since September 1, 1948.

Fortunately, he enjoys travel. He now spends one-third of his time on the road promoting scouting in this and other lands. He is responsible for the erection of the Boy Scout headquarters on the outskirts of New Brunswick, N. J., where 700 persons are employed at a 40-acre site.

Communist Control of Mainland of China

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. HUMPHREY. Mr. President, I have already alluded on the Senate floor to the speech by the Secretary of State on the China problem. Reports continue to appear in the public press which indicate that Communist control of the mainland is assuredly more than a "passing phase," as the Secretary of State described it.

One such report is an article written by Gordon Walker which appeared in the

July 10 issue of the Christian Science Monitor. His article is entitled "Red Grip in China Looks Strong." Mr. Walker concludes his article by saying:

What this all adds up to is that while Mr. Dulles may believe that the Communist regime in China is merely transitory, the bulk of Asians plus most Western observers, including United States State Department representatives in this part of the world, are convinced to the contrary.

These pools of opinion do not necessarily argue in favor of United States recognition. But they believe that the United States public should get a fair picture of Red China.

Mr. President, I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED GRIP IN CHINA LOOKS STRONG—AN INTIMATE MESSAGE FROM THE FAR EAST

(By Gordon Walker)

TOKYO.—Hard-working, honest, and well-informed United States State Department minions in Far East posts are still rankling over Secretary of States Dulles' recent observation that communism is "only a passing phase" on the China mainland. They are wondering what has happened to all of the laboriously collected reports which they have sent to Washington—the bulk of which give solid reasons why Mr. Dulles' claim is not justified.

Whatever one may think about the Peking regime and communism in general, they believe one must recognize and accept certain basic facts:

Seven years after the defeat of Chiang Kai-shek's armies on the China mainland, the Communist usurpers have unified the country to a degree never before achieved.

Red China today is undergoing serious economic difficulties. Lifting of the lid on freedom of expression recently, moreover, has shown clearly that there is widespread discontent not only among disaffected Chinese peasants but also among students and intellectuals. But, it is pointed out, there are two significant aspects which must be borne in mind:

1. None of the criticisms voiced—and some have been extremely vehement—have suggested any alternative to the regime now in power.

2. There s not a shred of evidence to show that Chairman Mao, with a gigantic party machine and an army of 2,500,000, cannot cope with any incipient revolt.

Unfortunately, United States newsmen are still barred from visiting Red China and documenting these opinions for themselves and their readers. They are forced, therefore, to rely upon the opinions expressed by a wide variety of observers stationed around the fringe—observers whose opinions range from pro-Communist to the violent anti-Communist.

This correspondent, over the past 2 years, has traveled along the China coast and all the way from Indonesia to South Korea, stopping off at almost every capital in between. Nowhere has he found any significant pool of opinion which favors the view that the Red China regime is merely transitory.

Even on Formosa, where emotional antipathy for the Chinese Reds is understandably at a peak, and where wishful thinking often colors rational reasoning, there is little genuine feeling that anything short of a third world war would unseat China's latest conquerors.

Japan, which sent 1,200 representatives of various nonofficial organizations to Peking last year, has probably had closer contact with the mainland than any other non-Communist country. The consensus here is that Mao and the Communist Party are in solid and relatively uncontested control; that significant advances have been made in industry, transportation, and communications; and that there are no grounds for believing that this type of material progress will not continue.

This feeling was reflected recently in remarks made by the managing director of the powerful Federation of Economic Organization, Koichi Yoshino, who recently headed a 14-member trade mission to China.

"Within the coming half century," Mr. Koichi observed, "Red China will probably reach roughly the same stage of industrialization as Japan. * * * If Japan stands by doing nothing to help, China will become forever closed to economic relations with Japan."

If one were to canvas all of the Western observers stationed around the eastern and southern perimeter of Red China—intelligence circles, diplomatic missions, research students, and business groups—the assessment of the Red China regime would add up to something like this:

Red China is undergoing at present an important transitional stage, out of which traditional concepts of Marxist procedure in government may be further amended, but not abandoned.

The recent wave of criticism inside China reflects a widespread dissatisfaction, not with the overall concept of government but largely with the manner in which it is being administered.

Many of those in China today who do not see eye to eye with the regime would rather have Mao than Chiang Kai-shek; they have not yet begun to look for a third component.

Material progress in China, however slow, has been sufficient to maintain the level of hope for the future which was generated during the early days when the Communists first took over and promised ultimate utopia.

Outside of China's frontiers, the Chinese Communists are playing an increasingly important role, not only in Asia, but more recently in eastern Europe. This fact was apparent following Premier Chou En-lai's tour of eastern Europe earlier this year.

Some 13 million overseas Chinese in Asia, contrary to the opinions of top administration officials in Washington, can no longer be considered as a factor in United States attitudes toward Red China. While possibly a majority would prefer to see some other sort of government in mainland China, the same majority would be unwilling to support a replacement by the old Nationalists.

What this all adds up to is that while Mr. Dulles may believe that the Communist regime in China is merely transitory, the bulk of Asians plus most western observers, including United States State Department representatives in this part of the world, are convinced to the contrary.

These pools of opinion do not necessarily argue in favor of United States recognition. But they believe that the United States public should get a fair picture of Red China.

Confessions Before Arraignment

EXTENSION OF REMARKS

OF

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. POFF. Mr. Speaker, on June 24, 1957, the Supreme Court of the United States rendered its decision in the case of Mallory against United States. Mallory, who had been convicted of rape, was in jail awaiting execution. The decision reversed the conviction on the grounds that the defendant's confession was improperly admitted in evidence and remanded the case to the Trial Court for a new trial. The prosecution, which had based its case largely on the confession, decided that without its use as evidence it would be impossible to convict the defendant and accordingly set him at liberty.

The Court ruled that Mallory's confession was inadmissible as evidence because it was extracted from him by the police before he was arraigned. The Federal Rules of Criminal Procedure require that a person under arrest without a warrant be taken without unnecessary delay before the nearest available commissioner or other commitment officer who shall inform the defendant of his right to retain counsel, his right to have a preliminary examination and his right to refuse to make a statement. The Court held that a person could not be arrested upon suspicion alone but only on probable cause, that there was unnecessary delay in the arraignment, and that the extraction of the confession before arraignment was a violation of the defendant's rights and therefore inadmissible as evidence.

The reasoning of the Court is somewhat obscure. Unquestionably every person arrested as a criminal suspect is entitled to an arraignment without unnecessary delay. However, from that it does not necessarily follow that every voluntary statement made by the suspect before arraignment should be invalidated for evidenciary purposes. Mallory's arraignment was, in my opinion, unnecessarily delayed from 2:30 p. m. when he was arrested until the following morning. However, at no time did he or his counsel contend that any of his four separate confessions were made under mental or physical duress or coercion. On the contrary, less than 2 hours after his arrest, Mallory voluntarily agreed to take a lie detector test. While two other suspects were being examined, the test was delayed until approximately 8 p. m. During the course of this test he made his first voluntary confession. Soon after, he repeated his confession to other officers and at 10 p. m. the police made an effort to reach a commissioner for arraignment. Failing in this, the petitioner consented voluntarily to an examination by the deputy coroner who found no evidence of physical or psychological coercion. Mallory then repeated his voluntary confession for the third time and about 11:30 p. m. dictated the confession to a stenographer.

There is no law on the statute books which invalidates a voluntary confession by reason of delay in arraignment, but the Court's decision will in future cases have the same effect as a criminal statute. Federal police officers will have no power to interrogate a criminal suspect to determine whether or not there is probable cause of guilt before arraignment, and prosecuting attorneys will be afraid to use prearraignment confessions as evidence to establish their case before the jury. Neither can a Fed-

eral police officer safely arrest a criminal suspect until he knows that a commissioner is readily available and until he knows that he has sufficient direct or substantial evidence to establish probable cause before the commissioner even though the suspect may have voluntarily admitted his guilt.

I want to preserve the right of prompt arraignment, but I also want to preserve the right of police officers to interrogate the suspect and the right of the prosecuting attorney to use voluntary confessions as evidence against the suspect, both in proving probable cause before the commissioner and in establishing guilt before a jury. I have drafted and introduced a bill, H. R. 8624, which states simply that "statements or confessions or other evidence shall not be inadmissible solely because of delay in taking an arrested person before a commissioner or other judicial officer." Such a provision does not change the law which invalidates confessions extracted under duress by threat, promise of reward, or other improper inducement or coercion. Such a provision of law cannot possibly injure either a guilty person or an innocent person, and most certainly can and if enacted will protect society against confessed dope peddlers, thieves, rapists, murderers, and other crooks and criminals who prey upon their fellow citizens. It is time someone had a little regard for the rights of society in general as well as the civil rights of the individual citizen. Individual liberty is no license for the transgression of the rights and safety of others.

The Westminster Choir of Princeton, N. J., Helps the Government of Japan Combat Communism, the New York Times Reports

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the New York Times of July 14, 1957, reported on the highly significant results of a recent world tour by the Westminster Choir of Princeton, N. J. This tour was under the authority of the Humphrey-Thompson Act, Public Law 860, 84th Congress, and was originally organized as part of a program to acquaint the peoples of other countries with the cultural activities of the United States.

The Westminster Choir opened a very important two-way interchange. Students are coming to the Westminster Choir College from a number of Asian countries, and members of the college are expected to go to India, Okinawa, Thailand, and Pakistan.

The president of the college, John Finley Williamson, and Mrs. Williamson, have been engaged by the Government of Japan to conduct summer schools in several cities. The Japanese Government is paying for these schools and I learn that it is doing so because there are 4,000 choirs directed by Communists who are working against the Government of Japan. The Government of Japan hopes to train choral directors who can displace the Communist leaders and the Williamsons have been asked to develop a songbook to replace the Communist songbook.

I include the article from the New York times together with some correspondence I have received on the tour of the Westminster Choir and the significant contribution that such nonprofessional groups are making in our developing relations with the people of other countries:

[From the New York Times of July 14, 1957]

THE WORLD OF MUSIC—ORIENT SEEKS TEACHERS FROM CHOIR COLLEGE

(By Ross Parmenter)

The full effects of the foreign tours being undertaken by American artists in the exchange program of the American National Theatre and Academy will not be known for years. It is probably safe to say, though, that the 4-month tour of the world made by 50 singers from the Westminster Choir College is likely to have a more far-reaching influence than some of the tours of famous professional musicians. One says this on the basis of repercussions that have already begun.

There is a hunger in the Orient for trained choral leadership. The tour, by bringing the college to the attention of people in Japan, Okinawa, Thailand, Pakistan, and elsewhere, has opened a two-way interchange. Orientals are both coming to the college in Princeton, N. J., for training here and importing college people to the Orient to give training there.

Next year, for instance, there will be 10 or 12 oriental students at Princeton, including 3 from Hong Kong. And in May a wealthy Indian banker is coming to the college to see what can be done about taking a Westminster member back to India. Okinawa is engaging a choir member to set up choral units on the island. Thailand has asked for two individuals to set up training schools for choral directors. And Pakistan has asked for a Westminster faculty man for 3 months to help the Karachi broadcasting station develop western choral music.

SCHOOLS IN JAPAN

Japan, however, is the country that has acted most decisively. It has engaged John Finley Williamson, the college president, and Mrs. Williamson to return there this summer to conduct summer schools in three cities. They will teach from August 19 to 23 in Sendai, from August 26 to 30 in Osaka, and from September 2 to 10 in Tokyo. The Japanese Government is paying for the schools and it is doing so because there are said to be 4,000 choirs directed by Communists, who are working against the government. The idea is to train choral directors who can displace the Communist leaders. The Williamsons, too, have been asked to develop a songbook to replace the Communist songbook.

INTERNATIONAL EXCHANGE PROGRAM
OF THE AMERICAN NATIONAL
THEATER AND ACADEMY,
New York, N. Y., July 12, 1957.

Congressman FRANK THOMPSON, Jr.,
Member of Congress, Congress of the United States, House of Representatives, Washington, D. C.

DEAR FRANK: Thanks for your letter of June 20, advising me that you have caused the Westminster Choir reports to be printed in the CONGRESSIONAL RECORD.

Like all of the attractions sent out on this program, they cheerfully made many personal sacrifices in order to carry out their mission on behalf of our country's cultural prestige abroad.

Sincerely,

ROBERT C. SCHNITZER,
General Manager.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 27, 1957.

Hon. CHRISTIAN A. HERTER,
Under Secretary, Department of State, Washington, D. C.

DEAR MR. SECRETARY: The Westminster College Choir of Princeton, N. J., on its recent tour abroad under the authority of the Humphrey-Thompson Act, Public Law 860, 84th Congress, made an impressive contribution to the fund of good will which other peoples have for the people of our country. It is clear that nonprofessional, as well as professional, cultural groups and organizations, have an important role to play in our relations with other people. I pointed all this out in a recent statement in the CONGRESSIONAL RECORD, a copy of which is attached.

In view of this, you will know I was surprised to receive a communication under date of June 21 from Dr. Joseph E. Maddy, president of the National Music Camp, saying "At a meeting of the National Music Council (representing 940,000 citizens) held in New York, May 23, 2 members of the music panel of ANTA (American National Theater and Academy) and 1 representative of the USIA stated that governmental support (President's fund) for musical exchange programs is now limited to professional musicians. Whereupon the council adopted the following resolution: 'The National Music Council strongly urges the USIA and State Department to include youth cultural activities, particularly symphony orchestras of outstanding attainment, in the cultural exchange program designed to promote world friendship and understanding'." Other statements in Dr. Maddy's communication seems to conflict with a letter I received from the Department of State (IES 032 National High School Band/5–2557) regarding its nonsupport of an overseas tour of the National High School Orchestra by funds under the Humphrey-Thompson Act. What is particularly disturbing is Dr. Maddy's appeal for "help to remove the subversive restrictions which now exist—barring music education from our cultural exchange programs financed from the President's fund."

I would appreciate having your views on this matter, and Dr. Maddy's letter which I am attaching. Please return it with your reply.

Cordially yours,

FRANK THOMPSON, Jr.,
Member of Commerce.

DEPARTMENT OF STATE,
Washington, July, 12, 1957.

The Honorable FRANK THOMPSON, Jr.,
House of Representatives.

DEAR MR. THOMPSON: Reference is made to your letter of June 27, 1957, enclosing correspondence from Dr. Joseph E. Maddy concerning the National High School Orchestra.

There is no stipulation that participants in the President's special international program must be professional performers, nor is it the policy of the Department of State to demand professional status as a qualification for assistance under the program. The Department has made considerable use of amateur groups and will continue to do so as appropriate to foreign-service post needs. Practically all athletic groups assisted have been in the amateur class, several nonprofessional musical groups have been sponsored or approved, among them the Westminster Choir, and plans are now un-

der consideration to send an amateur dramatic group to selected areas.

Neither are there restrictions barring music education from the program. The Westminster Choir, one of the country's notable institutions of musical education, admirably demonstrated American theories and practice in this field on its recent successful tour of the Far and Near East.

The Department does not believe it wise as a matter of policy to hamper the usefulness of the program by arbitrarily limiting participants to any particular category.

The correspondence from Dr. Maddy is returned herewith.

Sincerely yours,

JOHN S. HOGHLAND II,
Acting Assistant Secretary for Congressional Relations.

NATIONAL MUSIC CAMP,
June 21, 1957.

Representative FRANK THOMPSON, Jr.,
United States House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: Thank you for your interest in the National High School Orchestra project. Are we allowing a union boss to subvert our foreign policy? Can it be that the USIA will not approve any musical exchange program which does not provide employment for members of Petrillo's Musicians' Union?

At a meeting of the National Music Council (representing 940,000 citizens) held in New York May 23, 2 members of the Music Panel of ANTA (American National Theater and Academy) and 1 representative of the USIA stated that governmental support (President's fund) for musical exchange programs is now limited to professional musicians. Whereupon the council adopted the following resolution:

"The National Music Council strongly urges the USIA and State Department to include youth cultural activities, particularly symphony orchestras of outstanding attainment, in the cultural exchange program designed to promote world friendship and understanding."

We have been forced to abandon for this year what we believe to be the most effective cultural exchange project ever planned—a mission to Poland by the National High School Orchestra (100 of America's finest young musicians and citizens aged 14–17) representing at least 40 States, presenting programs of American symphonic music, speaking the Polish language, briefed in Polish history—as guests of the Polish Government. Our request for the cost of air transportation or for two large Government planes to transport the group from this country to Poland and return was denied by the above-mentioned ANTA Music Panel. Why?

We would like to plan such a project for 1958, if you will help to remove the subversive restrictions which now exist—barring music education from our cultural exchange programs financed from the President's fund.

I am enclosing our 1957 concert calendar. May I invite you and your party to visit the camp as my guests any weekend this summer? We have excellent accommodations for visitors, but need to know of your visit in advance to assure our best. I want you to judge for yourself the quality of performance of the National Music Camp students, the efficiency of the organization, and the effectiveness of the training program provided for America's gifted youth by the National Music Camp. May I hear from you?

Sincerely,

JOSEPH E. MADDY,
President.

USDA Official Reluctant To Promise Farmers Aid

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Reca Jasper, from the Monroe Morning World, dated July 13, 1957:

IN CATAHOULA PARISH: USDA OFFICIAL RELUCTANT TO PROMISE FARMERS AID

(By Reca Jasper)

JONESVILLE—A reluctance to promise any aid to the farmers of Catahoula parish, some who have had their crops flooded three times this year, marked the theme of a talk by an official of the Department of Agriculture at a meeting here yesterday.

Eugene Bayol, who visited the flood-stricken Catahoula Parish after prompting from Congressman OTTO PASSMAN, said in effect that he was fenced in by law and couldn't promise farmers and businessmen here anything. State and parish officials and farmers met at Block High School to discuss the serious situation.

Bayol was asked what aid the more than 1,000 farmers, whose crops have been ruined by floods 3 times this year, could receive from the Government and when. He said he would have to go back to Washington, study the figures given him, and then send another man down here to resurvey the situation.

"JUST DON'T KNOW"

When asked if it would be within the next month, he said, "I don't know." When asked if the aid would come by next fall, he answered: "I just don't know."

Bayol visited Catahoula Parish for several hours on a side trip from Washington, D. C., and only after considerable pressure from farmers would he agree to an aerial survey of the area.

"Half of these programs" Bayol said in speaking of aid to disaster-struck farmers, "are not very good * * *. They have to be too general. It is hard to make a Federal program fit into local situations."

FLOODED THREE TIMES

Catahoula Parish has been flooded three times this year. Two times rain floods have inundated the areas; then again hurricane Audrey caused the waters to again cover the area.

More than 100,000 acres of pastureland has been flooded in the parish, as well as 8,000 acres of cropland: 16,500 acres of oats. A total of 300 families' farms have been totally submerged and an additional 755 heavily damaged.

This has affected the pasturing of more than 10,000 head of sheep and cattle, mostly cattle ,and approximately 15,000 hogs.

Aid for wards 1 and 2, the 2 of the 7 wards not now listed as disaster areas, was discussed.

Some of the officials at the meeting included S. J. McCory, State commissioner of agriculture; William S. Peak, Jr., State representative; E. E. Johnson, Catahoula County agent; G. D. Babin, Jonesville mayor; Jim Davis, representative of ASC, of Alexandia; B. R. Cain, head of Catahoula Parish Farmers Home Administration.

J. C. Gilbert, chairman of the Catahoula Parish Red Cross chapter and police juror from Ward 2; D. E. Woodin, president of the Catahoula Parish Police Jury; A. L. Brooks, Catahoula Parish superintendent of schools; W. C. Brown, members of Tensas Basin Levee Board, and C. L. Wurster, Jr., Red Cross disaster chairman.

Founding of Schoolboy Patrol in West Virginia

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article concerning the organization of the Schoolboy Patrol at Clarksburg, W. Va.:

FOUNDING OF SCHOOLBOY PATROL IN WEST VIRGINIA

The founding of the Schoolboy Patrol in West Virginia had its inception as the result of a most interesting and unusual incident which occurred in the city of Clarksburg, W. Va., in October 1926.

At that time, Mr. S. E. Barnett was chief of the Clarksburg Police Department and Mr. Leo Johnson was a patrolman working, what was designated as the Main Street beat, the shift from 4 o'clock until midnight.

Mr. Charles E. Jenkins was a friend of Patrolman Johnson and an employee of the Romine Funeral Home, which at that time was situated at 353 West Main Street.

The funeral home is mentioned in this connection because Patrolman Johnson was a frequent caller at the home, from which place he reported by telephone to the desk sergeant at police headquarters, and the incident which led to the organization of the patrol occurred at a street crossing nearby, while Mr. Jenkins was conversing with Patrolman Johnson.

The late W. Guy Tetrick was, at that time, general manager of the Clarksburg Publishing Co. which published then as it does now the Clarksburg Exponent, the morning newspaper and the Clarksburg Telegram, the evening newspaper. Many schoolboys had their paper routes.

It was the experience of one of these paperboys who sold papers on Main Street, in Clarksburg, as observed by Mr. Jenkins and Patrolman Johnson, which led to the organization in West Virginia, now known as the Schoolboy Patrol.

The lad had a freckled face, his hair was red and unruly, as there was usually an uncontrolled wisp of red hair dangling over his forehead, his clothes were sometimes ragged and not too clean, but his eyes twinkled and his smile compelling—we called him "Red."

On this particular day as Patrolmen Johnson and Jenkins were conversing, Red approached them with his papers. Jenkins took a paper, gave the lad a $1 bill, and asked him to get some change at Anderson's Restaurant, which was four doors up the street.

With automobile traffic at the rush hour peak, Red with papers under one arm and clutching the 1 dollar bill in his right hand, darted into the street.

Through the mercy of Almighty God, Red reached the opposite side of the street safely, and there disappeared among the throng of pedestrians, on his way to sell more newspapers.

Because of their harrowing experience watching the boy cross the street in the traffic, Johnson said to Jenkins, "My God, Charlie, I felt certain that we would have to pick Red's body up from the street and carry it to the undertaker."

Jenkins then suggested to Johnson that it would be a splendid thing to train school boys to take care of street crossings used by children as they went to and from school. The regular police force in Clarksburg was, and is today, wholly inadequate because of lack of personnel to attempt to properly patrol schoolchildren at street crossings. To this suggestion Johnson wholeheartedly concurred.

Mr. Jenkins visited Mr. Barnett, the chief of police, and told him of his suggestion to Patrolman Johnson.

Mr. Barnett was delighted at the suggestion, promised his whole support, but reminded Jenkins that there would probably be huge obstacles in the path leading toward a workable organization.

Jenkins suggested that arrangements be made, if possible, through the police department to have one of their number designated to teach school boys to direct children at street crossings.

At this point, we discussed the idea with J. Ransel Romine, who was enthusiastic and he too mentioned rather pessimistically the idea of organization against parental and other objections which would surely confront them.

Jenkins again visited Mr. Barnett, the police chief, who reiterated his enthusiasm concerning the idea, but recited the fact that he of necessity would be governed by the city council and the city manager.

Mr. Jenkins was in consultation time and time again with Romine, who insisted that they make a well-planned attempt to organize.

After having explained the proposition to members of the city council and to the city manager, they were given the green light and Mr. Barnett was instructed to cooperate to the fullest. Then and there difficulties began.

Patrolman Johnson then began teaching boys safety measures at street crossings but many parents bitterly and viciously rebelled, explaining that they were not rearing their sons to be policemen. Many of the parents reminded them of the hazards of hot sun, cold and snow with possible fatal accidents and doctors bills. They, too, reminded them that they paid taxes to the city of Clarksburg for police protection which should include street crossings, more particularly those crossings used by school children. Such service would require only 30 minutes four times each schoolday.

They explained to the irate parents that their children would be taught to do work under strict supervision and that they felt that it would far more than prove its worth as a civic project.

The city council, Messrs. Barnett, Johnson, Jenkins, and Romine, were the objects of most severe criticism by many citizens. The criticism became so bitter and pointed that Romine felt that he should discontinue attending meetings, because of possible loss of business.

There was, however, a number of parents who wished to cooperate in the organization and from such homes boys were selected for the training and they carried on.

Mr. Tetrick continued his encouragement through the medium of the newspapers and before many weeks had elapsed many parents who had been so bitter toward us called, and insisted that their sons be given an opportunity to receive training in the art of patrolling children at street crossings.

Patrolman Johnson suggested that some distinguishing dress should be adopted for the patrol boys. At that time, funeral homes were equipped with a trimming room in which caskets were trimmed. In this room Jenkins obtained materials necessary to the making of a Sam Brown belt, supplying one of his own belt buckles and with the aid of a sewing machine, soon completed it.

Johnson was delighted with the belt and soon fitted it on his boy, who of course was very proud. Soon thereafter it became necessary to equip all the patrol boys with a Sam Brown belt and badge.

The patrol boys' mission and usefulness could not longer be questioned. Occasionally a smart aleck auto driver would violate speed rules and regulations in school zones. Their license number was promptly reported to the police, and through the close cooperation of police and public, the violators of rules were promptly punished.

The local newspapers continued their enthusiastic boosting of the new plan, and soon civic clubs, church groups, and women organizations were all exercising their influence in behalf of it.

Soon Patrolman Johnson was put in charge and devoted his entire time organizing and supervising the group now known and honored far and near as "The School Boy Patrol."

Thus, today 12,712 school children (figures supplied by Harrison County board of education) daily cross United States Route 50, a distance of less than 3 miles within the city limits of Clarksburg, notwithstanding the many other schools located in the city. A part of United States Route 50 is located between two of these schools, being the most heavily traveled piece of road in the State of West Virginia, according to traffic clock by the State road commissioner.

Not one child has been hurt or killed since the school boy patrol was organized over 30 years ago. A record of which we are proud.

Elbridge Gerry Memorial Service

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. McCORMACK. Mr. Speaker, on July 4, 1957, there were conducted memorial services in Washington, D. C., for Elbridge Gerry, one of the foremost patriots of Revolutionary period, a distinguished citizen and son of the Commonwealth of Massachusetts, and a signer of the Declaration of Independence, the only signer of the Declaration of Independence who is buried in the District of Columbia.

On the occasion of the Elbridge Gerry memorial services held on July 4, I include as a part of my remarks the address made on that occasion by Charles T. Macdonald, past president of the District of Columbia Society of the Sons of the American Revolution.

ELBRIDGE GERRY

Elbridge Gerry was born July 17, 1744, at Marblehead, Mass., and is one of Harvard's most distinguished sons. He was twice Governor of the Commonwealth of Massachusetts, which honored him with many public offices. At 28 years of age, he was a member of the Massachusetts General Court and later became a member of the committee of correspondence, which was one of the great instruments of intercolonial resistance. He was a member of the Massachusetts Provincial Congress and later a member of the Continental Congress, where he early advocated independence from the mother country.

At 32 years of age, he was one of 56 signers of the Declaration of Independence and the only one of those whose remains are interred in the District of Columbia.

In 1812 Elbridge Gerry was elected Vice President of the United States and he held that office until his death November 23, 1814, at the age of 70. He died suddenly in this city while on his way to preside over the Senate of the United States.

Elbridge Gerry never hesitated nor did he ask the price he might have to pay for his defiance of the English Crown. He acted with great initiative, courage, and ability in the face of the then almost overwhelming power of His Majesty's government, but when duty called he quailed not.

It is fitting indeed that on this 181st anniversary of the signing of the Declaration of Independence that we honor this great statesman and patriot, and it is most appropriate that this be done by the descendants of those who conceived this Nation's form and, to give it life, "pledged their lives, their fortunes, and their sacred honor."

May God preserve for posterity the brilliance of the memory of Elbridge Gerry.

Resolution by AMVETS Regarding Bow Resolution, Girard Case, Bricker Resolution, International Development Loan Fund and Foreign Aid

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD. I ask unanimous consent to include a letter, from Mr. Charles L. Bailey, Commander of the Atlantic Iowa AMVETS, Post. No. 1, and a resolution adopted by that post on July 11 just past.

The resolution is as follows:

THE ATLANTIC AMVETS POST NO. 1,
Atlantic, Iowa, July 11, 1957.

Hon. BEN F. JENSEN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN JENSEN: Enclosed please find copy of resolution passed by the members of the Atlantic AMVETS Post, No. 1, this date.

Also, please be advised that the original resolution protesting the handling of the Girard case, was passed by the Iowa Department of AMVETS when they met in their annual convention in Fort Dodge, Iowa on June 21, 22, and 23. The same resolution was also passed by the Iowa Auxiliary of AMVETS at their convention about the same time.

This is also to thank you, for our membership, for your kindness and thoughtfulness in having our resolution entered in the CONGRESSIONAL RECORD.

With all good wishes, and many thanks for your favors, I am,

Yours very respectfully,
CHARLES L. BAILEY,
Commander.

RESOLUTION OF THE ATLANTIC AMVETS POST, NO. 1, ATLANTIC, IOWA

Whereas the Atlantic AMVETS Post, No. 1, meeting this 11th day of July 1957, in a

regular and duly authorized session, have been informed that the Bow resolution (H. J. Res. 16), regarding the Status of Forces Treaty and similar agreements, was voted out of committee by the House Foreign Affairs Committee on June 27, 1957;

Whereas the next step for the Bow resolution (H. J. Res. 16) will be the House debate on this resolution and it is already noted that efforts are being made to substitute a so-called sense resolution which has no force or effect. And there is also a planned campaign to amend the Bow resolution by passing a watered-down version that might just request rather than direct the President to take action as demanded by the Bow resolution;

Whereas proper consideration for the constitutional rights of Americans like Bill Girard and thousands of others now serving overseas demand the Bow resolution be passed without amendments: Therefore be it

Resolved by the members of the Atlantic AMVETS Post, No. 1, meeting this 11th day of July 1957, in a regular session in their clubrooms in Atlantic, Iowa, That the Bow resolution (H. J. Res. 16) regarding the Status of Forces Treaty and similar agreements, be passed without amendments in its original form, which will require the President to modify or denounce the Status of Forces Treaty so that the United States will have exclusive jurisdiction over our servicemen abroad, as this is the only way we can restore their constitutional rights; be it further

Resolved, That the members of this AMVETS Post, No. 1, strongly urge the passage of the Bricker amendment, when it is considered before the House of Representatives, to prevent future trouble from the more than 200 treaties and executive agreements that this administration has entered into without the authority of our Congress; and, finally, it is

Resolved, That the membership of this Atlantic AMVETS Post, No. 1, does go on record as unalterably opposed to the International Development Loan Fund, which would give authority to the internationalists and the one-worlders the authority to make long-term foreign-aid commitments—as this is the only way to stop the international boondoggle now being carried on under the false claims of foreign aid.

Stop all foreign aid now.

CHARLES L. BAILEY,
Post Commander.
PAUL B. SIEN,
Adjutant.

The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Washington (N. C.) Daily News]

CIVIL RIGHTS OR POLITICAL POWER

What President Eisenhower's proposed civil-rights bill, if it becomes law, would accomplish in social advancement is only one factor in the present debate in the United States Senate.

What it would accomplish in the political arena is another. And from the maneuvering which has taken place, we wonder if the political power which the Republican Party expects to reap from such a law does not now outweigh the social benefits which proponents say would come to the Negro race.

If the Republican Party can convince the colored people of this Nation that the GOP is the champion of individual rights, that the GOP is the party which wrote the civil-rights bill and guided it to the law books, and that it is the GOP which stands ready to fight the battles of individual freedom, then Republican leaders see in that effort the complete recapture of the Negro vote in this country.

Until 1932, the Negro vote was considered to belong normally to the Republican Party. Franklin D. Roosevelt changed that and it remained normally Democratic until 1952 when President Eisenhower was elected. Then in 1956 the colored vote again went into the Republican column.

In several States the Neegro vote today could well decide the fate of that State. Whichever party captures it captures the State. New York is a good example. Because of this factor the Republican Party seems determined to court the favor of this vote.

There is one important factor which is all out of focus at the present time. The Democrats from the South are fighting this civil-rights bill just as they have done every time it has come up for consideration. But the southern Republicans are fighting it equally as hard. Take our own Republican congressman from North Carolina's 10th District, CHARLES JONAS. He is fighting the battle even though he is in the lower House which has passed the bill. But he voted against it.

Insofar as the South is concerned with this bill, it makes no difference which party a man belongs. Southern Democrats and southern Republicans alike are opposing it. But the northern Republicans are creating the impression over the country that only the southern Democrats are fighting it. And that is a misleading impression, one calculated to do the party an injustice, and more particularly southern Democrats an injustice.

All we have to do is to look around us here in eastern North Carolina. The Republican leader in our eastern North Carolina is John Wilkinson of Beaufort County. And there is no more pronounced opponent of the civil-rights bill anywhere in this country than Mr. Wilkinson.

So in reality and in truth the civil-rights fight in the Nation today is not one merely between southern Democrats and the rest of the Nation. It is one between the South and other parts of the Nation. And when we speak of the "South" we speak of Democrats and Republicans alike.

The issue in the South goes far beyond party lines. At least we in the South are consistent. We are not parading under the banner of social reform while at the same time carrying the toga of political advantage. Southerners are opposed to the bill—be they Democrats or Republicans. And insofar as the South is concerned no advantage in the area or no disadvantage should come to either party. Both parties are dedicated to the same fight. And neither party will deny that fact in North Carolina or any other Southern State.

It just happens that the Southern States are overwhelmingly Democratic. In numbers the voice of the southern Democrat is louder than that of the southern Republican. But the voices of both parties in the South blend into one chorus of opposition. And it is wrong to try to create the impression anywhere that the southern Democrats are opposed while the Republicans of the South are in favor.

[From the Greenville (N. C.) Daily Reflector of July 11, 1957]

IF NOT UNDERSTOOD, IT'S DANGEROUS

If the President and Congress do not understand the full meaning of proposed legislation, for the sake of the Nation they had better leave such bills in the pigeon holes until they either understand them or substitute measures which they do understand.

Such apparently is the case with the civil rights measure now before the Senate. The President has said quite frankly the civil rights measure which his administration is pushing "contains certain phases I don't completely understand." Among Members of the Senate there are almost as many interpretations of the various parts of the bill as there are Members in that law-making body.

On top of this confusion there is also the consideration which must be given to interpretation of any law if it ever comes before the Supreme Court. In recent years lawmakers who drafted and enacted legislation have been flabbergasted by interpretations given those laws by the highest court of the land.

Most Members of Congress agree that the measure which is being pushed reaches far beyond application only to cases dealing with alleged denial of individual rights to vote. The President has asserted his objective in urging passage of the legislation is to prevent anybody illegally from interfering with any individual's right to vote. Republican Senator WATKINS of Utah, a sponsor of the measure, declared there is no question that the bill could be used to enforce civil rights other than voting rights.

In the words of Senator ERVIN, of North Carolina, "the Attorney General could bring suits for 1,000 different purposes other than to establish voting rights."

For all the comments and views on the measure, it is quite clear that it is a far-reaching measure which will give unprecedented power to the office of the Attorney General. No one, apparently, is sure just how much power it would vest in that office so far as protecting the rights of individuals. It is quite possible that the Attorney General's office would have the power not only to protect civil rights of individuals, but just as realistically would have the authority to destroy other rights of other individuals.

The bill in its present form does not limit the power it would afford the Attorney General in cases where individual rights are involved. Under the measure individuals accused of violating injunctions secured by the Attorney General's office could be convicted and jailed for contempt by a Federal judge without so much as a jury trial.

Certainly the Senate would be unwise to pass the measure until and unless there is some manner in which it can evaluate the potential of the power it would afford the Attorney General's office and the effects it might have on individual rights.

The "Hobgoblin" of Section III

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. ABBITT. Mr. Speaker, we have seen demonstrated in the past week the truth of what I have said on the floor of this House a number of times in the past 2 months. I have said repeatedly that large segments of the press and radio and television commentators have failed or refused to give the public the true facts about the so-called civil-rights legislation. In spite of the fact that a number of Congressmen, most of whom, it is true, are from the South, have day after day pointed out on the floor of the

House of Representatives and on numerous other occasions exactly what the civil-rights bill does and the grave implications contained therein, many people in the North and West, including outstanding editors, now admit they had no idea that the bill was as far-reaching or as dangerous as it is.

Apparently, and we have no reason to doubt what they say, they thought the legislation only dealt with voting rights of minority groups. Time after time, I noticed news items in the northern press and particularly in the Washington Post wherein this so-called civil right-legislation was referred to as the right to vote bill. On several occasions the Washington Post had an editorial referring to the bill as the right to vote legislation. Time after time on the floor of the House this fact was pointed out by myself and other Members. We charged the newspapers with an attempt to fool the American people as to what was in the bill. A prejudice and distortion on the part of the press is a dangerous thing. We all know the importance of freedom of the press. We know the necessity of having a free press. At one and the same time, however, all segments of the press have certain duties and obligations that they must render to our people. A grave injustice has been done. In my opinion, some of it has been willful and malicious. I do not know whether the reporters are to blame or whether the editors edited the news articles after they were presented to the copy room. Whoever is responsible for this great injustice I trust will profit from this experience and hereafter present to the American people the news as it is in fairness to all of our people.

Even the editor of the New York Times admits that he thought the bill simply dealt with voting rights and only knew differently last week. I understand he blames this upon the failure of southern Congressmen to explain what is in the bill. The blame is not upon the Congressmen but upon that segment of the press, reporters, or news editors, I do not know which, who have failed to carry the statements, speeches, and releases of those Members of Congress who have opposed this legislation. I hope in the future that this same group will not be so prejudiced against a section of this great Nation as to refuse to give proper publicity to their grievances and opinions.

On Friday, July 12, there appeared in the Richmond News Leader an editorial entitled "The 'Hobgoblin' of Section III." This is a splendid editorial which explains one section of the so-called civil-rights bill. This same editor has on numerous occasions had outstanding editorials explaining the viciousness of the pending legislation as well as the evil it would foist upon the American people if enacted into law.

Mr. James J. Kilpatrick, editor of the News Leader, is one of the best informed editors in our country on States rights, individual liberties, and kindred principles of democracy. He has done much to preserve our way of life in the Commonwealth of Virginia. I hold him in high esteem.

In the hopes that at least some people in other sections of the Nation will have the opportunity of reading this fine editorial, I include it with my remarks. The editorial is as follows:

THE "HOBGOBLIN" OF SECTION III

Senator RICHARD RUSSELL's brilliant attack last week on the civil-rights bill swept the South to an amazing and sudden victory in the struggle to get its message across to the people of the Nation. The Georgian made no new points. He emphasized arguments that had been made by other southerners in House debate. But perhaps because it was Senator RUSSELL speaking, or because interest in the bill has jumped with the beginning of Senate debate, his arguments received an audience among northerners.

For the first time, the bulk of the Northern press last week found room to present Southern arguments against the measure. From the integrationist New York Times, among others, came well-bred cries of "for heaven's sake." No one, it appears, had understood that the civil-rights bill was anything more than a right-to-vote bill. The Times was frankly amazed.

What the Georgian made clear is that section III is not wholly new legislation. Section III is an amendment to an existing law, adopted in reconstruction days, which now is embodied in 42 United States Code 1985. The language in the bill now pending before the Senate would add 2 paragraphs to the 3 paragraphs of the existing statute. To understand the plot fully, one should read these 2 proposed new paragraphs:

"Fourth. Whenever any persons have engaged, or are about to engage, in any facts or practices which would give rise to a cause of action pursuant to paragraphs first, second, or third, the Attorney General may institute for the United States, or in the name of the United States but for the benefit of the real party in interest, a civil action or other proper proceeding for redress, or preventive relief, including an application for a permanent or temporary injunction, restraining order, or other order.

"Fifth. The District Courts of the United States shall have jurisdiction of proceedings instituted pursuant to this section and shall exercise the same without regard to whether the party aggrieved shall have exhausted any administrative or other remedies that may be provided by law."

The true purpose of these paragraphs fourth and fifth cannot be comprehended until one studies the existing paragraphs first, second, and third. Here it is found that the old law authorizes the filing of civil suits against any persons who conspire together with intent to deny to any citizen the equal protection of the laws. The Supreme Court of the United States has ruled that for a Southern State to provide separate facilities for Negroes as to schools, golf courses, railway waiting rooms and other public places, is to deny Negroes equal protection of the laws.

Thus the innocuous "right to vote" bill that Mr. Eisenhower thought was so moderate and decent becomes on closer scrutiny something else entirely. But that is not all. What Senator RUSSELL went on to point out is that there is on the statute books still another old law—its existence had been carefully concealed—which states:

"It shall be lawful for the President * * * or such other person as he may empower * * * to employ such part of the land forces of the United States, or of the militia, as may be necessary to aid in the execution of judicial process issued under sections 1981, 1983, or 1985–1992 of this title."

Mr. RUSSELL said he wondered long ago why this particular section 1985 had been chosen for amendment by the drafters of the pending bill. Other existing statutes offered more logical and rational bases for extension of the moderate aims sought by the President. The answer is that Attorney General Brownell wanted to tie in the new civil rights bill with the old law authorizing the use of troops. The result, said Mr. RUSSELL, "is the most cunningly devised and contrived piece of legislation I have ever seen—the ultimate in the technique of legislative draftsmanship to obscure purpose while creating and conferring power."

Of course, some liberals in the Senate attempted to minimize Senator RUSSELL's charge. Said Mr. DIRKSEN, of Illinois: "Seldom have I seen so many ghosts under a single bed." Mr. JAVITS, of New York added that the idea the authority in the bill will be misused "is only a hobgoblin in the closet."

Ghost? Hobgoblin? The South has learned through bitter experience to expect the worst from the Department of Justice and the Federal courts. Admittedly, it is an extreme case to suppose the proprietors of a Southern hotel, operating under a routine charter issued by a State to a business corporation, would be found in violation of section 1985 if they restricted their operations to white guests only. Yet such a finding is quite conceivable under the present trend in judicial opinion. If residents of a community objected, they could be jailed without a jury trial, and troops could be brought in to aid in the execution of judicial process. That is what this law is all about.

The hobgoblin which the South can see haunting section III of the bill walks like a man. It has the face of a man. And that face is the face of Herbert Brownell.

Congressional Primate

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. CANNON. Mr. Speaker, under leave to extend my remarks I am including in the CONGRESSIONAL RECORD an editorial from this weeks issue of the Word and Way, published in Kansas City, Mo., on the election of our distinguished colleague, Hon. BROOKS HAYS of Arkansas, as president of the Southern Baptist Convention at its recent session in Chicago.

The editorial follows:

A GOOD YEAR FOR LAYMEN

When the messengers at Chicago elected Congressman BROOKS HAYS of Arkansas as president of the Southern Baptist Convention, they turned for the sixth time to the ranks of the laymen for an occupant of this important office. Not since Gov. Pat Neff, of Texas, concluded his 2-year term of office in 1946 had the convention gone outside the ministry for a leader.

It seems entirely appropriate that a layman should be selected at this time; and the fact that Congressman HAYS of Arkansas was the only member of this group among the six who were nominated at Chicago was probably a deciding factor in his election.

One of the most reassuring developments in recent years has been the emergence of the layman in the work of the churches. If there was ever a time when religion was considered a matter for women and children, that time has passed. Today the layman

takes second place to none in assuming responsibility in the work of our Lord.

Furthermore, the men of the Southern Baptist churches are holding this year their first conventionwide conference. Sponsored by the brotherhood commission, this meeting will convene in the First Baptist Church, Oklahoma City, September 18–20, next. All signs indicate that it will be the greatest meeting of its kind ever assembled. It is no coincidence that in this momentous year in brotherhood history that one of its members should occupy the highest office in the convention.

Congressman BROOKS HAYS brings to this job a good education plus a long experience in State, National, and international affairs. He will add a new and distinctive touch to the picture. Richly endowed with good judgment and a sharp sense of humor, he will be equal to the demands of any situation.

A sketch of his life indicates that President HAYS dedicated his talents to the Lord in his early years and that he has maintained that spirit of dedication to the present time. Born in Russellville, Ark., August 9, 1898, he was educated in the schools of that State. Later he received the bachelor of arts degree from the University of Arkansas and the bachelor of laws degree from the George Washington University Law School. After graduation, he returned to his hometown to practice law, and there at the age of 23 he was ordained as a deacon and elected superintendent of the Sunday school in his home church. At the present time he teaches a men's class in the Sunday school of the Calvary Baptist Church, Washington. The pastor of this church, Dr. Clarence W. Cranford, coincidentally, is the newly elected president of the American Baptist Convention. This is the first time in history that the presidents of these two great conventions have been from the same congregation.

More People Favor Federal Aid Than Oppose It

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I include an editorial from the Hutchinson (Kans.) News Herald of May 28, 1957. I commend it to the membership of the House.

The editorial follows:

MORE PEOPLE FAVOR FEDERAL AID THAN OPPOSE IT

The latest Roper poll asked public opinion on Federal aid to education.

The results, which showed the public is strong for more Federal aid, are startling only in that they disagree with what some educational leaders have been saying.

The taxpayers are feeling the pinch of mushrooming school enrollments which necessitate more teachers and classrooms.

When asked if they favor financial aid which might lighten the local load most are bound to say "Yes."

Educators fear controls will follow a Federal-aid program. Yet many communities, such as Hutchinson, are receiving such aid due to a local or nearby military base which puts an added burden on the schools.

True, before a contract for a new building which will be paid for partly from Federal funds is let, plans must be approved by a Federal housing official. But experience here has shown that not only are these officials or agencies favorable to the locally made plans, but even pointed out ways to trim costs and bent over backwards when revisions were made.

If the Federal Government were to decide tomorrow morning that our crippling educational shortages were something for which it must take a heavy measure of responsibility for the first time, the heaven would not fall.

Status of Forces Treaty

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Uncle Sam Bows Down to Clamor From Abroad," and published in the Miami Herald of July 14, 1957. The editorial was written by one of the Nation's most able, discerning, and courageous editors, John S. Knight.

I may say that Mr. Knight rather severely criticized some of the actions which we have done. He does not approve of the Status of Forces Treaty. I am happy to be able to say that that is one measure for which I did not vote; and upon voting against it, I predicted that the sorrowful consequences which we now see, and in which we are involved, would result.

Also in the editorial there is a commendation of the senior Senator from Illinois concerning his attempt to reduce the budget by a billion dollars. I may say, in connection with that statement, that I think the proposal of the Senator from Illinois received five votes. I was very much pleased to be one of the Senators who voted for it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNCLE SAM BOWS DOWN TO CLAMOR FROM ABROAD

(By John S. Knight)

The now-famous Girard case has been settled by the Supreme Court.

GI William S. Girard, who caused the death of a Japanese woman who was scavenging scrap metal on a United States firing range, is to be turned over to Japan for trial.

In effect, the Court said there is nothing in the Constitution or in subsequent legislation to prevent United States authorities from giving up Girard to the Japanese.

This means the United States, under the administrative agreement with Japan, didn't have to surrender Girard, but is not barred from doing so.

WE DID GIVE IN TO JAPAN'S DEMANDS

The Court's decision is notable in that it serves to remind us how far the United States is willing to go to appease inflamed public opinion abroad.

At first, the United States claimed primary jurisdiction and to quote the Associated Press, "There was a long deadlock before the United States finally gave in to Japan's demands that it be allowed to try Girard."

But we did give in.

WHY WERE SCAVENGERS INSIDE FORBIDDEN AREA?

The Justice Department admitted "the killing may be deemed to have arisen out of an act done in the performance of official duty," but then rationalized that Girard never "was ordered" to use his gun in the manner alleged.

Of course, Girard wasn't ordered to shoot.

But why were Girard's officers permitting Japanese to pick up scrap metal in an area clearly posted as forbidden?

What is the measure of their guilt?

GIRARD IS SACRIFICED TO BIGTIME DIPLOMACY

The Court's ruling is uncontestable. The reasoning is sound.

But why did the United States, after first claiming the right to try Girard, finally agree to waive that right?

Because, says the Supreme Court, "the issue was referred to higher authority which authorized United States representatives * * * to notify the appropriate Japanese authorities * * * that the United States had decided not to exercise, but to waive, whatever jurisdiction it might have in the case."

So there you have it. One can picture old Foster Dulles as higher authority, insisting that nothing be done to offend the Japanese.

So a young American GI, hardly out of his teens and probably not too bright, was sacrificed on the altar of bigtime diplomacy.

It smells.

EVERYONE'S KEEPING COOL AND REDS HAVE HANDS FULL

This is the season when the tired businessman stops fretting about the budget, and finds himself a cool summer retreat, or a nearby golf course.

The All-Star game is over, Casey Stengel's men have only the White Sox to fear, there's a real pennant race in the National League, and the horse tracks are swarming with hopeful betters trying to beat the chalk.

Even the newspaper editors are gathered this week in San Francisco, hearing from the experts and otherwise dedicating themselves to a round of cocktail parties and sampling California hospitality.

A few perspiring editorialists stay on the job to interpret the Russian shakeup and the sum total of what they are writing only adds up to more confusion.

This is not to derogate their intelligence. But nothing seems certain except that Comrade Khrushchev is on top and the Russians have enough troubles at home to discourage any thought of starting a shooting war before we begin our Christmas shopping.

DOUGLAS SHOWS HOW TO SAVE A BILLION

As the happy vacationers trek to their favorite pleasure spots, the Congress of the United States is hard at work.

And Washington is no summer resort.

Our duly elected representatives come in for a good deal of criticism, both deserved and unwarranted.

But in the run of the news, where Mike Todd's $200,000 party in London attracts more attention than the fight over civil rights, examples of fine public service too often escape the editor's notice.

In particular, and to make amends, attention is now drawn to the efforts of Senator PAUL DOUGLAS, Democrat, of Illinois, to pare the shameful waste which exists in the Defense Department.

DOUGLAS, in a detailed presentation to the Senate, revealed that at least $1 billion could be saved without affecting national security in the slightest.

The Senator quoted a House report showing that the Defense Department, on June 30, 1956, had $134 billion in inventories of which $111.1 billion was in personal property.

He pointed out "there is enough money in these inventories, alone, to run the defense forces for a year or more."

DOUGLAS, who is no believer in meat-ax budget cutting, recommended using $500 million of his projected savings to equip two or more nonnuclear Army combat divisions and to provide an increase in marine units.

As he expresses it, "I was trying to reduce some of the excessive fat which the Defense Department is carrying and to increase its military muscle. * * *"

DEFENSE DEPARTMENT RESISTS ECONOMY

The Senator's amendment which would have carried out this purpose was overwhelmingly beaten. His own language will tell you why:

"The great obstacle which we face in trying to eliminate the waste is the inevitable counterattack of the Defense Department, namely, the cry that in seeking to reduce waste, we are endangering national security. They then threaten us with cutting the combat units.

"But they never admit," continues the Senator, "that they could reduce a single dollar of waste. In this way, they maneuver Congress and the country into perpetuating waste and diminishing real security."

The Senator's explanation of his failure to get expenses cut is deserving of public attention.

Together with Senator FRANK LAUSCHE, Democrat, of Ohio, he brought out that 92 percent of defense contracts were negotiated, rather than let through competitive bidding.

No improvement has been made in tihs system even though the Defense Department has 33 Secretaries, Under Secretaries, Deputy Under Secretaries, Assistant Secretaries, and Deputy Assistant Secretaries to carry out its functions.

Charlie Wilson had no such huge bureaucracy when he ran General Motors. Nor any waste, as GM suppliers can testify.

WHO'S PAYING? YOU ARE

Perhaps this brief recitation of what Congress is up against in attempting to hold down Federal expenditures will be of more than casual interest to the people who pay the bills.

Every bureaucrat in Washington thinks his budget is untouchable and resents any effort to slice off the fat. Our so-called businessmen's administration is just as culpable in this respect as the ones we have seen before.

But praise is due in large measure to Senator DOUGLAS and those of his colleagues who have dared to buck the Defense Department while risking the charge that they were endangering the national security.

Give it a thought, won't you, when you're trying to decide whether a No. 3 iron or a No. 5 wood will get you to the green.

Public Relations Important

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Elizabeth City (N. C.) Daily Advance of July 10, 1957:

PUBLIC RELATIONS IMPORTANT

The Elizabeth City Coast Guard is one of the most important and valuable organizations in this section of North Carolina, and all of us in the Albemarle section appreciate the fine work being done by the men stationed here. Time after time they risk their own necks in order to save the lives of others who are involved in ship or plane accidents, or are having some other kind of trouble.

In spite of its fine work, however, the Coast Guard is not receiving the credit it deserves. Principal reason for that is the fact that the Coast Guard does not have a first-class public-relations program. That probably is due to the fact that the organization does not have sufficient personnel.

Frequently the Coast Guard helicopters and planes are involved in some mission of mercy for which other branches of service receive the credit. Two such examples came last week. The Coast Guard participated in the Tyrrell County forest fire and later in the Edenton railway-trestle accident, but on both occasions the Elizabeth City NAF received credit for the work in the two towns.

That would not have happened had the Coast Guard maintained a first-class public-relations program. However, when a large part of the base's personnel is participating in some project, those left behind are too busy with their various duties to keep the public advised of its activities. Consequently, news stories frequently credit other agencies with acts that should go entirely to the Coast Guard. It would be to the Coast Guard's advantage to do all it can to correct the situation.

The Civil-Rights Issue

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. MORSE. Mr. President, the Senate debate on the civil-rights issue has been on the level contemplated by our Founding Fathers when they wrote the Constitution. It has been a discussion of facts, rather than of fancies; of principles, rather than of emotions; of logic, rather than of panic.

The Washington Star calls attention to this fact in its lead editorial today. It points out that it is too early to speculate on "details of amendments," but that it is apparent already that able Senators are seeking to rid the measure of ambiguities.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON READING THE FINE PRINT

Majority Leader JOHNSON told his colleagues on Friday that the value of Senate procedures has been dramatically demonstrated by the preliminary debates on taking up the right-to-vote bill. He is right. No recent issue of such importance to the country has been examined so searchingly under conditions and in an atmosphere which so clearly reveals the traditional role of the Senate at its best.

There is a certain analogy between this debate and the soundness of advice to purchasers of insurance to read the fine print. Many able Senators have been examining the fine print in this bill and reading it aloud. What they have found has genuinely surprised good Americans who were thinking of this bill all along as mere insurance, by the Federal Government, that no qualified American, regardless of his race or creed, will deliberately be deprived of his right to vote. Conditions imposed in the fine print, however, are correctly causing discomfiture to some of those completely in favor of what they thought the policy meant. For they are not sure what it means, or whether it injects more risks than it was designed to eliminate.

We shall not speculate now on the detail of amendments that will be sought in this bill. It is now certain that such amendments will aim to rid the bill of its ambiquities, narrow its application to the right to vote and guarantee that juries will determine the facts in contempt cases. Such amendments will be wise. As an old time liberal, O'MAHONEY, of Wyoming, reminded his colleagues the other day, "It is impossible for any person to stand before a legislative body in a free government and say 'I know what the law ought to be.'" The law that ought to be is the result of compromise, examination of all its implications and the avoidance of those that are dangerous. No one can argue logically that this bill should seek removal of certain evils by substituting other evils; that the protection of one set of civil rights should be strengthened by placing others in jeopardy. Yet that is what the bill, in the form it passed the House, proposes to do.

The late Justice Brandeis wrote these lines: "Experience should teach us to be most on our guard to protect liberty when the Government's purposes are beneficent. Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well-meaning, but without understanding."

The aptness of that warning, we think, has been demonstrated by a debate which is now about to enter its second phase.

Public Schools and Federal Aid

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I include an editorial from the Anniston (Ala.) Star of May 26, 1957. I commend it to the membership of the House.

The editorial follows:

PUBLIC SCHOOLS AND FEDERAL AID

Stewart Alsop, one of the two brothers who contribute regularly to this paper, the one with whom we are concerned today having to do mostly with domestic issues, while Joe is commuting from one country to another in Europe and Asia, seems to be worried over the fact that Uncle Sam might never get loose if he started giving aid to the public schools of the country.

But why should he get loose? Isn't it the money of the several States, or of the individual taxpayers thereof, that keeps Uncle Sam hale and hearty and able to do a fairly good job in the conduct of the business to which he is assigned? And isn't it right that we as valid United States citizens get back some of the money we put into his till?

Jefferson and Madison and others of the Founding Fathers held it to be a paramount duty of the Federal Government to support the schools of the country. For the perpetuity of our democratic form of government depends on an educated constituency.

Hence, Federal aid to education was the hard core of the economy of the Northwest

Ordinance of 1787, and many of the great educational institutions now encompassed in that settlement got their start from the Treasury of the United States under appropriations by the Congress.

The late Senator Robert A. Taft was for several years as skeptical as Mr. Alsop and many others as to the advisability of Federal aid. But when someone called his attention to the fact that his ancestors grew up in Ohio under the aegis of governmental school assistance, he had the intelligence and moral courage to reverse his position.

But when the Northwest was divided up into States and those States became relatively selfsupporting, the Federal Government did cease its outright support to the public schools of that region. Taft finally came to the conclusion, however, that Uncle Sam's change of policy in this regard was unjustified.

The Northern States, without the natural resources that obtain in the South and the West, have grown great and rich by reason of their investment in education and research. They are richer than the South and the West combined, and it would now pay them to increase the wealth of other regions through taxes for education and thereby enrich their South-West markets.

It is unfortunate, however, that the southern region that needs education the most is the least favorable to Federal aid on a large scale. They are afraid, or pretend to be, that Uncle Sam would attempt to control the schools if he should decide to give us back more of the money we pay him through our taxes.

But the fact is that we have been receiving Federal aid for many years. The land-grant colleges could not exist without their Federal subsidy, and in recent years Uncle Sam has been spending much money through State universities for research on various projects and has been furnishing school lunches to our children every day in the school year.

And we do not hear of his attempting to control Auburn or the university or our elementary schools because of his aid. As a matter of fact, it is written into the Federal Aid Act that Uncle Sam would have no control if we should get back more of the money we contribute in taxes for education and other purposes.

In fine, we are very much concerned for fear Russia will beat us in nuclear processes, but we should be even more concerned over the fact that the educators of Russia are the highest paid class in the Soviet Union. The Communists put a premium on an educated citizenship, and we can keep ahead of them in all respects only so long as we invest our money through taxes in cultivated human brains.

Penny Wise, Pound Foolish

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include therein the following editorial from the Daily Citizen, Urbana, Ohio, which, in my opinion, is worthy of the attention of every Member of Congress, for it points out a situation that is too often overlooked, both by those of us who serve in the Congress, and by our constituents:

PENNY WISE, POUND FOOLISH

Just a month ago Champaign County dedicated a new courthouse at ceremonies in which great tribute was paid to the importance of local government.

At the time of the dedication there still echoed over the handsome modern structure the onetime strong feelings of two defeated bond issues. The defeats came at the hands of conservative residents of this county who felt that a million dollars (more or less) was too much to spend for a courthouse.

When plans for the courthouse were pared down to an estimated $650,000, local voters finally voted to accept the proposition—although still by a very narrow margin.

The issue was sold and put on the tax duplicate to be paid off by the local taxpayers over a period of more than 20 years. And there will be those persons who will begrudge every semiannual taxpayment on that courthouse over that whole period until 1980 * * * in spite of the fact that the courthouse stands as a proud, serviceable local landmark out of which generations of local people may get great use and value.

This right to be watchful of the expenditure of our own money by Government is an American privilege each of us exercises every time we vote "for" or "against" a school levy, a city income tax, or the like. We are having our say because we care. After all, 20 years to pay for a courthouse is a long time.

If the 30,000 some citizens of this county felt that it might be necessary to build a courthouse a year over those next 20 years, the predictions of community disaster would set up a buzz from Christiansburg to North Lewisburg and from Springhills to Mechanicsburg that would shake the man on Monument Square right off his pedestal. What chance would that $650,000 bond issue have had if local residents had been told "you must pay for it all in 1 year"?

Yet at the same time, Champaign County taxpayers are giving away this year this same new county courthouse—or rather, its equivalent in cash—and there is not so much as a drugstore comment or a living-room argument about it.

This year—not between now and 1980—in this 1 year, Champaign Countians will pay $645,998 in taxes that will be given in the form of foreign aid to residents of other counties. It's the same amount of money—give or take a couple of thousand bucks—that created such a stir when voters were asked to approve it for a courthouse for their own use. There are only "ho-hums" when we talk about it on the Federal level.

Mind you, this is not Champaign County's share of the total Federal budget for this year—that $78 billion pyramid of waste and extravagance. This is only our local share of one small angle of the whole.

These figures are prepared by the Ohio Chamber of Commerce and are based on an estimated January 1, 1957, Ohio population of 9,044,700 and the fact that Ohioans pay 6.48 percent of every dollar the Federal Government spends. Note that this works out to about one-fifteenth—not the one-forty-eighth you might have thought at first.

The $645,998 share for foreign aid (alone) for Champaign Countians is based on the administration's attempt to have Congress appropriate $1,064 million for "economic aid" plus $2,800 million for "military aid." The total is $3,864 million.

What does the loss of one new courthouse mean to this county? Or, put another way, what would it mean to this county to have $650,000 to spend on county needs, new schools, township roads, churches, our own homes?

Independence Day has just passed and we read stories about the Colonists getting excited about the Stamp Act and the tax on tea to the point that they were willing to take up arms and shed blood for freedom from the tax oppression of their "federal government" in England. Today's patriot gets excited about the cost of a courthouse or a new school for his own use; but makes no attempt to do anything about Federal spending. Most of them won't even bother to pick up a pen or pencil to write their Congressman or Senator or President about it. The fact is, they don't seem to care about the Federal Government giving away the courthouse.

When it comes to the local level, county, school district, city, and township governments, we all are proudly penny wise. But when we start talking about the Federal Government, the same stalwart citizens and patriots are pound foolish.

The reason?

You didn't fool us for a minute, dedication speakers. The local government is only important because most of us everyday citizens know we can still control it. But the Federal Government is the one that is truly important, because here we have a Frankenstein created by ourselves which we do not have the desire, the will power, the interest, or the courage to do anything about.

Local voters berate and deny local governments, because, like the school sissy who puts little girls' pigtails in the inkwells, we are too timid to attack the bully who has everyone awestruck.

Until the individual voter and taxpayer decides to do something about it, local courthouses are likely to become harder and harder for local governments to come by and easier and easier for Federal Government to give away.

Diversion Should Have Green Light

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I should like to insert in the Appendix the attached editorial from the Peoria Journal Star of Friday, July 12, 1957, entitled "Diversion Should Have Green Light."

DIVERSION SHOULD HAVE GREEN LIGHT

Now, after 2 successive years of having the Lake Michigan diversion measure vetoed, the administration has finally gotten around to sending representatives to Ottawa for the purpose of explaining the bill to Canadian officials. One of the main reason for last year's veto was the fact that the matter had not been discussed with Canada. That country, until now at least, has taken a dim view of increasing the diversion of lake water into the Illinois Waterway.

The feeling there has been that the increased diversion—from 1,500 to 2,500 cubic feet per second—would lower the flow of water through the St. Lawrence and would affect navigation and power facilities. Other cities on the lake have objected to the measure in the belief that it would lower lake levels dangerously. Yet the Corps of Engineers has estimated that the increase in diversion would make an eighth of an inch difference per year in lake levels for the 3-year test period. This would hardly affect navigation.

If President Eisenhower's veto has been based on Canadian misconceptions, he should no longer have any good reason to veto the measure. It has already passed the House. It passed the Senate in the past 2 years, and it should be passed again this year and sent on to the President.

The main advantage of the bill is that it would help purify the river. It stands to reason that more water added to the effluent discharged into the river will further dissolve it and make the river cleaner. But there are other benefits. In its present form, the bill would regulate the flow of water at

Pekin, long a critical spot during periods of low water. It would give a greater flow to carry away industrial wastes, often a critical factor in an industry's decision to locate on a waterway. It would help protect natural resources and river fish and wildlife. It has been said that increased diversion would benefit the whole Mississippi River Valley.

Canada's objections seem to be based on unwarranted fears rather than on facts. Now that the administration has seen fit to explain our position to Canada, we hope that one of the bigger stumbling blocks to diversion will be removed.

Senior Citizens and Associates of America

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. LANE. Mr. Speaker, I wish to include herein my remarks before the Senior Citizens and Associates of America, of Lynn, Mass., during their annual outing at Salem Willows on July 14, 1957. Mr. Charles C. O'Donnell is president of the group.

HONOR THE AGED

It is good to see the number of older people in attendance at this outing of the Senior Citizens and Associates of America.

And it is always a pleasure for me to meet so many friends who, in their time, have worked hard to build the prosperity that our Nation enjoys. In the process, they have raised families that are a credit to the Nation.

Not too many years ago when a person retired he was supposed to take a back seat. Older people, either singly or in pairs, used to live alone.

All that has changed out of necessity.

Older people are being seen and heard.

More and more of them are joining groups such as yours, not only for social and recreational purposes, but for organized effort to wake up the States and the United States to their problems and their needs.

From the beginning of time the younger people have been brought up to honor and respect their elders.

This Golden Rule has been reinforced by human conscience and morality.

But during this century of upheaval vast social and economic changes have cast off the customs and the standards of the past.

We must find other means to take their place.

In the pursuit of material wealth some people quite thoughtlessly forget their obligations to others.

Sons and daughters become lost in their own problems and those of their children.

The days of the large families are gone. Homes are smaller, as each member strikes out on his own, and at an earlier age. The automobile and the television have brought greater mobility and diversified interests.

The family circle that once included under one roof, a dozen or more people from the baby in the crib to the grandmother, or the great uncle, is but a memory. Sometimes brothers and sisters come home to eat at different times, because they work on different shifts.

The net result of these, and other factors, is that the older people need and want, a security and independence of their own.

The United States was one of the last nations in the West to recognize this need.

Slowly but surely we are making provision for it.

As we had no precedents to guide us, we had to feel our way.

On a modest scale, both as to coverage and benefits, we set up a program of old-age and survivors insurance, and public assistance.

Experience has taught us that the State and National Governments have been too modest and too cautious in their approach to this problem.

As a consequence, our senior citizens have organized into groups that are working for legislation to provide national old-age pensions of $100 a month or more. Many people believe that this is the only solution, embracing as it does; complete coverage, adequate benefits, and streamlined administration.

It is not enough for governments to speak of their good intentions toward the aged, or to offer them sample benefits. There is much work to be done to make that program complete and sufficient.

Until we accomplish that, we shall be faced with a social, and an economic problem, of growing proportions.

Due to the advances of medical science, the lessening of hard physical labor, and the improvement in health and nutritional standards, the lifespan of Americans is increasing.

More and more millions of our people are living to an advanced age.

This makes it a problem that concerns the Nation as a whole.

Only national legislation will solve it.

Under the Old-Age and Survivors Insurance Act, which is only 20 years old, the Government sought to protect the individual and his family based on his earnings in work covered by the Federal social security law.

I have just received a report from the Secretary of Health, Education, and Welfare, concerning the number of beneficiaries, and the amount of benefits, as of December 31, 1956.

For the country as a whole, more than 9 million persons were receiving old-age and survivors benefits at a monthly rate of $483 million. This was an increase of more than 1 million beneficiaries, and $71 million in monthy benefits over the previous year.

At the present time, 73 million persons are insured. If death should take the family breadwinner, the mothers and children in 9 out of 10 American families can receive survivors' benefits.

In Essex County, Mass., which includes people within the area from Lynn to Lawrence, and Methuen, and down the Merrimack Valley to the sea, there are over 47,000 beneficiaries, receiving monthly benefits of close to $3 million.

Slowly but surely, this program is being developed. The day is not far distant, when every American will be covered by this, and/or associated programs.

Technical coverage is one thing. Benefits are another.

Because our Nation was so late in tackling the general problem of social security a number of our people were beyond the age where they could hope to build up their social security accounts.

To help them, a fill-in program of public assistance, whose benefits are contingent upon the action of the State legislatures, was established.

The State of Massachusetts has a good record in this respect as compared with most of the other States. As Charlie O'Donnell, your president and legislative director has advised you, there is every expectation that there will be some increase in the travel allowance for old-age assistance recipients, plus a cost of living increase of 5 percent, before the present legislative session is over.

Public-assistance benefits have never been sufficient. They have always lagged behind the cost of living.

We hear every subject under the sun being debated in the legislative halls and in the public press except the one which is of the greatest concern to the American people; and that one overriding issue is, the steady and dangerous rise in the cost of living and how to control it.

The problem of trying to make both ends meet as income remains stationary while prices go up is one that affects most Americans, but bears most heavily upon those with small, fixed incomes, like the good people who are trying to get by on the thin benefits called public assistance.

The experts themselves can't agree on the causes of inflation.

The other day one professor of economics said it was due to the fact that the people are living up to and beyond their incomes. Buying so many things that they hope to pay for later.

This certainly does not apply to the older people, because they do not have enough income in the first place to establish credit.

It is not enough for the younger people who will be old themselves someday to be courteous to their elders.

Our senior citizens are entitled to security and independence.

And this, in turn, depends on adequate income.

The only solution is for a national pension, or the equivalent thereof, with an escalator clause tied to the cost of living, so that no retired person will ever have to worry that changes in the economic picture will deny to him the necessities and the modest comforts that a civilized nation owes to its senior citizens.

Through organizations such as yours, the public is constantly reminded that to honor the aged we must engineer a better program to meet their needs.

There are understanding men and women in the Massachusetts Legislature and in the Congress who are determined to make social security succeed.

I hope you have a very pleasant outing made more enjoyable by the realization that there is only one direction for the social welfare programs of our Nation, and that progress, no matter how slow or hesitant it may seem at times, will not be satisfied until it reaches its goal.

One of the major obligations of our people is to provide true freedom and happiness for the aged who have richly earned the right to peace and security in the golden years of their lives.

America Needs an Army of Quality

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mrs. ST. GEORGE. Mr. Speaker, I think it was extremely interesting to note that the late Aga Khan decided that he should be succeeded by a very young man who had grown up and been educated in the atomic age.

It would seem that we, also, in our thinking on defense and the armed might of the United States must also remember that we are living in the atomic age and that our thinking must be scientific and not the old concept of mass manpower.

This new concept is admirably presented in the following article by George Fielding Eliot which appeared in the New York Journal-American of July 14:

AMERICA NEEDS AN ARMY OF QUALITY

(By George Fielding Eliot)

The United States does not need as large an Army—Active or Reserve—as the Soviet Union does.

We have no land frontiers to defend. We are unlikely to engage in full-scale warfare in Europe or Asia under foreseeable circumstances. We must, of course, keep our commitments to NATO and our defensive position in Korea. Beyond that, the most likely demands on our Army are found in the field of limited warfare.

These demands call for a fully ready, highly mobile, sea-and-air transportable force of Regular troops, emphasizing quality rather than mass quantity, backed by National Guard and Reserve forces of sufficient strength to meet a Korea-type emergency quickly and vigorously.

Numerical comparisons with the Soviet armies can be misleading unless these facts are remembered.

The U. S. S. R. must defend vast land frontiers, stretching thousands of miles from the Arctic Ocean across Europe to the Black Sea and then east clear across Asia to the shores of the Pacific.

Consequently, the U. S. S. R. maintains a huge army, based on universal service which includes every able-bodied man from the age of 18 to the age of 50.

The Soviet youth is called up for 3 years' active service in the autumn following his 18th birthday. When he has finished his active service he passes to a unit of the first-line reserve, in which he remains until his 35th birthday. During this period he undergoes 6 periods of training of 60 days each (90 days if he is a noncommissioned officer).

From age 35 to 45, he serves in a second-line reserve unit, and is called up for 5 30-day training periods. Finally, from 45 to 50 (when his reserve service ends) he serves in a homeguard unit and does 1 30-day training period.

Based on this system of service, the Soviet Army can, within a very few days, bring all its 175 active divisions to full strength and mobilize 225 fully-trained reserve divisions to reinforce them.

But—except on its Western frontier—the U. S. S. R. can bring only a small percentage of this huge army to any one point on its enormous perimeter quickly and with assured supply lines behind it.

Further, in limited nibbling operations, the U. S. S. R. is not going to take unlimited risks.

SEA-AIR MOBILITY

The United States, commanding the seas and the air spaces above them, can as a rule bring force to bear at threatened points around the Soviet perimeter, and supply that force, much more readily than can the U. S. S. R. It was this sea-air mobility and supply that enabled us to defeat the Soviet-supported assaults on Greece and the Republic of Korea. We can do the same again if we have to.

But we can do it far more readily, and at far less cost, if we have an Army—active and reserve—tailored to this requirement.

The U. S. S. R. needs masses of men and masses of weapons.

The United States needs very highly trained men and very high-quality weapons, designed for its special purposes. We cannot hope to have superior air power and a superior Navy, and support a mass Army, too. We need, not a big Army, but a very good Army.

Department of Agriculture Appropriation Bill

SPEECH

OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. STAGGERS. Mr. Speaker, I want to congratulate the conferees on their action in connection with H. R. 7441, the Department of Agriculture appropriation bill for the fiscal year ending June 30, 1958, and especially to commend the Honorable EARL WILSON, of Indiana, for his enlightening and comprehensive discussion of this very important bill. I hope that every farmer in West Virginia will read Mr. WILSON'S statement. Of particular interest to farmers in West Virginia who have been utilizing the agricultural conservation program to carry out soil-building and soil-conserving practices on their farms is the committee's action directing the Department of Agriculture not to make any change in the 1958 program from what it was in 1957.

Mr. Speaker, I was just as shocked as my colleagues who have spoken before me were when I received a copy of the secret memorandum from Assistant Secretary Peterson to ACP Administrator Koger deleting nine practices, which in essence have been the practices which the majority of farmers have utilized in their soil-improvement work, and restricting many others. It is a little hard to reconcile Mr. Peterson's action taking out these practices which comprised nearly 60 percent of the payments to the one-and-a-quarter million farmers participating in this program in 1955 with his statements before both the House and Senate Appropriations Subcommittees. According to the official hearings of these committees, he committed the Department of Agriculture to continue the 1958 program in the same general manner in which they proceeded in 1957. For him to issue this directive at this late date after congressional action was nearly completed and in direct opposition to the specific recommendations received from the various committees throughout the Nation is questionable procedure. The recommendations from my State of West Virginia were that no major change be made in the 1958 program over the 1957, and I have been reliably informed that this was the pattern throughout the Nation.

This administration has tried repeatedly to drastically curtail this program ever since they have been in power. There has never been a national program which has reached so many farmers and received such universal support. There is no excuse for such action as Mr. Peterson has taken of trying to reduce by administrative directive what they have been unable to sell Congress to do legislatively in previous years.

I want to congratulate the conferees again and I am glad to have the assurances of the chairman that he feels that the Department will withhold this directive.

Issue in Girard Case Clarified by Decision—Furor in Congress Yields to a Calm Explanation by Supreme Court

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. KILDAY. Mr. Speaker, the New York Times of Sunday, July 14, 1957, contains a concise and dispassionate article by E. W. Kensworthy on the Girard case. I include that article in the RECORD. The article gives a lucid account of some of the issues which are involved in the case and the status-of-forces treaties and agreements. I commend it to the attention of those desiring a correct understanding of the questions to be discussed should the status-of-forces issue be discussed in connection with foreign-aid legislation or otherwise:

ISSUE IN GIRARD CASE CLARIFIED BY DECISION—FUROR IN CONGRESS YIELDS TO A CALM EXPLANATION BY SUPREME COURT

(By E. W. Kenworthy)

WASHINGTON, July 13.—Second guessing the Supreme Court is hazardous, but most lawyers here confidently predicted that the High Court would wash out the ruling of District Judge Joseph C. McGarraghy that the surrender of Army Sp3c. William S. Girard to Japanese courts was unconstitutional.

Equally predictable was the tempest raised on Capitol Hill by the Supreme Court's decision. A number of legislators demanded that President Eisenhower renegotiate the status-of-forces agreements to eliminate the provisions permitting foreign courts to have criminal jurisdiction over any offenses committed by United States servicemen. The cry was, "The Constitution must follow our soldiers."

Some of this clamor can be dismissed as political sound and fury, but much of it stems quite honestly from a lack of understanding on the whole question.

TWO SIDES

The question of military extraterritoriality is nebulous, as are so many questions in international law. Authorities and legal precedents can be cited to prove that "the jurisdiction of a nation within its own territories is necessarily exclusive and absolute * * * susceptible of no limitation not imposed by itself." Other authorities and precedents can be cited to prove that jurisdiction over visiting forces in a friendly foreign state remains in the visiting sovereign.

For practical purposes, however, history has made it quite clear that the degree of extraterritoriality that visiting forces can obtain depends entirely on circumstances.

Obviously an army of occupation can insist upon complete immunity from trial by local courts, and United States forces in Japan had such immunity until the peace treaty restored Japanese sovereignty.

The immunity granted between allies depends on "who needed whom most," one lawyer said in a brief before the Supreme Court.

In 1942, on United States insistence, the British Parliament approved the Visiting Forces Act, granting complete military extraterritoriality to United States forces. During the debates in the House of Commons, one member called the bill a striking innovation. Another said it was of a completely revolutionary character.

BRITISH EXAMPLE

It was, indeed, a revolutionary departure—for Britain. But the British had been able to get the same immunity from France during World War I, and from Egypt and Iraq even after that war.

When the United States began to negotiate status-of-forces agreements with other countries in the North Atlantic Treaty Organization and Japan in 1951 and 1952 those allies were in a position to resist any demands for complete military extraterritoriality. And they did resist.

The agreements assigned primary jurisdiction to the host country for off-duty offenses, and to United States courts-martial for offenses during performance of duty. But they also provided that either side could ask for waivers, and that the requests would get sympathetic consideration.

It might be useful to recall an exchange that took place between Senator BOURKE B. HICKENLOOPER, Republican of Iowa, and Herman Phleger, State Department counselor, when the Senate Foreign Relations Committee was holding hearings on the reciprocal Atlantic Pact status-of-forces treaties back in 1953.

CASE OF IOWA

Senator HICKENLOOPER posed a hypothetical case. Suppose, he said, that an officer of a foreign country—say Canada—stationed in Chicago was ordered to proceed to a new post in San Francisco, and received permission to go by car.

"He goes through my State of Iowa, where he hits someone, and he is thought to be criminally negligent," continued Mr. HICKENLOOPER. "Suppose that the sending nation protests that the individual is acting in line of duty, and the agreement provides that when acting in line of duty, the sending nation has exclusive jurisdiction. Who determines * * * [whether his own nation has jurisdiction]?"

"What would happen," replied Mr. Phleger, "is that your courts [in Iowa] would have the right to determine their own jurisdiction."

What is likely to happen now?

For the last 3 years, Representative FRANK T. BOW, Republican of Ohio, has introduced a resolution calling for the revision of the status-of-forces agreements to prevent foreign trials of United States servicemen. Two weeks ago, before the Supreme Court ruling, the House Foreign Affairs Committee approved the resolution.

BOW RESOLUTION BLOCKED

When the House Rules Committee cleared the foreign aid authorization bill Thursday for floor action Monday, it failed to give a rule to the Bow resolution.

Thereupon Mr. Bow and some other Congressmen talked about tacking the Bow resolution as a rider on the foreign aid bill.

If the House approves such a rider and instructs its conferees to insist upon it in a conference with the Senate, the Senate may have to accept it in order to pass the foreign aid bill. However, if this should happen the President would certainly veto it. Therefore there is a good likelihood that the House leadership will throw its weight against the Bow rider.

For the leaders realize quite well that there is no chance that the major allies of the United States would agree to grant complete immunity, and that to insist on it would greatly impair the relations of the allies and weaken the Atlantic alliance.

Eisenhower's States Rights Boost

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a column by George Todt, entitled "Eisenhower's States Rights Boost," which appeared in the June 28, 1957, issue of the Valley Times, a newspaper which serves southern California's San Fernando Valley, a great area of my State represented in Congress by my able colleague, the Honorable JOSEPH HOLT.

Mr. Todt comments on President Eisenhower's address delivered at the Governors' Conference held recently at Williamsburg, Va., makes some very noteworthy observations on the surprising indifference shown toward the President's suggestion for a return of more power and responsibility to the States. I believe Mr. Todt's comments will be of interest to many Members of Congress.

EISENHOWER'S STATES RIGHTS BOOST

My friends and acquaintances seem to run the gamut insofar as ideological differences of opinion may be concerned. I think that is as it should be—and I like to hear from all sides whenever that is possible. Differences of opinion can be stimulating.

Some of these friends of mine are ultraconservative by nature, and they have been telling me for years that President Eisenhower was not to be considered much of a States rights man. In fact, I'd heard the theme so often that I was commencing to wonder about it myself. But if I had held any doubts on this score, they were dispelled when I read the magnificent speech Ike made before the governors' conference at Williamsburg last Monday. How will his hypercritics explain away words like these?

"I believe deeply in States rights," said the President. "I believe that the preservation of our States as vigorous, powerful governmental units is essential to permanent individual freedom and the growth of our national strength. But it is idle to champion States rights without upholding States responsibilities as well.

"I believe that an objective reappraisal and reallocation of these responsibilities can lighten the hand of central authority, reinforce our State and local governments, and in the process strengthen all America. I believe we owe it to America to undertake that effort."

Then Ike went on to suggest that the States and the Federal Government get together on the composition of a joint task force to study the situation and do something constructive about it. His thinking was along the line that by removing barriers to effective and responsive government, by overhauling taxing and fiscal systems, by better cooperation between all echelons of government, the States can regain and preserve their traditional responsibilities and rights.

Failing that, he said, the States themselves might create new vacuums into which the Federal Government could plunge ever more deeply impelled by popular pressures and transient political expediences. The President made it amply clear he did not prefer the latter course. Instead, he argued to the governors that they should step in—with Ike's blessing and help—and reclaim some of the States' rights which had been surrendered to centralized government and bureaucracy in the past. What response did he get?

Incredibly, he got practically none at all. The governors and their official families hardly got off their hands. Only polite applause for Ike at the commencement and the end of his address. It seems fantastic enough—but that's what the reports told us.

I believe it is somewhat appropriate to suggest to those ultraconservative friends of mine—mentioned earlier in this article—that maybe it's time to get off Ike's back on this matter of States' rights, and stay off. Concentrate your fire on the governors of the 48 States, friends. Those are the boys who are manning the barricades of centralized power it seems—not Mr. Eisenhower.

There were some exceptions among the governors, of course. Notably California's Goodwin J. Knight, Illinois' William Stratton and Ohio's C. William O'Neill—all of whom registered strong approval of Ike's tremendous stand in favor of States' rights.

But most of the States' officials took a negative and skeptical attitude. It looks from her as though the majority of them just weren't too interested. They seem to be so used to centralized authority emanating from Washington that they no longer appear to know how to act when the headman offers they back the keys to their own house.

Now if the governors can't get fired up and steamed up when Ike offers to assist them in the matter of regaining some of their lost States' rights, then who is supposed to do so? What has all the shouting been about anyway? Who is really against States' rights? Can it henceforth be said that the President has not championed them?

Shall we allow the chips to fall where they may hereafter? In the meanwhile, Ike deserves an "E" for effort. He gave it the old college try. It's not his fault if the governors didn't have gumption enough to take him up on it. Better luck next time.

Resolution of Commendation of the Late Senator Joseph McCarthy

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. MASON. Mr. Speaker, on May 8, 1957, the Illinois Federation of Republican Women adopted a resolution which concerns the late Senator Joseph R. McCarthy. Under unanimous consent I ask that the resolution be printed in the RECORD.

The resolution follows:

RESOLUTION OF THE ILLINOIS FEDERATION OF REPUBLICAN WOMEN

Whereas in the death of Senator Joseph R. McCarthy, the United States Senate has lost

one of its most courageous Members, a great Republican Senator who, like his friend Senator Robert A. Taft, will be remembered long after his passing; and

Whereas since even before the Korean war, Senator McCarthy was the leader of the patriotic fight to eliminate pro-Communists and subversives from our Government and from vital defense industries; and

Whereas Senator McCarthy fought the Communists and their supporters at the sacrifice of his health and in spite of the fact that it made him the victim of the same organized smear tactics which forced MARTIN DIES out of Congress and deprived our country of the services of General Douglas MacArthur; and

Whereas Senator McCarthy served his party well by personally campaigning for and helping to elect many Republicans to high office, but put his country ahead of his party, and fought valiantly, in war and in peace, against our Nation's enemies; and

Whereas Senator McCarthy, in the great American tradition of Abraham Lincoln, rose to high office over the handicaps of poverty and lack of an early education, yet always lived a modest and exemplary personal life, and, when his income-tax returns were scrutinized at the demand of his enemies, he was found by the Democrat in charge of the Internal Revenue Bureau to have overpaid his taxes by more than $1,000;

Resolved, That the Illinois Federation of Republican Women expresses its deepest regret at the death of Senator Joseph R. McCarthy and consequent great loss to the State of Wisconsin, to the Republican Party, and to our country, and extends its heartfelt sympathies to his widow; and

Resolved further, That a copy of this resolution be sent to Mrs. McCarthy, to the Governor of Wisconsin on behalf of the people of Wisconsin, and to Senator EVERETT M. DIRKSEN who courageously served on Senator McCarthy's committee and voted against the censure of Senator McCarthy.

Passed on May 8, 1957, Springfield, Ill.

Mississippi Waterfowl Program

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I would like to recommend to the attention of my colleagues a four-point program for national waterfowl refuges adopted by the Mississippi Flyway Council. The Mississippi Flyway Council is comprised of representatives from 14 State conservation departments and Canadian provinces. At their last meeting they discussed the matter of legislation relating to the waterfowl refuge program and after a study committee report the following program was adopted unanimously. Because legislation affecting the program is under consideration in committee at this session of Congress these suggestions from a group representing a 14-State area bear considerable weight in establishing the viewpoints of experts in the field. The chairman of the council is L. P. Voigt, director of the Wisconsin Conservation Department.

MISSISSIPPI FLYWAY COUNCIL'S FOUR-POINT NATIONAL WATERFOWL REFUGE PROGRAM

1. We strongly urge the Congress to implement and speed up the National Waterfowl Refuge program because of previous delays, increasing costs, and acquisition difficulties.

2. We believe Congress should make adequate direct appropriations from the general treasury both to supplement duck stamp acquisition funds and for the major portion of the cost of development, acquisition, and maintenance of waterfowl management units to meet the United States treaty obligations.

3. We support a plan to raise the annual bird-hunting stamp from $2 to $3, providing 50 percent of each $3 be used for land acquisition and leasing.

4. We recommend that the Secretary of Interior be authorized to open up to 40 percent of any major management area to hunting and that smaller areas of less than 500 acres may be entirely open to hunting in the discretion of the Secretary when the number of birds and other circumstances warrant such action.

Department of Agriculture and Farm Credit Administration Appropriation Bill, 1958

SPEECH

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. AVERY. Mr. Speaker, I should like to make a few observations with respect to soil and water conservation in the State of Kansas. The farmers of Kansas generally are becoming more concerned about conserving their soil and water resources. Weather conditions of recent years have forcefully brought home to them some fundamental facts, especially in regard to water conservation.

Farmers who have installed permanent soil and water conservation systems on their land have found that their conservation work has paid dividends in both dry weather and wet weather.

During the drought years they found that their permanent conservation measures helped to capture and hold the little rain that did fall. Consequently, crop yields were better and their land was less subject to damage from wind erosion.

In this year's wet weather they found that their conservation farming systems induced greater insoak of moisture and carried the excess water from heavy rains off of their fields in an orderly manner with less damage from water erosion.

Understanding of these basic facts in my home district has resulted in a tremendous interest in water conservation. There is more interest today than ever before in installing conservation farming systems on individual farms and upstream watershed protection for entire communities.

The soil and water conservation services available from the Department of Agricultural for helping farmers to install permanent conservation measures are a real help to the farmers in my district. They are receiving highly valuable technical assistance through local soil conservation districts. They see great potentials in the new upstream watershed protection program.

It was because of local need that I supported the amendments to the Hope-Aiken Act in the 84th Congress, and have introduced H. R. 7756, to further amend the Hope-Aiken Act in the 85th Congress, in order tthat the intent of Congress can be carried out for developing upstream flood prevention projects such as the Walnut Creek project in Brown County, Kans. They appreciate the fact that in Kansas our policy is to emphasize ACP cost-sharing practices directed toward the installation of permanent conservation farming systems and the treatment of small watersheds.

I want to pay tribute to a man down in the Department of Agriculture who has an important responsibility for the policies under which these services are administered. I am referring to Ervin L. Peterson, Assistant Secretary for Federal-States Relations. He has proved himself to be a national leader in soil and water conservation.

Since Mr. Peterson has been in office he has given intensive attention to conservation matters. He did something, that in my opinion, more administrators should do. Soon after he was appointed he went out over the country and talked with farmers about their soil conservation problems. He saw for himself the work that farmers are doing. He learned from farmers what they think of soil conservation and what they need in the way of help.

Kansas was one of the States that Mr. Peterson traveled thoroughly. I am proud of the permanent conservation work that he saw on the land in Kansas. And I know Kansas farmers are proud of it, too.

I know, too, that what Mr. Peterson learned from farmers around the country has been reflected in the soil and water conservation policies of the Department of Agriculture. Under those policies farmers are getting more help than ever before in installing permanent conservation systems.

On behalf of the farmers of Kansas, I am taking this occasion to commend Ervin L. Peterson for the outstanding leadership that he is giving to the soil and water conservation movement in the United States. I am only hopeful that comprehensive watershed development can proceed under the Hope-Aiken Act as was originally prescribed by Congress.

The Late Honorable Earl Cory Michener

SPEECH

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. O'HARA of Minnesota. Mr. Speaker, it is my desire to join with the distinguished gentleman from Michigan [Mr. MEADER] to pay a tribute to our late colleague and friend, Earl Michener. It is with sadness that I learned that he had passed away at the page of 80 years.

One of the first friends that I made when I came to Congress was Earl Michener. He was an able and conscientious Member of the House, and certainly one of its ablest parliamentarians. I believe he is one of the few Members of the House who served both as a Member and chairman of both the Rules Committee and the Judiciary Committee.

He was always anxious and willing to be of assistance to new Members of Congress, and much of my early education of the rules of the House was from the advice of Mr. Michener.

Those of us who knew Mr. Michener know it was with the greatest reluctance that he reached his decision to retire, and that was largely due to the fact that his wife had been in poor health and he felt it was his duty to retire to be with her as much as possible.

Mr. Michener was a veteran of the Spanish-American War. He was a deeply patriotic citizen and honored and respected by everyone. To his daughter I extend my deep personal sympathy.

Returns on Questionnaire in Second Congressional District of South Dakota

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. BERRY. Mr. Speaker, one of the most rewarding efforts I have made this session was the distribution of a questionnaire in my district. I was quite overwhelmed by the response received. Almost half of the individuals took the time to add personal comments on items of special interest to them, and all of them devoted a great deal of time and thought to their answers.

Because I believe the tabulation of the results reflects the general thinking in western South Dakota on these subjects, I thought they would be of special interest, and am, therefore, inserting the compilation in the CONGRESSIONAL RECORD where they may be studied by other Members of Congress.

It is my privilege to represent a district with diversified interests, including farming, ranching, mining, tourist, and small industry. It covers that part of South Dakota west of the Missouri River, including the lush grasslands of the plains, the beautiful and mineral-producing Black Hills with majestic Mount Rushmore, several of the largest Indian reservations in the country, and numerous friendly, active communities where the memories of pioneer days are still quite fresh in mind.

Recalling the struggle of those pioneer days, the people of the second district know the value of a dollar, and the satisfaction that comes from a hard day's work. It is foreign to their way of thinking to look to the Federal Government for help for every minor emergency. They are accustomed to taking care of themselves. At the same time, they resent the increasing tax burden, brought about by expanded Federal operations, that makes it more difficult to be independent and fulfill their own needs.

These conservative, energetic, freedom-loving sons and daughters of the pioneers who broke the prairie and opened the mines have a lot of commonsense ideas on the operation of our Government. I recommend their thinking to my colleagues.

The results of the questionnaire are as follows:

	Percentage	
	Yes	No
AGRICULTURE		
Do you approve of—		
1. The soil-bank program as presently operated?	41	59
2. The sale and barter of farm surpluses to Communist nations?	38	62
3. A food stamp plan by which needy persons could obtain surplus foods through normal commercial channels?	77	23
4. Higher support prices on wheat and corn?	23	77
BUSINESS		
Do you approve of—		
1. Federal control over the production of natural gas?	51	49
2. The continuation of the Small Business Administration and to liberalize its lending authority?	71	29
3. Tax reduction for small business?	76	24
DEFENSE		
Do you approve of—		
1. President Eisenhower's foreign policy in general?	69	31
2. Inviting to this country for conferences, the heads of foreign governments with whom we are not in agreement?	75	25
3. The exchange of atomic secrets with other countries?	19	81
4. Requiring all new National Guardsmen to take six months' training on active military duty?	73	27
IMMIGRATION		
Do you approve of—		
1. The admission of additional refugees to the United States from Hungary?	30	70
2. Admission of a greater number of immigrants from all countries?	14	86
POSTAL SERVICE		
Do you approve of—		
1. An increase in postal rates to meet the Department deficits?	64	36
2. Increased salaries and retirement benefits for postal employees?	32	68
LABOR		
Do you approve of—		
1. Regulation by law of labor union welfare funds?	92	8
2. The proposal to extend the present $1-an-hour Federal minimum wage to groups not presently covered, mainly retail and service employees?	53	47
3. The repeal of the Taft-Hartley law?	10	90
SCHOOL AID, FEDERAL		
Do you approve of—		
1. Federal assistance for a school building program?	51	49
2. Federal aid for school maintenance and operation?	33	67
TAXES		
Do you approve of—		
1. Reduction of Federal taxes even though it unbalances the budget?	22	78
2. Exemption of all pension and social-security benefits from income tax?	70	30
VETERANS		
Do you approve of—		
1. Increasing the maximum interest rate on VA-guaranteed home loans to secure more private funds for home construction or purchase?	52	48
2. Increasing disability, hospital, and survivor's benefits for veterans?	46	54

Recommendations on budget cuts were as follows: (1) Foreign aid; (2) number of Federal employees; (3) Federal aid to States, municipalities, school districts, and local public agencies; (4) construction of public works (dams, airports, buildings, interstate roads, etc.); (5) Federal aid to agriculture; (6) Federal aid to small business; (7) national defense.

Girard Ruling

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting an editorial which appeared in the Milwaukee Sentinel on Friday, July 12, on the subject of the Supreme Court ruling on the Girard case.

GIRARD RULING

The unanimous decision of the Supreme Court in the Girard case does nothing to recover its lost prestige. It remains our dissenting opinion that the basic rights of this American soldier have been violated.

As we have emphasized before, those rights are not related to his own degree of guilt, whether he killed a Japanese woman on a firing range through malice or accident. Nor are they affected by the probability that he will receive a fair trial in a Japanese court or be more leniently treated than by court martial.

It has seemed to us, and still does, that those rights are inherent in the fact that he was on duty at the time and therefore under United States jurisdiction.

But the unanimity of the Court's ruling serves to place on the Eisenhower administration the initial responsibility. That is where it belongs.

Under the status-of-forces arrangement (with Japan it is merely an administrative agreement and not, as with NATO nations, a treaty) the United States has primary jurisdiction in offenses committed by servicemen while on duty. Girard was on duty. Everybody concedes that.

When the joint United States-Japan committee, formed to decide jurisdiction under terms of the arrangement, met on the Girard case, both sides pressed claims. The deadlock lasted for weeks and was inflamed into a national issue in Japan, largely through leftist agitation.

In this impasse, the administration authorized the United States representative on the committee to waive jurisdiction. He did.

That was when the blunder was made. The evidence is strong that it was made in an effort to placate Japanese feeling. It was a policy decision in the cause of interna-

tional friendship. It was also a blunder of expediency at the price of justice.

If, now, the whole status-of-forces structure everywhere comes under hard congressional review, the administration has only itself to blame.

Weighing Security—Editorial Comment in Pittsburgh Post-Gazette

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. KELLEY of Pennsylvania. Mr. Speaker, in my weekly newsletter to newspapers in my district last week, I commented on the recommendations of the Commission on Government Security—the Loyd Wright group—as they involve the extension of the espionage laws to newspapermen who dig up and report on so-called secret information, and also as they involve the question of wiretapping. I inserted that column in the RECORD yesterday, and it was, I readily concede, very critical of the Commission on those particular points.

The Pittsburgh Post-Gazette last Monday printed an editorial also discussing the Commission's findings and report and noted some affirmative recommendations of the Commission which the Post-Gazette found had merit, particularly as they provide greater protections for the employee accused in security proceedings. Among these are the granting of hearing rights to applicants for employment, and to confrontation of accusers where that is possible without endangering national security.

My newsletter referred to several worthwhile suggestions of the Commission, but did not go into any detail. I have no hesitancy in saying the Commission made some good suggestions.

But I note that the Pittsburgh Post-Gazette agrees with the position I have taken on some of these other recommendations, including the widening of the espionage laws and the dead horse wiretapping proposal. Newspapermen have seldom, if ever, compromised our security by printing the facts and the truth.

The Post-Gazette editorial is as follows:

WEIGHING SECURITY

After 18 months of study, the 12-member Commission on Government Security recently issued an 800-page report on the Federal internal-security system. Because of the document's length, we cannot deal in detail here with its many recommendations. Each will have to be assessed as it is advanced in the form of a bill or a proposed administrative change. But the major proposals of the congressionally established group do set the tone of the report and they deserve comment. While some of the Commission's recommendations seem highly desirable, others are questionable. Too often the Commission seems to have balanced the objective of national security against traditional guaranties of individual liberty and to have weighed its decision in favor of what seems to us an unattainable airtight security.

Granting the Commission its due, however, a good word should be said for its suggested reforms favoring the rights of the citizen. Among them are proposals that:

All persons subject to loyalty investigations be permitted to confront their accusers and cross-examine them whenever it can be done without endangering the national security.

An unsuitability classification be established to completely separate such employee risks as alcoholics and sex perverts from loyalty cases.

Hearing rights be granted to applicants who are denied jobs because of disloyalty charges (only jobholders now have such rights).

The confidential category of classified information be abolished.

Among the Commission's recommendations which seem to us to go too far toward restricting traditional rights are those that would:

Extend the Federal employee security system instead of limiting it to sensitive agencies.

Make permanent those passport restrictions now applicable only in periods of war and national emergency and curb travel abroad by anyone furthering the aims of any group called subversive by Congress or an authorized official.

Provide severe criminal penalties for mere disclosure of classified information, without any showing of conspiracy or intent to cause harm (as now required).

Legalize the use of wiretap evidence in subversion cases.

Formalize the Attorney General's list of subversive organizations. (Other studies of the security program have proposed its abolition.)

Federal Participation in the Acquisition of Runway Clear Zones

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mrs. GRIFFITHS. Mr. Speaker, the following resolution concerning H. R. 6582 was adopted at the meeting of the Michigan Association of Airport Managers held on June 18, 1957. I request that this resolution be printed in its entirety.

Whereas there has been introduced in the United States Senate bill No. 1189 and in the House of Representatives bill No. 6582, which would amend section 10 of the Federal Airport Act of 1946 to provide an increased Federal participation in the acquisition of runway clear zones and for other purposes, and specifically providing that to the extent that project costs of an approved project represent the cost of acquiring clear zones for runways, the share of the United States shall be 75 percent of the allowable costs of such runway clear zones; and,

Whereas, the Michigan Association of Airport Managers realize that communities in the State of Michigan are engaged in a program of expansion of airport facilities which will involve the acquisition of such clear zones for runways; and,

Whereas, in the opinion of said Michigan Association of Airport Managers, the public interest and convenience require the enactment of the above-described legislation: Now, therefore, be it

Resolved, That the Michigan Association of Airport Managers hereby goes on record (at their meeting in Flint, Mich., June 18, 1957) as supporting and urging the enactment of Senate bill No. 1189 and House of Representatives bill No. 6582, providing for increased Federal participation in the acquisition of runway clear zones and for other purposes, and does urge United States Senators CHARLES E. POTTER and PATRICK V. MCNAMARA, and Congresswoman GRIFFITHS to support passage of the above-described bills. Further copies of the within resolution to be transmitted forthwith to Senators POTTER and MCNAMARA and Congresswoman GRIFFITHS.

Passed and adopted this 18th day of June 1957, by a majority vote of Michigan Association of Airport Managers.

Bette Davis

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article written by Mr. Lawrence J. Quirk, of Lynn, Mass., a nephew of the late Congressmen from the Seventh Massachusetts District, William P. Connery and Lawrence J. Connery.

Mr. Lawrence Quirk is a specialist in his field and has had considerable and valuable experience as a free lance writer, having been associated with a number of newspapers and magazines throughout this country.

The article follows:

HOLLYWOOD'S NEGLECTED GENIUS

Why are Hollywood producers neglecting one of their greatest actresses? Why aren't good roles coming her way?

Whenever I think of Bette Davis' distinctive contribution to the art of the screen over a 27-year period, I like to remember something I once wrote about her and never published. I said Bette Davis acted, as Mrs. Browning so movingly phrased it in a famous poem, "with the passion put to use in her old griefs, and with her childhood's faith; with the breath, smiles, tears of all her life."

This to me has always been the acting essence of a creative artist who gave me countless hours of deep pleasure and emotional catharsis as a boy and as an adolescent, in such moving dramas of the Davis golden era as The Old Maid, Now, Voyager, Old Acquaintance, and The Corn Is Green, all Warner films.

In those golden years—1939 to 1945—Bette Davis reigned supreme as the screen's first lady. The great glamour stars of MGM were in eclipse by that time. Only Joan Crawford remained to challenge with her passionately sincere acting style, the superb feeling and artistic precision of the actress Davis in her prime. The Davis academy awards came, strangely enough, in 1935 and 1938, before the full flowering of her art. And though she got many nominations in the years that followed, she never won a richly deserved third Oscar that would have fittingly recognized the period of her greatest achievements.

She had come to Hollywood in late 1930, a wren-like, big-eyed, scrawny ingenue. Universal executives took one look at what they had bought, and delegated her to a sex-appeal category with angular funnyman Slim Summerville.

But the intense little girl with the strong overcompensatory drive, determined to achieve her artist's due despite lack of natural good looks, persisted—and finally the better parts came her way.

By 1934 she had brought an originally amused and skeptical Hollywood to its knees with a magnificent portrayal of a sadistic waitress, Mildred in RKO's Of Human Bondage. Into that role, and into the ones that followed, she put all of the intensity and fierce emotion that had been born in a lonely and insecure childhood plagued by a parental divorce and the cruel Christmas tree fire that had nearly destroyed her eyesight and which accounted for the famous popeyed expression that critics ridiculed.

But the day was to come when writers in America and Europe were to call Bette Davis, Popeye the Magnificent. And then, and only then, as the screen idol of two continents, could the lonely, insecure little girl from Lowell, Mass., tell herself: "I am fulfilled."

The writer was born and brought up in a Massachusetts city—Lynn—very near Bette's birthplace. A decade and a half ago, the big event for me and other unabashed Davis fans was the advent of a new feature starring our idol at the Warner Theater on Union Street. Somehow, movies had real glamour then; warmth, immediacy, and concentrated emotion. And Bette Davis contributed her full share.

Davis numbered among her personal heartbreaks three marriages into which she had entered with all the hope and love in the world, and all of which ended on a negative note. Harmon Nelson, whom she wed as a girl of 24, found it difficult to weather the comparison of his wife's fabulous career with his own more modest achievements as a band leader. They were divorced, to Davis' keen regret. To this day she thinks and speaks of him fondly.

Her second husband, Arthur Farnsworth, died from an accidental fall on the street when they had been married less than 3 years. Her third, William Grant Sherry, father of her only child Barbara (she adopted two others) was ill-suited to her temperamentally, and after 5 years a stormy divorce ensued that left her even more lonely and embittered.

Finally she married actor Gary Merrill, and managed to get in some measure of domestic happiness while she was still young enough to enjoy it. Seven years wed, they are still together.

Numerous other troubles besieged Bette Davis. The difficult cesarean delivery of her one child. The decline of her box-office fortunes after 1948. A serious operation for osteomyelitis that kept her off the screen for 3 years (1952–55).

Since her last major triumph actingwise (in 1950's All About Eve), Popeye the Magnificent has had a lean 7 years of it. Her last academy nomination was for 1952's The Star, made just before the illness struck that was to leave her emotionally and physically depleted for months. An unfortunate musical, Two's Company on Broadway, and critical frowns did not help her morale.

By 1953 Hollywood was saying: "Bette's had it. The parade's over." But 2 years later she was back in there pitching again with a repeat performance of her famous 1939 role of Queen Elizabeth. But the film, 20th Century-Fox's The Virgin Queen, did not put her back on top at the box office, nor did the two that followed in 1956, MGM's The Catered Affair, and Columbia's Storm Center. The political controversy over the latter was another headache.

Nineteen hundred and fifty-seven has seen Bette Davis quite active in a number of television dramas. But pictures—the medium she helped to make great, are another matter.

Hollywood is shamefully neglecting Bette Davis. At 49 she should be in the prime of her acting art on-screen. When she was only 30 she was playing character roles. The loss of her youth should not have proven a handicap. What is behind Hollywood's attitude? As Gloria Swanson commented recently, Hollywood is fertile ground casting-wise for middle-aged actors, but not, it seems, for middle-aged actresses. Or at least not for those who have failed, or neglected, to retain the illusion of youth in their appearance.

Davis has never cared about her looks. Even when very young, she went in for realistic makeup, and clothing, and hair disarray on-screen in the interests of sound characterization. Hence no one cares less about looking middle-aged than Bette Davis. But youth-obsessed Hollywood does care, it seems. Bette also has been quoted to the effect that she is not going to starve and diet her frankly spreading figure into something angular just to please the camera. They'll take her as is, or else.

Another factor in Davis' difficulties: there aren't enough good scripts going around. And even if the script is worth while, producers want potent young names to bring in the teen-agers who pay such a large percentage of the box-office take. But with TV saturating the land and the necessity of film producers turning out quality product in order to compete, Davis should be coming in for a belated renaissance. It could happen.

But there is another possibly negative element. Bette herself. She has not exercised the wisest judgment in her choice of film roles since 1952. And her TV appearances indicate strongly that she needs a wise and firm director's hand to tone down, polish, and restrain the overly elaborate mannerisms and excessive attitudinizing that mar of late her still brilliant and authoritative acting style.

To our mind, only one role could put Bette Davis back in the big time at this late date. It could serve her as the pilot film in a wonderful new series of Davis dramas, dramas, incidentally, for which a Hollywood growing steadily more adult is now prepared. That role? Mary Todd Lincoln.

Davis, it is said, has considered the role. But nothing ever came of it. Yet the part affords her limitless possibilities. A disciplined director who guided her wisely could help her win a third award in it. Since the film could open in 1861, the year Lincoln went to the Presidency, and since Mary Todd Lincoln was already 43 at that time, the age factor would prove no barrier. And the great scenes that come to mind: Davis mourning the death of her son Willie in the White House. Davis braving Union prejudice because her relatives were in the Confederate Army. Davis battling snobbish Washington society. Davis spending extravagantly on clothes. Davis mourning Lincoln's assassination. Davis quarreling with her son, Robert Lincoln. Davis in some ripsnorting mad scenes at the close.

Such was the tragic life of emotionally unstable Mary Todd Lincoln, once First Lady of the land. It could mean a new lease on life for Bette Davis, once First Lady of Hollywood. So come on, you producers who scream constantly about the need for quality pictures with quality performers. There's a suggestion for you. Quit griping, get the rights to that story, and call Bette. Time's awasting, and this inexcusable neglect of Popeye the Magnificent should be terminated, pronto.

Honorable Jim Wright

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. IKARD. Mr. Speaker, I wish to include in the RECORD a tribute paid to my able colleague, the Honorable JIM WRIGHT, who represents the 12th Texas District. This tribute was paid to JIM WRIGHT by way of an introduction, when he spoke before a meeting of the Kiwanis Club, by one of our most distinguished and able judges in Texas, District Judge Jack Langdon, of Fort Worth.

President Joe, fellow Kiwanians, and guests; during the convention in San Francisco last week we heard a great deal about a character by the name of Joe Smith. There is probably a Joe Smith in every community in the United States. He may be a Republican or he may be a Democrat. Most often he is found in the smaller towns and cities of our Nation. Most of us are acquainted with his brothers and cousins, Tom, Dick, Harry, Ed, Bill, and Jim. Joe Smith is a product of the public schools of his community. Ordinarily he is a graduate of the local junior college and of his State university. Joe was well liked by his schoolmates and participated in all of the activities of his school. He was good natured and always a good sport. Regardless of the nature of the contest he was always able to give a good account of himself. He was a good loser and a graceful winner. He managed to go to college because he was willing to work at odd jobs to provide the necessary finances.

As an adult citizen Joe Smith is respected by the members of his community. His friends and neighbors bring their problems to him and find comfort in his friendship and counsel. He is a good father and husband. He finds great strength and comfort in his abiding faith in God. He enjoys outings with his wife and children. He loves to hunt and to fish. While he understands the intricacies of fly fishing and the use of the spinning reel, he is far more at home with a trotline.

When Joe Smith uses the pay telephone in the hotel lobby, he always reaches his finger in the coin return slot to see if by any chance there is a nickel in it. After he uses the phone he again feels in the slot to determine if by some inadvertence his nickel has been returned.

He loves to brag about what a hard time he had as a kid in going through school and working his way through college. This is most often done at times when in the opinion of Joe Smith his children are making unusual demands upon him for money or some unusual purchase. He loves to explain to his children the struggle he had earning his own money and how it taught him the value of money. Joe Smith, in bragging to his children and close friends, takes great joy in describing the hardships he endured as a schoolboy. He relates with ever-increasing exaggeration the distance he walked to school. He tells of the early hours he was aroused by his family to locate the livestock which had gotten out during the night. He often tells his children that when he was a child it was necessary for him to go to the creek and break the ice with his bare feet in order to get water to wash his face and hands before he could go to school.

Very often Joe Smith is elevated to a position of public trust. Everyone who knows Joe Smith feels that as a public official he will not oppose good legisaltion because it is sponsored by political adversaries, nor support bad legislation because it is sponsored by his friends. Joe Smith knows that the best test in the consideration of any measure is whether or not it is in the public interest, regardless of who may sponsor or oppose it. Joe Smith is a friendly, easy, outgoing, good-natured individual. He looks you in the eye when he talks with you and he has a firm handshake. It is not necessary for you to hand his hand back to him or look for a hook to hang it on. Joe Smith is a humble person but unafraid to take a stand for that which he knows to be right. He has the courage of his convictions but is not brash or egotistical. He is intelligent and possessed of good common horsesense. He has a strong sense of fairness. Because of these virtues he is able to assume important roles in our society. Joe Smith represents what most of us consider a typical American who is capable of leadership.

In my opinion our speaker today is our Joe Smith, his name is JIM WRIGHT. He measures up in every important detail with our fellow American, Joe Smith. JIM WRIGHT has made an outstanding record as our Congressman. It is a privilege to present him to my fellow Kiwanians and our guests.

H. R. 8681—A Bill Designed To Prevent Another Girard Case

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. KILDAY. Mr. Speaker, on Friday, July 12, I offered H. R. 8681, a bill designed to prevent another Girard case. My bill was prepared after a careful study by me of the entire opinion of the Supreme Court and comes within the powers of Congress as expressly stated in the Girard opinion.

My bill consists of but one sentence, as follows:

Notwithstanding the provision of any treaty or agreement to the contrary, no officer of the armed services of the United States having under his command, in his custody or under his control, any member of such armed services shall deliver him, or her, to the jurisdiction or control of any foreign nation for trial or prosecution under the laws of any foreign nation.

There is great misunderstanding of the power of Congress to legislate within the area covered by a treaty. Actually there is no doubt whatever that Congress can, and many times has, legislated after the execution of a treaty to so control the officers of the Government as to prevent the accomplishment of something agreed to by treaty.

In the Girard case, the Court outlined the treaty and quoted the exact language of the protocol upon which it authorized the delivery of Girard to Japan. Then it used the following words:

The issue for our decision is therefore narrowed to the question whether, upon the record before us, the Constitution or legislation subsequent to the security treaty prohibited the carrying out of this provision authorized by the treaty for waiver of the qualified jurisdiction granted by Japan. We find no constitutional or statutory barrier to the provision as applied here.

The purpose of my bill is to provide the statutory prohibition which the Supreme Court has said would prevent the delivery of an American serviceman to a foreign country under a status-of-forces treaty.

Perhaps, my proposed language should be followed by additional language to provide for a proper review by the Secretary of the military department concerned and a limited power in him to waive jurisdiction in clear cases of the primary right of the foreign country. I am drafting such language.

How Millions Could Be Saved

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD an editorial entitled "How Millions Could Be Saved" written by by Philip F. Miller and published in the July 12 edition of the Daily Tribune, Royal Oak, Mich.

The editorial follows:

HOW MILLIONS COULD BE SAVED

"Let's give Joe a couple of millions for that new yacht basin his town wants. I know it hasn't been approved by the Bureau of the Budget or the Army Engineers, but Joe's a good fellow and he'll play ball with us if we want projects like that of our own.

"Besides if we approve this project it will help him get reelected."

Remarks like this are not uncommon in one of the most important committees of the United States Legislature, the House committee on Public Works. It is one of the largest spending of the House committees. South Oakland has a representative on this committee in recently elected Congressman WILLIAM S. BROOMFIELD.

Congressman BROOMFIELD does not like the way this committee wastes billions of dollars of the public's money through log-rolling methods similar to those quoted above.

I was talking with him about this the other day. Under the present setup it seems that measures like this can be tacked onto the annual appropriation bill presented by this committeee. The bill runs in the neighborhood of $1 billion to $2 billion.

"Most of the projects outlined in the appropriations bill have been approved by the Bureau of the Budget and the Army Engineers. They are necessary projects for which the money should be spent," Congressman BROOMFIELD said. "But along with these are a number of measures which have not been so approved but which certain members of the Public Works Committee think will be advantageous to them in their home territories."

The President must either approve this bill as a whole or veto it as a whole. There are enough vital projects included in the bill so that a President usually hesitates to veto it. Yet if he approves it a number of undesirable projects, boondoggles, are going to go through as well.

The solution to this problem would be to pass a measure allowing the President to veto certain items in any appropriation bill. In other words, he could approve the majority of the appropriations which were just and necessary. But he would be able to strike out those which, after careful study, were deemed a waste of the taxpayers' money and purely private or local projects.

Any of these measures which were vetoed could be returned to the floor of the House for further consideration. Careful scrutiny could be given each item on the appropriations bill and each item would have to stand on its own merit.

Millions of the taxpayers' money are being wasted through these blanket appropriations for public works. An item veto has been considered for a considerable time by those interested in economy in government.

"Out of a billion and a half of projects now proposed, I'll estimate as much as $300 million worth are not Federal responsibility at all. They are purely local in scope, pure pork-barrel stuff," BROOMFIELD said.

Certainly Congressman BROOMFIELD deserves support in his efforts to end this abuse of the committee powers and to bring practical economy into appropriations measures.

The Segregated Ballot Box

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, July 15, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent that an editorial entitled "The Segregated Ballot Box," written by Max Ascoli, and published in the Reporter magazine of June 27, 1957; and an article entitled "A Report From the South on the Negro Voter," written by Edward Ganarekian, and published in the Reporter magazine for June 27, 1957, be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

THE SEGREGATED BALLOT BOX

Since the Supreme Court decision on desegregation, the fight for civil rights in the South has had its battleground in the schoolhouse. The education and future of children have been at stake in this fight. If Attorney General Brownell and Senator DOUGLAS have their way, there is a chance that a second front will be opened up, one concerning the large group of American adults and their right to exercise the electoral franchise.

The crucial importance of such a second frant can scarcely be over-estimated. If Federal district attorneys down South can start action so that the same qualifications which admit white people to the ballot box are made applicable also to Negroes, then the nearly century-old aftermath of the Civil War may be on its way to liquidation. Southerners who share the feeling and fears of Senator ERVIN know that the final battle for white supremacy may be at hand. They have barricaded themselves behind the ancient Anglo-Saxon right that entitles every man to a trial by his peers, in this case every segregationist to a trial by fellow segregationists.

Americans who do not happen to be southerners should be thoughtful and responsible before passing judgment on those of their countrymen for whom segregation is a harrowing issue. Thoughtfulness and responsibility, however, do not mean inde-

cisiveness or wishy-washyness. In this spirit, while we welcome the civil-rights proposals put forth by Attorney General Brownell, we would be much happier if the authority to be granted the United States district attorneys were aimed primarily at making the 15th amendment at long last operative. This admirably brief and pointed amendment states:

"SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

"SEC. 2. The Congress shall have power to enforce this article by appropriate legislation."

Congress would be following section 2 by authorizing Federal judges to issue civil injunctions—which means no trial by jury—against those who are found responsible for having violated section 1.

Several private organizations—the NAACP first of all—have done admirable work in bringing before the Federal courts cases of violation of basic rights, and the Federal judiciary, under the leadership of Mr. Justice Warren, has reacted magnificently. But the 15th amendment needs specific reinforcement, since the devices that have been used to prevent individual citizens from exercising their rights in the polling booth have been most frequently devious and specious. To safeguard all other civil rights, other remedies can be used aside from civil injunctions brought at the request of Federal attorneys. In general, we are distrustful of all monopolies or potential monopolies, and we are unwilling to concede the monopoly of virtue or of civil libertarianism to anybody—not even to the successors of Mr. Brownell.

But again, we think that a second front in the battle for civil rights is needed, just as unrelenting pressure is needed on the first front, the one where the rights of children are at stake. The 15th amendment has been in our Constitution for 87 years, and only the Federal Government can make it operative.

If and when Negroes enjoy their franchise in the South as they do in the North, then whatever advantage they can gain will be gained by themselves, according to their skill in playing the game of politics. As has happened with other groups at various times considered inferior, the skill the southern Negroes can develop in playing this game will allow them to reach a greater measure of equality. Voting cannot make them automatically equal, but will give them the chance to move step by step, one election after another, toward political equality.

Of all the competitive games in our competitive society, politics is the fairest. It is not easily learned, and as a rule all our so-called minority groups have had a hard time at first. Before conquering their proportionate share of public offices, they have had to overcome the vested interests of other previously entrenched groups. It has frequently happened that the leaders each group has given itself at the beginning have been of a rather poor quality. But improvement both in leadership and in political skill has invariably come.

This was the case with the Irish and with the Germans and with the Italians and with the Jews, as it is the case in our own days with the Puerto Ricans, each group fighting with others that were already on top, and at the same time gaining some measure of recognition from them. Ultimately the sharper differences and conflicts dwindle, and links are established that go beyond all groups.

This is the way America has been made and is being made, thanks to the toughness and fairness of American politics. This will certainly happen south of the Mason-Dixon Line. Both whites and Negroes know that it will happen. It will never be too soon.

A REPORT FROM THE SOUTH ON THE NEGRO VOTER

On August 11, 1956, Gov. James P. Coleman, of Mississippi, told the platform committee of the Democratic National Convention in Chicago that in his State Negroes were free to pay their poll tax, to register, and to vote. Somehow things didn't turn out just that way during the 1956 election: In nearly all of Mississippi's 82 counties Negroes were stalled, blocked, rejected, intimidated, and even threatened when they tried to exercise their rights as citizens. The registration figures Governor Coleman himself had compiled when he was State attorney general in 1954 showed that there were 13 counties in which no Negroes were registered at all, 9 other counties in which 6 or less were registered, and 29 others in which fewer than a hundred were registered.

Furthermore, the Governor surely knew why Negro registration was low in Mississippi. It is fairly common knowledge that in Lowndes County, where only 52 out of a possible 9,200 Negro voters were registered, Negroes received anonymous letters like the one sent to Caleb Lide: "Last warning. If you are tired of living, vote and die." In Forrest County, where only 16 out of a possible 13,000 Negro voters were registered, the registrar disappeared when Negroes tried to register, told them to come back later, said the books weren't open to colored people that day, or simply said "No." To test their understanding, Negroes might be asked such questions as "How many bubbles are there in a bar of soap?" Governor Coleman could have discovered without much difficulty that some Negroes in Forrest County have been paying their poll taxes for more than 30 years in the forlorn hope of being allowed to register and vote someday.

FROM 485 DOWN TO ZERO

In Humphreys County Negroes were not even permitted to pay their poll tax until 1953. When 17 Negroes finally brought suit against the sheriff, a Federal court ordered him to end this practice, and in 1953 485 Negroes succeeded in paying their poll tax. But these 485 soon found themselves the victims of a campaign of pressure and intimidation, and only 200 of them actually registered. A year later the number was down to 126. The newly formed citizens' council began circulating lists of the registrants and still more withdrew. As the 1955 gubernatorial primary approached, Negro registration dropped to 92. These few held firm until the shotguns came out.

On May 7, 1955, one of the county's Negro leaders, the Reverend George W. Lee, was shot in the face by a shotgun fired from a car passing close to the one he was driving. His murderers were never apprehended. The sheriff said that Lee probably had had a heart attack and was killed in the crash that followed, and that the lead pellets in his face were probably fillings from his teeth. With that statement the matter was considered closed. The Citizens' Council then told Gus Courts, president of the local unit of the National Association for the Advancement of Colored People, "We're not going to let Negroes in this country vote and we're not going to let the NAACP operate. You're leading the Negroes, trying to get them to register and vote; we're going to put you out of business." And they did. On November 25, 1955, Gus Courts, while working in his grocery store, was shot and seriously wounded by a shotgun fired, again, from a passing car. Gus Courts made up his mind. He packed up and left Mississippi.

No Negroes vote in Humphreys County today. They have given up for the time being and say they will not make another attempt until they are guaranteed Federal protection.

In the other counties the methods used to prevent Negroes from registering and voting were usually less brutal. Economic pressure was the most common weapon. Another effective technique was that used in Jefferson Davis County. The 1954 registration survey indicated that 1,221 of the 3,900 Negroes of voting age in the county were registered. During the summer of 1956, the board of supervisors called for a reregistration (Mississippi has a system of permanent registration) and cleared the rolls. All the white voters reregistered without difficulty. The Negroes who tried to reregister found that they had no interpret portions of the Federal and State constitutions to the satisfaction of the registrar. This requirement, written into the Mississippi constitution of 1890 for the express purpose of disfranchising Negroes but forgotten as soon as that was accomplished, was now revived. The United States Supreme Court had declared it unconstitutional in 1949, on the basis of the 15th amendment, but the decision was ignored. Of the 1,221 Negroes previously registered in Jefferson Davis County, only 60 were able to overcome the technical obstacles put in their way and were allowed to register in 1956.

Still another device used in Mississippi to eliminate the Negro vote was the challenge at the ballot box. Just before the 1955 primary, Tom Tubb, State Democratic chairman, notified the Democratic executive committee of each county that it was to challenge all Negro voters at the polls because they did not subscribe to the principles of the Democratic Party of Mississippi, and therefore were not qualified to vote in the primary. These principles, said Tubb, included opposition to a Fair Employment Practices Committee and the support of States' rights, segregation, the poll tax, the antimiscegenation laws, and the traditions of the South. On the assumption that no Negro could possibly subscribe to all these principles, it was not considered necessary to ask any Negro whether he did not not. He was to be automatically barred from voting in the Democratic primary—the only election that counts in Mississippi.

This was an old story to the residents of the all-Negro town of Mound Bayou, in Bolivar County, for their votes have never been counted. Mayor Ben Green of Mound Bayou, a Harvard graduate, said resignedly, "It's their privilege to throw our ballots out, but it's our privilege to cast them. We shall keep on voting." In Mound Bayou 295 of the 700 Negroes of voting age pay their poll tax every year and vote, even though they know it is an empty gesture.

Of course, the courts have declared the white primary unconstitutional, even in State and county elections. But according to Democratic Chairman Tubb, "We usually run our own affairs down here. Negroes have pretty good sense and we shouldn't have any trouble with them. It shouldn't take night ridings or beatings for them to use their own good judgment."

ANOTHER FORM OF MASS SLANDER

During the summer of 1956, the FBI investigated some complaints received from Negroes in Mississippi and four other States—Alabama, Louisiana, Georgia, and North Carolina. On October 24, Assistant Attorney General Warren Olney III, head of the Justice Department's Criminal Division, made a preliminary report on the results of the investigations and said, regarding the forthcoming national election, "criminal prosecutions will be brought in every instance where we can show a qualified person was denied the right to vote simply because of his color." This announcement drove Governor Coleman into a state of righteous anger. "Mississippians have not been guilty of any violation of this kind," he declared, "and to make a blanket charge against them is just another form of mass slander. I have already discussed this fully with the attorney general of Mississippi and

we expect to appear personally in any Federal court where any Mississippian is indicted on these trumped-up charges and we will defend them before a jury of Mississippians." The last part of the statement was highly significant to Negroes. To them it appeared highly improbable that a Mississippi jury could convict a white registrar, sheriff, Democratic leader, or head of a citizens' council for so slight an infraction as depriving a Negro of the right to vote.

The editor of the Jackson Daily News, one of the State's leading newspapers, seemed to know as little as the Governor about what was going on in the State. In a front-page editorial, he called Olney "a plain, unvarnished, unmitigated, and conscienceless liar for trying to tell the people of the Nation that Negro voters in the South are being kept away from the polls."

It's quite true that there are 13 counties in Mississippi where Negroes don't find it actually impossible to vote. But these are the counties in which the larger cities are located. Hinds County, of which Jackson is the capital, has the largest Negro registration—4,100 out of a potential 35,000. The three Gulf coast counties have the largest percentage of Negroes registered—20 to 40 percent. Interestingly enough, the Negro vote is smallest where the Citizens' Councils are strongest. In Mississippi there are 300 local councils in 66 counties, with a total membership of 85,000.

After Mississippi, Alabama ranks second in the list of States in which Negroes have difficulty registering and voting. Of the 516,000 Negroes of voting age in Alabama, only 53,400 were permitted to register in 1956.

Louisiana ranks third. Of the 529,000 Negroes of voting age in Louisiana, 152,000 were registered in October 1956. This is a rather remarkable increase over 1948, when there were only 28,300 registered Negro voters in Louisiana, and a concerted effort has been made to reverse the trend. Last year State Senator W. M. Rainach, chairman of the State's joint legislative committee on segregation and president of the Louisiana Association of Citizens' Councils, led a campaign to eliminate the Negro vote. He and his followers succeeded in getting approximately 10,000 Negroes removed from the registration rolls in 10 parishes. If the Justice Department had not threatened prosecution and sent FBI men into Louisiana to investigate, State Senator Rainach's purge would undoubtedly have spread throughout the State.

Here is the way most of the 5,785 Negroes registered in Ouachita Parish were disfranchised. There is a section of Louisiana's registration law that gives any two voters the right to challenge the registration of any other voter. If within 10 days of notification the challenged voter can produce an affidavit signed by three other voters attesting to the correctness of his registration, he stays enrolled. This section of the law was originally intended to provide a means for challenging voters whose place and duration of residence was in question, but the citizens' council used it to challenge Negroes for any irregularity—for writing "C" instead of "Colored," or "M" instead of "Male"; for a miscalculation of age, which had to be given in years, months, and days; or for the use of any but the proper word.

THE CHALLENGE

In March the Citizens' Council set up shop in the registrar's office and began to challenge every one of the 5,782 Negroes registered. Secretaries typed out the challenges and 8 or 10 members of the council worked away at the business of signing them. In the middle of April the challenges were given to the registrar, who began mailing out the 10-day notices. A few days later, the courthouse at Monroe was a scene of complete chaos as the challenged Negroes descended on the registrar's office to protect their right to vote. Crowds jammed the corridors and overflowed onto the courthouse lawn.

Negroes who came to sign affidavits for their friends were told that they were not qualified to do so because they too had been challenged. When they said they had not received notice of a challenge, they were told it was in the mail. Undaunted, a number of them obtained the signatures of their white employers and restored their names to the rolls and began signing affidavits for their friends. As more names were restored, more were able to sign affidavits.

To slow down the process, the registrar began to limit the number of times any one person could sign, to require that signers come from the same precinct as the voter challenged, to require an interpretation of the Constitution from each person, and to limit the number of voters processed to 40 or 50 a day. Hundreds came each day in response to the challenges; some arrived as early as 5 in the morning to make sure they would be among the first 50; many came day after day until their 10 days had expired.

When the time finally ran out, 5,187 of the 5,782 Negroes challenged were off the rolls. The board of directors of the Ouachita Parish Citizens' Council commended the council president and the registrar for their interest and efforts in behalf of good citizenship.

The move to disfranchise Negroes did not spread as quickly as Rainach and the Louisiana Association of Citizens' Councils had hoped. For one thing, the presence of the FBI made many local council leaders hesitate. Rainach became impatient and demanded prompt action. At a council meeting in Grant Parish, he took the floor away from the president of the local unit and pushed through a vote for an immediate purge. Reluctantly, the council president agreed. During the following week, a committee went through the registration files and challenged 758 of the 782 Negroes enrolled in Grant Parish, following the same techniques used in Ouachita Parish. The Colfax Chronicle, a parish weekly owned and edited by Mr. and Mrs. Kenneth J. Walker, revealed the whole plan and printed on its front page a sample affidavit that the challenged Negroes could use to get themselves reinstated. It also helped develop some white opposition to the purge by publishing the names of a dozen white people who would agree to sign affidavits for Negroes they knew personally. Of the 758 Negroes challenged in Grant Parish, some 488 were able to produce affidavits and thus keep their names on the registration lists.

A total of 13 parishes responded to Rainach's prodding and the results in the majority of them were quite satisfactory to the Citizens' Councils. For example, in Caldwell Parish, where 330 of the 450 Negroes were challenged, the registrar refused to accept affidavits from a challenged voter unless he was accompanied by a law-enforcement officer and a member of the Citizens' Council. He also refused to accept affidavits signed by white people on the ground that they were of a different race.

Rainach has predicted that eventually 90 percent of Negro registration in Louisiana will be eliminated. To this end he announced a new statewide purge to get underway in 1957 that would solve our segregation problem" and make Louisiana "a shining example to the Nation on how to thwart the National Association for the Advancement of Colored People."

TRIAL BY JURY

After the election was over in November 1956, the Justice Department began the action it had threatened against the registrars and the Citizens' Council leaders involved in purges that had taken place in Louisiana. A Federal grand jury was empaneled on December 4 and subpenas were issued. Between January 29 and February 6, the grand jury heard testimony on three parishes—Grant, Caldwell, and De Soto. Rainach's prediction that "It is not going to be easy to get Louisiana people to indict Louisiana people" was proved correct. No indictments were issued. On February 12, the grand jury decided not to hear any testimony on three other parishes—Ouachita, Jackson, and Bienville. It announced quite candidly that there was no possibility of any indictments, whatever the evidence might be. At this point the Justice Department could have taken the matter directly to the Federal courts, but this move was considered inadvisable. Instead, Attorney General Brownell turned to Congress and asked for the power to initiate civil action for preventive relief by injunction, restraining order, and declaratory judgment. This approach, he argued, would be more effective because it would be less harsh and would not impose on anyone, particularly public officials, the stigma of criminal prosecution.

Southern Negroes are somewhat skeptical about the libertarian zeal of a number of southern Senators to amend the administration's civil-rights bill by guaranteeing a jury trial to anyone who is held in contempt of a Federal court for not obeying its injunctions. Perhaps, as Governor Coleman says, this skepticism is a form of mass slander. But, on the basis of experience, the thousands of Negroes who have been denied the right to vote throughout the South suspect that they have more to gain from a Federal court than from an all-white jury.

Twenty-five Years Ago Today

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks I wish to include an editorial which appeared in the Huntsville Times, Huntsville, Ala., on July 8, 1957:

TWENTY-FIVE YEARS AGO TODAY

In these days of blooming, burgeoning prosperity, let us recall that today the bottom of the depression was reached 25 years ago.

On July 8, 1932, the New York stock market hit its all-time low. The Dow-Jones average closed at 41.22. It is now past the 500 mark.

A quarter century ago, more than 11 million American citizens were unemployed, walking the streets and seeking jobs. It was the time of the bonus army assembled on the outskirts of Washington and marching toward the Capitol. There was hunger and destitution everywhere. People were hopeless, in the depths of despair. Many formerly in good circumstances were bankrupt, or hanging on grimly.

Those were dreary years here 25 years ago, as well as throughout the Nation. Everything was at a standstill. There was no building whatsoever. The big textile mills were in sad condition, working part time, at pitifully low wages. Jobs were divided up, so that all could have a chance to eke out a living. There was no relief, no pensions, no local, State, or Federal aid.

Farmers were in terrible condition, most of them mortgaged up to the hilt. It was cotton, cotton, cotton everywhere, because it was a cash crop. As we recall, the price was around the low of 5 or 6 cents a pound.

Yet somehow people survived. Some of them bear today the scars of those tough days of yesteryear.

As we look at the two extremes of July 8, 1932, and July 8, 1957, there is some kind of a moral to be drawn from them. Perhaps it is that the people of this Nation should keep a closer eye on the economic machine, not let it get off the track and run, willy nilly, to one extreme or the other.

Speculative excesses led to much of the disaster that culminated in the great depression of the early 1930's.

Today, a quarter century later, the great threat is unbridled inflation. Unless it is curbed and held in bounds, there may come evil repercussions.

The Gentleman From Brooklyn, John J. Rooney

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. MULTER. Mr. Speaker, it is my proud honor to ask the privilege of the House to insert in the CONGRESSIONAL RECORD an article about a distinguished colleague, the Honorable JOHN J. ROONEY. It was written by Frank Coleman and appeared in the New York Daily News of July 13, 1957.

I am certain our colleagues will join me in saying that any criticism of the item would be limited to the fact that it omits so many more good things that we, as authors, would be prompted to say about JOHN. Most of those sentiments can be summed up in our application to him of the words "Gentleman, scholar, friend." The article follows:

THE GENTLEMAN FROM BROOKLYN, JOHN J. ROONEY

It's awful hard for a big city boy to crack the inner circle of veteran politicians from the South and West who really run things around here when the Democrats are in power. But a spruce little Brooklyn Irishman shows signs of doing it.

He is Representative JOHN J. ROONEY, of the 14th District, which includes South Brooklyn, Erie Basin, part of Bay Ridge, and Boro Park.

The strang thing is that ROONEY is climbing to the top by breaking almost every rule for big city Congressmen. When he came to Congress in 1944 he asked for, and got, a job on the Appropriations Committee, which means a lot of work and few headlines.

He is so busy on committee hearings that visitors from back home often can't seee him. He has to spend a lot more time in Washington than some of his colleagues.

UNORTHODOX POLICY BEGINS TO PAY OFF

But after 13 years in Congress this unorthodox policy of quiet labor behind the scenes is finally beginning to pay off. In the cloakroom they say ROONEY is definitely a comer. He has the friendship and confidence of Speaker SAM RAYBURN, Democrat of Texas, and Representative CLARENCE CANNON, Democrat of Missouri, powerful chairman of the Appropriations Committee. With such backing, he can get a lot of things done for his constituents.

What is it really like to be a Congressman from New York City? How do you get the job? How do you keep it? How do you get ahead?

"I think it's the most interesting job in the world," says JOHN. "I like it."

ROONEY represents 380,000 people who have many special problems and interests. When any one of them feels like it, he can sit down and write ROONEY a letter asking for help or telling his Congressman how to vote on a big issue of the day. An average of 200 people a week do write letters.

OFFERS SPECIAL BILLS FOR HARDSHIP CASES

Much of the mail deals with immigration. Many of ROONEY's constituents are foreign-born or have relatives in the old country. When they want to bring mama or aunt Sophie into the United States they frequently need the Congressman's advice or help. Often ROONEY introduces special bills to take care of hardship cases.

A lot of the other mail deals with civil service and postal pay matters. People want jobs or pay raises. They think ROONEY can help and often he does. Businessmen write asking for help in landing Government contracts or aid in special community projects.

"When they ask us to do something, we try to do it," says ROONEY.

He is proud of getting the Gowanus Creek channel deepened and of his part in establishing the Fort Hamilton Veterans' Hospital. Getting things done for the homefolks, of course, is the secret of staying in Congress, whether you represent Brooklyn or Hot Coffee, Miss. And as ex-President Harry Truman was fond of saying "The first requirement for any statesman is to get elected."

DEMOCRATIC LEADERS GAVE HIM THE JOB

How did ROONEY get the job in the first place? It was given to him, practically speaking, by the late Frank V. Kelly, Democratic leader of Brooklyn, whose picture hangs in a place of honor in ROONEY's office, 1230 New House Office Building.

The district had been represented by Tom Cullen, who lived next door to ROONEY on Congress Street. Cullen died in office. A special election was held on June 6, 1944, to fill the vacancy. Kelly gave the Democratic nomination to ROONEY. It was tantamount to election, as they say, in that heavily Democratic district. Besides, hardly anybody came out to vote since the election happened to fall on D-day.

Why did Kelly pick JOHN for the job? ROONEY was a good organization man; he was a lawyer with some experience in public life, and he had the stuff in his background and personality to win in case of a fight, as ROONEY proved 2 years later in a close race.

FAMILY HOME WAS OVER FLORIST SHOP

ROONEY was born November 29, 1903, upstairs over the family florist shop on Court Street. His parents were Irish immigrants. The family has lived in the district now for almost 90 years. John attended St. Paul's Parochial School, St. Francis Prep and College, then went to Fordham Law School, graduating in 1925. He earned part of his expenses blowing a cornet in chop suey joints.

ROONEY practiced law in Brooklyn until 1940 when Bill O'Dwyer, then district attorney of Kings County, asked him to join O'Dwyer's staff and help clean up Murder, Inc. As assistant district attorney, ROONEY worked in the rackets division. Among other accomplishments, he sent the officials of Teamsters Local 138 to Sing Sing for extortion, 15 years before the lid blew off the National Teamsters' Union.

ONLY MEMBER ON FOUR SUBCOMMITTEES

How did ROONEY get assigned to the choice Appropriations Committee as a freshman Congressman? Ex-Congressman Walter Lynch, now a justice of the New York State Supreme Court, wangled it for him. Lynch was then a member of the Ways and Means Committee, which makes all committee assignments.

Now he is chairman of the Subcommittee on Appropriations for the State Department, Justice Department, and judiciary. And he is also a member of three other subcommittees, the only Congressman with four assignments from Chairman CANNON.

JOHN and his wife, Catherine, keep a house here on Woodley Road, as well as the family home at 218 Congress Street, Brooklyn. They have four sons and a daughter.

Rev. Armand "Father Spike" Morissette, of Lowell, Mass.

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, July 15, 1957

Mr. SALTONSTALL. Mr. President, one of the most beloved citizens of Massachusetts is the Rev. Armand Morissette, of Lowell. He is affectionately known as Father Spike to thousands of people in our State. The help he has given to French sailors visiting the United States has been widely recognized.

The Kiwanis magazine for July 1957 publishes an article about him by Edgar May which describes some of the fine work Father Morissette has done. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LE PETIT PÈRE OCCUPÉ

(By Edgar May)

In a neat wardrobe closet of the sun-filled French-style home of the Oblate Fathers in Lowell, Mass., three hats sit side by side on a plain shelf. The first is the gold-braided cap of a naval captain; the second, the dapper homburg of a diplomat; the last, the black biretta of a priest. All are worn on the same head—that of the Rev. Louis Joseph Conrad Armand Morissette, secretary of the provincial of the Oblate Fathers. Each hat represents a separate life of a slip of a man whom people call Father Spike, the busy little priest (in French-dominated Lowell: Le Petit Père Occupé).

Perhaps the most helter-skelter of his three lives is that of an officer in the French Navy. Father Spike is the only American to hold such a position, but he readily admits that he is about the worst sea captain who ever tripped across a quarterdeck. As chaplain to all French sailors in the United States, he is probably the only gob who ever mistook an admiral for a chief petty officer because their sleeves look something alike. He has the audacity to call a halyard a rope and a bulkhead a wall. His ocean voyages have been limited to a motor launch cruise around Boston Harbor. And, furthermore, he can't swim.

During World War II, sailor Spike once visited Boston harbor to deliver some important papers to the skipper of a French destroyer. Unable to locate his man, he turned to an American sailor standing guard duty.

"Pardon me, but could you be kind enough to tell me where I can find Captain Berland?"

The sailor, visibly stunned by such a request from a man in a captain's uniform, snapped to attention and fired out an answer: "Yes, sir, he's out on the cruiser, sir."

The priest surveyed the harbor filled with a fleet of gray warships, hesitated, and then whispered to the sailor, "Now can you tell me which is the cruiser?"

Recalling the incident, he says, "That poor sailor must still think he talked to a spy or the President's nephew."

Father Spike was not inducted into the French Navy; he was absorbed by it. You might say that the old fiction plot of boy meets girl was responsible. It started in the early days of World War II, when French sailors first came to Boston in great numbers. (French sailors are like all sailors, except maybe more so: they want to meet girls.) A rumor spread among them that there were many pretty girls who could speak French in a city called Lowell, only two dozen miles from the Boston naval base.

Father Spike, working in the Lowell USO at the time, helped validate that rumor. With his flawless knowledge of French, he soon became the architect of an unofficial Franco-American alliance between the young ladies of Lowell and the young men from the French warships. As the alliance was strengthened, he made more frequent trips to the Boston naval yard to hold services aboard ships, to help sailors out of language difficulties, and, of course, always to play the part of Cupid.

As the trips increased, the sailors named him their chaplain, and in late 1941 General De Gaulle made it official with an announcement that Louis Joseph Conrad Armand Morissette now was chaplain for all French sailors landing in the United States.

Now that Father Spike was Sailor Spike, he naturally had to have a uniform. Since French chaplains don't wear military dress, but clerical robes, this was an obstacle. But not for long. The American naval tailors collaborated with the French and produced a mutation that combines the style of the United States Navy officer's coat with the insignia of the French. His cap has the regulation serving of "scrambled eggs"—the braid of a staff officer. But in place of the American spread eagle is the wreath and anchor insignia of the French.

"It took me a while to learn this saluting business," Father Spike recalls, "but after a little practice in front of the mirror I could at least produce a fair imitation."

While he had to learn very few navy regulations, there were some that were impressed on him after he had broken them. One of these—Be in the right place at the right time—was explained to him in precise French by a miffed captain who was to have Boston's archbishop as his guest.

Father Spike was told to bring the archbishop on board at 12 noon. Eager to show his new military efficiency, he arrived 15 minutes early with his guest, whisked him aboard only to confront a dismayed captain whose band and sailors still were practicing the welcoming ceremony in another part of the ship.

Several weeks later, newly aware that in the navy it is as sinful to be early as it is late, he held Massachusetts Senator Leverett Saltonstall at the gate for 20 minutes before he would escort him up the gangplank.

Today this landlocked sailor's peacetime duties are much like those during the war. He blesses ships, holds services on anything that stays afloat, from the luxury liner *Ile de France* to the smallest French fishing boat, and continues to oversee the perfumed alliance between Lowell and the French fleet.

His military orders are always in his pocket. They are signed by Rear Adm. J. A. Snackenberg, commandant of the First Naval District, and read like this:

"Father Armand Morissette, of Oblate Fathers, Lowell, Mass., whose picture and signature are affixed below, holds the title of honorary chaplain in the French Navy and as such is recognized by the French Government as chaplain of all French Navy, merchant marine, and fishing fleet seamen in the United States, although he is a United States citizen. Father Morissette is hereby authorized to enter any subject activity for the purpose of visiting any French vessel berthed therein."

For his military duties, the priest receives no pay. However, there have been some material rewards. Several years ago a New England newspaper published a Sunday feature about the busy little Father with pictures that showed him in full captain's regalia, wearing his perpetual rimless glasses. The president of an optical firm saw the article and was so impressed that a navy captain would allow himself to be photographed wearing spectacles that he has sent Father Spike a free pair every Christmas since.

In 1951 the French Government investigated its strange navy hero after word of his numerous activities spread throughout the military. There was no particular fuss over the report that Sailor Spike never had been to sea, but consternation resulted when the French found a captain in their navy who had never been to France: "Monsieur, c'est impossible."

There was only one thing to do, of course: Send Father Spike to France. So, as guest of the government, the Lowell priest was bundled across the Atlantic. (Unfortunately for his naval record, the Frenchmen transported him by plane.)

Midway through the whirlwind tour, one in which Captain Spike had the services of both an American and a French naval aide, a Paris newspaperman observed that Pere Spike was the most potent medicine for France since the Marshall plan.

In the few weeks that he was on display, this clergyman in the crossbreed navy uniform was good-will ambassador extra ordinaire. As an American he placed a wreath on the Tomb of the Unknown Soldier at the at the Arch of Triumph; as a French captain he inspected the fleet at Brest (where he almost suffered from gastronomy because he thought he had to complete the sample meals set out for him in every ship's galley) and as a man of the world he served as the visting celebrity at United Nations Day in Metz.

Sometime between these functions he received from France's Secretary of the Navy a replica of a cross worn by St. Vincent de Paul, the first commissioned chaplain of His Majesty's galleys. President Vincent Auriol gave him the lifetime rank of honorary chaplain of the French Navy, and later, at a ceremony in Boston, Consul General Albert Chambon bestowed on him the coveted Franch Legion of Honor.

Whenever he exhausted his knowledge of naval matters (which was almost always right after the mirror-practiced salute), Father Spike called on his best dipolmatic mien—a half-moon smile and a hearty handshake—to endear him to his new-found French friends.

For several years this one-two diplomatic punch has been functioning smoothly at the United Nations, where he is considered a sort of special adviser on French affairs to the United States mission. Whenever he is in New York you can find him usually at the Waldorf-Astoria, where Henry Cabot Lodge has his headquarters. The priest and the United States representative to the U. N. have been friends ever since he was a seminary student and young Lodge was a newspaper reporter.

Father Spike still keeps a post card that Lodge sent him when he first went to Europe to persuade General Eisenhower to seek the Republican nomination for President. The message was brief:

"Ike, like Spike, is a wonderful guy."

When Lodge came back and had to defend his Senate seat against young Jack Kennedy, the contest exhausted the Lowell priest. (Senator KENNEDY also was a friend of Father Spike's.) "I was in an awful fix in that campaign. I had to keep running from one camp to the other."

When in Washington, Father Spike usually is also "running from one camp to the other." At the White House, he frequently knocks on the door of Maxwell Raab, secretaary to the Cabinet, and Robert Cutler, executive assistant to the President. (He attended President Eisenhower's second inauguration with a ticket marked "Mrs. Cutler." Cutler is a bachelor.)

In the Senate or House corridors, he's greeted with a loud "Hi, Spike" by Congressmen who often request his services as a linguist whenever they have to address a French-speaking audience.

Several years ago a prominent midwestern governor bumped into the priest at the Waldorf-Astoria just before the State executive was about to address a Franco-American dinner. Father Spike scribbled a few French introductory remarks for the governor, and the two have been exchanging correspondence ever since.

With fluency in French, English, Latin, and Italian, and a reading knowledge of German, Russian, Greek, and Portuguese, Father Spike was literally speechless only once.

One day at the end of the war, a French captain approached him with a Chinese Jesuit who knew neither English nor French.

"The captain reasoned that we both knew Latin and promptly asked me to invite the Chinese priest to breakfast. I was stuck. I could tell him a few prayers, but I certainly couldn't ask him if he wanted bacon and eggs."

In Lowell (where he was born 47 years ago, the son of Jean-Baptiste Morissette, a textile worker, and Exilia Dureault), he speaks French 60 percent of the time. He thinks in French, writes himself notes in French, and when he speaks English, although he is a fourth-generation American, every one of his words is flavored with a French accent.

When he propels down Jeanne d'Arc Avenue in Lowell (he never strolls or walks), the out-of-town observer might hear this exchange:

"Bonjour, mon peret."

"Ah, Madame Montbleau. Bonjour. • • • Comment ca va?"

Even at the weekly Kiwanis meeting in Lowell, the conversation at his table more than likely is spiced with a few French phrases. As a Kiwanian, by the way, he has an attendance record that is near perfect. If he misses the Lowell session, he's likely to pop up at luncheons in Montreal, Chicago, or San Francisco.

Father Spike became a Kiwanian 4 years ago after a Lowell Sun reporter took him to several meetings. The Father Spike charm spread immediately and he was asked to join. He calls Kiwanis "America in miniature" and is the organization's supersalesman among clergymen who regard service clubs with a skeptical eye.

The Lowell club is his first port of call when a widow needs some new shoes for her brood, or when his 250 charges at the Franco-American orphanage are without a Santa Claus and the toys that go with him. Last Christmas, for example, he and Kiwanis collaborated to make it a merry holiday for a dozen needy families.

There's virtually no community project that omits his name as one of the organizers, and if all organizations in which he holds a membership card were recorded here, the list would run right off the page. The Lowell Sun's clipping file must be bulging if it has saved every article that lists the busy little priest. Hardly an issue is printed without a sentence somewhere that says "and brief remarks were made by the Reverend Armand Morissette."

His unofficial biographer, Elizabeth Larkin, who is also his number one fan, has collected 10 huge scrapbooks of news clippings—all since 1954.

The most prized among this mountain of press recognition is one that reports that he was the recipient of last year's B'nai B'rith North Shore Council Community relations award for his service to God and to his country, champion of liberty, brother to all men and a distinguished leader in the cause of furthering better understanding among men of all faiths.

Governor Christian Herter presented the bronze plaque at a dinner in his honor. Father Spike's acceptance speech before his Jewish audience was as informal as it was successful. He introduced it with this anecdote:

"The only day I really was nervous at the United Nations was when I was introduced to the Soviet's Andrei Vishinski. I was presented to him as a Catholic priest and the first thing he said was: 'Good business, good business.' And for once the old boy was telling the truth. My only amazement is that so many of my good Jewish friends are letting this good business go by."

The ovation that followed might even have brought a smile from Mr. Vishinski.

At the moment, many of his interfaith friends are contributing to his most serious project—raising funds for a new seminary for the Oblate Fathers. Last February more than 2,000 Lowell residents of all faiths feted him at a testimonial dinner. They presented him with an oil portrait of their favorite priest and generously overpaid for their roast beef and salad so the proceeds could go to the Oblate college fund.

Much of his jetlike activity now is centered on this half-million-dollar fund drive. In a recent week he skipped around the country soliciting donations in New York (for a faculty room), Chicago (for part of the chapel), and Montreal (for a half dozen rooms). Several months ago he invaded the silver-dollar capital of the United States, Las Vegas, at the invitation of a Lowell-born deputy sheriff.

His campaign assistants run the gamut from Henry Cabot Lodge, who helped him stage a huge diplomatic reception at the United Nations, to a local bookie who occasionally picks up the phone and whispers, "Hallo, Father Spike? You might call on Mr. So-and-so tomorrow. He did rather well at Arlington this afternoon."

Amid this maelstrom of activity he still manages to catch up with his clerical duties. His day starts at 5 a. m., with early Mass, and by the time the clock says noon, he's made several sick calls, dented a section of his huge correspondence, and possibly officiated at a funeral. He keeps his appointments straight in three-part fashion. His travel schedule is mapped out 3 months in advance, and a red ledger on his desk keeps him posted on the week's obligations. For day-by-day commitments the Father Spike slip-of-paper system takes over. He carries these notes to himself in every conceivable pocket.

Sundays occasionally are a little difficult. Sometimes he has to say Mass at different churches, and then his timing must be flawless. Last summer, when he was pinch-hitting for several priests, his driver, kindly Henry Belanger, who is also a Kiwanian, had to install a siren on his black sedan so that his passenger could keep his appointments for God. (Father Spike is the only Massachusetts clergyman authorized to use a siren, an act that one police official said was born of necessity rather than courtesy.)

When he has time to reflect on his triple-threat career of priest, diplomat, and sailor, this dynamo in the turned-around collar sums it up like this:

"My life is like the 'Perils of Pauline.' I'm always walking on thin ice."

If this analysis is correct, and Father Spike is the male counterpart of this intrepid movie heroine, then even strolling on a good frost shouldn't faze le petit pere occupé.

For Hollywood never lets a hero fall, and it's highly unlikely that God would!

Long Beach Naval Shipyard Employees' Association Wins Praise

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. HOSMER. Mr. Speaker, the Long Beach Naval Shipyard Employees' Association is the largest group of its kind and I am sure the most active and effective. These thoughts were summed up by Washington columnist Virginia Kelly in a recent writing appearing in the Long Beach Press Telegram newspaper as follows:

LONG BEACH NAVY SHIPYARD EMPLOYEES GROUP DRAWS HOSMER, DOYLE PRAISE

(By Virginia Kelly)

The year in and year out unified and determined efforts of the Long Beach Navy Shipyard Employees' Association have won the admiration of Representative CRAIG HOSMER and Representative CLYDE DOYLE.

Donald G. Sutherland, president of the Long Beach NSEA, and Abner Faircloth, NSEA executive council member, were in Washington awaiting the report of the House Armed Services Subcommittee which visited Long Beach recently to study shipyard subsidence problems.

Praising the two Long Beach men, Representative HOSMER said, "Don Sutherland and Ab Faircloth are men of exceptional ability who have worked tirelessly for the interests of the Long Beach Naval Shipyard. I have seen them in their negotiations with State and Federal Government officials and have observed that they have always been dynamic, courageous and well informed."

Terming the two men "outstanding citizens," Representative DOYLE said, "All through my six terms in Congress I have known the officers and members of the NSEA and have always found them to be dedicated to the best interests of the community and the Nation."

In Washington, Mr. Sutherland said that the Long Beach NSEA, with a membership of 5,500 out of 6,700 employees, is the largest shipyard employees' group in the United States. "Naturally," he said, "we are interested in preserving our jobs but there are many other reasons why the Long Beach Naval Shipyard should stay in operation."

The problem, he said, is of interest to every Long Beach citizen.

Mr. Sutherland stressed that a large percentage of the NSEA have invested their life savings in homes in the Long Beach area.

"In addition," said Mr. Sutherland, "each member of the NSEA probably has about $2,500 in obligations for an automobile and household appliances."

He said that the Navy has said the operating of the Long Beach Naval Shipyard is essential to national defense. "To preserve the skills of these trained men, the yard must be kept in operation," Sutherland said. He emphasized that the shipyard has proved that work can be done there efficiently and as reasonably as our economy permits.

Small Business Act

SPEECH
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7963) to amend the Small Business Act of 1958, as amended.

Mr. CURTIS of Missouri. Mr. Chairman, for several years I have been much concerned over the position of small business in an economy geared for defense production. The importance of small business participation in defense procurement is obvious when we realize that our Government spent some $43.5 billion on defense items in fiscal 1952 and over $19 billion in fiscal 1956. During this same period the amount of defense contracts to small business fluctuated without apparent pattern but generally between 21 percent and 16 percent.

I had the honor to serve on the House Select Committee on Small Business during the 82d Congress and have since followed closely the efforts, or lack of effort, on the part of the Federal Government to assure small business a fair share of its purchases of goods and services. During the Korean war our committee found procurement offices awarding the lion's share of their contracts to the largest concerns in the country. The prevailing philosophy was that there was little or no time to be concerned about prime contracts for small business and that they should look to subcontracting as a means of contributing to our national defense. No effort was made to assure financial assistance or a supply of materials and components so that even with a contract the smaller business might produce effectively. In addition, administrative procedures on defense contracts virtually precluded a small manufacturer from handling a Government contract, if the incentive to produce for the Government had not already been killed.

Because of the lack of consideration for small concerns evidenced by procurement officials Congress established the Small Defense Plants Administration in 1951 with authority to assist small firms to secure Government contracts, to obtain adequate financing, and to find a solution to their administrative difficulties, I believe that as a result of this legislaiton small business was able to make a significant contribution to the Korean war.

In reviewing the role of small firms of Government procurement in 1953 Congress found that while defense spending had decreased greatly because of the cessation of hostilities, continued assistance was necessary to assure fair and equitable opportunities to the small firms in our economy. Many of the procurement and technical assistance programs of the Small Defense Plants Administration were carried over into the new agency and have proved to be, since the

fall of 1953, effective tools to combat the obstacles encountered by small business in its dealings with Government procurement agencies.

The Small Business Administration program in which the most effort has been expended to provide procurement assistance is the so-called joint set-aside program. Under this program, representatives of the Small Business Administration are assigned to the principal purchasing centers of the Government to review or screen with representatives of the purchasing agency, proposed procurements, and to determine which of them can be set aside either in whole or in part for exclusive award to small business. I should emphasize, however, that the law makes this program strictly a cooperative effort. SBA may only suggest which procurements should be set aside. The final decision rests with the contracting officer.

Originally SBA was precluded from screening classified procurements, sole source procurement purchases under $10,000, emergency and research and development procurement. A revision of the original agreement does now, however, permit SBA to screen procurement in all of these areas, to give greater consideration to Government purchases which are suitable to their type of production or supplies.

I might state parenthetically that considerable opposition was encountered in the early days of the agency to its full-fledged effort to assist small business to secure more Government contracts. Through constant pressure and negotiations SBA has been able to extend the scope of this program. Each year finds more and more Government contracts being set aside for small firms. During the past year, the program has been extended beyond the Military Establishments to include civilian procurement agencies such as the General Services Administration, the Veterans' Administration, the Post Office Department and the Departments of Agriculture, Commerce, and Interior.

I should like to discuss very briefly at this point the procedures for set-asides for small business promulgated by the SBA in conjunction with other Government agencies. In the case of total small business set-asides, invitations for bids issued by the purchasing agency contain a notice to the effect that the procurement will be awarded to one or more small-business concerns; bids or proposals under the procurement will be restricted to small-business firms and awards will be made to a small-business firm or firms; and bids or proposals received from firms not classified as small business will be considered as nonresponsive. The advertising and awards are conducted in the same way as prescribed for formal advertising except that the bids and awards are restricted to small-business concerns.

In the case of partial small-business set-asides, the invitations for bid covering the procurement of the unreserved portion shall state that an additional quantity of a stated amount has been set aside for negotiation for small-business firms exclusively, and invitations for bid and requests for proposals for the unreserved portion shall be for not less than an economic production run as shall also be the proportion set aside for small business. After the award of the unreserved portion, procurement of the portion set aside is affected by negotiation. The right to participate in the negotiation for the quantity set aside is conditioned upon the submission of a bid upon the items in the procurement at a unit price within 120 percent of the highest award made on the unreserved portion. Such negotiation proceeds among small-business concerns beginning with the bidder which submitted the lowest responsive bid in connection with the unreserved procurement. When the procurement of the unreserved quantity has resulted in one contract only, or in multiple awards all at the same price, awards for quantities set aside shall be made at the unit price of the unreserved quantities. When the procurement of the unreserved quantities resulting in multiple awards at different unit prices, awards for quantities set aside shall be made at the highest unit price of the unreserved quantities.

Mr. Chairman, this is a good time and a good place to clear up any misconceptions with respect to the joint determination program as provided by the Small Business Act.

Section 214 of existing law provides "to effectuate the purpose of this title, small-business concerns within the meaning of this title shall receive any award or contract or any part thereof as to which it is determined by the administration and the contracting procurement agency (A) to be in the interest of maintaining or mobilizing the Nation's full productive capacity, or (B) to be in the interest of war or national defense programs."

Section 14 of H. R. 7963 utilizes the same language with the exception that "Whenever the administration and the contracting procurement agency fail to agree, the matter shall be submitted for determination to the Secretary of the head of the appropriate department or agency by the Administrator."

One of the misconceptions is that a small-business concern participating in the joint determination program gets some sort of a price advantage. That is not so. All the advantage that a small concern gets is an opportunity to participate in a given procurement. In order to have an opportunity to participate, a small concern must be within 20 percent of the lowest qualified bid for that portion of the total procurement which is open to all bidders, both large and small. For example, if the lowest qualified bid on an item is $100 each, then all of those small-business bidders whose prices range up to and including $120 have an opportunity to negotiate for the set-aside portion of the procurement. In these negotiations any bidder who is within the $120 range must compete with other bidders in that range, but in no event will a contract be awarded at more than the $100 price.

Let us say once again and emphatically that in the procurement program carried on by the Small Business Administration small business does not get one cent more than anybody else for a given procurement. This is the way it should be, and I hope we will never feel it necessary to get into a program of premium payments for one contractor as against another. This type of policy may be justified in moments of extreme peril where price is of no consideration, but certainly in the situation in which we now find ourselves, premium prices are not needed, and certainly are not wanted by the small business sector of our economy which seeks Government procurement awards. What they want is a fair and equal treatment with all of their competitors and nothing else.

Mr. Chairman, the following table illustrates the increase in activity in the SBA joint set-aside program. A great effort has been made by the Agency to obtain set-asides in those areas where small firms have had difficulty in obtaining contracts. Only through a very broad approach can the full potential of small business be realized.

SBA Set-Aside Program

Set-aside agreed to Aug. 1, 1953, through May 25, 1957

Fiscal year	Military		Civilian		Total	
	Number	Amount	Number	Amount	Number	Amount
1957	8,176	$602,848,950	1,925	$42,527,238	10,101	$645,376,188
1956	5,796	489,574,912	277	8,103,520	6,075	497,678,432
1955	3,924	386,610,589			3,924	386,610,589
1954	1,621	228,504,359			1,621	228,504,359
Total	19,519	1,707,538,810	2,202	50,630,758	21,721	1,758,169,568

The Small Business Administration also renders a service to small firms through the issuance of the certificates of competency in those cases in which a contracting officer of the Government has withheld the award of a contract to a small firm by reason of the opinion that the firm lacks the necessary financial and productive capacity to successfully perform the contract. In such an event, the firm may request the Small Business Administration to make a separate and independent survey of the firm's resources as related to the procurement involved. Such technical and financial information concerning the firm as may be available from the purchasing agency is furnished to the Small Business Administration for its consideration. If the Small Business Administration, after making such a survey, is of the opinion that the firm possesses adequate capacity and credit to successfully perform the contract, it will issue its certificate of competency. When this certificate of competency is issued, the

contracting officer of the Government is, by law, directed to accept such certification as conclusive and is authorized to award the contract to the holder of such certificate without requiring it to meet any other requirements as to capacity or credit. Normally a period of 10 working days is allowed in which the Small Business Administration may exercise its authority to issue a certificate of competency. Certificates of competency have been issued by SBA in about 50 percent of cases in which requested. Very few holders of certificates of competency have failed to perform their contracts in accordance with the contract terms.

For many small firms, particularly those with limited facilities subcontracting affords the best opportunity to participate in Government procurement. SBA regional offices, which service small firms in their respective areas, are responsible for maintaining an inventory of small-business facilities in their area. The small firms register their industrial facilities with these regional offices where their facilities are classified, and the small firms are notified of subcontracting leads suitable to their type of plant and equipment.

An important service to the small firm is that of bringing to its attention various items for which adequate small-business competition is lacking. To accomplish this, SBA representatives at purchasing offices of the Government notify the SBA regional offices of items for which small-business competition is needed. The regional offices in turn bring these items to the attention of firms which they believe can supply them.

In many types of its contracts the Government inserts a clause requiring the contractor to subcontract to small firms the maximum amount that the contractor finds to be consistent to the efficient performance of the contract. Each contractor receiving a prime contract in excess of $1 million, which offers substantial subcontract possibilities, is urged by the procuring agency of the Government to establish and conduct a defense subcontracting small-business program. This program provides for the designation of the executive of the contractor as its small-business liaison officer who will be the contact man with the procuring agency of the Government and officials of the SBA on matters relating to small-business participation. This program includes the adoption by the contractor of procurement policies designed to assure that small firms will have equitable competitive opportunity to secure defense subcontracts and the placing in its subcontracts of the small-business subcontracting clause appearing in its own prime contract.

Procurement assistance counseling is another function which is performed by Small Business Administration, principally in the regional and branch offices. The staffs of these regional and branch offices are available to small firms for discussion of their problems and for assistance and guidance in solving them. In its counseling program, the Small Business Administration helps small firms to determine which items or services they can supply to the Government and assists them in being placed on appropriate bidders' lists, so that invitations for bids will be sent to them. Assistance is also rendered in obtaining bid sets for any procurement which is suitable for supply by small business. These bid sets are available to small-business firms in the regional and branch offices. Small firms are also counseled on how to sell their services to prime contractors as well as to firms needing components which they can produce.

Mr. Chairman, through legislation, committee hearings, and personal representation to Government procurement agencies, the Congress has attempted over the years to assure small firms an equitable opportunity in their attempts to secure more Government business. The full potential of small business has never been realized. While the procurement agencies themselves have rendered lip service to small-business problems and while various programs have been established within those agencies to assist small business, little has been accomplished. That is why we need an independent small-business agency to act as a watchdog and as an advocate for greater and more effective assistance.

The Small Business Administration is doing everything it can, through its own programs and through advice to other Government agencies to assist small firms in securing more Government contracts. Much more can be done and will have to be done if we wish to maintain the productive capacity of this segment of an economy. With military items becoming increasingly complex an effective subcontracting program must be developed. This program must have some teeth in it. I will not accept the statement that the Federal Government must leave the decisions of subcontracting entirely up to the prime contractor. I believe that the Small Business Administration must continue an all-out attack on the problems encountered by small firms in their dealings with the Government procurement agencies. This attack must encompass the areas of research and development, the availability of advance and progress payments, the use of sole source procurement, the availability of bid sets and specification data, the use of emergency procurement, the preponderance of negotiated procurement and numerous other fields.

Finally, I would like to state that such a program can best be accomplished by making the Small Business Administration a permanent, independent agency. Only in this way will the procurement agencies be made to cooperate to the fullest extent and to realize that Congress insists that solutions be found to the very serious problems confronting the small businesses in our country.

I will agree that when the time comes when we can greatly reduce the Federal Government's participation in the field of procurement of goods and services from our economy the need for a small-business administration may no longer exist. However, in this age of cold warfare where our defense budgets must remain high there does not seem to be any likelihood of a great reduction in the Federal Government's procurement program in the foreseeable future. During this period of great Federal Government activity we must preserve our basic system of private enterprise part of which rests on a proper balance between large and small business. Big business comes from healthy small businesses growing. Destroy the new growth or stunt it and we badly damage the future economy of our society. The SBA protects against this danger.

Those who could prolong the life of the SBA for a 1-year period or even a 5-year period instead of providing for permanent status are being completely unrealistic in their estimates of why the SBA should exist. Indeed, do they think this cold war will end next year or 5 years from now? By limiting the period of existence of the SBA they badly damage the effectiveness of SBA because they eliminate the long-range planning it must do to perform its job in this era of cold warfare.

Washington Report by Congressman Bruce Alger

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my weekly newsletter of last week.

The July 4th return to Dallas, 1,200 miles crossed in 4 hours of flight, strengthened my feelings of grassroots kinship with my district (as do letters and questionnaires). It's good to return home even though briefly.

The crucial natural gas bill vote awaited our reassembling in the Interstate Commerce Committee Tuesday morning. It was not a hapyy experience. The present gas bill is a highly controversial subject with a bewildering history. The Supreme Court in 1954 flatly reversed the intent of Congress by placing gas production under Federal regulation. The subsequent Harris bill was vetoed by the President because of questionable lobbying activities during Senate consideration. The President approved the bill's basic provisions, although he muddied the situation when he suggested that additional consumer price safeguards were needed, thus creating a freedom plus control contradiction. This year's bill thus becomes a strange and questionable compromise. Arguments for: (1) It frees gas from present utility ratemaking status. (2) It is a compromise between those having varied gas interests (one or more), the producers, transmission (pipeline) companies, and distributors (selling to ultimate consumers). (3) Even a bad bill is better than no bill. Arguments against: (1) The bill puts into law the erroneous Supreme Court decision. (2) In the compromise, gas producing and transmission were confused, pipelines requiring regulation but quite distinct from production which is fiercely competitive, hence no Federal regulation needed. A substitute bill (offered by MACDONALD, of Massachusetts, a regulation proponent) to free small producers from regulation, clearly demonstrated to me the confusion in the minds of some Representatives. His arguments for this bill were applicable logically to all gas producers. Later, in the final vote on the Harris bill, the

bill was approved out of committee 15–13. I voted "present" to express my disapproval of Federal regulations, though I would have voted "yes" (if the deciding vote) to bring the matter before the House and the Nation.

The Girard decision by the Supreme Court is reducible to two debatable basic propositions, it seems to me (after study of the Supreme Court decision and the district court case): (1) The Secretaries of Defense and State, together with the President, made the wrong choice in waiving jurisdiction over Girard, since under the agreement and treaty, soldiers on duty are under United States jurisdiction (regardless of Girard's conduct, he was on duty); and (2) the agreement and treaty abridges the Constitution by placing United States men under foreign jurisdiction (Bricker amendment would prevent such situations arising).

The civil-rights debate in the Senate shows no termination date yet. For my part, to leave no stone unturned, I wrote the President personally, enclosing my floor speeches analyzing some of the dangerous provisions, wherein more civil rights would be endangered than those the bill seeks to protect.

Politics may be clearly viewed by the present aid-to-education (classroom construction) bill situation. Speaker RAYBURN is pressing the Rules Committee to report the bill out. It is not to him, apparently, the principle of whether it's the Federal Government's role. No, rather it's a matter of bringing the bill to a vote so a record of Republicans voting against the President can be secured, this then becoming more important than whether or not we put the Government into building schools. Shouldn't Congressmen act rather on the merits of the bill, senior Members all the more so? True, politics has its rightful place, but should not first consideration go to the legislative provisions themselves?

The military construction bill passed allocating $1,624,000,000 for military real estate all over the United States and the world. (Texas always gets its share, $50 million this time.) The big debate occurred over getting the Defense Department out of business operation, some 2,500 businesses of 47 kinds. Again, the House refused to permit this Hoover Commission recommendation to pass, the vote being almost a party line—Democrats against, Republicans for. Now again, isn't it in order to challenge those Members who fear the loss of a Government operation in their district by stating: (1) If you were really for Small Business you'd stop Government from being the prime competitor (Government using taxpayer's own money to compete with him while the small-business man petitions for Government loan of amount similar to his taxpayment). (2) If you really want to cut the budget and economize, here's the place to do it legitimately, without endangering the military preparedness. (3) If you want to raise Government income legitimately, sell these Government enterprises to the citizens and thus put them on the tax rolls. (4) There is no constitutional justification for Government owning and operating business enterprises.

The Senator Is Dead—A Tribute to Joe McCarthy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial which appeared in the Register Times-Review of La Crosse, Wis., on May 10, 1957. It is a tribute to the late Senator Joseph McCarthy.

The editorial follows:

THE SENATOR IS DEAD

By tragic coincidence, only several hours after the editorial on controversy above was written, on of the most controversial figures of this decade, Senator Joseph McCarthy, died.

The Wisconsin Senator's death should be the occasion of thoughful meditation for the Nation. His health gradually gave way under the frightening burden and almost unbearable pressure of responsibility placed on the shoulders of a United States Senator who fearlessly undertook his duties of office. Few political figures on the national scene today care to be controversial. As a consequence they contribute little or nothing to the future of this Nation. History shows that all statesmen were controversial in their day. Only politicians are noncontroversial. Many Senators are mere politicians swayed by fads popular at the moment. Their guiding principle is one of political expediency. They will change their course in midstream should an ill wind brush against their political fortunes. They vote with an eye on the next election. Senator McCarthy can never be accused of such a perversion of high office.

Senator McCarthy's death reemphasizes what thinking people in America have known for some time: Any prominent figure who dares to be courageous and fearless in fihting communism will be crucified and crushed. In this respect Senator McCarthy and Representative MARTIN DIES are classic examples. Few men have been crucified as viciously as was Senator McCarthy.

There will be multitudes of hypocrites who will come forward after Senator McCarthy's death with platitudinous praise. We are concerned here not with the late Senator's voting record, but with his stand on atheistic communism and his approach to this sinister menace in our midst. On this we believe he was dead right. This we have consistently held even when it was unpopular to take such a stand. We have followed his activities at close range and have had many personal conferences with him. We feel qualified to evaluate his program of anticommunism. We do not agree with those who say "his intention was right, but his methods were wrong." We have carefully studied his methods over the past years and have not found them to be wrong; at times he may have erred in judgment but who dares to cast the first stone? The greatest error in our age is silence and in that Senator McCarthy never erred.

He did make mistakes as all men do, but these were rather tactical errors than mistakes of principle. Senator McCarthy was always sincere in his objectives. As a former Marine he fought tenaciously and bravely for that objective—to weed Communist-inspired-and-led termites out of the framework of American Government.

History may well prove that the silencing of Senator McCarthy by powerful forces in and out of Government following the Senate-Army hearings in 1954 to be the turning point of victory in the United States for the subversive menace of world communism. It is our conviction that he was throttled because he had reached pay dirt at the top. His investigations brought him to the front dorsteps of men of high rank in the United States.

The world, the Nation, and particularly the State of Wisconsin, mourn the death of the courageous Senator. It will be many years before Wisconsin or any other State sends to Washington a statesman with Senator McCarthy's courage, conviction, and ability. We cherished him as a friend in life, we grieve at his death. Few have served their country more totally, unselfishly, and effectively. His death is a severe loss to the Nation—a loss greater than most now realize. Long after his worst opponents—who frequently in their criticism didn't even bother to study the record—have passed into oblivion, Senator McCarthy's memory and contribution to the Nation and the world will remain. Few are entitled more rightly to the title that is his of being a stanch, loyal Christian American statesman. Perhaps his utter fearless action was sufficient to stop the advance of communism in the land he loved; perhaps his voice was choked out too soon. Perhaps his wife and associate should be a candidate for the seat he leaves vacant.

A man of controversy—yes—but also a man of history—that is Senator McCarthy. May his soul rest in peace.

Farm Aid Suggestions

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a news item which appeared in the Des Moines Tribune, Wednesday, July 10, 1957.

The editorial follows:

HILL OFFERS THREE FARM AID SUGGESTIONS

E. Howard Hill, president of the Iowa Farm Bureau Federation, suggested in a speech here Wednesday three ways in which the level of farm income might be increased.

Hill, speaking at a conference of Iowa vocational agriculture instructors at Hotel Fort Des Moines, reviewed the various farm-price-support programs and declared:

"Price supports may help if used in a sensible manner, but they are not the solution to the farm problem."

THREE METHODS

Instead, Hill suggested these three methods:

Discovery of new uses for agricultural products. "The untold possibilities of research, particularly for grain farmers, stagger the imagination," Hill said. "If scientists could discover a practical new use for one crop, such as soybeans, we could solve the surplus problem."

An increase in farm exports. Hill said that, in the main, America is not exporting a quality farm product and that what is exported is not being processed and packaged in the ways foreign customers desire it.

Lowering United States trade barriers so more manufactured goods could be imported, and give such countries as England, Germany, Italy, and Japan the finances with which to purchase additional amounts of American foodstuffs.

"Where we maintain trade barriers, we are preparing a welcome mat for the salesmen of communism to enter under the guise of salesmen of foods," Hill declared.

FARM INCOME

Hill told the vocational agriculture teachers that farmers' net income is down 30 percent since 1947 "and this downtrend has taken place while the income of practically all other groups has continued to rise."

Hill also suggested that farm income can be improved somewhat by increasing the consumption of meat, milk, and eggs and that there should be a concerted effort to

decrease farm expenses, particularly through correcting property-tax inequalities.

The conference, attended by 297 high school vocational agriculture instructors, is sponsored by the division of vocational education of the State department of public instruction.

During Wednesday's program eight teachers were honored for their years of service in such work.

Certificates for 10 years of service were presented to Marvin B. Baker, Sloan; Everet Berends, Fredericksburg; Raymond D. Shaw, Lenox; and Harold B. Turpin, Manson.

Keys honoring them for 20 years' service in vocational agriculture instruction were presented to Ralph W. Gruenwald, Tipton; Howard S. Wilson, Albia; Robert P. Hager, Waukon, and Clyde R. Andrews, Independence.

The conference will continue through Friday.

A United America

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. ANFUSO. Mr. Speaker, one of finest addresses ever delivered on the subject of North American and South American solidarity was made recently by my good friend, His Excellency Dr. Ezequiel Padilla, former Minister of Foreign Affairs of Mexico. The occasion was at the conference banquet of the American Society of Training Directors in Fort Worth, Tex., on May 16, 1957.

Dr. Padilla is an outstanding authority on international law and government. The title of his address is "America: Strength and Spirit of a Free World." In it he proposes the idea that just as we have created the political solidarity of the nations of the Americas, so it is necessary to establish an economic solidarity for the entire Western Hemisphere to make it "a union against the dangers of injustice and poverty."

This is a most interesting idea which, when realized, would help to solidify and strengthen our cause against communism. Soviet Government leaders recently boasted that they can win the French elections merely by distributing bread. They also boasted that in the 1960's the agricultural production of Russia will surpass that of the United States.

Of course, we know that this is not true. Communist Russia has for several decades been boasting of surpassing the United States in many fields of endeavor, but has never succeeded in fulfilling any of its boasts. But if Russia finds it difficult to do so now, imagine how much more difficult it would be for the Communists to match our achievements if we were to establish an economic alliance with all the nations of the Americas, such as suggested by Dr. Padilla.

A united America could produce enough food to feed the whole world. A united America could supply everything needed by mankind. A united America could really be a blessing to all.

Mr. Speaker, I am glad to insert into the RECORD Dr. Padilla's address and commend it to the attention of all my colleagues.

The address follows:

AMERICA: STRENGTH AND SPIRIT OF A FREE WORLD

If the splendor of this gathering were an assurance of a good speech, I should be able to deliver this evening a masterpiece. Nevertheless, my personal impression, here before you, is more or less the same as Lord Chamberlain must have experienced when, in a banquet in his honor, he was approached by the toastmaster who whispered in his ear: "Mr. Chamberlain, should we permit the tremendous gayety that is taking place in this hall to continue, or should I right away announce that you are going to speak?"

The presence in this room of more than one thousand prominent businessmen from the 48 States of this country, is the exponent of the constructive power of free enterprise; of the magic of private initiative that built this Nation, not only as the most powerful and highly respected on earth but, at the same time, the most luminous beacon of human liberties. And it is that free enterprise not only helps to develop economic power but also forges a world of just wages, of public works and institutions that complement those wages: libraries, parks, hospitals, schools, universities and, what is worth more, the basis of social security. In the course of history, man has not been able to attain economic justice and, at the same time, the enjoyment of human liberties. These realizations, of which this great country is a model and an example, constitute the ideology of democracies, which belongs not only to the United States but, as an irreductible inspiration to all of our America.

In these dramatic hours of mankind, this ideology has converted the American Continent into the spirit and strength of a free world.

Every time we look again at the Old World, we discover the spectacle of hatred, dissension, conspiracies, and anxieties. The Far East, under the subversive influence of Red China and the ominous neutrality of India; the Middle East, under the Communist penetration and discord of its peoples; Europe itself, creator of the greatest forces of human civilization—not to speak of the vast Soviet Empire whose organized conspiracy to install upon the ruins of all the liberties the gloomy system of slavery and terror—are all zones of confusion; their problems constitute the alarm and a grave threat to the conquest of man. In exchange, and in vivid contract, when we again look at our America, we discover, instead of the clouds that are descending upon the horizon, the brightness of a new day for the destiny of humanity. Here we have developed the greatest advances of international justice. The great principles that hardly a century ago were repelled by the then powerful peoples of the earth, now constitute the patrimony of America. Nonintervention, the equality of nations, the sovereignty of the people, obligatory arbitration, cooperation in peace and in war, are principles that have been born, or have been consolidated in the American nations. Doctrines converted into international law are perpetuated in the names of great patriots and American internationalists: the Monroe Doctrine with its multilateral meaning, the Pan-Americanism of Bolivar, the doctrines of Calvo, Gondra, Estrada, and other illustrious intellectuals, all Americans, have made of this continent, fertile in the sentiments of justice, equality and peace, the continent of fraternity and hope.

These great advances have culminated in resolutions as energetic as our treaties of reciprocal assistance of Rio de Janeiro in 1947 and of the preservation of our political integrity, which guarantee and safeguard us against warfare and against the Communist conspiracy.

But in this extraordinary ascension, new advances have become imperative. The frank cordiality of our peoples in demanding that the political solidarity we have established be extended into an economic solidarity of the entire continent. The union of all our nations against aggression from any exterior source, has its counterpart in the union of our nations against the aggression of misery. It is necessary to unite the policy of the good neighbor with the policy of the good partner. The dream of America has been to associate indissolubly our peoples against the dangers of war. We should also create an objective of our countries for a union against the dangers of injustice and poverty.

Economically, our peoples live in confusion and anarchy. This situation is dangerous when confronted by the forces which at this time rule the destinies of the world. The world is moving toward continental economies. This is undoubtedly a time of transition which in the course of future generations shall result in the economic unity of the world. But now the Far East, Russia, and the very Europe which is anxiously seeking its economic unity and in whose efforts England itself has broken with its traditional resistance for the uniting of the peoples of Western Europe, are all demonstrating to us that the economic forces being organized in large areas shall compete for the markets of the world.

It is not a revelation to affirm, as has already been done by economists and statesmen, that in an economic worldwide competition we are faced with the risk that Russia will gain through peace what its armed forces could not conquer by war: the domination of the whole earth. America, as a continent, until now has not been able to emerge from anarchy and economic confusion. It is pertinent to recall these prophetic words of Alexander Hamilton in 1781: "Our entire system," he stated at the time, "unfolds in disorder. Unless we can overcome this chaos, we can never become a great and prosperous nation." Now is the time to apply these words to the entire hemisphere.

One of the greatest motives which disturbs the cordiality of our countries is the exchange of our products. Latin America produces strategic materials and agricultural products of basic worldwide consumption. The United States, in turn, is the supplier to Latin America of machinery and industrial products needed for its economic development. This interchange takes place under conditions that are adverse to Latin America. Briefly it can be explained as follows: The United States has had until now the power to set by itself the prices of its own products. These prices are fixed in accordance with costs of production but in these costs the just and fair wages of its workers are strongly protected. Latin America, on the other hand, does not have the power to set its own prices. Until now its principal consumer, and practically only customer, has been the United States. Latin Americans fix prices surely also in accordance with production costs, but in these costs the wages of the Latin American worker lack equitable protection. The wage of the American worker in the United States is, without a doubt, 10 times higher than that of the worker in Latin America. This can be explained in accordance with the blind forces of economics; but we should not forget the new forces which are working throughout the world. In April of last year, the Day of the Americas, I had the honor

of addressing the Pan American Society in New York, when I reiterated my constant assertion that in order to ward off the economic anarchy prevailing in our continent, it was necessary that the representatives of the 22 American nations, including Canada, meet for the purpose of discussing and planning a common economic system for the entire hemisphere. It was a profound satisfaction for me to note 3 months later the coincidence that took place at the Pan American commemoration in Panama when President Eisenhower proposed a meeting of representatives of the presidents of this hemisphere to discuss and resolve the great economic problems of the American nations. From then on this idea is moving forward. The representative of President Eisenhower is his own brother, Milton. There are problems of great economic significance being discussed: the creation of an Inter-American Bank which shall release the energies of the common man of our nations, investments for mutual benefit, technical cooperation, and economic justice which has been the principal theme of this speech.

Neither the time available nor the known facts allow us to observe the results obtained, but one thing is certain and that is, that this idea no longer can retrogress. The question President Eisenhower presented on June 22, 1956, before the meeting of Presidents in Panama, cannot have anything but and affirmative reply. That question was: "Can we, the United countries of America, now advance to a new phase of association in which we shall dedicate ourselves to the wellbeing of the human individual with the same measure of enthusiasm and of effort that we have dedicated to the abstract principles of unity and justice?" In this interrogation, there is the recognition of the valor of man; it is an echo of the assertion of Socrates and Jefferson. It is the same declaration constantly made by President Ruiz Cortines: "Man is the essence of the Universe." The objective of Governments is not a monstrous totalitarian abstraction, in the name of which the individual is sacrificed and the peoples are enslaved; but the living man, the true protagonist of history, the man who fights, suffers, dreams and dies.

The United States is the leader of the world, but this involves the imperative moral of representing not only its own national interests, but the interests and aspirations of its allies.

The goals of Soviet conquest have made this clearer than ever. The union of America is more urgent than ever. Latin America, without the United States, would represent a sheer drop from the heights painfully attained. But it is also true that the United States, without Latin America, would gravely weaken its position, its moral force and the security of its destiny. We should not forget, on the other hand, that America, strength and spirit of the free world, has a mission to fulfill: that of putting this strength and this spirit to the service of the great causes of man in this tragic hour of humanity. There should reecho in our ears, as the voice of bleeding humanity, the appeal that the martyred people of Hungary directed to the free world in their very recent immolation:

"Our boat is sinking. The light is fading, and every minute the shadows are becoming darker; civilized peoples of the world, hear us, and offer us your fraternal hands."

An America, strong and united, should know how to reply to that call.

Bastille Day

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. O'HARA of Illinois. Mr. Speaker, yesterday, July 14, was Bastille Day, a day on which we joined with our allies, the French, in celebration of an event weighted with significance for the people of France as well as our own citizens.

It is fitting and proper that we pause on this day to remind ourselves that Frenchmen fought, bled and died beside our own troops during our fight for independence. In reminiscing, we think lovingly and gratefully of the youthful La Fayette who, fired by the story of our gallant fight for freedom, eluded the vigilance of the French King and made his way to the side of George Washington. We still enjoy his military acumen as well as his humor in recalling his comment at Yorktown that he, George Washington, Generals Wayne and Green with the assistance of the French fleet under Rochambeau contrived to "trap Cornwallis in his own mousetrap."

Yes, Mr. Speaker, July 14 is a day on which we congratulate our allies the French and ourselves on the dawning of a new day for a well-nigh benighted world.

On this day commemorating the 168th anniversary of the storming of the Bastille, while we reflect, for a moment, on the inner significance of that past event, we must retrace some of the history of the Bastille itself in order to do so.

As we all know, the Bastille was a fortress which once flanked the city gates of St. Antoine in Paris. Its construction was begun in 1370, and it was completed in 1382. It became a State prison, finally holding many ill-starred but illustrious victims. But the infamy of its treatment of prisoners made it one of the most hated institutions in all Europe. Its name became synonomous with injustice and brutality, a symbol of the despotism of the old royal regime of France. The climax of the reign of terror came during the ministry of Cardinal Richelieu. However, it was not until the mass revolution in the late 18th century, that the Bastile was to play its most historic role, when the people of France rose, as one, and destroyed it.

On July 12, as we also remember, events in Paris began to move rapidly toward chaos and destruction. Angry mobs surged through its streets festering and restive under the harsh and unjust demands of the authorities. Finally, 2 days later, the mob stormed the Bastille, forced its surrender and murdered the commander and a few of the Swiss mercenaries hired to crush the popular uprising. This mob literally pulled down the Bastille's walls, leaving not one stone in place. It is, beyond question, one of the most dramatic events in all modern history.

For the French it has become their chief national holiday, a day when liberty for the people became a reality. In recognition, also, of the closeness of Revolutionary spirit and ideologies of the French and the Americans, Lafayette sent the Bastile's key to George Washington as a relic. It is still to be seen at Mount Vernon.

The ideals of the French Revolution are universal ideals, and Bastille Day today, as well as in 1789, still symbolizes the ideals of liberty, equality, and fraternity. Today, as well as in 1789, human beings still rise, as one person, against tyranny, oppression and injustice, determined man shall guide his own destiny, follow the dictates of his own conscience, be master of his own fate. As the Hungarians battled Communist tanks with stones and sticks in Budapest last October, so did the French strike at the once-believed impregnable Bastille. Then, as now, it was proved that only fear holds people captive, a fear which can be conquered when the soul of man asserts its inherent rights and demands justice and freedom be the only voices of authority. If the United States struck the first blow against absolutism in 1776, the storming of the Bastille marks its death knell. We do well to remind ourselves of our Revolutionary past, understanding what it means to oppressed, downtrodden peoples to taste the sweet draft of liberty for the first time.

The world's struggle for peace, justice, and liberty continues today. And we cannot remind ourselves too often it will be a continuing fight as long as there are power-seeking elites tyrannizing people, refusing them the rights and privileges basic to their welfare and happiness. For the entire world, therefore—not just for France—Bastille Day remains the symbol of man's refusal to submit indefinitely to despotic rule and dictatorial mandate.

Senate Makes Mockery Out of Economy Drive

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. KNOX. Mr. Speaker, I ask unanimous consent to insert in the RECORD an

editorial from the Otsego County Herald Times, Gaylord, Mich., which in my opinion expresses the feelings of many of my constituents in the 11th Congressional District of Michigan.

The editorial follows:

SENATE MAKES MOCKERY OUT OF ECONOMY DRIVE

The Senate of the United States succeeded in losing a lot of prestige after leading all of us taxpayers to believe that it was seriously trying to protect our tax dollars by cutting unnecessary items from the budget, then turning around and voting to approve a Federal dam at Hells Canyon.

This job will cost taxpayers somewhere between $300 million and $500 million. We taxpayers here in Michigan would receive no benefit from the dam, but we would be among the heaviest contributors to it.

Oddly enough, private enterprise has already spent several million dollars to start building three private dams there which would generate almost as much power as the Government dam.

The firms have been granted a tax writeoff to encourage them to develop the dams.

What makes mockery out of the Senate's campaign to reduce expenses of Government is this proposed new expenditure of almost a half billion dollars—all completely unnecessary. The firms which will build the needed dams will pay taxes, and the money they use will not be the already overburdened taxpayers' money. It will be their own.

The Democrats who voted for it talk of the private companies making a power grab but how about the taxpayers' grab they are putting out?

We hope the House of Representatives doesn't fall for this wild new program of spending tax dollars needed now to pay off debts. We have faith that President Eisenhower will veto the project even if they do, and we don't feel that either the House or Senate can muster up enough votes to override the President's veto.

Social Security Wheat

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BEAMER. Mr. Speaker, many of us who live in the Middle West and have lived our entire lives in the endeavors of agriculture, appreciate the situation of the farmer. Shame on those who would try to place the blame on Secretary of Agriculture Benson. Congress must assume its responsibility and discontinue its repeated attempts to make political vassals of the farmers.

Under unanimous consent I include the following editorial from the July 6, 1957, issue of the Prairie Farmer on this subject:

SOCIAL-SECURITY WHEAT

No one really expected wheatgrowers to vote down quotas. Everybody is unhappy with the wheat situation, but nobody is ready to do anything about it. When the explosion comes, it will probably come from the Plains States where wheat has always been a principal crop.

One big reason for this is that Eastern and Midwestern States are going in for social-security wheat in a big way. Unless some means is found for cheapening wheat so it can be used for feed, the big wheatgrowers in the West are bound to lose out.

Take Illinois as an example. Wheat acres allotted for 1957 totaled 1,414,575. These have been reduced by 25,000 acres for 1958. However, Illinois farmers actually planted 1,737,000 acres of wheat for 1957. Somebody cracked the allotment to the tune of 322,425 acres. They were the small growers of 15 acres or less. Figuring an average of 10 acres, there must have been approximately 32,000 of them.

Many of these growers are in top-grade corn country and normally would not be bothering with wheat. However, wheat is an easy crop, the support price is very good, and Uncle Sam is ready. The man who raises less than 15 acres does not actually sell to the Government, but what's the difference? Uncle Sam takes the bulk of the wheat and leaves him a nice market.

Texan's Interest in Hells Canyon

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. ULLMAN. Mr. Speaker, a good deal of misinformation has been peddled by the private power utilities concerning the cost of Federal construction of the high dam at Hells Canyon to the taxpers of other States. Characteristically, the private power companies' propaganda overlooks certain important facts with regard to who would be paying for this project. They forget to mention that it is the ratepayers themselves who would pay well over 85 percent of the total cost of the high dam plus all interest charges.

A recent article appeared in the Eastern Oregon Review, which is published in LaGrande, Oreg., in the second district which I represent. The article pictures clearly and concisely the true situation with regard to the development of the Hells Canyon stretch of the Snake River. I wish to commend the editor of this newspaper, Mr. C. J. Shorb, for an article which I believe sheds considerable light on this particular aspect of the Hells Canyon fight.

Under unanimous consent, I include the article in the Appendix of the RECORD:

The article follows:

TEXAN'S INTEREST IN HELLS CANYON

An article printed in the John Day paper attracted our attention. It was printed as an editorial but we have a very vivid feeling that we have read that item elsewhere and feel that it might be just what it sounds like, a piece of propaganda for the power monopolies. The article is headed, "Texas Looks Toward Idaho," and goes on to relate why a Texan is so interested in the Hells Canyon because he is going to have some of the bill to pay. If that was all the item said we would not take the trouble to comment but the item was so full of misinformation that we just didn't like to let it pass without comment. We are sure that whoever wrote the article knew it was rife with misinformation and that it was run for the purpose of attempting to bias the readers against a great development which seems to be winning more favor in our section of the Nation.

First, the article states that Texas citizens will be forced to pay some $22,375,380 of the amount necessary to build the high Hells Canyon Dam way up there in Idaho. That would sound like the Idaho Power version rather than a Texan's for we believe that even the Texans know that Hells Canyon is no more in Idaho than in Oregon. Only the Idaho Power Co. and a few of their cronies in Oregon seem to feel that Oregon has no interest or personal ties with the Hells Canyon Dam. That company has completely ignored the State of Oregon and its laws and its rights in the project. Their actions have been highhanded and most assuredly a sore spot with most loyal Oregonians. We feel that our State has an interest there and our interest should be protected.

The writer of the John Day article failed to state that virtually all of the cost of the Hells Canyon Dam, were it built by the Government, would be repaid—yes—with interest to the Treasury of the United States. Other projects on the river have already repaid a very material portion of their cost and far in advance of the time limit given them.

In addition to that, the power produced at other river dams in the Northwest by the Government has brought about the appearance of wealth many times the value of all the dams combined, and every year that increased value in new business, new farms, to say nothing of new services rendered for our people at a saving to them of millions, have produced more taxes each year for several years for the Government of the United States than has been the cost of any of the dams or would be the cost of the high Hells Canyon Dam. The people of Texas should welcome that fact, and so should the editor of the John Day paper, for in that influx of new values in the Northwest is a tax base for payment of much of the taxes that might otherwise be theirs to bear.

The other statement which we want to differ with is the old one seen so often in power company propaganda works, that if the private utilities continue the job of developing the Hells Canyon reach of the river the taxpayers would contribute absolutely nothing and all the money will come from private sources. Evidently the writer did not learn of the huge tax writeoffs which the company asked for and received and later in an effort to correct their deviation from truth and responsibility, after being caught and the public informed, were willing to pass the handout of millions asked from the Government. Those millions in tax writeoffs would come directly from the taxpayers of the Nation, including Texans. The ratepayers including the patrons of the John Day newspaper would be saddled with some of the cost of the development from now on by the private producer and the tax writeoffs would not be to their advantage in any way. The rates would be predicated upon the overall cost of the project plus all expenses, necessary and unnecessary, plus an assured profit which most business people do not enjoy.

If the person from Texas, if there was such a person, worried about the expenses of Hells Canyon his worries would not be so great had he read the findings of one Washington correspondent who dug into tax writeoffs, and found that the tax writeoffs to hydroelectric companies in the United States last year would amount to approximately $10 to $12 a year for each taxpayer in the Nation. At that rate the taxpayers of Texas are paying each year an amount equal to the amount the John Day article states fallaciously they would pay for the entire construction of the Hells Canyon high dam.

Delaware River Channel Improvement

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. FULTON. Mr. Speaker, I would like to submit a well-written editorial on Delaware River channel improvement.

The editorial follows:

[From the Philadelphia Inquirer of July 15, 1957]

TRUTHS ABOUT THE CHANNEL

On the principle that every bit added to what you've got is better than what you had, there will be cheers now that the Senate Appropriations Committee has upped the appropriation for the Delaware River channel for the coming year by $2 million, to a total of $11 million.

It is to be hoped that when this measure goes to a conference committee with the House of Representatives, the $11 million figure will not be cut. For it is still $5,500,000 short of the $16,500,000 which United States Army engineers said could be profitably used in channel dredging this year.

Since it will be some time before the measure reaches its next stage in the legislative process this may be a good time to spread on the record—for public understanding—some facts about our channel. Particularly, it is important to nail some recent lies and correct some flagrant misstatements.

Falsehood No. 1: This is the cry that deepening the upper channel to 40 feet will benefit only 1 company, United States Steel.

The truth: Prospect of a 40-foot channel has been attracting a large number of new industries on both sides of the channel above Philadelphia. Here are just a few who will use that channel, in addition to United States Steel: The National Gypsum Co., which is building a multi-million-dollar plant at Burlington, N. J.; the Meenan Oil Co., at Levittown; the Wood Conversion Co., which plans a multi-million-dollar plant near Burlington; the Phoenix Iron & Steel Co., which is also locating in the Burlington area.

These plants, and others, are planning their future business on the basis of a 40-foot Delaware River Channel.

Falsehood No. 2: That the measure now before Congress provides for spending $91,738,000.

The truth: The measure before Congress involves only $11,000,000. Future expenditures are up to Congress.

Falsehood No. 3: That the Delaware Channel is a gift by the Nation's taxpayers to this area.

The truth: In general taxation, the Philadelphia metropolitan area pays far more to the Federal Government than it receives in return. And over the past 50 years Delaware River development has cost the Federal Government $105,000,000—while it has received here in customs receipts more than 14 times that sum. In 1951 alone Port of Philadelphia customs receipts were $52,300,000.

If anybody is making gifts, it is Delaware Valley who is making them to the rest of the Nation, not the other way round.

Delaware Valley is growing in spite of pullbacks and carpers. From January to June 1954 our port handled 15.6 percent of the Nation's foreign commerce, compared with 12.5 percent during that period of 1953. And our increase took place at a time when the whole Nation's waterborne commerce had declined 4.3 percent. Finally, in import tonnage, our port has become the country's first.

So, we place these facts on record to spike the falsehoods. So, too, do we register our thanks to Congress, both for a prospective increase in the channel appropriation and for the decision of both houses to make it a 40-foot channel—not a 35-foot channel.

This is a good time to thank, also Senator Edward Martin, who has been in the forefront of this campaign: Senator Clark, and our members of the House of Representatives who have fought this good fight year in and year out.

They know, as we do, that it cannot be said too often, or too loudly. Delaware Valley asks no gift. It asks only its due: the right of this Nation's Birthplace to continue to serve its historic major role as one of the great ports of the United States of America.

Correction of Military Discharges, H. R. 7530

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. MULTER. Mr. Speaker, on June 24, 1957, I had the privilege of appearing before the Special Subcommittee on Military Discharges of the House Committee on Armed Services. The following is my testimony before that committee in support of my bill, H. R. 7530:

STATEMENT OF HON. ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Thank you, Mr. Chairman, and members of the committee, for the privilege of attending here so that I can be heard in support of my bill H. R. 7530 and similar bills dealing with the plight of individuals who have been or who are hereafter discharged from the armed services under conditions other than honorable.

May I say, Mr. Chairman, that I am sure that your record of the legislative situation shows that there is no way other than Presidential pardon that a former member of the armed service can get a pardon for the offense for which he received a discharge, other than honorable. I might say when we talk about discharges other than honorable, I at least include within the terms of my bill, and I trust that the chairman means to include within the terms of his bill, not only the discharge which is labeled "other than honorable," but also the dishonorable discharge.

I think the whole subject should be covered and every type of discharge other than an honorable discharge should be subjected to review in the plan of the proposed bills being considered by the committee.

The present law and regulations permit review of these discharges only for the purpose of correcting the discharge if there was something wrong in the first instance in the manner in which it was issued or because the trial was improperly conducted or on the basis of the law and the regulations applicable, the sentence and the punishment was too severe.

The only other remedy is a Presidential pardon, and if any of you gentlemen have had experience along that line, you know how long and arduous and almost impossible it is to get a Presidential pardon, and then after he has gotten it, his discharge still remains unchanged. Even though a Presidential pardon may be issued to the man, he still carries with him for the rest of his life imprinted "other than honorable" or "dishonorable," on his certificate of discharge.

By far, the greatest number of these men have committed no serious offenses. They are, in the main, minor offenders who because of some less serious infraction have been sentenced by a court-martial, not to the punishment of a dishonorable discharge, but to the lesser punishment of discharge under conditions other than honorable.

That is not to say, those who received dishonorable discharges will not be able to avail themselves of the benefits of this law, if enacted.

Many men, who were suffering from some mental defect or disease which prevented their meeting acceptable standards of social or military conduct, have received such discharges. These men are not real criminals; they are not murderers, traitors, or rapists; they are minor offenders. Even the Armed Forces distinguishes between them and real criminals by giving them discharges other than dishonorable.

When a man receives a dishonorable discharge from the Armed Forces, it is almost impossible for him to get a job. No one wants him. He goes from job to job. He never gets started. His family and friends drop away. Let's face the hard fact; he pays for his crime the rest of his life. He never gets an opportunity to be rehabilitated. He may be, and oftentimes is, forced into a life of crime as the only alternative to starvation.

If it was intended that these offenders also should pay for their offenses during the rest of their lives, then it would be more humane to incarcerate them in jails for their lifetime. No one dares suggest that. Then why inflict this blight upon their whole lives?

I say to you, however, that today the practical result is the same. This is particularly dreadful to contemplate as to the minor offender with a less than dishonorable discharge. The ordinary civilian employers have neither the time nor the patience to draw fine lines of distinction in this matter. They say, "If he doesn't have an honorable discharge, we don't want him." Under these circumstances there is no hope of expiation for that man, nor of rehabilitation for himself or his family.

No hope, gentlemen; no hope for either him or his family. Let them pay and pay for the rest of their lives. Is this the quality of justice and mercy of which we as a Nation can be proud? Shall we mete out to these offenders the cruelest punishment which one human being can mete out to another—hopelessness? Shall we be merciless?

Gentlemen, permit me to quote to you the great words of that teacher in Israel, the Christ of the Christian world, when Peter came up to him and asked:

"Lord, how often shall my brother sin against me, and I forgive him? As many as seven times?" Jesus said to him, "I do not say to you seven times, but seventy times seven" (Matthew 18: 21).

Shall we not forgive these men once?

My bill, H. R. 7530, would give them hope. It sets up a board of pardons. It would permit them, under proper conditions, to rehabilitate themselves and their families, and, where eligible, to atone for their past offense by further service in the Armed Forces.

It proposes to establish, outside of the Department of Defense, a Board for the Correction of Discharges and Dismissals, composed of five civilian members appointed by the President with the advice and consent of the Senate.

Members of the Armed Forces who have been, or are in the future, discharged under

conditions other than honorable would be entitled to file a petition, after 3 years from discharge, for a certificate which would entitle them to reenlist in the Armed Forces.

After 5 years from discharge, they would be entitled to petition for a discharge under honorable conditions.

In the case of certificates to reenlist, the Board would review the preceding 3-year period and grant the certificate if it finds that character and conduct during such period was good and that petitioner would be otherwise eligible for reenlistment.

An individual, his heirs at law, or legal representative, filing a petition after 5 years from discharge, could obtain a discharge under honorable conditions if the Board found his character and conduct during such period to be good.

Such discharge, however, would not entitle him to any monetary or other benefits under the laws of the United States to which he would not have been entitled if such discharge had not been issued.

The bill also contains the necessary operational provisions, such as authority for independent investigations, holding of hearings, appointment of a staff, and the like.

It is unjust that these individuals should be required to undergo lifelong suffering without an opportunity to prove that they have been and can be good citizens. Many of them are or were in their teens with their whole life still to be lived.

We cannot do anything about the reactions of the public because of the discharge. We can, however, do something about the duration of such reaction toward those young men who have attempted to reestablish their character by blameless conduct for a reasonable time.

One of our colleagues has pointed out that 69,323 boys received discharges under conditions other than honorable between July 1, 1950, and June 30, 1955; the present boards for the correction of military and naval records have, under the punitive rules under which they operate, changed or corrected only 561 military or naval records. This amounts to about eighty-one one-hundredths of 1 percent of the 69,323. Think of that, gentlemen, less than 1 percent of the 69,000 boys involved have had their records corrected.

That is not to imply that the board did the wrong thing in failing to make corrections, but they are limited. They must review the record as originally presented and ignore everything that has happened since.

The reasons for that, I believe, are that the review is in effect by the military, and the review looks not to whether the person has earned a pardon but whether the original punishment was proper.

This new board sought to be created will not review in the light of military law and regulations and not in the light of propriety of the original decision or the sentence. It will be concerned solely with whether the applicant is entitled to be pardoned in the light of his subsequent good conduct.

My bill, H. R. 7530, is not concerned with going back to correct the record because of some new factor which indicates that perhaps the sentence by a court-martial to such a discharge was unjust or too severe. This bill runs to the continuance of the punishment. It recognizes the fact that to continue to punish these boys beyond a reasonable length of times is both unjust and unmerciful. Once again, I would call to your mind the words of Jesus, that great teacher in Israel:

"Blessed are the merciful, for they shall obtain mercy" (Matthew 5: 7).

Gentlemen, I urge the adoption of H. R. 7530, or a bill such as the chairman and the other members have submitted urging that the principle be enacted. The details I am sure you gentlemen, in your wisdom, can take care of in a good piece of legislation.

Again I wish to express my appreciation for the privilege of appearing before you to present my views.

Mr. DOYLE. Thank you very much. We appreciate your doing so.

We have before us every bill along the lines of the subject which have been filed in the House, regardless of what variation there is in them from 1108. We have them all before us and are familiar with the texts of all of them, and we appreciate your diligent work in the field.

Mr. MULTER. I am sure we are all in agreement that it is hight time something was done about this. I believe it is the first time in 10 years such legislation has even gotten a hearing before the Congress, and I am sure this is going to bear fruit.

Mr. DOYLE. Thank you very much.

Reapportionment Act of 1929

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article of general interest in the June issue of the Connecticut Bar Journal by Hon. John Q. Tilson, a former Member, and for several years majority leader in the House, now a member of the New Haven bar and the State Bar Association of Connecticut:

REAPPORTIONMENT ACT OF 1929

(By Hon. John Q. Tilson)

It may be truly said that the fair and equitable apportionment of the population for purposes of representation lies at the very base of the requisites for a representative self-governing republic. In our own Congress it has been a serious problem arising in acute form after each decennial census from that of 1790 down to the passing of the Reapportionment Act of 1929. The problem has arisen because of unequal population increase in the several States and the unwillingness to enact a law that would reduce the number of Representatives in a State. Until after the census of 1910 the problem was usually solved by following the line of least resistance which meant increasing the total membership enough to prevent any State from losing a Representative.

At the time of the 1920 census the number of Members had reached 435. Since 1910 a war had intervened and there had been notable shifts of population. It was evident that unless the membership of the House were substantially increased, a number of the States whose population increase had not kept pace with some of the others would have to lose or more Representatives. The results of the 1920 census confirmed the worst fears and human nature being what it is, there is little wonder that for four successive Congresses the constitutional mandate for decennial reapportionment was not complied with. This furnished the background for the passage of the 1929 act which effectually solved the century-old problem of fixing the number of House Members. To change it would now require positive legislative action concurred in by the Senate and approved by the President of the United States. With the almost universal feeling that the House is already too large for maximum efficiency and that to increase it substantially would be most unwise, there is little probability that it will be increased. It is almost certain that no Senate would concur in and that no President would approve such legislation.

The passage of the usual decennial reapportionment acts rarely attracted much attention from the general public. They were simply taken for granted. The passage of the 1929 act, although the circumstances were somewhat unusual, still created little stir outside of Congress and very few headlines in the newpsapers. This may have been due partly to the fact, as will appear later on, that in the end the outcome turned largely upon parliamentary procedure which most outsiders regard as technical. The serious character of the matter involved makes it truly a historic controversy effecting a problem historical in its origin and of tremendous importance to the future of the Republic.

In the June 1956 issue of the Western Political Quarterly, published by the Institute of Government, University of Utah, appears an article by Dr. Orville J. Sweeting entitled "John Q. Tilson and the Reapportionment Act of 1929." In this article the writer describes in some detail the parliamentary battle leading up to the passage of the act. Perhaps he gives Tilson undue credit for his skill in managing the fight, but it was, nevertheless, Tilson's immediate responsibility. The writer of the article sent a copy to the veteran parliamentarian, CLARENCE CANNON, an active participant in the controversy and now chairman of the great House Committee on Appropriations in Congress. Acknowledging receipt of the article, CANNON gives his estimate of the importance of the result, though he had fought on the losing side. In referring to the account of the contest, CANNON says "it covers one of the most interesting and most important chapters in the parliamentary history of the Nation and serves to further emphasize the invaluable service rendered by Tilson as majority leader and an incomparable parliamentary swordsman in one of the most critical sessions of the House." Further complimentary references to the influence exerted on Congress and its procedure are here omitted.

The fact that two such men as CANNON, a veteran statesman and a parliamentarian of nationwide repute, and Sweeting, an earnest student of parliamentary representation in self-government, so emphatically agree as to the importance and far-reaching effects of the legislation here involved has inclined me to add to the record a little further account of the background, the difficulties to be overcome, the turning point, and the final outcome of this historic legislation.

As stated above, it became certain after the 1920 census that on the basis of 435 Members a reapportionment would necessitate the loss of Representatives in quite a number of States. Bills were introduced during the intervening Congresses, but none reached the stage of serious consideration. This was the situation at the beginning of the 69th Congress in 1925. Coolidge had been triumphantly elected President with both branches of Congress strongly Republican. Nicholas Longworth was chosen Speaker of the House and I was elected majority leader. From the beginning of my leadership the one responsibility that lay heaviest on my mind was the fact that for half a decade the House had flagrantly failed to perform a duty clearly imposed by the Constitution. Now my own party was in power and I had been assigned a spot near the center of the stage for action. It was not a question of where do we go from here. I knew where we should go but just how to get there was quite a different matter. Of course, I took the matter up with the President, the Speaker, and many other leaders in both political parties, for fortunately

party politics was not involved. Outside students of parliamentary representation were consulted. One in particular, Prof. Walter F. Willcox, of Cornell, now in his nineties and still actively interested in the subject, was most helpful. The question was considered in all its apects. Half the decade was gone and it had become evident that no satisfactory apportionment act could be passed on the basis of the 1920 censu. The 1930 census was only 5 years away.

Consideration now turned toward some sort of anticipatory legislation. In the act of Congress providing for the 1850 census, a provision was added fixing the number of Representatives and directing the Secretary of the Interior to apportion the fixed number among the several States in accordance with the population of each as shown by the 1850 census. However, in this case, an entirely new act was passed in 1852 disregarding the earlier act though using the same number as fixed in that act. The fact that the earlier act had provided for an administrative officer to make the apportionment in this particular instance suggested the idea of a permanent act requiring such action in case the Congress failed to comply promptly with the provision of the Constitution. This idea was carefully worked out in shaping the legislation finally enacted. In effect it provides that unless Congress at its first regular session after a decennial census shall have enacted reapportionment legislation, the executive department shall proceed to apportion the then existing number of Representatives among the several States according to population as shown by the census and by a method carefully prescribed. Changes in the method, especially as to the fractions of the established ratio, may be made—already some have been made—but "the existing number" will probably not be materially changed for a long time to come.

It is a matter of interest to speculate as to what would have happened had this legislation failed at that time. It is quite certain that further attempts in this direction would have been futile until after the 1930 census. The results of that census showed an even more unequal increase of population than had the census of 1920. To prevent the loss of membership in any State would require the enlargement of the membership by about a hundred. Probably no legislation at all would have been enacted, the unequal representation would have continued, with the degree of inequality greatly increased.

The parliamentary struggle attending the passage of the act may here be dwelt upon but briefly. It consumed the major part of 2 legislative days and covers many pages of the Congressional Record. Dr. Sweeting's article quotes from it freely. What at one stage of the proceedings looked like a fatal stroke for the bill was later turned into an aid toward its final passage.

The generally accepted rule in parliamentary procedure for the introduction of amendments is that it is not admissible to inject under the guise of an amendment a subject different from that under immediate consideration. One thing at a time is the purpose of the rule. The bill was being read for amendments and at the moment had reached the clause for the exclusion of certain persons that were not to be counted for representation. From the first apportionment act passed by Congress this clause had read "Indians not taxed" and at this stage it was the one subject before the House. A Member from a State that would surely lose a Member offered an amendment proposing a new subject of exclusion, aliens. Had I been in my seat I should have made a point of order against the amendment which would probably have been sustained but I had left the hall for a bite of lunch and before I could return debate had begun on the amendment which precluded making a point of order against it. A combination of southern and mid-westren votes adopted the amendment. Its adoption established a class of exclusions and entitled Mr. Tinkham of Massachusetts to offer his pet amendment to exclude from the count disfranchised Negroes. It was agreed to by a different combination of voters including those who wished to kill the bill at any cost. It is a common way to kill a bill by loading it down with objectionable amendments. A very close vote was expected in passing the bill as it was drafted. The alien amendment alone probably doomed the bill; with the Negro amendment its passage was out of the question. At this point the battle was apparently lost.

An adjournment was secured and before the bill was taken up again 2 or 3 days later an amendment was prepared which if it could weather the storm of points of order and be agreed to would eliminate the two odious amendments. In addition to removing these, the amendment included other substantial additions so as to make it in fact materially different from any amendment previously submitted. It was readily admitted, however, that its main purpose was to remove the two exclusion amendments. Points of order came from all sides. Both these amendments had been inserted by a safe majority vote. As against my amendment it was contended that we could not do by indirection what could not be done directly. Certainly a motion to strike out singly either amendment would not be in order having been voted in by a majority. My contention was that my amendment presented a new question materially different from that of any amendment previously voted upon and being obviously germane to the matter under consideration was clearly not subject to a point of order. After several hours of heated discussion the Chair ruled in my favos.

Having cleared this hurdle my amendment was now in order for debate and a vote. Its introduction completely changed the situation. The Members from the Northeast who had voted with the Midwest for the Negro amendment were violently opposed to the alien amendment. They could not afford to vote against my amendment for it was their only chance to rid the bill of this odious exclusion provision. Southern Members who had gleefully joined with the Midwest to insert the alien amendment were furious over the Negro amendment and would not have dared to vote against my amendment, for here was the opportunity to vote out of the bill a provision that, if it could have been enforced, would have substantially lessened, the representation of several States. The adoption of the amendment was thus assured.

The storm raised by the parliamentary controversy concerning the several amendments helped clear the air for a more sober consideration of the bill on its merits. It gave occasion for an earnest appeal to Members to lay aside petty differences on immaterial things and pass a reapportionment bill, a duty that had been much too long delayed. This appeal to a high sense of duty seems to have been taken seriously. At any rate the bill was passed by a wider margin than had been anticipated. Its passage solves, probably for a long time to come, a regularly recurring problem of more than a hundred years' standing and does so without taking away or limiting any right or power of Congress conferred by the Constitution.

My membership in the House of Representatives covered eleven 2-years terms, 22 years, a record in length of service for any Connecticut Representative. Six years of this time I was elected floor leader of a Republican majority. It was my privilege as it was my duty, to taken an active part in much more or less important legislation. It was my earnest desire to do my full share of the work to be done and fair credit has been accorded to me as having performed meritorious as well as faithful service. Of all the service rendered by me during my entire tenure in office, however, it is now my opinion, 28 years later, that my leadership in connection with the reapportionment act of 1929 was the service most far reaching in its effect and the most useful to my country.

Protest Against Inflation

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the Record I am including a full-page advertisement from the July 12 issue of the Mexico Ledger, published at Mexico, Mo. It is signed by the Mexico Citizens Committee to Curb Inflation, consisting of some of the most prominent and progressive businessmen of the City.

It is merely one phase of a general protest which the Committee on Appropriations is receiving from all parts of the country.

The article is as follows:

Hon. Dwight D. Eisenhower,
President of the United States,
Hon. James T. Blair, Jr.,
Governor of Missouri,
Hon. Thomas C. Hennings,
United States Senator from Missouri,
Hon. Stuart Symington,
United States Senator from Missouri,
Hon. Clarence Cannon,
Member of Congress, the Ninth Missouri Congressional District.

Gentlemen: We are increasingly alarmed at the spiraling inflation that threatens our national economy and reduces the purchasing power of our money.

We believe the steady upward climb of the price-wage spiral, excessive Government spending, the ever-rising public and private debt with the resulting mounting tax burden, are basic factors that have brought inflation to our door.

We want a stable dollar that will buy a dollar's worth of goods. We will do our part to help bring this about and we expect industry and labor and our public officials—local, State, and national—to do the same.

Economy and efficiency must be effected in government as in business and in the home. Waste and duplication cannot be tolerated in the present state of our country's finances when the fate of our national economy, which is the basis of our national defense, is at stake.

Excessive Federal spending means higher taxes. This not only drains too much tax money from the people but it also takes needed revenue away from State and local units of government so they do not have the funds to do for themselves. Excessive Federal spending also fosters the habit of undue dependence on the Federal Treasury by local governments and private citizens.

In the present state of the national economy, we are urging all our fellow citizens against exerting pressure on the Congress for increased Federal spending. We also urge them to restrain themselves from taking any action that will tend to force higher living costs.

Inflation must be curbed. We believe this to be the responsibility of every citizen, whether he be in government, business, labor, agriculture or any other walk of life.

With the inflation spiral continuing upward, we believe our representatives in Congress should be judged by what they save us rather than what they get for us.

We believe that taxes are too high and should be reduced unless a definite portion is earmarked for reduction of the public debt. We want this tax saving ourselves to buy the things we need unless our country needs it more for debt reduction.

We believe it to be our duty to our country and our families to do our utmost to help mobilize our people to fight inflation which is a most dangerous threat to our national life.

We feel this peril from within our country could prove to be a greater threat to our Nation's security than any attacks from abroad.

A united effort by the people and their representatives can solve this problem.

Respectfully,

The Mexico, Mo. Citizens Committee To Curb Inflation: J. B. Arthur, Judge George Adams, Arthur D. Bond, Bradford Brett, Ray B. Carroll, Alan Coatsworth, W. R. Courtney, Dr. Thomas L. Dwyer, Frank Edwards, Paul Ekern, Lowell Hagan, L. B. Hawthorne, James H. Higgs, Maurice Kemp, William S. Lowe, Elmer MaGee, Mize Morris, Herbert Morris, Edward P. O'Brien, Herbert B. Plunkett, George Stahl, Walter G. Staley, Hollis Stolte, Col. C. R. Stribling.

A Tribute to Mr. Hugh Hallidy, of Nutley, N. J.

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. RODINO. Mr. Speaker, one of Nutley's beloved citizens passed from the scene last week. The townspeople of Nutley, and especially the children, will always remember this kindly man. His gentle nature endeared him to all. My good friend, Mr. Ralph Heinzen, editor and publisher of the Nutley Sun, in his final tribute to Mr. Hugh Hallidy describes him well as "the children's friend."

The editorial follows:

THE CHILDREN'S FRIEND

Hugh Hallidy found his greatest happiness in life in the uniform of a school crossing patrolman, in the declining decade of his 84 years. His love was children. For the youngsters who, blindly, trusted their lives to his ministrations or heeded his soft-spoken advice about safety at the busy corner of Kingsland Road and Passaic Avenue he was a soft touch. When a week's allowance had been spent, Mr. Hallidy was always good for a loan for ice cream.

The first Democrat ever to win election to the town council, back 47 years ago when Democrats were a rare oddity in Nutley, Hallidy had had a long civic and charitable career when he donned the uniform of the school police. The heavy mail of letters and postcards which reached him from "his children" during his fatal illness, the only sickness of his long life, proved that the affection which he invested in the tots he protected was a two-way feeling.

Hugh Hallidy loved children but that he was unwed and childless, himself, was the great tragedy of his life. A girl he was about to marry was killed in a railway accident and he never married. For the rest of his life, but particularly during the last decade as a school policeman, all children were "his children." They will miss their good friend.

United States-British Relations

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. FULTON. Mr. Speaker, it is a pleasure to submit for the CONGRESSIONAL RECORD the excellent interview which Harry W. Frantz of the United Press, foreign department, Washington bureau, had at Norfolk, Va., aboard the British carrier, *Ark Royal*, on June 10, 1957. The review quotes carefully Vice Adm. Manley Laurence Power, flag officer of the British aircraft carriers, who was attending the International Naval Review, celebrating the Jamestown Festival.

As the writing of the interview is excellent, the statements by Admiral Power should be read by every American official and citizen interested in the strategic disposition of the fleet strength of the free world.

The interview is noteworthy as it gives an experienced and authoritative British opinion on the effect on the British Navy of the recent British official white paper containing the program for the future reduction of British defense forces.

Every one of us who has been a United States Navy World War II veteran, or is at present on active duty with the United States Navy or Navy Reserve, has wondered what the effect of the proposed British reduction in defense forces would have on the British Navy, with which we have so long cooperated so closely as friends, and allies, and under the North Atlantic Treaty Organization.

Here is the simple and authoritative answer, and as the news dispatch is so well written, the meanings contained in the carefully worded statements of Admiral Power are plain.

The article follows:

Vice Adm. Manley Laurence Power, flag officer of British Aircraft Carriers, said today that United States relations with Great Britain are basically strong and that neither country can live without the other.

In news conference aboard the British carrier *Ark Royal*, here for international naval review, Power said, "The hands across the seas idea is still very strong. Some persons in both countries try to upset that idea, but it is basically as strong as ever. Neither of us could live without the other in the long run. We have fought together and we have played together pretty well."

Power said that aircraft carriers are the hard corps of modern sea forces. He said that scientists tell him they can make "a shopping list" for navies bigger than any country in the world can afford.

"You have to make your choice as wisely as you can. Once you pick up what you think is a winner there is no turning back. * * * Your (United States) Navy is luckier than ours because they have more money when they look into the shop window."

Power said regarding international naval review, "I cannot think of a more satisfactory way of celebrating the Jamestown Festival. It is very pleasing to us. We get few chances to cross the Atlantic, and the review afforded us wonderful opportunity to come here.

"I think there is not nearly enough contact between your citizens and ours, due to exchange situation and so on. Now, 3,000 of our young men have a chance to see your country and how you run things here."

Reporters asked many questions about naval effects of British white paper program for British defense forces. Power said that the proposed program would lead to reduction in manpower of the British navy but did not expect much cut in British active sea strength. He said a possible cut of 20,000 men might not have much effect on the size of Britain's seagoing fleet, and the effect on white-paper program on navy may be less than on other services.

"When the white paper was published there was a sigh of relief all through the Navy. We thought that we came out well indeed."

Admiral Power said there is a committee within the British Admiralty which is examining the redisposition of manpower and resources "to get more in the teeth and less in the tail."

He explained that in event of war, great disruption would occur in early days, before reserve ships could be recommissioned. Consequently, defense depends largely upon active sea forces.

Power said that Britain's Navy will cut away a lot of deadwood in reserve ships. He said Britain is presently converting 2 carriers and 1 is being built. British plans call for modernization of all carriers. He said no British carrier yet has full angle deck of 8½ percent in line. *Ark* carrier is 5 percent angle.

"That little battle of the pyramids in which we took part convinced us that carriers are absolutely necessary."

He said British missiles program has not gone far yet. "We are experimenting and testing now. I am not yet sure what will come out. It is possible that we might eventually come to a carrier for missiles without any aircraft."

Questioned whether Britain will have global striking force under the white-paper program or program confined to the NATO area, Power said: "We must be able to reach anywhere in the world because we have commitments all over the world. We should be able to operate in any part of the world where our interests or alliances are affects."

Earl C. Michener

SPEECH

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. DINGELL. Mr. Speaker, it was with considerable sadness that I read in the paper the other day of the death of the Honorable Earl C. Michener who died at the age of 80 on July 5, 1957. Mr. Michener was a Member of this

House from 1919 to 1933 and from 1935 until his retirement in 1951.

He was chairman of the House Rules Committee from 1925 to 1933 and from 1935 until his retirement he served as a member of the House Judiciary Committee. Mr. Michener is well remembered for his watchfulness over the Treasury and the taxpayers' money. He served his people long and with distinction. I had the pleasure of knowing him during my early boyhood and recall him as a kindly, gracious, and gentle man. He was much respected in Congress for his wisdom and for his decency and industry. When he retired because of his wife's illness, Congress lost a most able and conscientious man. The people of this country will miss a devoted public servant whom I know the good Lord will receive with mercy and kindness.

Peril of Creeping Inflation

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. JONES of Alabama. Mr. Speaker, under leave granted, I wish to insert an editorial from the July 5 issue of the Huntsville Times, Huntsville, Ala.

The editorial follows:

PERIL OF CREEPING INFLATION

The United States Government has a lot of problems—including Russia and world peace as the most obvious and immediate—but the one that grows day and night, that gnaws at the vitals of this Nation, and that affects every one of the more than 170 million people in it, is the peril of creeping inflation.

This has just been emphasized by the advance of $6 per ton in the price of steel, which soon will be translated into the price of nearly every item the American people use. Watch the cost of living march on up, from the cost of needles and pins to automobiles, refrigerators, and toasters. A few cents here, a few dollars there will be tacked on to the cost of nearly every item purchased.

The advance may be slow and uneven, and it may be even a year before all the inflationary effects of the steel rise will be felt.

This shot in the arm to inflation points up again vividly how fast this peril to our economy is growing. The old dollar has dipped below 50 cents in purchasing value, and it is still sinking.

A writer in the Christian Science Monitor cited the other day some of inflation's effects on purchasing power:

"By the end of May, the American people had spent 9 to 10 billion dollars on inflation in the past year. But the summer's warmth caught them not counting the cost.

"If someone had told the young couple buying a house in Suburbia in 1940 that their $10,000 to $12,000 project would cost $32,000 to $40,000 in 1957, the young people would have scoffed.

"If they had been told that their $1,200 modest automobile of 1940 would cost $3,400 to $3,600 in 1957, they would have thought the individual was slightly dreamy-eyed, to say the least.

"If they had been told their their insurance savings would be worth 25 percent less, they would have been shocked.

"If they had been told that their trust account arranged by their grandparents would have proven to be a sieve for large losses, they would not have believed it.

"If someone today would tell proper young suburbanites that they would need a $60,000 to $75,000 house between 1965 and 1970 for a modest residence, or that their modest, low-cost automobiles would be available at around $7,500, they couldn't be made to believe it. A lending program would be available to take up the slack.

"This is the nature of inflation. It is never believable."

This is not to say that inflation cannot be controlled. It will be a bitter pill to swallow. The longer the day is postponed, and the decision put off to meet the problem head on, that much more difficult will be the job.

It is idle to say, "Well, this can't happen to us. We'll get around to the job of controlling inflation in due time."

It can happen to us, just as it happened to nation after nation in Western Europe, as well as in other parts of the globe.

What Is Life Really Like in Red China?—First-Hand Report by GI Returnee—II

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the second of five interviews with American soldiers who chose Red China and then came home disillusioned. The interviews were taken and reported by U. S. News & World Report.

When one reads some of the unrealistic suggestions by other Americans that "we can do business with Red China," one could almost wish such Americans would also have to go through what these GI's did. Will we always refuse to learn until after our Pearl Harbors. The interview follows:

STORY OF GI TURNCOAT: RETURNING TO UNITED STATES IS "COMING BACK INTO WORLD THAT'S ALIVE"

Otho G. Bell was a prisoner of the Chinese for more than 3 years. He had just passed his 23d birthday—on January 23, 1954—when he went into China. He stayed for a year and a half, coming out in July 1955.

A farm boy, born in Mississippi, Bell had never taken to schooling, and it was a 10-year struggle to finish eight grades. Although books did not interest him, machinery did. He liked to tinker.

Like all the other 21 Americans, Bell was first put through a strenuous course in Communist theory and practice. Then he was assigned to a machine center on a collective farm in the Yellow River Valley, with the task of repairing farm implements and food-processing machines.

He now lives on a 2.5-acre plot near Olympia, Wash., and works at a mushroom farm nearby. On the side, he raises berries.

The following interview with Bell was recorded at Olympia:

Question: "Did you like the Chinese people?"

Answer: "The only thing I could say I did like there was the people, that were suffering so much. You could sympathize with them and they could sympathize with you. Otherwise, I didn't see anything there that I liked in particular as far as scenery or recreation that they had. As for work, they didn't have any machinery to do any work with."

Question: "Who were these people who were suffering?"

Answer: "They were the Chinese people who were brought to these plants to work. They had specified jobs and they had to learn their jobs. They would order them into the plant, and tell them, 'You're going to run the machine.' If a person would answer, 'I don't know how to run the machine,' he would be told, 'You're going to run it anyway—and if you break the machine then you're responsible for it'."

Question: "Didn't they have people to show them how to run the machinery?"

Answer: "No; they had no training course. They'd just grab a man and put him on a machine, and if he broke the machine, he would suffer the consequences according to the damage to it. If it was damaged too much, they would shoot him, or he'd go through a court and be put in prison, or they would release him from the job—put him out on the streets.

"He couldn't hold a job anywhere else after he left there because all the jobs are controlled by the government, so he couldn't even get a job on a farm. He wasn't allowed any place to eat or sleep, so he'd just have to roam until he died and no one would be allowed to give him any food."

Question: "What were the living conditions in China?"

Answer: "Rather simple. They mostly had soup to eat. Maybe they'd steal some beans or dog meat and put in into a big pot and cook it up into soup and feed it to the workers."

Question: "Did they eat in plant cafeterias?"

Answer: "Most of the plants had their own cafeterias—living quarters, mess hall and everything—in with the plant—so the people have to be in certain areas at certain times. When they leave the plant, they have to tell where they are going, and when they return, they have to give explanations of where they have been. If they were somewhere else besides where they said they were going, then they had to give explanations for that."

Question: "Would you say that people you knew were satisfied with this life?"

Answer: "They were not satisfied, but there was nothing they could do about it. They were under guard and surveyed at all times. Then they were going through a course that Communists called reformation of education. They would go to work about 6 a. m., as a rule, or at daylight, and work until it got dark. Then they would have 30 minutes to eat. Then they would go back to what they called their study class and they'd study anywhere up to midnight. They got very few hours of sleep."

Question: "Was there plenty of food in China?"

Answer: "I'd say they had plenty of food as far as rations went, but the government has monopolized it and they feed it mostly to the soldiers. Their stronghold is the soldiers, and as long as they can give soldiers good food and good clothing they know they can control the rest of the country."

Question: "Did you have different food from the Chinese?"

Answer: "On the job we ate the same food—that is, when we ate. If they were eating dog or cat, we would generally go without. You could see them killing and skinning it. By then, too, we knew a little bit of the language, and asked the workers what they were having to eat; they'd say dog meat or cat meat. If we were real hungry, we'd join them and eat. It depended on our condition. You had to live."

Question: "Could you get extra food anywhere?"

Answer: "No; you couldn't buy any extra food. Your pay just covered your living, including your food. You were allowed to buy only one suit of clothes per year."

Question: "Did they assign you work clothes?"

Answer: "They gave you a stamp. You could buy either the material, or one suit, with that stamp."

Question: "What happened if a stamp got lost?"

Answer: "Then you just went without. Few people would steal it. Among the civilians they understood that each person was working under the same strain, so they hardly would take it from one another."

Question: "Did men and women work together, or just men?"

Answer: "Men and women both in the same plant."

Question: "How did the women dress?"

Answer: "Just like the men. The material was real thin cotton. All clothes were blue."

Question: "What about cold weather?"

Answer: "They had padded clothes then, with cotton inside."

Question: "What did people talk about mostly, at meals or at work, or when they had a little bit of time to themselves?"

Answer: "Some wouldn't say anything. Others would talk. They were in the party. Soldiers were right there with them, the Communist Party and party headquarters. Everything is set up right within your own place."

Question: "Did they actually have people on the production line who were party workers?"

Answer: "Yes."

Question: "To stimulate those who were not?"

Answer: "Yes; that's what they had them there for—to boost the rest of them, and to give 'reformation' during work hours and after work. At all times, they carry on this 'education.' They don't even slow up for 1 minute. And they're not allowed to talk about anything that is counteracting to this education, no chit-chat."

PENALTIES FOR GRUMBLING

Question: "Did you ever hear any grumbling?"

Answer: "You never heard anyone say anything directly to the officials or soldiers. They would complain, but they would complain to people they knew well or could trust. If a worker complained about his machine, for instance, that he didn't like to work on his machine because it wasn't any good, if he complained to the wrong guy, that guy takes it up with the commander. It would come up during discussion. He would get criticized and receive punishment. They would call it 'corrupt ideology.'

Question: "Who does all this criticism?"

Answer: "They have meetings—that's where they criticize, not on the job. One guy knows a mistake the other one made. He gets up at this meeting and names it. Everyone has to get up during the process of criticism and first he criticizes himself. He says, 'Well, today, I didn't put out too much production.' Maybe he broke his neck doing all he could do, but still he has to say he didn't put out enough, and then they turn around to him and someone says, 'You didn't do this on the job,' or 'you made a mistake and made the wrong kind of machinery.'

"Then he gets criticized for all that, or for 'talking on the job,' or 'relaxing,' or maybe for 'talking revolutionary talk.' They're very strict."

Question: "When the workers were outside the plant or among themselves, were they ever free of someone watching them? Couldn't they talk among themselves?"

Answer: "You very seldom saw them quarreling among themselves. They would talk to a close buddy, someone they could trust. I talked to a lot of them after I learned their language.

"They would come to me and they would give me a description of how they lived before the Communist came in. They could see the difference. I would ask them, 'Do you want to go back to the old way, or do you like this way?' They'd say they would either want to go back to the old way or find something different."

"And, of course, they would ask how you lived and what kind of system you had and how much freedom you had during working hours, what kind of work you could do. I told them you could do any kind of work you wanted to. If you don't like the job, you can give notice and go someplace else. They didn't have that."

Question: "Did they believe you?"

Answer: "Yes; they believed me. They could feel that there was something else they wanted and needed, but they couldn't get it. They would tell you: 'There's nothing we can do because we don't have the guns.' It seems as if they were seeking for something that they knew existed but couldn't find."

Question: "Where did you live?"

Answer: "We lived in a compound with wires strung around it, and with guards. It was what they call a processing factory, where they do mechanical work, overhauling on trucks and tractors. They called it a state farm. The farm had Chinese and everyone else all together. Quarters were mud houses with straw tops."

Question: "How many people slept in one room?"

Answer: "Anywhere from 50 to 75. You slept on the floor or you found some wood and built yourself something to get off the floor."

Question: "There were no bunks?"

Answer: "No; they just put up a mud hut and you slept there."

Question: "Was there any plumbing or electricity?"

Answer: "No plumbing—but there was electricity to run the plant. They used it for lights because electricity was generated from motors and when night came they shut off the motors."

Question: "How about the Chinese there? Were their conditions of eating and living different from what they were accustomed to before the Communists took over?"

Answer: "Yes. They had more, before the Communists came in. Most of them were weak and skinny.

"I asked one what kind of life he led before the Communists came, and he said he worked in a garage, had his own car, and he could run it for a taxi most of the time. They had shipped him from Shanghai down there. As soon as the Communists came along, they separated him from his wife and family."

UNDER CONSTANT GUARD

Question: "At the plant you lived in a 'compound.' Did they have guards?"

Answer: "You were under constant guard. If you wanted to go some place, maybe just wanted to take a walk outside the factory, you would start and see if anyone would follow you. They said we were absolutely free, that we could go where we wanted. But immediately when you stepped out of the gate, a guard was right with you and you could only go so far, then he would bring you back. The guard told you when to come back. He had no gun, at least not in the open, but those at the gates had guns."

Question: "Were the guards friendly toward the people in the compound?"

Answer: "No, they were superior to the civilians there. Whatever the guards said to do, the civilians had to do."

Question: "What kind of work did you do?"

Answer: "They assigned us to repairing machines, trucks, and diesels."

Question: "American trucks, Chinese trucks, or Russian?"

Answer: "They were captured American trucks—GMC's. They had Ford tractors and a lot of Russian tractors. They didn't know how to fix this machinery. They didn't know how to overhaul it or repair it. They knew very little about machinery, so they put us into this plant and told us to work.

"In the process of working we figured out that they didn't know anything about machinery, so we decided to act like we didn't know anything either and to mess everything up. So we put bearings in backward or put discs in wrong, or left 3 or 4 out, and turned [piston] rings bottom-side up."

Question: "Didn't they find out what you had done?"

Answer: "For a long time they didn't know what was going on. The equipment was always breaking down, always coming back.

"They couldn't figure it out, so they began to ask us, 'Why does it all go wrong?' So we'd tell them it was the gasoline or the oil was bad.

"Then they sent one guy from Shanghai, a Chinese who could speak good English. He was pretty intelligent, so when he saw machinery sent back, he said this was done wrong or that was done wrong. So that kind of stopped our plot for a while."

Question: "Did they watch you more carefully after that?"

Answer: "At that time they watched us everywhere we went. One man was right with us all the time.

"After that, we started to make our push out of there. We refused to work, refused to do anything that they said to us. We demanded to leave."

THREATS FROM THE REDS

Question: "What did they do?"

Answer: "They came in and said, 'You'll work or else you'll suffer the consequences.' So we asked what were the consequences. They said, 'In our society, those who don't work, don't eat; those that don't work and follow the party, they don't exist.' He was in a roundabout way telling us if we didn't work, we'd be shot.

"So we told him, 'If you want to shoot us, go ahead.' We didn't know what they were going to do. We went on for a week like that."

Question: "Did they give you any food?"

Answer: "Yes; they finally gave us food after one day. So we figured we had won one victory. We found out they were going to move us into another factory, where they built plows, and which they claimed had better conditions. So we made an escape that night.

"The militia, their underground police, picked us up. We told them we wanted to get out and go home, so they sent to main headquarters to find out exactly what they were supposed to do with us, because civilians in the plant saw what we were doing. They saw how far we had got by holding a strike."

Question: "Did any of the Chinese try the same thing?"

Answer: "No; they didn't. They wouldn't dare to try the same thing. They had no hesitation in shooting them."

Question: "Did you know any cases where workers in the plant were shot?"

Answer: "They shot one worker in the same plant we were in because he broke a machine. They had him tried before all the workers in the plant and his sentence was death. They just took him out and shot him."

Question: "Did you get paid for your work?"

Answer: "You received just enough to eat and buy your clothes."

Question: "What about things like toothbrushes and soap?"

Answer: "They had a commissary, run by the Government, where you could buy stuff like that."

Question: "What about other things—shoes, belts smokes?"

Answer: "Most of it was issued. They'd take it out of your wages. You got a pair of shoes, they cost so much, they'd subtract it from your pay."

Question: "Were there any unions, or any negotiations between the workers and the officials?"

Answer: "They had what they called a union. One had to support the ideology to be accepted in the union. The rest were outsiders, but still they had to pay dues and couldn't go to the meetings.

"Actually, it wasn't a union. Communists just picked out who they thought they could control and used them against the others.

"The main object was to get more production out of the workers, not to better their conditions."

Question: "Could you change your job?"

Answer: "No; you couldn't. You had to stay at a specified factory unless you became a 'model worker.' If you put out more production than anyone else, they'd send you to another job where they had better machinery. But that was the only way to get to another plant."

Question: "Was your pay raised when your production increased?"

Answer: "No; it was still the same."

Question: "What did the cities look like over there?"

Answer: "They're building Peiping up. Russians are helping them, I guess. They're going to try and make that the showplace Foreigners will come there and the Chinese will say, 'This is what the Communists have.'"

"Outside of that, when you leave Peiping, you find civilians living mostly in old wood houses. You see very few brick buildings."

Question: "Could anyone build his own home, like a farmer?"

Answer: "You couldn't even own land. The state started off by giving so much land according to family, usually small communities on the same land. Some individuals wouldn't give up their land so they would take him out and shoot him or else they'd freeze him out—cut off his grain, refuse to let him buy anything, so he's left out. He either has to give in or die of starvation."

Question: "Did you pay taxes, income taxes?"

Answer: "They have taxes. They take a certain percent of your wages for taxes, also for unions, and for some kind of organization to serve the soldiers. When they get through you don't have much left."

Question: "When you got back, did things look different? What impressed you most?"

Answer: "To be free. Knowing what was going on over there, what was happening to people, you couldn't feel sorry for yourself because you knew their condition was worse."

UNITED STATES MEANS MORE NOW

Question: "Did being over there change your outlook on American life?"

Answer: "Yes. You can appreciate it. At first, when you come back, you are just dazed by all the people and automobiles.

"It's hard to explain just exactly how a man does feel after being over there and coming back into a world that's alive, where everything is moving.

"Before I ever saw the Communists function, I always felt we had freedom—but it's a lot more active feeling after you've seen what they do."

Question: "How about getting a job in the United States? Did you have any trouble?"

Answer: "No; it hasn't been too much of a problem. I only tried finding work in one place, the job I have now. I went out to apply for the job and got it right away. Haven't gone out any other place to apply for a job. As long as I could get a job and work and take care of my family, I wasn't interested in going any other place."

Tribute to Governor McKeldin

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. FRIEDEL. Mr. Speaker, Rabbi Albert A. Pattashnick, the field director of the Talmudical Academy of Baltimore has called to my attention the splendid tribute paid by Solomon Rogers, Esq., of the Baltimore Bar, to the very well-known Governor of the Free State of Maryland, the Honorable Theodore Roosevelt McKeldin. The occasion for this tribute was the dedication of the study hall in Governor McKeldin's honor in one of the truly great and celebrated institutions of learning, namely, the Talmudical Academy of Baltimore.

Mr. Rogers, who is not only a very brilliant attorney, being a gentleman imbued with a truly civic consciousness and deep religious convictions, as can be testified to by all who have the privilege of knowing him, is also equally gifted as a brilliant and erudite orator.

The toastmaster on that auspicious occasion, which was attended by the leading citizens of the State, was Mr. Charles Rosenbaum, whose industry, business acumen, and effective ability have contributed so very much, indeed, to keep the great city of Baltimore in the front ranks among American municipalities.

Under leave to extend my remarks, I am including Mr. Rogers' address.

Governor McKeldin and Mrs. McKeldin, Mr., Chairman, worthy rabbis, ladies, and gentlemen, my wife and I are always happy to come to the Governor's mansion in this historic city of Annapolis, and I wish to thank you, Governor McKeldin, and you, Mrs. McKeldin, for this privilege and for your warm hospitality and many evidences of friendship. I am particularly pleased to be here on this occasion, and to have the added privilege of participating in the campaign to build the study hall at the Talmudical Academy in your honor for your outstanding public service to mankind.

The Talmudical Academy and its dedicated staff and teachers have attained a very important place in our community as an outstanding institution of learning and education, and a modern school for the teaching of Judaism and Jewish history to thousands of our children for nearly four decades. Many of Baltimore's outstanding leaders in the professions and business received their early education at the Talmudical Academy and they have done much to preserve our Jewish way of life.

This is, of course, of great importance to all Jews because if Judaism is to survive as a way of life in America, we must teach our children the wisdom, faith, and power of the ancient heritage of Israel, whether exemplified by orthodox, or conservative, or reformed doctrines and practices.

We, like many Jewish leaders on the American scene during the past several generations, are genuinely alarmed because of the drift of many of our people away from Judaism. As far back as 1906, Dr. Solomon Schector, the then president of the Jewish Theological Seminary of America, called it a national disaster. In an article which I read in our Holy Days Prayer Book, he said, "It is a tragedy to see an ancient people, distinguished for its loyalty to its religion and its devotion to its sacred law, losing thousands every day by mere process of attrition. We are helpless spectators of the Jewish soul wasting before our very eyes."

And, as thinking men and women, we are convinced that if we are to make our future as Jews in America happy and secure for ourselves and our children, we must teach our youth our Jewish history and traditions and make them justly proud of their heritage. Our people must be imbued with our rich traditions replete with 5,700 years of Jewish civilization, and with our contributions to the world in the fields of science, medicine, and government. We should electrify our people with the realization of the debt owed by the Christian world to Judaism for its gifts to the world of religious principles and a code of ethics of human behavior which have been adapted to and made part of the Christian religion as their own.

While we must use every means possible to hold our people steadfast to Judaism, we must at the same time, also develop a process of integration in the general community and become participants in a vibrant American Jewish life in order to give us utmost Jewish strength and unity in American public, political, and community affairs.

It seems to me the Talmudical Academy has chosen wisely in dedicating its study hall as a permanent testimonial to Governor McKeldin. It appears particularly appropriate and significant because of the governor's intense interest and devotion to the study of the Bible and various religions and the history of mankind and because he practices the religious principles and ethics of his faith devoutly. He stresses at every opportunity, the importance of spiritual and moral values in everyday life and as a consequence, has greater understanding and reverence for the religious beliefs of all other peoples and every faith. Through this practice he has made many contributions to the promotion of better relations between peoples of all creeds and in perpetuating the brotherhood and dignity of man.

The life and experience of Theodore Roosevelt McKeldin are an inspiring and fascinating story and a saga of American opportunity and achievement.

Like many of the great leaders in American history, from its founding to the present day, Mr. McKeldin, from a modest start in life, by tremendous labor, prodigious study, and indomitable will and determination to

succeed, overcame many hardships and obstacles to become one of the great and dedicated leaders and public figures on the American scene today. He is a nationally famed orator and author and he receives numerous requests to speak from religious and civic and business organizations of every description from every part of the United States.

He has been honored by the people of Baltimore and the State of Maryland by being elected by tremendous majorities to the highest office within their gift. He has taken a leading part in southern governors' conferences and occupies a very high place in the national Republican councils and his name should receive favorable consideration for any office within the gift of the people of the United States.

He has received many honors, awards, and citations from religious, fraternal, and civic organizations and numerous testimonials from organizations dedicated to the promotion of intergroup relations and understanding and brotherhood.

He holds an unbelievable number of honorary degrees from colleges and universities all over the United States, and recently had the rare distinction of receiving an honorary fellowship from the University of Jerusalem. I say rare, because the University of Jerusalem has given only a few honorary degrees during its entire existence.

But in spite of all these many honors, commendations, testimonials, and encomiums, Mr. McKeldin has never lost his touch with the common man or his love and respect for plain and ordinary people. He manifests greatest concern for the underprivileged and needy, and has demonstrated a passion for justice and mercy.

He has been in the forefront in the fight for civil and human rights and has made notable contributions in combating discrimination of every kind, and has used his great talents in breaking down many barriers against and injustices to Negroes in Maryland. He has translated into reality those high ideals which too often are only empty promises and platitudes. He has appointed Negroes for the first time in Maryland history to high office. He appointed the first Jew to the Court of Appeals in Maryland history when he appointed Simon Sobeloff chief judge, and he recently appointed the first Italian-American to the supreme bench of Baltimore.

But to my mind, his greatest public service, far beyond the call of duty, and certainly more than we have a right to expect, has been his great efforts in the interest of Jewish causes and matters affecting the Jewish people. No Jewish cause, whether it be the United Jewish Appeal, Hadassah, Brandeis University, Jewish Theological Seminary, Brith Sholom, Histradrut, Jewish national fund, or bonds for Israel, and many others, fails to receive the benefit of his great talents, energy, and even generous financial support. His efforts on behalf and unstinted support of Israel since its inception as a state and his forthrightness and courage in defending it in opposition to the stand taken by our State Department during the recent war with Egypt was of tremendous benefit to us when we desperately needed friends and moral support.

He organized and is president of the American Israel Society, an organization of Jews and non-Jews, which is doing much to promote cultural relations and understanding between Israel and America.

He has visited Israel twice in recent years and contemplates another visit early next year. We are most fortunate to have this able Ambassador and his great voice transmitting the Israeli and Jewish story to the people of America, Jew and non-Jew alike, whether it be at a Histadrut meeting or a Hibernian dinner.

I had the opportunity of hearing Governor McKeldin some months ago at one of the leading churches in Baltimore discuss his trip to the Holy Land, as the talk was advertised. No speaker at a Zionist, United Jewish Appeal, or bond dinner ever made a more constructive pro-Israel presentation.

He is one of our most dedicated and sincere friends, and I am sure I express your sentiments when I say we all value and treasure his friendship most highly and trust we may always merit and cherish it. As in the language of Shakespeare:

"The friends thou hast, and their adoption tried.
Grapple them to thy soul with hoops of steel."

Governor McKeldin, in recognition of your high personal characteristics and humane qualities and your devotion and dedication to Jewish causes and institutions, we wish you to know that you have gained our warm affection, high esteem, and profound respect. We, your friends, are happy to make possible the building of the study hall at the Talmudical Academy as an eternal honor in your name.

We hope the Almighty in His infinite wisdom will spare you for many years to come and give you strength and the capacity to continue your vigorous and courageous stand in the defense of democracy, freedom, and justice for all mankind.

Inspection of Poultry and Poultry Products

SPEECH
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6814) to provide for the compulsory inspection by the United States Department of Agriculture of poultry and poultry products.

Mr. ANFUSO. Mr. Chairman, in passing the bill H. R. 6814, which provides for compulsory inspection by the Department of Agriculture of poultry and poultry products, it is of utmost importance that certain religious practices should not be overlooked.

It is my understanding, developed from the testimony at the hearings of the Committee on Agriculture, that recognized religious practices of the Jewish faith are accepted in the bill. For example, the laws of Kashruth require that kosher poultry be slaughtered by a shochet—religious slaughterer—that it cannot be defeathered with the use of steam or hot water, and that it must be offered to the consumer uneviscerated.

In order that these religious requirements should not be disturbed, poultry processed in accordance with religious dietary laws is to be exempt from the act.

I, therefore, call again these practices to the attention of the Secretary of Agriculture so that, in issuing the necessary rules and regulations pursuant to the act, he will make certain that they in no way interfere with these traditional processing requirements of the Jewish people.

Right of People To Know

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. UDALL. Mr. Speaker, many of our colleagues were disturbed by the threat to freedom of the press in the recommendations put forward recently by the Commission on Government Security headed by Mr. Loyd Wright.

In my opinion the right of the people to know what their Government is doing should only be restricted when necessary to protect the highest interests of national security. Succinct discussions of this threat were contained in the two editorials which appeared a few days ago in the Phoenix (Ariz.) Gazette which I am inserting in the RECORD, as follows:

[From the Phoenix Gazette of June 26, 1957]

STEP TOWARD LEGALIZED CENSORSHIP

The Wright Commission's recommendations on the Government's loyalty-security program contain at least two changes that would lead the Nation in the wrong direction. The more serious of the two is proposed legislation making persons outside as well as within the Government subject to jail penalties for unlawful disclosure of information known to be classified (i. e., secret).

This would give the Government power to decree what should be published and to imprison those who disobeyed. Under the proposed central security headquarters, responsible only to the executive branch, it would be possible to mark any Government information "Top Secret," whether it was vital to the Nation's security or only to the administration's political security. If the information were leaked from a Government source, the incumbent administration would still be protected by the prison threat against publication. Except in wartime, there is no place in America for legalized censorship of that sort.

The other misguided recommendation is the one calling for stricter Government control of passports and American travel abroad. Freedom for Americans is not a domestic matter. A United States newsman should be free to visit and report on conditions in Red China regardless of State Department fears of the diplomatic applecarts he might upset. The emphasis should be on change away from restrictions which now put an

American-made iron curtain around our own nationals.

The Commission had made some good points on coordination of the loyalty-security program and in distinguishing between a loyalty threat and a security threat. But it has gone too far in trying to protect information.

[From the Phoenix Gazette of July 5, 1957]

MAKING IT EASY TO SUPPRESS NEWS

Loyd Wright, an attorney who heads the Commission on the Government's loyalty-security program, has had a sample of how hard it is to get information out of a bureaucracy. The details concerning 15 cases of publication prejudicial to the national security are denied to him by the Government.

These are cases which Wright has mentioned in justification of the Commission's recommendation for jail terms and fines for anyone violating security secrecy. Presumably they would show that newsmen have broken security on vital defense secrets—if Wright could break through Government classification of documents he believes would substantiate the charge.

Sometimes the secret stamp is entirely warranted to protect the Nation's security. But it can also be used to protect an administration's political security. The Wright Commission has recommended a step that would help bureaucrats put the secrecy lid on anything they wanted to suppress, and make it stick. Whether the information were vital to security or not, its publication would be equally prohibited under penalty of imprisonment.

This kind of blunderbuss legislation would be an invitation to Government censorship of news, since the law would back up the Government as sole arbiter of what was secret and what wasn't.

Progun Law

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. SAYLOR. Mr. Speaker, sportsmen and sportswomen throughout the United States are becoming increasingly alarmed at the various laws and regulations that have been passed and which have been proposed concerning firearms.

Hunting and gun sport form an integral and important part of our recreation pattern and will continue to play an ever-increasing role as our recreational activities increase in the years to come.

It is, therefore, heartening to find that William B. Edwards, the technical editor of Guns magazine, has made a thorough study of this problem and approaches it from a positive angle rather than the negative.

To all sportsmen and sportswomen, to all gunners, to all interested American citizens, I urge your serious consideration of the following editorial from Guns magazine which will appear in its September issue:

ANTIGUN LAW PROPONENTS ARE NOT ALL DO-GOODERS—LAWS THAT STRIKE AT CIVIL LIBERTIES THREATEN BUSINESS AS WELL AS OUR AMERICAN WAY OF LIFE

The antigun lawmakers are having a brisk season for 1957. With the practical nature of Andrew Volsteads and the subtlety of Carrie Nations they have attacked the root of all evil and the ills of mankind by the simple expedient of trying to take away all guns. Recently proposed Treasury regulations came close to this ideal; they could have destroyed the firearms industry and the shooting sport. Under the guise of protecting the people, these makers of rules who push antigun bills such as these are forging weapons, not into ploughshares, but into an iron collar of restraint, worthy of a fascist state.

Year by year more antigun laws are proposed. Meanwhile, pro-gun collectors and shooters are mollified by the excuse, these laws are thought up by well-meaning, innocent do-gooders. Certainly a few antigun advocates may seem to be well-intentioned, but lets look at well-eaning legislators in the forefront of antigun legislation.

Take a good look at genial, charming, personable Big Tim Sullivan, who disarmed the citizens of crime-ridden New York in 1911 with the grandaddy of antigun laws, then went mad the following year and was confined. Says the biographical dictionary, "Vice and crime were carefully organized in his territory and paid graft to his machine, as did many lines of legitimate business, including pushcart peddlers * * *. When charged with grafting, or partnership with crime and vice, he could rise in the (New York State) assembly or on a campaign rostrum and, by telling the story of his tenement boyhood and the sacrifices of his mother, reduce even hardened political opponents to tears * * *."

Big Tim was of the cloth of Adolph Hitler and the spellbinders of the ages. Election fights which stimulated the public pulse in those days hampered Big Tim's grasp on politics. So he pushed through a law requiring everyone in New York State to get a police permit to buy or possess a pistol or revolver. Sullivan knew he could control the police. This meant that when Sullivan's boys went on their ballotbox stuffing sprees, they could be reasonably sure of having no opposition. Big Tim was not a "well-meaning legislator" in his pistol law ideas. The Sullivan law weakened the opposition, sweetened the Tammany kitty. Antigun bills are a popular stepping stone to political fame, and many in the antigun ranks share Big Tim's motives.

A most ironic instance of the do-good legislator at work occurred in Connecticut last spring. A brutal murder of two people incensed the public against guns and a fantastic spate of 24 antifirearms bills was put into the mill, including the demand to register every pistol or revolver in the State. This is a common form of antigun bill, though just what it is supposed to accomplish is not clear. According to Fred A. Roff, Jr., of the Colt's gun company, the criminal committed the murders with a registered revolver, and the criminal was already a convicted felon.

Outlawing guns is impossible. The police themselves are often a source of pistols to people who do not bother with licenses and permits. I bought seven revolvers including a Colt DA M1878 .45 revolver and a small engraved Smith & Wesson .32 from one Chicago policeman, who did not want to insult me by asking for a permit. Though I bought them as "collector's items," they had been confiscated by the officer in the normal course of his work. He was logical in selling the guns to me, knowing me to be a gun collector; yet "confiscated guns, must be destroyed according to law," declares Chicago police commissioner T. J. O'Connor.

Another gun which came my way from a policeman violated State and Federal law. It was a .38 Smith & Wesson with numbers ground off that once belonged to the famous kidnapper "Machine Gun" Kelly. The gun was taken from one of Kelly's gang by then-detective Charles Zimmerman, later Buffalo, N. Y. chief of police. When he retired to California, Zimmerman kept the gun in memory of a high point in his career. His widow sold it to me as a collector's item. According to the penal law, section 1899, State of New York, "firearms and other enumerated dangerous weapons (confiscated in criminal proceedings) must be either destroyed or retained by the police department * * *" Evidently in New York, as in other places, there are two kinds of law—one for the police, and one for civilians. Federal law was also violated by Zimmerman by retaining a gun from which a number had been erased, and by transporting it across a State line.

While cops claim they can curb crime by taking away all guns, and the pro-gun guys come back with wornout cliches such as "with what gun did Cain slay Abel," the realities are that not even law enforcement agencies agree on what should be done with confiscated guns.

"The Los Angeles Police Department complies with law by dumping these guns into the deep waters of the Pacific Ocean each year on July 1," says A. C. Hohmann, of Los Angeles. But in Boston, the Commissioner of Public Safety "may sell or destroy the same, and in case of a sale * * * shall pay over the net proceeds to the Commonwealth." In Washington, D. C., "Pistols, machineguns, etc., are either destroyed or transferred to the regular inventories of Federal or District Government agencies," reports Inspector Earl Hartmen, property clerk. Yet by stealing from Government sources alone, criminals get nearly half the guns used in crime.

Philadelphia police recently made a smart, moneysaving move, which implicated the city government, common carriers, several gun dealers, and numerous other people, in a violation of the Federal Firearms Act. Procurement Commissioner Michael Sura decided that some confiscated Philadelphia police guns were worth money. He "scooped up 2,662 weapons which technically belonged as evidence from past trials and arranged * * * with the courts to offer them at public sale," wrote David O. Moreton in the May issue of Law & Order, the police monthly magazine. These guns were bid in by a New York gun dealer. Commissioner Sura thriftily saved Philadelphia nearly $10,000 in trade for new police equipment, yet demonstrated strikingly the logical inconsistency of the police attitude toward firearms. And he helped many people violate the Federal law.

The 1938 Federal Firearms Act states: "It shall be unlawful for any person to transport, ship, or knowingly receive in interstate or foreign commerce any firearm from which the manufacturer's serial number has been removed, obliterated, or altered, and the possession of any such firearm shall be presumptive evidence that such firearm was transported, shipped, or received, as the case may be, by the possessor in violation of this chapter." In this lot of guns were many with numbers ground off, and everybody from Commissioner Sura, to the common carrier, to the New York dealer, to final owner may have violated Federal law during their possession, transfer, shipment, or receipt of such firearms as the New Navy .38 Colt revolver illustrated, from which the serial numbers have been erased. Yet the sales and transfers in themselves were lawful transactions.

What, then, of the overall value of Federal antifirearms legislation? Has Congress any reason to make laws restricting the possession and use for lawful purposes of any kind of firearm? The answer is, no. But they are able to restrict guns by exercising a highly valued privilege of Congress, to raise and collect taxes. Congress has tried to control guns by excessive taxation.

Most of us agree that to provide for the common defense, to run our Government, we must pay taxes. We should naturally expect to give the Government considerably

more in tax money than the costs of accounting and collecting this money, so there will be a little left over for housing, defense, public works, welfare and social security, veterans' compensation, and other needs. But Congress antigun laws cost the people more to administer than they bring in.

The Treasury handles Congress gun-taxing laws because Congress has prohibited itself from making gun-restricting laws by saying in the Constitution's second amendment that "A well regulated militia being necessary for the security of a free state, the right of the people to keep and bear arms shall not be infringed." Contrary to what some of the more rabid pro-gun guys claim, this does not mean that everyone can go around carrying a gun. It does not mean that everyone cannot go around carrying a gun, either. The application of its meaning is in the expression "well regulated militia." The National Guard is not a constitutional "well regulated militia"; it is part of our United States Army organized Reserve forces. The militia ideas of the framers of the Constitution opposed the existence of a standing army. Formal expression of the militia concept was set forth in Plan for a Militia published in London in 1745 by a Colonel Martin. The ideas in this little book had much to do with the phrasing of the second amendment.

The army costs too much, said the colonel; militia would be cheaper. "No mercenary army (Martin's word for professional or standing army) which this nation can support without becoming bankrupt, is sufficient for its security against foreign invasion; yet a national militia is capable of defending it with great certainty, and little expense." The militia included "the military service of all men capable of bearing arms, from the age of 18 to that of 50 years; except such as may be exempted by law * * *"

Over a century later, the militia term held the same meaning. In Wilhelm's Military Dictionary (1881) under militia is the explanation, "The laws of the United States require the enrollment into the militia of all able-bodied males between the ages of 18 and 45 years, with certain exception according to law (such as judges, clergymen, doctors)." And at that time, "The organized militia of the United States numbers 125,906 men, the number of men available for military duty unorganized, is 6,598,105." Out of a population in 1881 of 50 million, the figure compares well today with our 18 million licensed hunters with a national population of 170 million. Our shooters are our militia; our hunters, smallbore rifle shooters, target pistol marksmen, shotgunners, gun collectors, all are members of the militia of the United States.

But according to decree of the courts, militia is said to mean only the National Guard. And the progun guys who smart under the edict that no antifirearms laws have invaded the rights of citizens as embodied in the second amendment, flinch as the National Guard status is waved in their faces. They can flinch even more, for the term well-regulated, though not relating to the National Guard, did mean that guns were to be kept in an armory. The militia idea definitely regulated guns. When the militia companies were organized, the Government may send to every captain for each man so enrolled a good firelock (smoothbore flintlock musket) * * * and during every captain's possession of the arms, each is to be allowed an armorer to keep them clean. * * * The captain, not the individual militiaman, was to keep the firelock.

These two aspects of the much-mooted second amendment have caused conflict. The word militia does refer to everyone between 18 and 45 or 50 years of age. But secondly, the amendment does not say that everybody ought to carry a gun. The first point, that the militia includes everyone, is a score for the progun crowd; the second point favors the antigun lawmakers by proposing storage of arms in a Government armory.

But there is one more point, the heart of the controversy, for the amendment does not really relate to the concept of the militia, nor to the "security of a free state," but specifically to the "right of the citizen to keep and bear arms shall not be infringed." Stress that word "right," for it applies to all citizens. It is not a limitation on the States, as many examiners of constitutional doctrine generally observe. If it were, it would have been written "the right of the States to raise citizen militia to keep and bear arms shall not be infringed." The Bill of Rights refers to the citizens. Clearly, the second amendment means what it says. Court decisions which affirm that an antifirearms law is "constitutional" because it doesn't prevent the National Guard from carrying pistols are clearly legalistic nonsense: the National Guard is not the militia.

Times change. The National Guard is indispensible to our pattern of national defense. The militia today consists of 20 million gun owners. They face a very real problem, the present and future trend in antifirearms legislation. Basic rights are infringed, and the national security has been placed in danger by antigun laws.

Instead of implementing the second amendment, making sure that every man of the militia knows how to shoot his firelock—or Krag, or Springfield, or M–1, or BAR, or full-auto M–14 and M–15 rifles—Government has used excessive taxation to prohibit using modern military rifles for lawful purposes, and has killed the domestic manufacture of machineguns for defense. American soldiers are dead today because we did not have enough machine-firing weapons to give them on Bataan and Corregidor. The National Firearms Act (of 1934, amended 1954), was to blame. Then Attorney General Homer Cummings, after one World War and a dozen minor wars in his lifetime, still believed in 1934 that we would have no more war (it was outlawed by the League of Nations) and there was no need for guns. Then 1940 found us drilling recruits (who had never seen a gun) to fight a machinegun blitzkrieg, and the Army didn't even have guns to give them for drill. The concept of preinduction training in marksmanship was a flame nurtured by a tiny group of shooters in the National Rifle Association, men who knew the truth. Nobody would listen, though they preached the doctrine that rifle shooting is fun, as well as a duty of the citizen.

Even the Army has fallen for the antigun line. After spending 13 years and great expense in developing a full auto infantry rifle, the M–14, Ordnance has come up with a dilly; the M–14 as issued will be semiautomatic only, no advance over the M–1. By substituting a few parts the modern militiaman's firelock can be made full auto—but how do you convert an ordinary GI into a trained automatic rifleman? Will there be time?

There is a way to train 20 million citizen militia. We must have, not antigun laws, but progun laws. First step, repeal existing Federal firearms laws. They do not prevent crime. They do not curb crime. They do not give law enforcement officers any tools with which to catch or convict criminals, especially when law enforcement bodies from top to bottom ignore even Federal laws regulating firearms. And the high percent of federally owned and registered (U. S. Army) firearms used in crime reveals how ineffective Federal control of guns is. In two instances Federal firearms laws have been damaging to the national defense. The Machinegun Act has proved its folly, and prevented the creation of even a sport-shooting program in line with the Nation's need.

In a second instance, the Federal Firearms Act has been so badly written by law cranks (not gun cranks) that petty men with grand visions have seized on it as a stepping stone to power, and the abuse of the public. This mumbo-jumbo of commerce-regulating law hinders the legitimate dealer and manufacturer in guns—would, if proposed regulations went into effect, put gunmakers and dealers out of business. A house of cards, the law regulates the business of firearms making and selling, but carefully avoids the main fact, that of making a criminal's use of a gun unprofitable.

These new regulations include, for example, the requirement that records be kept permanently by the dealer or gunmaker, for the life of the business, or the duration of his successors. Records, in brief, to be kept in perpetuity. Says R. E. Train, assistant to the Secretary of the Treasury, in a June 10, 1957 letter to Senator Homer Capehart, "section 177.51 requires each licensed manufacturer or dealer to maintain records reflecting the receipt and disposition of all firearms. These records are required to be preserved permanently until the licensee or its successor in interest discontinues business. The present regulations provide for the maintenance of such records, but only for 6 years. The statute itself (15 U. S. C. ff 903 (d)) provides that 'dealers shall maintain such permanent records of importation, shipment, or other disposal of firearms and ammunition as the Secretary of the Treasury shall provide.'

"This section of the proposed regulations which is being widely objected to as imposing a new and unreasonable burden would seem to be clearly required by the words of the statute itself," continues Mr. Train in his opinion to Senator Capehart. "Actually," says Train, "the main difference between the old regulations and the new would seem to be that at the present time these records need only be kept for 6 years rather than permanently."

Although there is no reasonable explanation offered as to the value of records of a gunmaker kept permanently, nor is it stated who will be able to afford the tremendous cost of searching these records, citizen Train is obviously at fault in his semantic logic. "Permanent records" does not nor has it ever been intended to mean "keeping records permanently, in perpetuity." A permanent record is, if we take Webster for the meaning, one "not subject to fluctuation or alteration." In the statute quoted by Train, the word "permanent" modifies "records" as an adjective. The new regulations twist it into an adverb, "permanently," which modifies the verb of "keep." Now, does the Treasury want records kept in permanent-type ledgers, available for inspection as required for normal income-tax purposes, or does it want records kept on any old scrap of paper, or in the mind of the dealer, but retained by him for all time? One or the other, but not both, is the meaning of the statute. And once "permanent records" is allowed to mean "records kept permanently," every industry in the United States which keeps records, every businessman, every taxpayer, every citizen, who should keep records in permanent form for, say the stautory 6 or 7 years, will have to keep records as long as they are in business, as long as they are taxpayers, as long as they are alive. Why?

This firearms department is an odd offspring of an abortive push to get rid of all crime, by getting rid of all guns. The pillars on which it is propped are the National Act of 1934 and the Federal Act of 1938. Both are ostensible revenue-raising acts. Under the National Act in 1955–1956, $11,000 was taken in from transfer and registration fees, penalties, and fines. During the same period, the Alcohol and Tobacco Tax Unit of the

Treasury (which contains the firearms department) spent an amount which the ATU director refused to reveal, though it must have run into the hundreds of thousands of dollars. In one instance, in downstate Illinois, ATU agents spent 5 years in getting 1 machinegun collector. When brought to trial, penalties could have totaled 18 years and $45,000. Charitably, the judge gave a token fine of $100, exacted no court costs, thereby apparently expressing his belief that the Government's case was a waste of time. In the southern district court in California, a Culver City dealer, harassed by ATU agents, on direct orders from Washington, spent over $1,000 fighting an action brought by the Government because he sold antique curio pistols known as Chicago protector palm pistols. Firing an unobtainable .32 extra short rimfire cartridge, the gun was argued to be a violation of the National Machine Gun Act by another one of those odd twists of meaning which the Treasury seems to enjoy. The court, however, tossed out the case, finding for the defendant gun dealer.

Since the Alcohol and Tobacco Tax Unit also is supposed to catch bootleggers, and is ordered to apprehend criminals engaged in dope peddling, every minute spent on antigun foolishness is so much time taken away from their legitimate business. Distilling illegal alcohol is said to be the second largest illegal industry in the United States. And in the time it takes our ATU man to get the dope on an otherwise honest gun-law violator (they don't prove many cases), a narcotics peddler can suborn your boy or your girl into a life-wrecking habit.

Today, right now, there exists crying need to enact constructive legislation in the field of firearms law. Repealing existing laws is a must. Reenacting some provisions of existing laws, together with a look at the mandatory sentence, should come next. Judges and juries are reluctant to convict when stiff mandatory sentences are in sight. But let the punishment fit the crime—say, 2 to 5 years in addition to the specific charge, if the crime was committed while carrying a gun, would be workable. Don't exempt shotguns and rifles from penalties for criminal use, but don't aim antigun laws at any gun just because of its fancied criminal-type nature. Yesterday's terror weapons is tomorrow's collector's prize. There should not exist any legislation prohibiting any citizen from using any type of firearm, including machinegun, muffler, or silencer, or Buck Rogers ray gun, for any lawful purpose. But if anyone steps out of line with a gun, throw the book at him.

Enact legislation to put some teeth into the militia concept, too. Work on that militia idea, and while we cut defense spending by the billions, let's up it a few millions in the direction of the citizen soldier. Instead of trying to cut out the Army director of civilian marksmanship's puny appropriation of $300,000 in the false interests of economy, stick a couple of extra zeroes on it, and make military small arms and ammunition available in plenty for rifle club members on approved ranges. Drop some added cash into the Federal school aid program, and build decent shooting ranges as elements in the overall sports program. Get the States interested in making the sport of shooting a part of everyday life in the towns, on campus. The cadre of instructors available, free, from the membership of the National Rifle Association, the United States Revolver Association, the National Skeet Shooting Association, the Amateur Trapshooter's Association, the National Muzzle Loading Rifle Association, the National Single Shot Rifle Association, and many more clubs, shooters' and collectors' organizations all over the Nation, can really implement that second amendment if we have positive firearms legislative thinking, instead of negative, false, destructive attitudes.

What you can do is twofold: First, write immediately to the Director, Alcohol and Tobacco Tax Unit, Bureau of Internal Revenue, Washington 25, D. C., and give him the benefit of your views of the proposed new regulations. Copies of these regulations can be found in any public library in the May 3, 1957, Federal Register. If you are against the rules, say so. Your letter must be in duplicate.

Second, write to your Senators and Congressmen, in Washington and in your State capital. Tell them what kind of gun laws you think are needed to prevent crime, and what kind of laws you want to see enacted to make your sport of guns and shooting one that will not be taken from you. And consider also your rights, as a citizen under this Constitution. Tell your Congressman about those rights, too. He knows about them, but it is always refreshing to a legislator to have matters called to his attention anew by the people who voted for him. Send a copy of your letter to Guns magazine for reference. We'd like to know your ideas on constructive firearms legislation. Urge the formation of a congressional committee to recommend good gun laws.

There are plenty of advocates of antigun legislation. The results have been many: National weakness and disarmament, increased crime, novel forms of corruption and graft, political hysteria controlled for selfish political purposes, and manifold invasions of the rights of citizens. After all, why not have a progun law?

Survey Discloses New Jersey Is Undergoing the Most Pronounced Industrial Development in Its History

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the State of New Jersey is undergoing the most pronounced industrial development in its history. At least $1,400,000,000 will be spent between now and 1961 by about 500 concerns for capital improvements or new plants in New Jersey, and these figures may be exceeded considerably, inasmuch as many concerns declined to disclose the extent of their planned capital outlays.

Gov. Robert B. Meyer has opened an intensive drive to attract new business and industry to New Jersey in cooperation with executives of the State's banks, business, industry, and utilities.

I include here a report on this drive for new business from the New York Times of July 15, 1957. The article was written by George Cable Wright, the Times' able correspondent in Trenton, N. J.:

JERSEY MAKES BID TO NEW INDUSTRY—EXECUTIVES TO BE ENVOYS OUT OF STATE—GROWTH ALREADY AT PEAK, SURVEY FINDS

(By George Cable Wright)

TRENTON, July 14.—Gov. Robert B. Meyner has opened an intensive drive to attract new business and industry to New Jersey. He is acting in cooperation with executives of the State's banks, business, industry, and utilities.

The executives, meeting with Mr. Meyner in Princeton last week, agreed to be economic ambassadors. All are men who travel extensively in their work. Each received a portfolio stressing the advantages of doing business in Jersey. The envoys will use this in seeking to induce industrialists, manufacturers, and financiers whom they meet to locate here.

Meanwhile a survey discloses that this State is undergoing the most pronounced industrial development in its history.

HEAVY SPENDING SLATED

At least $1,400,000,000 will be spent between now and 1961 by about 500 concerns for capital improvements or new plants in New Jersey. In all probability the expenditures will far exceed this figure, as many of the concerns have declined to disclose the extent of their capital spending.

Public utilities, which must service these new and added facilities, will spend more than 60 percent of the total outlay. The only utilities failing to keep pace with the industrial development appear to be those that furnish potable and industrial water.

The growth of industry and business is particularly pronounced in the Delaware and Raritan River valleys. Yet there are evidences of it in nearly all of the State's 21 counties. The extent of the developments is obvious to the motorist who drives south along United States Route 1 or the New Jersey Turnpike.

Among the more costly projects are 3 electric generating plants being constructed by the Public Service Electric & Gas Co., at a cost of $500 million; a $276 million completely integrated steel mill planned by the Phoenix Iron & Steel Co.; a $24 million Curtiss-Wright plant now nearing completion, and an $18 million installion about to be built by the Phelps Dodge Corp.

TELEPHONE EXPANSION PLANNED

The New Jersey Bell Telephone Co. plans to spend $220 million on new equipment over the next 4 years. In the same period the Atlantic City Electric Co. will invest $100 million in generating equipment.

Meanwhile the pressure of new business led the Prudential Insurance Co. last year to embark on a major expansion program. By 1960 this concern will have spent $21 million for additional office space.

Chemical industries alone are committed to spend $139,100,000 on capital improvements and expansion in this State during this year and 1958.

One atomic reactor plant, reportedly the first of its type in this country, was placed in operation by Daystrom at West Caldwell in March. Three other reactor installations are about to be built.

Meanwhile industrial real estate activity is reported brisk throughout the State, with choice tracts being sold rapidly. A substantial rise in employment rolls is anticipated in conjunction with this development. However, the increase is expected to be tempered by a spread of automation.

It is interesting to note that job predictions for 1960, made for the State just 7 years ago, have in many instances already been surpassed.

NINE-HUNDRED-ACRE STEEL PLANT

Phoenix Iron & Steel, a subsidiary of Barium Steel, has purchased 900 acres adjoining the Delaware River at Burlington for its ambitious project. When completed, it will provide facilities for the complete production of steel plate, structural designs, and seamless tubing. It will further assume all of the functions of the company's present plants at Harrisburg and Phoenixville, Pa.

Just a week ago $10 million in debentures were sold to finance the start of construction. The first phase will cost $50 million and will comprise the erection of adequate docking facilities, a blast furnace, and an oxygen converter plant.

The National Gypsum Co. recently completed a multi-million-dollar installation ad-

cent to the Phoenix property. And the ood Conversion Co., of St. Paul, Minn., is w building a $3,500,000 plant at near-by elanco. A few miles south at Moorestown, e Radio Corporation of America has vastly panded its guided missile and surface dar work.

At Pennsauken, on the outskirts of Cam-n, the Ford Motor Co. is constructing an 3,500,000 parts depot and export center, and e Pepsi-Cola Bottling Co. is erecting a ulti-million-dollar facility.

Other concerns building major installa-ons in this area are the Owens-Corning berglas Corp., the Hussman Refrigerator o., of St. Louis, and the National Metal dge Box Co. The Campbell Soup Co. cently completed the erection here of a 00,000-square-foot warehouse and is now onstructing nearby an office building and aboratory.

JET ENGINE FACTORY

The Curtiss-Wright structure is rising at he northern end of the Delaware Valley n Lawrence Township. It is due for com-letion by 1961 and will be used for the aintenance and testing of jet engines. Nearby, in East Windsor, the Applied Science Corp. is erecting a $1 million build-ng to house its present activities at Prince-on.

Socony Mobil has purchased land for a re-search laboratory at Pennington and plans o operate an atomic reactor plant at Hope-well. The New York Shipbuilding Corp. has just completed a new $12 million graving dock at Camden.

South at Paulsboro on the Delaware the Sun Oil Co. and Esso Standard Oil are about o build new bulk-oil plants. A few miles east the Hercules Powder Co. and the Owens-Illinois Glass Co. are erecting major struc-tures.

United States Bronze Powder Works, Inc., plans a multi-million-dollar facility at Flemington, as does RCA at Somerville. Johnson and Johnson recently completely a new plant for its Ethicon Division near Som-erville and three additional moderniatic plants on a 300-acre site at North Bruns-wick. These structures will house the com-pany's shipping center, baby products divi-sion and surgical dressing activities.

The Phelps Dodge installation is rising on a 200-acre tract at South Brunswick.

The Okonite Cable Co. recently purchased a large plant on Route 1 at New Brunswick for $4,500,000 and has already moved all of its Wilkes-Barre, Pa., operations here.

Other concerns that have purchased large tracts of land or are now building in this area are the Aluminum Corporation of Amer-ica, the California Refining Co., the Ameri-can Smelting & Refining Co., the Hercules Powder Co., the Jersey Central Power & Light Co., RCA, the Bakelite Co., E. R. Squibb & Sons, the Sperry & Hutchinson Co., Ron-son, and the National Lead Co.

Revlon recently moved most of its Brook-lyn and Bronx cosmetic facilities to Edison Township, near New Brunswick. Within a 10-mile radius of New Brunswick more than $100 million is being spent or has been com-mitted by private industry, for expansion and development of production plants.

Sherwin-Williams has purchased 12 acres at South Brunswick for a new paint instal-lation. Brockway Glass completed a new plant at Freehold last year and is already expanding it, and the Minnesota Mining & Manufacturing Co. is erecting a vast plastic plant close by.

The Colgate-Palmolive Co. has bought 105 adjoining acres, and the American Coil Com-pany, Inc., has just completed a 65,000-square-foot building at Farmingdale.

The General Chemical Division of the Allied Chemical and Dye Corp., is expanding its Elizabeth facility, and the Philco Corp. is planning to erect a huge storage warehouse in that community. Close by at Linden, the General Aniline and Film Corp. and Esso are spreading their industrial wings.

Inflation: Politicians Choose Up

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. ULLMAN. Mr. Speaker, devotees of the Eisenhower-Humphrey tight-money form of economic strangulation have missed few opportunities to chastise their critics as half-baked political opportunists who know nothing about fiscal policy or classical economic theory. I think the fine column of July 12, 1957, by Mr. Richard L. Strout, staff correspondent of the Christian Science Monitor, will provide interesting reading for my colleagues as it furnishes some information on the composition of the group which is attacking the so-called orthodox economic theory held by Secretary Humphrey. As Mr. Strout points out, the new economic group includes men who, indeed, are not to be scoffed at.

Mr. Strout also relates some of the arguments of this new economic school and in particular pays attention to the fact that the tight money, credit-rationing policy is uneven and unfair. Certain giant corporations continue to obtain needed financing even though interest rates soar, for they are able to pass the added expenditure along to the consuming public by charging higher prices. However, it is the little-business man and the small company in the highly competitive situation who are unable to absorb the staggering cost of current interest rates. They do not have the opportunity to benefit from an administered price.

Mr. Speaker, I think it high time we examined closely the relevance of the orthodox economic theory to the type of inflation we are now undergoing. Despite Secretary Humphrey's protestations, the theory may not be as sacrosanct as he would have us believe.

I ask unanimous consent that Mr. Strout's article be included in the Appendix of the RECORD.

The article follows:

[From the Christian Science Monitor of July 12, 1957]

INFLATION: POLITICIANS CHOOSE UP

(By Richard L. Strout)

Many observers here regard inflation as the No. 1 long-range economic issue before the United States.

The question increasingly is asked:

Is this another old-fashioned normal kind of inflation, or is this a new kind?

From the beginning the administration has said this is normal-type inflation which requires normal remedies.

A group of economists, however, is urging strongly that it is a new kind of inflation to which old-fashioned classical remedies aren't adequate.

POLITICIANS TAKE SIDES

Politicians are beginning to choose up sides. President Eisenhower, outgoing Secretary of the Treasury George M. Humphrey, and other Republicans are committed to the orthodox concepts and argue that the old-fashioned prescription of tight money is the appropriate remedy.

On the other hand, Democrats—almost desperately searching for a common political issue—are tending to fall behind the new group of economists. It can't be said that the Democrats always understand the new theory but they are willing to take a chance on anything.

The new economic group, although in a minority, includes men not to be scoffed at. At one time or another doubts about the orthodox theory have been raised by Elliott Bell, editor of Business Week and former fiscal adviser to Thomas E. Dewey, John Kenneth Galbraith, and Seymour Harris of Harvard, Gardner C. Means of the Committee on Economic Development, Leon Keyserling, former head of the Truman Council of Economic Advisers and—in greater or lesser degree—a good many other well-known figures.

PRESIDENT ASKS HELP

The administration's problem is that although it has backed the "tight money" policy courageously for almost a year prices have kept going up. As an editorial in the current Life magazine (supporter of the Eisenhower administration) says:

"The consumer price index has gone up for 14 of the last 15 months and is at another all-time high * * * prices have risen nearly 4 percent in the past year."

There are signs that the administration is less certain now that it has the answer.

President Eisenhower at his press conference has with increasing frequency stated that the Government by itself cannot halt inflation, that this is a problem in which the people must cooperate. Increasingly, he singles out corporations and trade unions. This in part approaches the theories of the "nonorthodox" school. Shortly after making one of his urgent exhortations Mr. Eisenhower was faced with the latest price boost of United States Steel.

Secretary Humphrey's economic views, as presented in lengthy current grilling before the Senate Finance Committee, are almost 100 percent traditional and orthodox, but some people think that even he is shifting.

In a militant opening statement he appeared to take the position that current inflation is due to big Government spending and goods "scarcity," that prices are rising because too much money is chasing too few goods. This is the classical concept.

On July 11 he amplified this to include another feature, huge Federal expenditure for unproductive armaments. It appeared that his is one of the chief villians in Mr. Humphrey's concept. It leaves unanswered why prices were fairly stable for 4 years between 1951–55 even while armament expenditures were big.

The group of new school economists, increasingly backed by a number of Democrats, is charging that what Secretary Humphey says is happening isn't happening, and that he is taking the wrong steps to prevent it from happening.

ARGUMENTS STATED

If the diagnosis of "to much money chasing too few goods" is correct then the orthodox remedy for the orthodox problem is correct—cut down the supply of money. This the Federal Reserve Board has been doing vigorously by boosting interest rates, throttling credit. This has the effect of rationing loans, just as water is rationed on a life-raft. Those who get credit survive; those who fail succumb.

But what the new economic school argues is that this remedy is no longer adequate; in fact, may actually be harmful. Credit rationing as an inflation remedy is uneven and unfair, they assert.

At the risk of oversimplification, the argument runs like this:

Small companies can't get credit easily, neither can competitive groups whose prices are fixed on the market place. The building industry and small business, it is widely accepted, are having difficulties.

But the giant corporations (so runs the argument) are less affected. Instead of borrowing money, they raise prices.

MORE SUBTLE EFFORT?

Other speakers go further and argue that credit stringency is injuring small business and not affecting or even aiding monopolies, while the banks which have money to lend are prospering disproportionately.

Prices are going up at the same time that the value of Government bonds are sinking, it is pointed out.

Many economists cite the one-two effect of trade unions raising wages in escalator agreements while simultaneously employers pass on the cost to the public in higher prices.

"How can 'tight money' affect this kind of thing?" they ask. Dr. Sumner Slichter, of Harvard, has partially stressed the inflationary significance of this union-employer procedure.

To get at the real causes of the "new inflation," according to many witnesses before the two current Senate hearings, remedies at once more subtle and up to date are required.

Minneapolis Youth Wins Propeller Club National Award

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 15, 1957

Mr. JUDD. Mr. Speaker, Ronald C. Johnson, a student at Central High School in Minneapolis, has won first prize in the annual essay contest sponsored by the Propeller Club of the United States and conducted among the Nation's high schools to stimulate active interest in the American Merchant Marine. His award is a 40-day, 8,000-mile-round-trip voyage to the Mediterranean.

Ronald's essay topic was the "American Merchant Marine: Its Importance to the American Farmer, Miner, Manufacturer in World Trade." He related the vital role of American shipping in maintaining reliable means for exporting surpluses produced from each of the above fields and in providing supply lines at home for dozens of commodities essential to the welfare and economic health of workers in those fields.

The National Propeller Club is an organization with about 12,000 members in various commercial fields who actively advocate and support the need for an American-flag shipping industry. In addition to his top national prize, Ronald's essay won first prize in a contest which the Twin-Cities Port of the Propeller Club conducted among high-school youths in Minneapolis and St. Paul.

Naturally we are proud of Ronald Johnson's fine achievement.

Mr. Speaker, under leave to extend my remarks, I include the winning essay.

THE AMERICAN MERCHANT MARINE—ITS IMPORTANCE TO THE AMERICAN FARMER, MINER, MANUFACTURER IN WORLD TRADE

(By Ronald C. Johnson)

FOREWORD

I am entering this contest because ships have always fascinated me. Having lived inland, I have had only a slight firsthand knowledge of our great merchant marine.

The more I studied this vast subject, the more I have become aware that our very existence as a powerful and prosperous Nation is directly linked to our merchant marine. Its inland, coastal, and world shipping represents the very lifeline of commerce, upon which the American farmer, miner, and manufacturer must depend for the transport of raw materials and distribution of finished products.

Most important of all, I have discovered that our merchant shipping affects the people I know and see every day. The paperboy and the mailman, for example, could not bring us news if it weren't for mass shipping of wood pulp, ink, minerals, and machinery. My corner drugstore, as well as the big department store downtown would not be so reasonable in price, nor so diversified, without the benefit of our vast and complex family of merchant ships.

The Propeller Club, through its Harold Harding Memorial Essay contest, is doing a great service to all Americans of my generation by giving us this opportunity to study and more fully appreciate the vital importance of our great merchant marine.

THE UNITED STATES MERCHANT MARINE AS A BENEFACTOR OF WORLD ECONOMY

With the world's surface being composed of more than 70 percent water, the ships from all countries weave a network of commerce, making possible a freer interchange of goods and ideas. The United States Merchant Marine, as a leader in world shipping, is one of the greatest forces for a more stabilized and unified world civilization. Through recent years, spectacular strides have been made in transportation and communication that have seemingly melted vast distances between continents. American shipping is also keeping its pace with progress. In the future as well as for the present, our merchant marine will remain to be our most reliable and economical means of transport for a variety of American goods stemming from our mines, our fields, and our factories. The United States possesses more than one-third of the total sea tonnage of shipping (see chart A), and has the world's largest merchant marine.

OUR SHIPS ARE BUILT TO SPECIALIZED REQUIREMENTS

Our world shipping fleet is comprised of tramp or charter vessels, the company-operated vessels, and the liner vessels. There are a wide variety of ships in each category. Each is designed for a certain type of service. For example, there are ships built for overseas trade, intercoastal shipping, Great Lakes shipping, and inland waterways. Each vessel must be built to best suit the trade route for which it is intended. Most ships are designed for one purpose, or a single type of cargo. These include the sleek passenger liner, the combination passenger-freighter, the company liner, which might include ships designed exclusively for transporting coal, grain, ore, chemicals, or foodstuffs. There are also combination freighter-tankers, which haul both package freight and bulk cargo—such as oil and other liquids. Barges of all types are used extensively on inland waterways. These are generally built for one type of commodity, such as grain, coal petroleum, and other bulk cargoes. Some barges are specially built to transport hundreds of automobiles and trucks.

Some vessels must be limited as to length, beam, or draft, due to certain size lockages or shallow waters in which they operate. Commercial fishing fleets are noted for being designed to meet the requirements of the particular type of fishing for which they are used. Our Great Lakes ore boats are a typical example of the way our merchant ships are often completely designed to perform a specific cargo hauling task. Their job is to economically move iron ore from the head of the Great Lakes to the steel centers of Illinois, Indiana, Ohio, and Pennsylvania. Marine architects and engineers developed mammoth 600- to 800-foot long ships for this task. The record for filling one of these ore boats is 11,000 tons in 15 minutes. Normally, however, boats are filled in 3 or 4 hours, from huge overhead hoppers, which receive ore from railroad dump cars, with tracks running out on the pier, above the hoppers. Giant unloaders empty the ore boats in from 4 to 5 hours.

The design of a ship is all-important, because it affects its efficiency, and its ability to best serve the miner, farmer, and manufacturer.

OUR POSTWAR MERCHANT MARINE

The United States merchant marine includes 25.8 million gross tons, 30 percent of the world's active ocean-shipping tonnage (see chart A). World War II left us with a surplus of 4,000 war-built ships owned by the Government. Their tonnage equaled two-thirds of the world's prewar dry-cargo fleet, and one-half the tanker fleet. Nearly a thousand of the best of these ships were sold to United States citizens, which were given preference. Most of these surplus tankers, Victory, and Liberty ships have been remodeled to efficiently meet our Nation's present-day shipping needs. Eleven hundred surplus ships were sold shippers of other nations, and 1,888 have been set aside as our national-defense reserve fleet.

The value of our moth-ball merchant fleet was proven only recently, when the Suez Canal was closed. Many of our reserve tankers were quickly recommissioned to carry United States fuel oil to Europe. Hundreds of these surplus ships have also served agriculture by providing emergency grain storage capacity.

UNITED STATES POSTWAR OCEAN SHIPPING TRIMMED TO INDUSTRY'S NEEDS

As statistics indicate, we presently have a vast, powerful modern fleet of merchant ships to serve American industry. In fact, World War II, and our international commitments in Korea from 1948 to 1953, spurred us into overbuilding our merchant fleet.

For the sake of economy, we have cut back our active shipping tonnage to proportions that best suit our current requirements.

GOVERNMENT SUBSIDIES ARE VITAL

With our high wage scales and high operating costs, our ships cannot economically compete with the merchant fleets of other countries. It is estimated that foreign ships can be built for less than half of what United States shipyards can produce them for. The typical foreign freighter can also operate for hundreds of dollars per day less than ours. It is therefore inevitable that the Federal Government subsidize American shipping and shipbuilding to insure the continued strength of our merchant marine. Much of this subsidy cost is regained through our protective import duties. This expense to our national budget is a

necessity. It must be included as a part of the overall cost of insuring our world leadership and our ability to be self-sufficient in the event of another war threat.

OUR MERCHANT MARINE IS BIG BUSINESS

In analyzing costs, it is well to realize the tremendous stake American shipping has in American industry. Passenger liners such as the *United States* represent a $70 million investment. A modern freighter ranges from $3,500,000 to $6 million each. Private investors have a long-range investment that must show a profit and be amortized over a 20-year period. Yet, Government arrangements with the United States Maritime Commission provide only for 12-year subsidy contracts. This presents a serious threat to encouraging private capital, and hinders the continuing strength and prosperity of our merchant marine. A high proportion of United States owned ships must be Government subsidized in order to remain in operation (see chart B).

PRIVATE ENTERPRISE, PLUS PRIVATE CAPITAL CAN SOMETIMES IMPROVE SHIPPING SERVICES

One exception to the trend toward increasing dependence upon Government aid, is the Federal Barge Lines operating in the Mississippi River and its tributaries. This line, for many years, was a Government-owned facility, consistently operating at a loss. Recently acquired by the St. Louis Shipbuilding & Steel Co., it was gradually built into an organization earning a substantial net profit in 1956. This was accomplished by reequipping the line with faster, more powerful new diesel towboats, introducting completely new-style integrated sectional barge tows, and by using modern loading and unloading methods.

American industry benefited by this company's improved handling of freight, and faster service. Federal Barge Lines is no longer a taxpayer's burden. Instead, it is a profitable, taxpaying enterprise.

SHIPPING ROUTES MUST BE ECONOMICALLY SOUND

To best serve industry, cargo space must be fully utilized, and runs with empty or light loads avoided. Short shipping seasons can also make a route costly.

OUR STRATEGIC LOCATION, PLUS ABUNDANT HARBORS AND WATERWAYS, FAVORS SHIPPING

Another important phase of the merchant marine's ability to serve the American farmer, miner, and manufacturer in world trade, is our abundance of excellent natural harbors and well-managed port facilities. These natural harbors are strategically located on both the east and west coasts, and on the gulf. Enormous manmade harbors and inland water facilities have also been developed to bring the world's markets to industry's doorstep. North America, blessed with the most fabulous inland sea—the Great Lakes—is soon to become an important link in world trade through the great St. Lawrence seaway.

The North American Continent, with its vast coastline, is uniquely placed as a natural center of world trade on both the Atlantic and Pacific Oceans. With the Panama Canal, the United States holds the key to important east-west shipping—both for our coastal industries and a great portion of all world shipping. (See chart E.)

THE UNITED STATES MERCHANT MARINE OF THE FUTURE

Today marine engineers are vitally concerned about the possibility of future block obsolescence of our merchant ships of World War II vintage. To counteract this, far-reaching experimentation is going on in testing newer, stronger, more durable materials that can go into the building of our ships.

Completely radical new designs are being worked out to make our ships more functional. Stowage, loading, and unloading processes are being improved to cut handling costs and speed shipment. This will be a tangible aid to American industry and agriculture. New techniques are being tried. "Piggy-back" shipping of semitrailers on the decks of intercoastal ships, Great Lakes ships, and inland waterway barges. Two new rollon train ships to be started this year, will permit the Alaska Steamship Co. to roll on 110 railroad cars and transport them on an 8-day turnaround schedule between Seattle and Whittier, Alaska. Huge mariner cranes and other automatic loading and unloading machinery are fast replacing archaic boom gear.

New turbo-generators using nuclear power are expected to be built within the next 5 years. Such developments might hold the key to revolutionizing the entire shipping industry. There might be a day when nuclear powered ships can travel many times around the world without delay for refueling. Greater operating efficiency should result. By eliminating much bulky machinery and fuel storage, such a ship could provide 20 to 30 percent added cargo space.

All of these new developments hold great promise for the new merchant fleet of the future, and its ability to offer new standards of transport to benefit the American farmer, miner, manufacturer, and ultimately all of us.

The Supreme Court—Has It Legislative Functions?

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. HOFFMAN. Mr. Speaker, from the pen of Mark P. Haines, of Sturgis, Mich., publisher of the Sturgis Journal, comes the following editorial of June 22, 1957, which can with profit be read by the average citizen:

GOVERNMENT BY USURPATION

Recent decisions of the Supreme Court of the United States make convincing evidence that the lawmaking powers of Congress have been usurped by 9 men who hold their positions by appointment and are frozen into their jobs for life. What President Roosevelt was unable to accomplish with his Court-packing scheme in the 12 years he was President, President Eisenhower has achieved in less than 5 years. We now have government by philosophy and political opinion instead of law.

The Supreme Court has preempted the legislative functions of Congress and is decreeing—not interpreting—what laws shall govern our people and our economy. The irresponsibility of some of its decisions are incredible.

People of this country now have a better understanding of what President Eisenhower meant when he gave his reason for the appointment of Justice Earl Warren—that the former California Governor had a good middle-of-the-road philosophy. A judge's personal convictions and philosophy should have no bearing on his judgment in matters of law. The Supreme Court's duty as defined by the Constitution is to apply the law to the facts as determined by the lower courts unless there has been a gross abuse of discretion with regard to the latter. Personal views and prejudices should have no part in the Court's reasoning.

Adding to the confusion is the fact that the Supreme Court can't make up its own mind.

On June 11, 1956, the United States Supreme Court by a 5 to 3 vote upheld the right of military courts to try civilian dependents accompanying the United States Armed Forces overseas. Last week, ruling on the same two cases, less than 1 year after its first decision the Court reversed itself completely. There are now nearly 400,000 of these overseas dependents, plus 24,000 civilian employees, who have no papa, no mama, no Uncle Sam.

Even more serious in its implications is a recent decision of the Supreme Court practically nullifying the authority of Congress to deal with Communists on the Federal payroll. Reversing its own decision upholding the Smith Act 6 years ago, the Court has now freed 5 California leaders of the Communist Party from sentences under the Smith Act, and ordered new trials for 9 others. The Court's reasoning is, that in order to convict under the Smith Act, which makes it a crime to conspire to teach and advocate overthrow of the Government by force and violence, it is necessary to prove that action toward violent rebellion is being advocated. A simple showing of advocacy says the Court, is not sufficient for conviction.

This seems to be a distinction without a difference. Does it mean that a man who plants a bomb in an airplane or a theater or a home can't be convicted unless he is caught touching a match to the fuse? The intent of Congress in passing the Smith Act was perfectly obvious. It was designed to enable the law-enforcing agencies to prosecute and convict Communists on the Federal payrolls. Now the Supreme Court is releasing them faster than they can be put behind bars.

No wonder Government lawyers are bewildered. Commented Columnist David Lawrence: "It all adds up to the bewilderment of the public which is being solemnly told that it must always bow to the supreme law of the land—whatever that is today."

Well might the people inquire as did a certain Cassius in another time of threatened tyranny:

"Upon what meat doth this our Caesar feed
That he is grown so great?"

Unless something can be done to curb the autocratic power of the Supreme Court, Congress might as well pack up and go home. Let the Supreme Court write as well as pass judgment on the Nation's laws.

If there comes a time when the people are convinced that the Supreme Court wishes to overthrow our Government by judicial degree, there would seem to be no reason why impeachment proceedings would not be available because the Court is an independent, continuing body, 1 of the 3 branches into which the Federal Government has been divided.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Address by Hon. William E. Jenner, of Indiana, Before Sigma Delta Chi Journalistic Fraternity

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Sigma Delta Chi Journalistic Fraternity, in Indianapolis, Ind., Monday, June 24, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE WILLIAM E. JENNER BEFORE THE SIGMA DELTA CHI JOURNALISTIC FRATERNITY MONDAY, JUNE 24, 1957, INDIANAPOLIS ATHLETIC CLUB, INDIANAPOLIS, IND.

I'm very glad to be with you today because it gives us a chance to talk freely. I always enjoy an exchange of ideas. I know the questions you ask will be stimulating.

The other day I asked myself why I go on fighting communism. Why don't I pack my things, move into my house in Bedford and just go fishing?

But that day I was feeling a little low. We were in session for more than 12 hours and I've just had an operation.

I'll tell you why I go on fighting and why I will continue to fight as long as I am able to.

Because communism is a conspiracy to overthrow the Government of the United States.

Its methods and techniques may change. Its purpose will not.

The Internal Security Subcommittee, of which I am a member, is responsible for knowing and ferreting out the many diverse ways in which the Communists work.

As long as the Communist conspiracy exists—and that means as long as communism exists, my purpose will not change.

The recent Supreme Court decisions make our committee's work more difficult.

The net result of the Jencks case is that no one can be prosecuted under the Smith Act, or under any other statute unless the FBI is willing to turn over to the defendant's lawyers all reports which the FBI has received from witnesses the Government plans to use against him at the trial.

Before that, it was left to the judge to look at the documents and decide whether they should be given to the defense.

The Communists scored in that decision. They can ask for anything in the FBI files touching their cases.

In the Yates case, the Supreme Court reached the remarkable conclusion that the Smith Act prohibits advocacy of forcible overthrow of the Government, if such advocacy is coupled with an "effort to instigate action to that end," but that Congress did not intend to prohibit advocacy of forcible overthrow "as an abstract principle."

The net result of the Yates case is to cripple the Smith Act. That invalidates all the prosecutions thus far obtained under it, including Jack Hall and the other Hawaiian Reds.

Victory No. 2 for the Communist.

In the Watkins case, the court practically says that hereafter it is going to make a critical judgment as to whether any legislative purpose justifies the disclosures sought and, if so, the importance of that information to the Congress in furtherance of its legislative function.

The court ruled the defendant would not have to testify about persons he knew as members of the Communist party because the mandate setting up the House Committee on Un-American Activities is too broad and vague.

Consequently, every Communist hereafter called before the House Committee on Un-American Activities, and perhaps by other congressional committees, will have the right to demand a detailed and lengthy justification of the interrogation, perhaps of every question.

The net effect of the Watkins decision is to gravely harrass and hobble the House Committee on Un-American Activities. Fortunately, the mandate of the Internal Security Subcommittee is much less vulnerable to criticism by the court, though of course, only a very brave man would prophesy that it will not be attacked in its turn by the present court.

In *Sweezy* v. *the State of New Hampshire*, also decided on June 17, 1957, the Supreme Court reversed the contempt conviction of a witness who refused (without pleading the 5th amendment) to answer the questions of the Attorney General of New Hampshire. The attorney general was acting under the authority of a resolution of the New Hampshire legislature authorizing him to investigate possible violations of the New Hampshire subversive activities of 1951. The court held that the investigative area assigned to the attorney general was too broad, and that the legislature should have defined more precisely what matters it wanted investigated. The net effect of that decision is to cripple still further the power of the individual States to investigate subversive activity—a power already greatly limited by last year's decision in *Pennsylvania* v. *Nelson*, which struck down the sedition laws of no less than 42 States.

In *Service* v. *Dulles*, also decided on June 17, 1957, the Supreme Court held that John Stewart Service had been invalidly discharged from the Foreign Service by Dean Acheson in 1951. Despite the prevailing impression, the Court's decision has nothing to do with Service's loyalty or suitability, and does not constitute a ruling that he is or was loyal or a sound security risk. The decision merely holds that Secretary of State Acheson blundered in discharging Service before completing all the investigative steps. The case is, therefore, important to Service, but not especially to us. The Reds and their sympathizers naturally distorted it to mean that Service has been cleared by the Supreme Court on the issue of loyalty—which is nonsense. Yes, the Communists are doing fine.

Think of the gains the Communists have made since that night in 1917 when Lenin arrived at St. Petersburg's Finland station to take communism out of a book and bring it into the lives of men.

Think of the gains the Communists have made since the end of World War II, when we vowed to plant the four freedoms and the ideals of the Atlantic Charter everywhere in the world.

Think of Poland, Czechoslovakia, Hungary, Rumania. Think of little Latvia, Lithuania, Albania. Think of all the others.

Then remember, the powerful, well financed, thoroughly trained and artfully concealed Communist agents in government bureaus, embassies, foreign offices, intelligence headquarters, editorial sanctums and university faculties, not only in our own country but also in every one of the countries of our so-called allies.

Think of the immense wealth and influence of those who try to foster and protect this ignorance.

Three years ago, when I was chairman of the Senate Subcommittee on Internal Security, we issued our now famous report Interlocking Subversion in Government Departments. That was the report, you will recall, which laid bare the design by which Communists penetrated into the United States Government and helped each other to rise to command posts in that government.

That was the report which described the members of the Red underground in these words: "They used each other's names for reference on applications for Federal employment. They hired each other. They promoted each other. They raised each other's salaries. They transferred each other from bureau to bureau, from department to department, from Congressional committee to Congressional committee. They assigned each other to international missions. They vouched for each other's loyalty and protected each other when exposure threatened."

You will recall, I am sure, the impact those words had on thinking Americans. One paper wrote that it sold as fast as the Kinsey Report. People who were uncertain before, people who had doubted before, doubted no longer when they were shown the tunnels through which those Red moles had crawled into our Government. It became enormously important not only to the conspirators, themselves, but also to the many, many others who have a vested interest in concealing their conspiracy, to obliterate the impression made by our report.

When we said the members of the Red underground used each other's names for reference on applications for Federal employment, we said it because there were scores of documents in the record to prove it. When we said: "They hired each other; they promoted each other; they raised each other's salaries; they transferred each other from bureau to bureau, from department to department, from congressional committee to congressional committee; they assigned each other to international missions; they vouched for each other's loyalty and protected each other when exposure threatened."

We said all this because there were not scores, but hundreds of documents in the record to prove it.

This is precisely the reason why our report did so much to form the prevailing image of Communist infiltration. The Communists knew all this. So did their friends, who help the cause so much by pretending to be anti-Communists. They knew, they all knew that the only way to destroy the influence of our report was to plant a lie about it in a respectable place and then circulate that lie under respectable auspices. That's why I go on fighting.

I don't give up in any fight, simply because it is going against me. Every American instinct recoils at the thought of quitting. America was not settled by quitters, it was not built by quitters, and it will not be saved by quitters.

But that is the response only of my instincts. What about my intelligence?

Have I dedicated myself to a lost cause? Is communism really the wave of the future, the tidal wave which cannot be resisted?

Not if I have anything to say about it.

Communism is a lie and a lie can always be resisted, successfully resisted, until it is consumed by its own inner evil.

This is the central fact of our time, the fact that communism is a lie. It is a lie that communism is a people's movement. It is a lie that communism is the dream of the toiling proletariat. Communism is the soul sickness of white-handed bourgeois intellectuals and has been ever since Karl Marx, the husband of a baroness, and Frederick Engels, Marx's rich boy patron, wrote the Manifesto in 1848.

In the 108 years since that brain child of Marx and Engels was laid on the world's doorstep, communism has never won a free election anywhere on earth. It came out of a book and into the lives of men in 1917 when V. I. Lenin, the son of a petty nobleman, and his handful of Bolshevik conspirators, seized power in Russia. They had just been outvoted 5 to 1 in the election for a constituent assembly, the only free election ever held on Russian soil. The manifesto of the third international, written 8 months later under Lenin's own direction, contained their own description of what happened then. "Communists voted in the election for the constituent assembly," the manifesto said. "They met in the hall. But they came there to break up this constituent assembly within 24 hours." Lenin himself boasted: "Just as 150,000 lordly landowners under czarism dominated the 130 million Russian peasants, so 200,000 members of the Bolshevik Party are imposing their will on the proletarian mass."

Conspiracy, coups d'etat, and arms—but never the free choice of the people fueled the Red juggernaut in Poland, Czechoslovakia, Hungary, Yugoslavia, Rumania, Albania, China, and Indochina.

It is a lie that communism is a people's movement.

It is a lie that communism is a program of human welfare. It is the parent of famine, and has been ever since Lenin's fingers closed around Russia's throat. There were famines all over Russia immediately after the Bolshevik triumph. There was an even more fearful famine in the early 1930's, which Stalin himself planned, in order to punish the small farmers for the crime of wanting to own their own land.

There were famines or near famines in Communist Poland and Communist Yugoslavia. There were famines in Communist China. There will be famines wherever there is communism. Famine is an integral part of socialist production.

It is a lie that communism is a program of human welfare.

It is a lie that communism offers workers of the world a way to throw off their chains, as the manifesto promised. The chains of workers in the capitalist world are mere figures of Red rhetoric. But the chains of workers in the Communist world are real.

The manifesto itself expressly calls for the creation of industrial armies, especially in agriculture. The very first Soviet constitution required forced labor on the part of the whole population.

Forced labor and Marxism—Leninism are husband and wife. They cannot be divorced from one another.

Was it only lies, was it only conspiracy, coups d'etat, and arms that propelled the Red advance? No; there was one more thing.

Capitalism helped communism to advance. Capitalism saved communism from disaster again and again—capitalism, which communism seeks to wipe off the face of the earth.

It was so from the very first. Lenin came to power by singing the siren song of peace and persuading his country's soldiers to lay down their arms before the German assault. The inevitable happened.

The Kaiser's army engulfed Russia. Under the Prussian heel, Lenin signed the treaty of Brest-Litovsk, which, according to one historial, lost for Russia 26 percent of the total population, 27 percent of her railway system, 33 percent of her manufacturing industries, 73 percent of her total iron production, and 75 percent of her coal fields.

Communism could not have survived for a year after this craven performance, save for one thing. The capitalist nations of the West, France, Great Britain, Belgium and the United States fought on, broke the Prussian power and made the treaty of Brest-Litovsk a dead letter. Then they sent Herbert Hoover to feed the Russian people, who were starving to death under the Red dictator's policies of socialist production.

Who saved Stalin's bloody neck when Hitler struck toward the east in 1941? Was it socialist production? Any schoolboy knows the answer to that.

It was capitalist production in capitalist ships braving the North Sea routes, which brought Stalin the tools and weapons without which he could not possibly have survived. He almost failed to survive anyway. Hitler overran Stalin's Russia just as Hindenburg had overrun Lenin's Russia a generation before.

Who saved China's Communist leader, Mao Tse Tung, when Chiang Kai-shek's Nationalists had him bottled up behind Kaigan Pass and were preparing the death blow for China's Communist revolution? Capitalist America saved him, acting through George Marshall. That great hero, Gen. Claire Lee Chennault told the story to our subcommittee in these words: "The Nationalists were persuaded to pull out of the pass and open the highway through there, so the Communists could move northeast. They did that, and they moved into Manchuria where they received arms."

The arms they found in Manchuria were left there by the Japs whom capitalist America had just defeated.

Now do you understand why I go on fighting communism?

I go on fighting communism because I do not believe that this lie, the most monstrous lie ever concocted in the whole history of mankind, can permanently withstand the assaults of truth. I do not believe the liars who conceal it can permanently withstand the assaults of those who would snatch the veil of concealment away.

I do not believe that the colossal blunders of the West, real blunders sometimes, cowardly blunders sometimes, contrived blunders sometimes, can go on forever.

What are the American people going to do in the face of the overwhelming victory which the Communists have just won in the Supreme Court? Are they going to quit? I am sure we will never quit.

General MacArthur told us, during the Senate hearings on his dismissal, that in every situation there is a way to victory. You, the editors of our free press, I, and the other Members of Congress, must find it.

American strength is leaking away. It would be foolish indeed to pretend otherwise.

The American Congress and the American people—writers, lawyers, labor leaders, businessmen—have worked long and hard since the the thirties to map out the lines of Communist attack and to plan the American defense against subversion. We have tried in every way to carry on our fight, against this conspiratorial war, within the framework of our law and our cherished political liberties. We have spent weeks and months taking testimony. We have spent long hours in legislative drafting. We have imposed on our Department of Justice every reasonable requirement for protection of the innocent. If anything we have erred, as we wished to err, in protecting the innocent rather than convicting the guilty, though we knew the danger to our country was great.

Now the Supreme Court says all our caution was in vain. It says we can forget all about subversion, and leave everything to the FBI, but the FBI must open up its files, to the legitimate questions of the innocent, and to the cleverest questions of the Soviet Union's smartest subversive agents.

We, in Congress, knew the argument was false that the FBI alone could defeat this conspiracy. The Justice Department and the FBI cannot issue subpenas or compel testimony under oath. We knew Congress must take the lead in finding remedies for conspiracy. Congress has paid a heavy price. You know what happened to MARTIN DIES, to the long list of Members of the House and Senate who failed of reelection, because they were good fighters against communism. You know what happened to Joe McCarthy.

I promise you that I will not quit. I promise that Congress will not quit. I promise you the American people will not quit. We will say, as John Paul Jones said, "We have not yet begun to fight."

When the fight is finished the Communists will be a dark stain on the pages of history, and American liberty will again enlighten the world.

Address by Hon. Herman E. Talmadge, of Georgia, Before the Alabama American Legion Convention

---

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the junior Senator from Georgia [Mr. TALMADGE] before the convention of the Alabama department of the American Legion, in Montgomery, Ala., July 15, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. HERMAN E. TALMADGE, SENATOR FROM GEORGIA

Commander McCray, Mayor Gayle, Senator Sparkman, Congressman Grant, distinguished guests and my fellow Legionnaires, your invitation to speak at this convention is a cherished one for me.

I can think of no place where I feel more at home, outside of my home State, than in this hallowed city amidst friendly neighbors.

The invitation to speak here and spend some time with you which was so graciously extended by Commander McCray, Senators Hill and Sparkman, and Congressman Selden is most appreciated.

I want to tell you at the outset of my remarks today how grateful I am for the thoughtfulness and many courtesies your distinguished Senators have extended to me during my initial service in the Senate. You are to be congratulated upon your State's able representation in both branches of the National Congress.

The Alabama delegation in the House of Representatives is noted as a strong one. Senator SPARKMAN, the Democratic vice-presidential standard bearer in 1952, is a keen student of Government and a tireless and energetic worker. Senator HILL is

renowned for his championship of the cause of the rank and file of citizens of this country.

Typical of Senator HILL's effort in the field of public welfare is the Hill-Burton Hospital Construction Act which bears his name. This act has afforded every area of every State modern hospitals, health centers, nursing homes, laboratories and other facilities so needed in ministering to suffering humanity.

In Georgia, we have taken full advantage of this program and our people from the mountains to the sea are grateful for its benefits.

Yes, Alabama always has furnished her share of statesmen to the world's greatest deliberative body.

I am reminded of the great Senator John Bankhead; the renowed leader, Senator Oscar Underwood; and the two immortals from your State, Senators John T. Morgan and Edward C. Pettus.

It is an inspiration for me to visit again the birthplace and first capital of the Confederate States of America.

It is good to see the majestic capitol building where President Jefferson Davis was inaugurated and the very spot where he stood to deliver his inaugural address to an assembled throng.

All of the interesting shrines in Montgomery serve to emphasize our mutual heritage.

Georgia and Alabama are similar in many respects. We have the same social customs and traditions. We share most of the same religious faiths. And a common characteristic of our two peoples is their reputation for patriotism and sacrifice—a willingness to do more than their share in any emergency.

Geographically, our states are much the same. So are our cities.

Our educational systems are comparable in many ways.

We produce essentially the same raw and manufactured products.

Our forebears are the same in many families of both States.

The histories of our two States are parallel in many respects.

We have suffered together in adversity. We have fought side by side in many battles of several wars. We have labored together in peace and have shared together the fruits of those labors.

We have witnessed together the birth of the new southland. We have seen an industrial empire added to an agrarian economy giving new life and added strength to our whole region.

The result has exceeded every dream. Despite all obstacles, the future is full of promise. During the next 25 years, Georgia and Alabama can look forward to another unprecedented period of growth and development which, I predict, will far exceed the progress of the last quarter of a century.

If we are to guarantee this desired goal, we are going to have to see a wider unity of purpose among the people of our States and among the States of our region which share the same problems and objectives.

There is a definite need throughout the South—and, for that matter, throughout the entire country—for organized political action on the part of responsible individuals, responsible businesses and responsible groups interested in preserving our form of government, interested in maintaining our constitutional liberties and interested in preserving the rights of the States and of the people.

I say this for today relatively insignificant pressure groups are wielding far more power in our Government than their numbers deserve simply because of their militant organizations and activities.

If the masses of the people of this Nation would make their feelings known through concerted efforts, we would see a big change for the better in Washington.

I value my American Legion membership because I know that this is one organization which is working 24 hours a day, every day, for our American way of life.

When I think of the Legion and of all for which it stands there comes to mind the pages of our history which record this land's greatest triumphs in deeds of Americans far beyond the usual standards of loyalty, patriotism, bravery, and sacrifice.

I think of Bunker Hill, San Juan Hill, Tripoli, the Marne, Flanders, Belleau Wood, Chateaux-Thierry, the Argonne Forest, north Africa, Sicily, Mount Casino, Tokyo, Ploesti-Schweinfurt, Bremerhaven, Normandy, the Bulge, Bataan, Corregidor, Midway, Guam, Guadalcanal, Korea, Inchon Peninsula, Heartbreak Ridge and all the other sanguinary battles which have been waged in the annals of our Republic—battles which have been waged at so great a cost in lives and material substance.

The American Legion has not forgotten.

On no occasion has the Legion ever failed to stand up and speak out vigorously in defense of our institutions, our ideals, and for maintenance of our guaranties of liberty and freedom. The Legion has done so courageously, sometimes in the face of severe hostility and at actual peril to the organization itself.

The undeviating record of the Legion, therefore, has been and will ever be, to keep faith with those Americans who have gone on before, many of whom have given their lives for the cause of freedom.

My friends, with that past record and that solemn dedication on the part of this organization, I want to take this opportunity to discuss with you the most deadly and dastardly threat ever to confront us as a nation—the sustained and vicious attack aimed at the destruction of constitutional and representative government in this country.

Let us look at some of the ways in which we have seen this attack pressed in recent years.

We have seen the United States Supreme Court forsake its constitutional role of interpreter of the law and seek, through usurpation of legislative power, to make the laws instead.

We have seen the executive branch of our Federal Government demand unprecedented power to regiment the social, economic, and political life of this Nation.

We have seen Congress abdicate more and more of its authority to the executive branch and we have heard proposals that the Senate relinquish its traditional freedom of debate despite the fact that it is an integral part of the delicate balance of powers afforded under our form of government.

The Supreme Court has deliberately ignored the Constitution of the United States and substituted impractical and unproved theories for established law and precedent as the basis for its rulings. It has sought to obliterate the reserved rights of the States. It has sought to dictate to Congress. And it has proved itself more concerned about the rights of Communists and rapists that it is for the rights of the innocent, law-abiding citizens whose rights such individuals violate.

The President and his Attorney General have demanded that Congress give them authority to interpose the Government of the United States between the individual and his right under the law to seek either damages or criminal prosecution for any violation of his civil rights. They have demanded that Congress enact a new force bill which, through adroit manipulation of the amendment process, robs every citizen of his right of trial by jury and authorizes full use of the Army, Navy, Marine Corps and militia of the Nation to enforce the Attorney General's notions of what are and are not civil rights.

Because that is a subject of much current concern on our part—and one which should be of concern to every American who values his liberty and constitutional heritage—I should like to point out and emphasize some of the grave dangers posed to our freedom as individuals and our form of government by the misnamed civil rights bill presently being considerd by the Senate.

Although we of Congress are told by the President and his Attorney General that this measure is designed principally to protect the already constitutionally guaranteed right to vote, it is very carefully grafted into the existing civil rights statutes of the Nation.

By amending laws which stem from the passions which flamed throughout the Nation immediately before, during, and for years after the War Between the States, it brings into play statutes which—if implemented to the letter by vicious or vindictive Federal officials—could be used to punish the South with another period of reconstruction, 90 years later.

Let me read to you one of these old laws which would be revived by the bill presently under consideration. It is found in the United States Code as section 1993, chapter 21 of title 42. Entitled "Aid of Military and Naval Forces," it states:

"It shall be lawful for the President of the United States, or such person as he may empower for that purpose, to employ such part of the land or naval forces of the United States, or of the militia, as may be necessary * * * to prevent the violation and enforce the due execution of the provisions of sections 1981–1983 and 1985–1994 of this title."

For the sake of clarification, let me point out that the section 1985 which that language states can be so enforced is the section which this bill would amend to permit the Attorney General to initiate injunctive proceedings in the name of the United States.

Therefore, let there be no misunderstanding on the part of anyone. Under this measure the full might of the United States Army, the United States Navy and the United States Marine Corps could be used to enforce with bayonets and bombs the provisions it is proposed that Congress enact into law.

And by the very vagueness and general terms of the language of the present law which the administration wants to amend, the bill now being debated would extend the authority of the Attorney General of the United States over the entire field of civil rights.

The law, as it now reads, prohibits any interference with or denial of the equal protection of the laws or any right or privilege of a citizen of the United States.

That language covers an area as broad as the imagination of mankind and as fathomless as the minds of some individuals who may transiently enforce its provisions.

Who is to say what constitutes equal protection of the laws?

Who is to enumerate the rights and privileges of a citizen of the United States?

Under the authority of that loose language the Attorney General could initiate injunctive proceedings affecting not only the full range of laws governing relationships between individuals, groups and races but also such totally unrelated fields as taxation and the location of roads by Federal and State agencies.

He could take the position that failure to employ a person because of race, creed, color, national origin or any other factor constitutes a denial of the rights and privileges of a citizen of the United States and thereby set himself up as a one-man FEPC with authority to use the military might of the United States to regiment the industry and business of the Nation.

There is not an area of human thought or conduct which the language of the bill now before the Senate does not cover. It runs

the gamut from sowing to reaping, from sleeping to waking, from thought to action and from the cradle to the grave.

The Attorney General, through clever manipulation of the amendment process, would subvert the language of the present law under which trial by jury is inherent and limits of punishment specified, into a cloak for actions in the name of the United States under which trial by jury is denied and the extent of punishment left to the unbridled discretion of the presiding judge.

If enacted, this so-called civil-rights bill would change private action to Government action.

It would interfere with the right of Americans to pursue their equitable remedies.

It would deny Americans the right of indictment.

It would deny Americans the right to confront and cross-examine their accusers.

It would deny Americans the right of trial by jury—a right now guaranteed by law to even rapists, murderers, and traitors.

It would have the net effect of completely changing our form of government from one under which rights are inalienable with the individual to one under which rights are arbitrarily determined by the Attorney General of the United States.

It does not confer upon a single American a single additional right. The only person to whom it grants any new rights is the Attorney General of the United States, on whom it confers the arbitrary and unrestricted power to use the Federal judiciary as an instrument of his political caprices to deny civil rights.

It would make of the Attorney General a czar of civil rights superior even to the Constitution of the United States.

The protection of the civil rights of our citizenry lies not in the enactment of new, confusing, contradictory, and unconstitutional laws but rather in a strict adherence to the constitutional guaranties, processes, and prohibitions which already are the law of the land and which, without question, are adequate to meet every requirement of those who are concerned about protecting the rights of the American people.

Every civil right which we as citizens of the United States cherish is set forth and guaranteed in the Bill of Rights.

These guaranties are stated clearly and unequivocably in language which can readily be understood by any person with a fourth-grade education.

As great as is my respect for the collective judgment and intellect of my colleagues in Congress, I cannot concede that Congress can improve on the Bill of Rights.

In a nation as large as ours, it is possible to find examples of injustice anywhere—from among the Indians of the Southwest to the Eskimos of Alaska. Civil rights are violated in the Middle West and the East just as often as they are in the South and on the west coast.

But the mere fact that injustices do occur and civil rights sometimes are violated cannot by any stretch of the imagination be said to be justification for the destruction of constitutional government and the abrogation of constitutional guaranties.

State and Federal courts are now available to protect civil rights—they have been doing just that—and no one has submitted the first bit of evidence to show they are not doing their job in this regard.

It remains to be seen whether Congress will abdicate its constitutional role to safeguard the rights enumerated by the Bill of Rights in this instance. The House of Representatives, under extreme pressure from the executive branch, has done so.

In the Senate another chapter in this fight is unfolding.

There, I am proud to report, a group of determined men, including myself, presently is in the process of alerting the people of this Nation to the grave jeopardy in which their rights are placed by this legislation.

And I wish to state to this Alabama audience that there are no two Senators who ever have done or are doing a more effective job in opposing such punitive legislation than Alabama's Senators HILL and SPARKMAN.

While I could not predict what the outcome of this debate will be, I will say this: I cannot bring myself to believe that the masses of the American people, once acquainted with the facts about this monstrous legislation, will countenance its enactment or enforcement.

In conclusion, I make this observation.

Sometimes we may be justified in feeling frustrated with the direction of our Government and with the policies of our leaders.

But we must never sell America short nor discount the loyalty, courage, ability, honesty, and sincerity of purpose of the American people.

They have demonstrated again and again their intense determination to meet and overcome whatever challenges may confront them.

Because of this, I am confident that this Nation will survive in spite of all the mistakes that our leaders and Government may make.

I put my faith in the good sense of the American people to save us from ourselves.

I hold fealty for both my State and my Nation.

In no instance has there ever been any conflict or problem for me for I know, as every loyal American knows, that what is best for my State also is best for the country as a whole.

Washington needs to pause for reflection and for a reevaluation to realize fully once again from whence comes all freedom, all equality, all strength, all integrity, all security, and all those other precious attributes identified with our growth as a Nation.

There must be a sincere rededication to the fundamental teachings of the Holy Writ.

There must be a renewed respect for the true meaning of the Constitution and a respect for the law as it is written.

There must be a practical recognition of the fundamental laws of nature.

There must be an instillment of sound business practices into Government.

And there must be a solid determination on the part of all public servants to keep faith with the people.

The American people must be freed from the attendant evils of bureaucracy, redtape, intimidation and tyranny so they once again can be masters of their own destiny.

Let no one be deceived by the cries of those who would destroy us. A return to fundamentals is the key to survival in this day and age even more than was the case in all the other periods of great stress and strain that have marked the life of our Nation.

We must not lose sight of the unchallenged fact that a militarily impregnable America and an economically invincible America are the world's best and only hope for peace.

If we are to perpetuate our blood-won birthright for ourselves and for our posterity, the welfare of the American people and the solvency, safety, security, and sovereignty of our own country must be our primary concern.

As for me, and the future of this country, I put my faith in Almighty God and in the sound judgment of my countrymen as we work shoulder to shoulder for right and justice.

To that concept I am pledged.

To that concept I give my energy and devotion.

Anniversary of Texas Bar Association

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 16, 1957

Mr. JOHNSON of Texas. Mr. President, Sunday was the 75th anniversary of the founding of the Texas Bar Association.

Taking note of the occasion, the Kilgore News Herald said editorially:

The basic principles and objectives established by the founders of the Texas bar three-quarters of a century ago remain.

Charles K. Devall, the energetic and forward-looking young publisher of the Kilgore News Herald, which is one of the outstanding newspapers of east Texas, shows a keen awareness of the valuable contributions made by the State bar of Texas.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATE BAR'S SERVICES NOTED

An event of major importance—especially important for members of a distinguished profession—occurred on July 14, 1882. It was on that day that the Texas Bar Association came into being.

It was the first organized effort of the Texas legal profession, which is celebrating its diamond anniversary month. More specifically, the week beginning today has been designated Diamond Anniversary Week of the Texas bar by proclamation of Mayor Crim in tribute to the American system of judicial administration.

As part of the local area celebration, the Gregg County Bar Association will be paid an official visit in Longview by the Honorable Ruel Walker, member of the Supreme Court of Texas.

From its inception, the State bar has continued to push its proposals to improve the administration of justice, for no one knows better than the legal profession that the very foundation of our American way of life rests on the law.

The association has brought changes for the better in our penal laws, it has stood strongly for constitutional government, it has, through the legislature, placed innumerable important and needed laws on the statute books, and it has often removed conflicts and ambiguities in the law which had become prevalent through the years.

The basic principles and objectives established by the founders of the Texas bar three-quarters of a century ago remain. Changing times and conditions only have resulted in additions to early objectives. The creed the pioneer lawyers recognized and wrote will remain so long as members of the profession are privileged to practice law in a free land—never to falter in their efforts that everyone shall enjoy equal and prompt justice, fairly, efficiently and impartially administered.

Congratulations to the State bar association and to members of the Gregg County Bar Association—on their great heritage and on their service which has enriched the lives of so many people.

Water-Development Projects Pay Big Dividends

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. JOHNSON of Texas. Mr. President, once of the best weekly newspapers in Texas, which has hundreds of good weekly newspapers, is the Liberty Vindicator. The Vindicator has an editorial page in keeping with the paper's general policy, which is kept to a high standard by Editor Jake Smyth.

Jake Smyth is an editor who knows the needs of his community. This knowledge was well exemplified in a recent editorial in his newspaper on the value of flood-control and water-conservation projects, a subject of vital concern to the people of the Liberty area.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A HEALTHY RETURN

Flood control and water conservation projects on the major rivers of Texas "will pay for themselves and will return healthy dividends," United States Senator LYNDON B. JOHNSON declared this week.

But our senior Senator is deeply concerned.

Unless a far-reaching development and conservation project is pushed forward aggressively, said the top-ranking Democrat from the heart of Texas, we will not have the water we need by the year 2000.

Dams and more dams is the Johnson solution.

That is the kind of language that can be easily understood by the folks of the Trinity Valley, who suffered for several years from drought and are now suffering from more than 2 months of overflow waters.

Senator JOHNSON mentioned the Trinity specifically when he said we must hold onto our rainfall instead of allowing the water to run off into the gulf.

"If we don't develop our water supply and conserve our water resources," he emphasized, "the Texas economy will wither on the vine and our State will become a wasteland."

Speaking of the approach to the water solution in the 1958 Federal budget, the Senator asserted that "the problem is a giant and we are fighting it with a knitting needle."

It is his contention that our investments in flood control and water-resources development have lagged far behind the increase in population and the expansion of the economy. He quotes figures to show that Federal expenditures for water projects actually were 14.9 percent less in 1956 than in 1950.

"At a time when, by every sound standard, we should have been doing more, we have been doing less," Senator JOHNSON reiterated. "Our failure to do more has been costly in lost industrial opportunities, in heavy flood damage, in loss of human life."

The leading Democratic Senator thus echoes officially what we along the Trinity have been saying in layman's language for a number of years. The problem, of course, is leadership. State and local water problems cannot be solved by Uncle Sam alone, as we were plainly told by a United States Army engineer at the White Heron fish fry at Anahuac 10 days ago. The only solution is through a combination of Federal, State, and local perseverance, funds, and planning.

It now appears that the Trinity River Authority, as far as our river is concerned, is doing a commendable job of bringing to a head our local and regional water and conservation needs under the long-discussed master plan.

Our problem down here on the lower Trinity is to do just what Senator JOHNSON suggests—work and plan constructively now, on a long-range basis, if we want to whip this major problem before the year 2000.

Talmadge Debunks Inane "Aid"

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Talmadge Debunks Inane 'Aid'," which appeared in the Fort Wayne News-Sentinel June 29, 1957. This editorial pays deserved tribute to my colleague, the junior Senator from Georgia [Mr. TALMADGE], for the very able speech which he delivered on the floor of the Senate recently in opposition to the further squandering of American taxpayers dollars on foreign aid. This editorial from the Fort Wayne News-Sentinel, one of Indiana's outstanding newspapers, is further evidence of the fact that the opposition to continued foreign aid by American citizens transcends sectionalism and political party lines.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TALMADGE DEBUNKS INANE "AID"

There have been many excellent speeches delivered in Congress on our endlessly and senselessly squandering our substance all over the world on inane foreign aid projects. However, it has remained for Senator (former Governor) HERMAN TALMADGE, of Georgia, to present perhaps the most damning detailed chapter and verse indictment against this shocking fallacy of the Washington bureaucrats and internationalists.

After the fashion of the able trial lawyer he is, he launched his case against foreign aid with a typical opening statement, in which he presented a general synopsis on United States expenditure of $40 billion in economic aid and outright grants, relating how the money has been used to subsidize tax cuts in foreign lands, while as a result, tax cuts are denied our own people at home. Of how the billions went to stabilize foreign currency while the resultant inflation further feeds the fires of devaluation of our dollar. Of how this misbegotten aid builds hydroelectric projects, irrigation dams and flood-control projects all over the world, while floods still ravage America and there is an insistent cry for more power to enable our industry to keep up with the rest of the world.

Then submitting the detailed allegations in his complaint, "Barrister" TALMADGE declared that:

"While many of our farmers cannot get their crops to market over muddy roads, we build a huge six-lane turnpike to a gambling resort in Portugal.

"While millions of Americans are sweating over their tax returns, our Government sends a "hot lips" musician on a foreign tour and pays him more than the President.

"Why, we even have built public rest rooms in the Philippines and bathing facilities for Egyptian camel drivers. We have sent collapsible toothpaste tubes to Cambodia, dress suits to Grecian undertakers, and iceboxes to Eskimos. We have sent opera singers to Italy and ultraviolet ray lamps to India.

"And we have set up a pension program for overage Chinese Nationalist soldiers. And while rice production is less here than in Korea, our technicians have gone there to tell them how to raise rice.

"HUMMON," as he is affectionately known to many of his colleagues, introduced many other similar exhibits in evidence and then presented his summation to the congressional jury in which he appealed to them to end all economic aid as of now, and to reexamine military aid with the confirmed objective of seeing that the American taxpayer gets a dollar's worth of national security for every dollar that is expended. He realistically declared that:

"Economic aid could be liquidated without another dollar being appropriated by Congress. It could be ended this year without substantially disturbing the commitments already made. This could be done because there is still $7,500,000,000 already appropriated and yet unspent, for supplies and techniques in the many pipelines extending from our Treasury in Washington—these pipelines could flow for several years more to discharge their contents without putting new money into them."

TALMADGE emphasizes that it is of utmost importance that we "stop this inane foreign-aid foolishness now, before we wrap ourselves up into a perpetual commitment of perpetual monstrous waste."

He soundly predicated this appeal on the demonstrable premise that our many billions wasted on foreign aid have bought us neither friends nor any promise of national security.

TALMADGE speaks with the conviction of first-hand experience on the matter of national security, for he served in the United States Navy from 1941 to 1945, advancing to the rank of commander in which he participated in various engagements with the Japanese Fleet and in the Battle of Okinawa. TALMADGE soundly advocates the very antithesis to our senseless squandering of more billions in our frantic and futile quest for friends and security when he sensibly rationalizes that:

A militarily impregnable America, and an economically invincible America, are the world's best and only hope for peace. If we are to perpetuate our blood-won birthright for ourselves and for our posterity, the welfare of the American people, and the solvency, safety, security, and sovereignty of our own country must be our primary concern."

We reiterate that no one has thus far, presented a more convincing case for perpetuation of a strong and free America, than this distinguished Senator, former Governor and son of a former Governor of Georgia.

Government and the Arts

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD a speech by Lillian Gish entitled "Government and the Arts," delivered recently at the centennial celebration of the American Institute of Architects.

I believe that the suggestion of Mrs. Gish is well taken, and I hope the administration and the Congress will give serious consideration to this proposal.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOVERNMENT AND THE ARTS

(Address by Lillian Gish, actress, centennial celebration of the American Institute of Architects, Washington, D. C., Sheraton Hall, May 15, 1957)

I hope all of you subscribe to Christopher Morley's formula that a happy life is spent in learning, earning, and yearning; and that today will find you yearning for more beauty in this land of ours; and that you will share my belief that the Government should play a definite role in encouraging the arts in America. To date, our country's official interest has been outstanding in its absence. Such neglect could not have been the intention of our Founding Fathers, else our first President would not have commissioned the French architect, Pierre L'Enfant, to draw plans for this city. As you know, he only worked 1 year when he was dismissed because of his untoward disposition, though his plan was, in general, followed. Our second President, John Adams, wrote to his wife in 1780, "I must study politics and wars that my sons may have liberty to study mathematics and philosophy that their children may have a right to study painting, poetry, music, and architecture." Our third President, Jefferson, supervised the building of his own beautiful home and our lovely University of Virginia.

In France, Napoleon III, with the help of Haussman, planned Paris as it exists today. Without the Greek statesman, Pericles, who was a patron of the arts, the Acropolis could not have been planned and rebuilt after the Persian War. The Greek population was brought up to be sensitive to it, to criticize it, and to be proud of it.

This new Nation, growing so swiftly, had better pause and look to its future here at home. Since 1917 we seem to have concentrated on other lands more than on our own. We have given away many billions to others while our own shrines come down one by one for lack of funds to care for them. Why? Because the artist has no court of appeals as the laboring man, the war lord, or the businessman. They all have a Secretary in the President's Cabinet; but not the artist, not the scientist. He does not exist in our Republic.

When they opened the George Washington Bridge, that dream of beauty across the Hudson in New York, President Roosevelt came up from Washington, the governors came from all the States around, the mayors arrived, and bands played for hundreds of thousands of people, but they forgot to ask the architect. Of all the hundreds of people I have asked if they knew the name of the man or men who created this beautiful bridge, only one person knew, and he was an architect. When the brochure was prepared for the cornerstone laying of the new State Department Buildings, all participating officials, all responsible Government officials, contractors, and so forth, were listed, but not the architects. Why you do not sign your work as a sculptor or painter signs his, and in the same proportion, has always been a puzzlement.

Your architects are not entirely blameless. You remind me of my own family who believe that one should have his name in public print just three times—when he is born, when he marries, and when he dies. In my lifetime I have heard of only two architects: Frank Lloyd Wright, God bless him for what he has done to make even the word "architecture" known to us; and the other is a memory of my childhood, Stanford White, who got shot. A prizefighter gets more publicity and, in some instances, a truck driver is better paid. It would seem that our system of values has reached an Alice in Wonderland absurdity, worthy only of satire.

A nation is great only when the essence of its mind and spirit is great. We judge every ancient culture by its works of art. Why should we not judge ourselves by the same standard? Think for a moment what we would be like without the contributions of our Rockefellers, Fords, Mellons, Carnegie, and others of our great philanthropists. Where will we find the great, far-sighted and generous men in the future? Who will have enough private capital to restore a Williamsburg? Where will we get our art collections to equal Widener, Kress, and Chester Dale? Our enormous taxes make it less likely that we shall have men and families like these in the future. Such great sums of money are going to the Federal Government. Billions for arms and armies to defend this country, and not 1 cent for the background and beauty which these arms and men defend. Why should our Government not take some responsibility and give us a Secretary of Fine Arts, independent of the party in power, who would devote himself solely to getting the best possible assistance to help and advise each branch of the arts? This is really one of the most essential things for a government to consider.

For art, the most lasting product of a civilization, has no value that can be assessed in money. Imagine trying to sell the Parthenon, a Mozart Mass, or Paradise Lost today. Yet art is the only lasting aristocracy. Kings come and go; countries, governments come and go—only art remains. You and you and you, more than any other, are the unsung artists of our time. You have the ways and means to reach every part of this Nation.

Nothing lasting is every put into construction without a plan and solid structure. You devise the plan, and let the Government put up the structure, which, in your case, is recognition and authority. You must look ahead since you build for tomorrow You are the future. As an artist, you come pretty near to working in eternity. You start with a plan for a church, a house or a bridge. Then why not a plan for our cities that will enrich living by placing all the needs of the populace within harmonious reach in beautiful surroundings? That could end the confusion of running in narrow streets, many of which originally were cow paths from one end of town to another, looking for a hairpin. Does this sound fantastic? As you move through the United States, growing so swiftly, it is not too late for planned cities, instead of those that just growed, like Topsy.

Every town or city has something of which it is proud and would like to keep lovely or make beautiful. At Phoenix, where we played a few weeks ago, the natives pointed with pride at their camel-backed mountain, but told us it was being ruined and would soon look like any hillside dotted with houses. You are the ones to preserve our landmarks, the parks we already have, and see to it that other parks are made in this swiftly expanding land. But for this you must have authority and help.

If you agree that we need a Secretary of Art and Science, will you not devise a plan to be submitted with the plans of all the other branches of the arts and sciences, so that we may take it to the White House?

Our President has already gone on record and said that something should be done for the arts. Now it is up to us to tell him what that something is. Since he gave us a Secretary of Health, Education, and Welfare, because he believed it was a good thing for the country—and by the way, since then has been one grant alone of half a billion dollars—if we can persuade him that our cause has an equal value to the future of America, we have every reason to hope that this dedicated man will support us in every way. Canada has its Minister of Fine Arts. Canada, with a population not as large as two of our cities, has just voted a grant of a hundred million dollars to its Minister of Fine Arts. England has it Arts Consul; in 1950–51, their expenditure was $81,998,000. Sweden, France, Italy—every country but ours.

In Austria the summer before last, we were looking at one of Fisher Von Erhlick's—an Austrian architect of several centuries ago—lovely buildings, when 2 school children, around 11 or 12 years old, came by and told us that if we like his work, we could find a much better example of it 2 blocks further down the street. All the cultured nations of the world look to their artists to help build and preserve their civilization. Every nation in the world except ours. If you share my belief that we need this recognition, please work on your plan and make the artists of our country at long last belong to our country. "Forgive me that I cannot speak definitively on these mighty things. Forgive me that I have not eagles' wings. That what I want, I know not where to seek, except through you."

Editorial Comment on Foreign Policy Speech by Hon. Mike Mansfield, of Montana

---

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 16, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in today's Washington Post commenting on the very thoughtful foreign policy review given us by my esteemed colleague, Senator MIKE MANSFIELD, the junior Senator from Montana, who is the Democratic whip as well as a member of the Senate Foreign Relations Committee and a longtime student and teacher of history.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN SEARCH OF SECURITY

The suggestion advanced by Senator MIKE MANSFIELD that the Secretary of State survey firsthand the changes in Eastern Europe seems to us admirable. In another of his comprehensive and unpartisan reviews of foreign policy, the Montana Senator spoke cogently about the climate of fear that shrouds American attitudes and actions toward the Communist bloc. This fear can and ought to be replaced with faith in America's own capacity to influence change.

What Mr. MANSFIELD proposes is not an American propaganda campaign to democratize the satellites. He does not envisage dramatic liberation in the sense in which it has been used as a political slogan. Rather, he points to the error, demonstrated in the

instances of Poland and Yugoslavia, of regarding the countries of Eastern Europe as a single monolithic entity. He suggests that the Secretary of State visit these countries when feasible to note the individual circumstances of each; and he suggests expanded commercial, diplomatic, and cultural contacts as the best means of encouraging more independence from Moscow. "We do not serve the cause of freedom or the interests of this country," he asserts, "when we blockade these eastern European countries as a closed Communist corporation and merely seethe in the juice of our own moral indignation."

Somewhat the same rigidity unhappily governs relations with Russia. Mr. MANSFIELD notes that the expenditure of billions for security has not brought the feeling of security, and he suggests that despite the real threat of Soviet military aggression the fear of Russia has been magnified into a catechism. Anyone who has watched the relations between the Executive and Congress knows that this fear has become a political tool. It is invoked in order to obtain defense and foreign-aid appropriations, and, indeed, whenever reference to international communism will further the uncritical acceptance of this or that bill.

Such censure, of course, cuts two ways; there has been at least some question in the past whether Congress would have been disciplined enough to buttress American responsibilities in the free world without a goad. But a mature effort to reduce the fear of the Soviet Union to more realistic dimensions is well worth the effort. Among other instruments, the exchange of information espoused by Senator LYNDON JOHNSON and the people-to-people campaign already in progress should be useful. No government, even that in the Kremlin, can be wholly and indefinitely insensitive to public opinion.

There is the danger, to be sure, that too much focus on peace as an objective could create an atmosphere for peace at any price. It is important to remember that a more stable peace may well be the by-product of small accommodations—and that a nuclear strategy which focuses too much on deterrence of big wars and not enough on flexibility to fight small or limited wars in an invitation to instability. Insecurity is perhaps the trademark of the nuclear age, and Senator MANSFIELD is wise enough to recognize that absolute security is unattainable. The kind of self-confidence he urges will not end the competition with the Soviet Union. What it could do is bring about a more rational basis for examining the balance of power. The experience of both Hungary and Poland have proved Mr. MANSFIELD's thesis that "it is time to recognize that if there are dangers to freedom in the ideology of communism, there are even greater dangers to communism in the doctrines of liberty."

Combat Readiness—The Cordiner Report

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 16, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolution adopted by the military affairs committee of the Amarillo Chamber of Commerce, of Amarillo, Tex., regarding the importance of combat readiness of the Armed Forces, and the Cordiner plan.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the constant and growing turnover in trained personnel is costly to all defense services of our Nation, with the Air Force alone losing 4,000 pilots whom it has trained at a cost of $480 million; and

Whereas this turnover in trained personnel is impairing the combat readiness of the Armed Forces by the constant need to keep skilled manpower busy training personnel who will return to civilian life as soon as they have served out their enlistments; and

Whereas there is a bipartisan drive in progress to enact into law the major proposals of a plan evolved by Ralph J. Cordiner, president of General Electric Co.; and

Whereas the Cordiner plan would create a new basis for paying trained specialists in the Armed Forces, putting their remuneration in accordance with their skill rather than their seniority, thus increasing the pay to career servicement: Now, therefore, be it

Resolved, That the military affairs committee of the Amarillo Chamber of Commerce endorse the principles of the Cordiner plan and urge the Congress of the United States to enact such legislation to cover the problems herein set forth.

Dated this 8th day of July 1957.

Wallowa Lake, Oreg., State Park

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 16, 1957

Mr. NEUBERGER. Mr. President, almost any day one may read in his newspaper some statement heaping criticism on some public servant. It takes on the aspect of a minor indoor sport at times. The contrary reference occurs so infrequently that it, in itself, is an occasion for comment.

This past week, Mr. President, my attention was caught and held by an editorial praising a public servant. It appeared in the July 4 issue of the Wallowa County Chieftain, a weekly paper edited by a devoted conservationist and naturalist, Gwen T. Coffin. The editorial is entitled "Wallowa State Park." The editorial could very appropriately have been entitled "A Tribute to a Devoted Public Servant." I know personally of the devotion to his job exhibited by Al Zimmerman, about whom Mr. Coffin writes. Al Zimmerman's diligent work has evoked enthusiastic commendations from many people who have a professional interest in the development of public recreation facilities. Al Zimmerman's efforts have wisely capitalized on a gift of nature and the wisdom of the State highway commission, which procured the Wallowa Lake site. The dividends go to the hundreds of thousands who over the years will enjoy the grandeur and comfort of Wallowa State Park. It is a magnificent spot.

Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WALLOWA LAKE STATE PARK

Credit for the fact that approximately a quarter of a million tourists visited Wallowa Lake State Park last year is sometimes taken by the local chambers of commerce through their publicity committees. However, it is quite probable that a major reason for the attraction of this park to so many visitors is the tremendous job which Al Zimmerman and his associates are doing in making this spot one of the most beautiful in Oregon.

Too often we are inclined to make jokes and disparaging remarks about the ability of public employees and the amount of work they turn out. The truth of the matter is that they probably rank as high as the average worker, and very often their devotion to their work and their pride in achievement is decidedly superior. The latter is certainly the case with Al Zimmerman.

One of the first places to which Wallowa County residents like to take their visiting friends is Wallowa Lake State Park. It is definitely the top show place in the county and an object of great pride on the part of everyone. The beauty of the surroundings there is particularly impressive for those people who remember the area when it was largely neglected, covered with swamp and brush, dotted with abandoned buildings, and without provisions of any kind for picnics and camping.

Week by week, month by month, and year by year a steady addition of improvements is being made at the park. Grounds are cleared, more picnic tables, fireplaces, and benches are built, overnight camping facilities are enlarged, washing room and shower facilities are improved, shrubbery is planted, and many other landscaping projects carried on. Returning visitors are delighted to find the park more beautiful than the last time they saw it.

Al Zimmerman is the man behind this magnificent job. We take our hats off to him, and we hope that Oregon State park officials and the public generally fully appreciate the very outstanding job which he is doing.

Expansion of Wisconsin Colleges To Meet Needs of Youth

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 16, 1957

Mr. WILEY. Mr. President, I am happy to bring to the attention of my colleagues a tremendous program for expansion of private colleges in Wisconsin. I am proud that these independent schools are forging ahead with farsighted plans to meet our educational needs. Our school leaders, teachers, local communities, and all others who have contributed to the development and expansion of these meccas of learning are to be highly commended.

The great problem facing our independent schools, of course, is that of finances. We need wider, more generous support to help these schools continue and expand their facilities and programs to provide more educational opportunities for our youth.

In this technological age, when we are confronted by both the benefits and the hazards which science has created, we do, indeed, need a full corps of liberal arts students with a full understanding of our human relationship problem.

I am pleased, also, to point up the fact that we have a tremendous inflow of students from the other 47 States. This is, indeed, a fine reflection upon the high standards of our Wisconsin educational institutions.

An article in the July 14 issue of the Milwaukee Journal gives a detailed résumé of the proposed expansion of facilities, and increase in enrollment, planned by many of our Wisconsin colleges.

I request unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRIVATE COLLEGES MAP EXPANSION PROGRAMS—INSTITUTIONS IN STATE TO SPEND 16 MILLION ON FACILITIES IN NEXT 3 YEARS

(By Robert L. Dishon)

Private colleges in Wisconsin are planning to build more than $16 million worth of additional facilities in the next 3 years.

With these facilities, the independent colleges should be able to increase enrollment some 15 percent through 1960, according to a survey by the Wisconsin Foundation of Independent Colleges, Inc. (WFIC). Enrollment in the 16 liberal arts colleges in WFIC last year totaled some 10,000.

The expenditures now planned include two new campuses, dormitories, laboratories, classrooms, and numerous other facilities, according to the WFIC survey.

SEEK LARGER ENROLLMENT

Robert D. Steele, president of WFIC and of Carroll College, Waukesha, said the independent colleges in the State would like to take a fair share of the larger enrollment we all see coming.

He said that all the independent college presidents were concerned about maintaining or improving the quality of the educational programs while trying to serve more students.

"The colleges would welcome the opportunity to serve more students if the funds were available," Steele said. "They may be able to do more if a trend would develop for more contributions to private schools."

SOME PROGRAMS STARTED

Private colleges operate on a sounder financial basis than public colleges, Steele said, because the students pay more of the educational costs. This is said to be one of the reasons why more businesses and industries are increasing support to private colleges.

The planned construction on the private campuses merely will continue some expansion programs that were started after World War II, but which have been accelerated the last few years. Since 1952, the 16 colleges have spent nearly $25 million on capital improvements, according to the WFIC survey.

Carroll's recent expansion and its plans for the future are typical of what has been happening to private colleges throughout the State and Nation. In recent years, the college has built a men's dormitory, a sorority house, and 2 fraternity houses, and modernized 2 other structures.

NEW DORMITORY FOR GIRLS

Steele said the college expected to spend about $1 million to build a new dormitory for 150 girls and additions to the gymnasium.

The college board has decided to expand to 800 students immediately and has started a study to determine what facilities would be needed to handle 1,200 students. Some 765 students were enrolled last year.

Steele estimated that in order for Carroll to handle 1,200 students it would need some $7 million more than it had now—$3 million to add to its endowment fund and the rest for capital improvements.

Frederick O. Pinkham, president of Ripon College, Ripon, said his school "intends to stay small unless we can expand without changing the nature of the school."

GOAL IS 750 STUDENTS

However, the trustees have decided, said Pinkham, to increase from the 600 students last year to about 750 because they felt that the school "could operate more efficiently with that size enrollment."

Presidents of some other colleges said their boards had decided to increase enrollment to a certain level. Others said they expected increases but had not determined definite figures. Gus Turbeville, president at Northland College, Ashland, said his school planned to expand from 300 to 500. Milwaukee-Downer College expects to expand to 500 sometime in the 1960's, according to John B. Johnson, Jr., president.

NEW CAMPUSES PLANNED

New campuses will be built by Cardinal Stritch College, Milwaukee, and Dominican College, Racine. Exact details and costs have not been compiled, according to the presidents of the colleges.

Cardinal Stritch will build three initial buildings on a 60-acre site across North Port Washington Road from Nicolet High School in Glendale. Dominican plans to construct an administration-classroom building on a 26-acre site on Lake Michigan just north of Racine. Several other buildings will be constructed later.

COLLEGES LIST PLANS

Here are some of the plans by the private colleges:

Alverno College, Milwaukee—No immediate building plans, although the administration is preparing to increase enrollment from 600 to 900 in the next few years. The college has completed 3 buildings in the last 2 years.

Beloit College, Beloit—A new women's dormitory for 116 coeds and an all-campus dining room, $700,000; new men's dormitory and fraternity house, $200,000. Enrollment expected to increase to about 1,100.

Cardinal Stritch College, Milwaukee—Expects to increase enrollment from 154 to between 400 and 500 with the new campus, which will cost several million dollars.

SIX BUILDINGS FOR CAMPUS

Carroll College, Waukesha—A $1 million women's dormitory planned. Greatly enlarged enrollment being studied.

Dominican Colege, Racine—Expects to increase enrollment from 142 to some 400 with a new campus of 6 buildings. An administration-classroom building will be the first erected, at a cost of more than $1 million.

Edgewood College, Madison—A new residence hall, chapel, and library now being constructed, $900,000. Enrollment will be increased from 200 to 400.

MARQUETTE HAS PROGRAM

Lakeland College, Plymouth—Completion of residence facilities, sewerage plant, additions to physics department and offices, $325,000.

Lawrence College, Appleton—$1,800,000 for new residence space and a music-drama center.

Marquette University, Milwaukee—Only the MU liberal arts college is in WFIC, but some of the $5,500,000 in new buildings to be erected in the next 9 years will be used by liberal arts students. Some $1,500,000 of that amount may be spent through 1960.

Milton College, Milton—Student center and music studio, $30,000.

Milwaukee-Downer College, Milwaukee—Expects to begin expansion to handle some 500 students eventually. Some $300,000 is being planned for a commons-union building and an infirmary. A women's dormitory and a president's home on the campus will be built in the 1960's.

FIELD HOME PLANNED

Mount Mary College, Milwaukee—No immediate construction plans but some increase in enrollment expected.

Northland College, Ashland—A $125,000 men's dormitory and a $1 million fieldhouse planned to help expand the school to handle some 500 students.

Ripon College, Ripon—Two dormitories for 188 men, $800,000; a science building, additional coed housing, and enlarged dining facilities, $1,550,000.

St. Norbert College, West DePere—Exact plans have not been developed but the administration has estimated expenditure of $1 million.

Viterbo College, La Crosse—A new residence hall will be completed by September and a new music hall is being planned at a cost of $300,000.

The Boston Metals Co.

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 16, 1957

Mr. BUTLER. Mr. President, I have had occasion from time to time to remind my distinguished colleagues that the great port of Baltimore, which I have the honor to include in my constituency, is one of the leading shipbuilding and ship-repair centers of the world. Today I would cite another Maryland leader in the maritime industry, a company which disposes of the vessels built in Baltimore and elsewhere after they have lived out their useful lives.

I refer to the Boston Metals Co. of Baltimore, which, since 1904, has been engaged in the business of scrapping vessels of all nations. To give some idea of the scope and breadth of this company's operation, I might cite just one dramatic transaction in its long history—the purchase from the United States Shipping Board in 1932 of 124 vessels, totaling 1,800,000 gross tons.

The Boston Metals Co. not only scraps vessels, however, it serves the merchant marine on a round-the-clock basis, supplying needed parts in emergencies. Recently, I recall, a cargo vessel was incapacitated in Panama with a cracked propeller shaft. Boston Metals Co. was contacted on Friday evening, a new shaft was tested, disassembled, and dispatched in two planes the following day, and on Monday morning the work of installing the new shaft was begun.

An article in the July 1 issue of the Maritime Reporter told in graphic style the story of the Boston Metals Co.'s operations. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLDWIDE SHIP BREAKING

The Boston Metals Co., of Baltimore brings to ship breaking scientific skill and practical know-how acquired during more than half a century devoted to the art. Through its yards have passed such famous vessels as the battleships *Florida* and *Louisiana*, and the passenger liners *Mount Vernon, Monticello,* and *George Washington*.

Its founder, Morris Schapiro, started in business in 1904 with a capital of $30. Today, as Boston's very active chairman of the board, he heads an enterprise whose activities are international in scope.

Boston Metals' 30-acre plant in Baltimore has its own oxygen plant, machine, electric, and blacksmith shops, and two piers extending into Chesapeake Bay, one for scrapping, the other for stripping. The Atlas, a giant floating crane capable of 125-ton lifts, and three 45-ton Colby gantry cranes, are employed in moving huge dismantled sections.

Among the other companies in the Boston Metals family is the National Metal and Steel Corp., in Los Angeles Harbor. This Terminal Island subsidiary occupies over 130 acres formerly used by the California Shipbuilding and Drydock Corp. It is generally acknowledged as the West's largest ship breaker and supplier of salvaged and surplus marine equipment.

Boston Metals also owns Baldt Anchor, Chain & Forge, of Chester, Pa. The Baldt firm, in conjunction with the Navy, developed the Di-Lok chain, now standard on United States naval vessels.

President of Boston Metals is Morris Schapiro's son, John D. Schapiro, who grew up in the ship-breaking business. He also heads the famous Laurel Race Course in Baltimore. Harold B. Chait is vice president and executive sales manager of Boston Metals.

Joseph Schapiro is president of National Metal and Steel, and Nicolai Joffe, executive vice president. E. J. McGuiness is vice president in charge of Baldt Anchor, Chain & Forge.

Many of Morris Schapiro's transactions have become industry legends. In 1932 he purchased from the Government's Shipping Board the largest block of ships ever handled by any ship breaker in the world at one time—124 Hog Islanders (totaling 1,800,000 gross tons).

A recent Boston Metals' transaction which has commanded wide attention involved the purchase, resale, and delivery for scrapping of two Argentine naval vessels. In order to obtain the battleship *Moreno* and the coastal patrol cruiser *Pueyrredon*, Harold Chait successfully bid against buyers from all over the world.

Subsequent resale negotiations exemplify the high degree of teamwork which exists between members of the Boston Metals family. The *Pueyrredon* was sold directly by the Baltimore office, but the *Moreno* was sold through the cooperation of Nicolai Joffe, of National Metal and Steel. The prices paid for the vessels were an all-time high in the scrap markets of the world.

The delivery of the 26,000-ton *Moreno* involved a 15,000-mile voyage, probably the highest ton-miles towage in the history of ocean towing. Tugs of a total 5,000 to 6,000 horsepower were required. Boston Metals contracted with L. Smit & Co.'s Internationale Sleepdienst, of Rotterdam, Holland, which assigned the 4,000-horsepower tug *Clyde* and the 2,000-horsepower tug *Ocean* to the job.

While in Europe negotiating the towing contract, John Schapiro, together with his insurance broker, Stanley Brandt of Frenkel & Co., Inc., of New York, negotiated with Lloyds of London, what is probably the highest valued voyage insurance on a single vessel for scrapping ever placed. The *Moreno* was insured for the long voyage for $3,500,000.

One of the conditions required by Lloyds underwriters before accepting the insurance was that the certificates of seaworthiness for the ships be issued by Capt. W. D. Noble of Messrs. Mylchreest, Noble & Co., London, England. Captain Noble is one of the world's foremost authorities on ocean towage.

In 1946, the Boston Metals Co. became seriously engaged in the sale of ship machinery. Its large warehouses stock everything from Liberty ship boilers and engines to marine furniture. If a vessel owner, be he ocean or Great Lakes operator, needs a deck or engineroom replacement, the chances are excellent that Boston Metals will be able to satisfy his needs, and quickly.

Its policy of marketing only salvaged machinery and new surplus machinery built not earlier than 1942, except in rare cases where preservation and little use make earlier built machinery attractive, has removed the skepticism that once surrounded reconditioned machinery.

Boston Metals through its sale of reliable machinery helps keep existing tonnage profitably employed; and through its scrapping of uneconomic vessels contributes much-needed steel for new ships.

Gift of Warplanes to Tito

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Fort Wayne News-Sentinel on June 18, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JENNER HITS WARPLANES TO TITO

It was bad enough for the executive department of the Government in Washington, supported by modern Republicans in the Senate, seriously to propose starting Communist Yugoslavian Dictator Tito on his second billion in foreign aid, after we had worse than nothing to show for the first billion we lavished on him.

However, when at week's end it was proposed in this connection, to give Tito hundreds, perhaps thousands of latest type jet fighter planes, that, commendably, was way too much for Indiana's United States Senator WILLIAM E. JENNER, and he hit the roof of the Senate with a bang that literally rocked the Capitol with its repercussions.

Expressing his amazement and righteous anger that many in the upper House should be utterly indifferent toward arming Tito with large numbers of the latest warplanes, JENNER charged that "the Senate doesn't give a damn about the facts behind the furnishing of fighter planes to Yugoslavia's Communist President Marshal Tito."

How these selfsame hundreds of thousands of fighter planes given away to Communist Dictator Tito could very well ultimately be turned against our own boys, killing and maiming many thousands of them, promoted the fearless Hoosier patriot to work himself into a veritable fury of wrath over the utter inanity that could make such a frightful eventuality possible.

"Let's get the facts," JENNER exclaimed, adding, "I'm sure the Senate doesn't know them and doesn't give a damn." He then gave a highly realistic description of how Tito is "on top of a balanced seesaw with the United States in the air on one side and Russia on the other side."

In sharply clipped words he described President Eisenhower's foreign-aid program as "window dressing" for an administration attempt to bolster the economies of so-called neutral and Iron Curtain countries.

We share Senator JENNER's revulsion at the "every other country first and America last" concept that has ever increasingly in the past 20 years become the Washington Government's international doctrine. He said pursuant to this inane concept, Iron Curtain countries "can be legally financed" with millions upon millions of American dollars "even though Americans are cruelly pinched by resultant enormous taxes."

Hoosiers can well take pride in the fact that their United States Senator is valiantly fighting shoulder to shoulder with such other patriots as Democratic Senator BYRD of Virginia; and Republican Senator BRIDGES, of New Hampshire.

Senator JENNER's resounding blast at the particular kind of "foreign aid" that may be destined to be hurled back at us in hot flaming death and destruction, ably seconds the recent stand taken by Senator BRIDGES when he said:

"I have fought in the past, and I shall continue to fight in the future, against aid to areas which embrace philosophies and practices contrary to our best interests, while eagerly accepting our bounty. I am only too afraid that jet planes given to Tito would be turned against us in a global conflict, just as was all the scrap metal we shipped to Japan, which I also opposed at that time."

It is heartening to know that such stalwart guardians of our freedom and security as Senators JENNER, BRIDGES, and BYRD, are speaking out so fearlessly against the awesome peril that menaces us. And, we repeat, we can feel pardonably proud that a distinguished son of the Hoosier State is one of them.

The Oldest Twins in the United States

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. LONG. Mr. Speaker, July 16, 1957, marks a rather unusual anniversary date in the Long family. On July 16, 1862—95 years ago—twin daughters were born to John M. and Mary Long, of Tunica, La., 7 miles south of Winnfield, La. These twins are believed to be the oldest living twins in the United States today.

In this day and time not too many folks live to reach the age of 95 and it is even more unusual for twins to reach that age. I am happy to state that my two aunts, Mrs. Olive Long Wright, of Winnfield, La., and Mrs. Julia Long Nugent, of Alexandria, La., both residents of the Eighth Congressional District of Louisiana, which I have the honor to represent, are enjoying excellent health. They attribute their longevity to an active life, devoted to homemaking and a keen interest in church, social, and political affairs. Both are devout members of the Baptist church, having joined the Corinth Baptist Church in Louisiana at an early age. Their husbands, the late Riley Wright

and Doc Nugent, were engaged in farming and cattle raising.

The twins are aunts of the late Senator Huey P. Long, who was also a Governor of the State of Louisiana, the Honorable Earl K. Long, present Governor of Louisiana, the Honorable George S. Long, Member of Congress, the Honorable Julius T. Long, attorney of Shreveport, La., and great-aunts of United States Senator Russell B. Long.

Longevity is not unusual in the Long family. The twins had four brothers who lived to be over 80 years of age. Their father and mother lived to be 83, and two cousins, Perce and John Smith, of Sikes, La., lived to be 99½ years of age.

Mrs. Olive Long Wright is the mother of 8 children, 10 grandchildren and 10 great-grandchildren. Mrs. Julia Long Nugent is the mother of 9 children, 14 grandchildren, and 26 great-grandchildren.

A Letter From Britain

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. BEALL. Mr. President, the Baltimore Sun occasionally runs articles and letters written by Lord Winster, a member of the British House of Lords who was colonial Governor of Cyprus during the period 1947 to 1950. One of Lord Winster's letters to The Sun dealt with the grave situation on the island of Cyprus, and a copy of this communication was recently forwarded to me by Mr. Evaff A. Chriss, president of the board of trustees of the Greek Orthodox Community, Baltimore. At the request of Mr. Chriss, I ask unanimous consent that Lord Winster's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

A LETTER FROM BRITAIN—SALISBURY AND CYPRUS

(By Lord Winster, London, England)

I have always had, and still have, a great admiration for Lord Salisbury, who has qualities fitting him for our Prime Minister or Foreign Secretary outshining those of recent holders of the two posts. All eminent men occasionally slip up and much as I regret to say so, I do not think that his second resignation will enhance his reputation as did, most undoubtedly, his first. The fact is that he has resigned this time for an inadequate reason and one cannot help feeling that pique has played its part.

It is inevitable, looking to their past history, their great position, the part they have played in history, the position and authority they have always enjoyed, that the Cecils should have an authoritarian streak in them. It was very noticeable in the great Prime Minister and in Lord Balfour.

They are modest, even diffident in manner, but this is mostly due to their world having always deferred to them. It is very easy to go to the bottom of the table when you know with absolute certainty that you will be called up to the top.

The Cecils undoubtedly have a deep sense of public duty and serve their country with great devotion. But it has always seemed to me that they impose a condition, which is that they must be agreed with and must have their way. A study of Lord Salisbury's photographs reveals a somewhat obstinate mouth.

This, I should say, is a case where the doctrine of collective Cabinet responsibility should have applied. Lord Salisbury differed from his colleagues, but having expressed and argued for his opinion, I think he would have done better to accept the majority decision, especially as, after all, the heavens are not going to fall because Archbishop Makarios is being released. The Government stands confronting far more important problems—very serious problems, indeed.

* * * * *

The resignation is not based upon a great issue of principle or of morality. Presumably, Lord Salisbury wants to see a settlement in Cyprus so he goes only because he differs from his late Cabinet colleagues on how to achieve that end; his quarrel is over tactics, not over grand strategy.

Suez did involve principles and morality and the making of statements to Parliament which, in the lightof subsequent events, appear not to have always been candid. Here, Lord Salisbury saw no need to resign, but stood by what some of the best minds in the country outside politics thought highly questionable conduct. I find his action very peculiar.

When the Crown had to make a choice between two men for Prime Minister, Lord Salisbury is credited with having tipped the balance in favor of Mr. Macmillan, although many good judges thought and think Mr. Butler the better man. Mr. Macmillan confronts today the most anxious national problems.

Not all the Conservative Party likes what happened at Bermuda and anti-Americanism is once again in the air. It seems pretty clear that we shall make little impression on Nasser over the Suez Canal and the Middle East. The industrial and financial position is most grave.

The Times editorial on April 1 said: "The fall in the value of the pound has been unrelieved. Now all the reserves have been thrown in. Britain is living behind a shield of borrowed assets and on borrowed time. The capacity to live on our fat and to borrow further has come to an end. It is said that another dose of inflation is now inevitable. Britain's reserves are weak. They might be hard put to withstand the flight from confidence in sterling that could develop with severe and prolonged strikes."

On all fronts, Mr. Macmillan is hard pressed—foreign, internal, industrial, financial, party.

Yet this is the moment when the man who advised his appointment leaves his side and leaves it on a secondary issue. "Lord Salisbury's resignation," says the Observer, "could hardly have come at a more unfortunate moment. A government trying to deal with two great strikes can hardly afford any loss of prestige." I cannot help feeling that when the whole business is weighed up, it will be Lord Salisbury who will lose and the Prime Minister who will gain in esteem and influence.

* * * * *

I can feel little sympathy with the Government over Cyprus. "The whole story of Cyprus," said a recent Times editorial, "has been one of delay, blunders, bloodshed, and mounting suspicion." A few days later the Sunday Times weighed in: "The Government's latest declaration has created the impression that it does not seriously want negotiations with the Cypriots at this stage."

Lord Salisbury has at times shown a lack of judgment about Cyprus. His resignation now, just when the Government shows some signs of moving, however tardily, toward a solution, will stimulate Greece and Turkey to increase their claims. It is true that the Archbishop has not 100 percent denounced violence, but he has gone some way to doing so, far enough, in my opinion, to meet the Government's statement that should he reprove violence "a new situation would arise."

EOKA's offer to suspend operations, coupled with the archbishop's halfhearted condemnation of violence, makes it impossible for us not to respond in some form, otherwise our moral case would be worse. Lord Salisbury's reactionary attitude will never bring about a just and peaceful settlement and he has weakened his once great influence by an unjustifiable act.

While I agree that the Government has made a move in the right direction, I do not think they have as yet any idea of their next move.

To clear their minds, they should ask themselves two questions: (1) Exactly what use to us is Cyprus, (2) why is it right to grant liberty to India, Burma, Ceylon, Ghana, etc., and deny it to Cyprus?

Prerequisites of a settlement are that we abandon the colonial regime in Cyprus; give up the impossible idea of partition, withdraw the defense regulations, offer a complete amnesty, admit that there can be no negotiations without Makarios and no longer allow Turkey to exercise a veto on our policy.

The Nickerson Case

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. SPARKMAN. Mr. President, there recently was held in my hometown of Huntsville, Ala., at the Redstone Arsenal, a court-martial proceeding against Col. John C. Nickerson, Jr. Mr. Hanson W. Baldwin, the military authority for the New York Times, attended that court-martial proceeding. He has written a very interesting column in today's New York Times. The article is quite thought provoking. I ask unanimous consent that the column, entitled "The Nickerson Case," be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NICKERSON CASE—AN ANALYSIS OF THE PREJUDICIAL EFFECT OF COLONEL'S ROLE ON THE MISSILES RACE

(By Hanson W. Baldwin)

A comparatively light sentence, but one of the stiffest reprimands an officer could receive, has ended, it is to be hoped, the unfortunate case of Col. John C. Nickerson, Jr.

Colonel Nickerson is the Army officer who pleaded guilty to using documents marked secret to proselytize writers and manufacturers in behalf of the Army's intermediate range ballistic missile, the Jupiter. The facts reported from the court-martial—many of them based on Colonel Nickerson's own testimony, appear to justify the harsh language of the reprimand. In and out of court Colonel Nickerson talked too much; in the words of the official reprimand he "presumed" himself to "be above law and regulations." There was bound to be punishment, as Colonel Nickerson himself agreed.

Yet a consequence considerably more important than a ruined career is the possible effect of the Nickerson case upon the development of the intermediate range ballistic missile. Colonel Nickerson not only showed an excess of zeal and a deficiency of judgment, but the means he selected to achieve his ends, and particularly the things he said before and during his court-martial, tended, unintentionally on his part, to defeat the purpose he wished to attain.

Colonel Nickerson was carrying a torch for Jupiter, the Army's version of the intermediate range ballistic missile, which has been under development at Redstone Arsenal, Huntsville, Ala. in competition with the Air Force Thor. The ruling last year by Charles E. Wilson, the Secretary of Defense, that the Air Force would operate any intermediate range ballistic missile led to Colonel Nickerson's unwise acts.

Yet Mr. Wilson's decision did not by any means exclude the Army from the use of ballistic missiles or from the development of long-range missiles. The Jupiter, fortunately, has continued under development.

PREJUDICE FEARED

Yet the Nickerson court-martial might well tend to prejudice judgments and imperil continued development of the Jupiter.

By Secretary Wilson's ruling, the Air Force, which will operate the 1,500-mile missile when it is ready for use, is now the Army's sole customer for the Jupiter. The Air Force, through private contractors, has been developing the Thor, another version of the intermediate range ballistic missile.

To date, the Jupiter appears to have been more successful than the Thor; it may well be, as Redstone Arsenal claims, a much superior missile. But the Army has to convince the Air Force and the Department of Defense of the truth of these claims.

In mid-June shortly before the Nickerson court-martial, Redstone Arsenal, headquarters of the Army Ballistic Missile Agency, played host to Maj. Gen. Bernard A. Schriever of the Air Force and his staff. General Schriever and the Air Force ballistic missile experts were thoroughly briefed on Jupiter, on the Army's ballistic missile team and on the great capabilities—in missile development—of Redstone Arsenal. They came away impressed.

Then came the court-martial and Colonel Nickerson's testimony in and out of court, which was certainly not calculated to win friends and influence people in the Air Force. The testimony seemed to hint that Secretary Wilson's verdict giving operational control of the 1,500-mile missile to the Air Force was influenced in part by vested interests of aviation companies. It cast aspersions not only at Thor but at the Air Force.

It defended Jupiter but the defense was an attack upon the Air Force, which is the potential user of Jupiter. It showed, what was already known, that the Jupiter was potentially an excellent missile, whose development should be continued. But its attacks upon the Air Force, and particularly the unproved and implied inferences in the testimony, were bound to react against Redstone Arsenal and the Jupiter missile.

One cannot but conclude that Colonel Nickerson talked too much. The sooner the wounds left by the Nickerson case are healed the better for the Nation. We are engaged in what could be a life-and-death missile development race with Soviet Russia.

Already budgetary pressures appear to be curtailing United States missile developments. The promising Navaho long-range missile, for instance, has just been abandoned. A technical evaluation of the potential capabilities of other more promising missiles and of new chemical-powered piloted jet bombers may offer some justification for this cancellation. But there is no doubt that the defense dollar squeeze was a major factor.

ONE CRITERION USED

There are several timely lessons, therefore, to be drawn from the Nickerson case. The first is that there must be only one criterion in the selection of weapons and in development plannings; the criterion must be what is best for the country, not merely for the individual service.

The second is that the administration will make a major mistake if it adopts in military budgetary matters a penny-wise-pound-foolish policy in research and development. Parallel and competitive, but different, approaches to the same end—for instance, the Jupiter and the Thor—are absolutely essential to the best product.

And Government research teams, laboratories and arsenals like Redstone are an important part of the whole development effort, and should serve as a kind of guide and yardstick for private industry in the development of the new technology of the missile age.

A National Lottery

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. FINO. Mr. Speaker, I am happy to inform the Members of this House that my proposal for a national lottery continues to gain more and more support. The most recent endorsement comes from the Veterans of Foreign Wars, Department of California.

In a letter which I am pleased to insert in the Appendix of the CONGRESSIONAL RECORD, the State commander, Alva J. Fleming, informs me that at their recent State convention held in Fresno, Calif., the delegates, representing 50,000 Veterans of Foreign War members, and 516 Veterans of Foreign War posts in that State, passed a resolution unanimously endorsing a national lottery.

Because of its significance and importance, I am inserting in the RECORD not only the above-mentioned letter but the resolution which was introduced by the San Francisco Post, No. 58, of the Veterans of Foreign Wars.

The letter and resolution follow:

VETERANS OF FOREIGN WARS,
OF THE UNITED STATES,
San Francisco, Calif., July 10, 1957.

Hon. PAUL A. FINO,
United States Representative,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN FINO: We have read with interest an article in the Sunday, June 30, 1957, issue of the San Francisco Chronicle of your bill currently before the House Ways and Means Committee dealing with the establishment of a national lottery. Under your proposal, we understand, the proceeds from such a lottery would be used for Federal Hospitals, care of the blind, recipients of old-age assistance and disabled veterans.

We thought that you would be interested to know that at our recent 37th annual State convention held in Fresno, Calif., the delegates representing 50,000 Veterans of Foreign Wars members, and 516 VFW posts, in California, passed a resolution seeking and endorsing a national lottery. A copy of the resolution as adopted is enclosed for your information.

In view of the fact that this department is on record favoring such a lottery as you propose, it is requested that we be furnished a copy of your bill. Our resolution has been forwarded to the National organization to be considered by the delegates to our 58th National Convention to be held at Miami Beach, Fla., August 25–30, 1957.

Sincerely yours,

ALVA J. FLEMING,
State Commander.
ROBERT J. NUTT,
State Adjutant.

CALIFORNIA 1957 RESOLUTION, No. 117, SEEKS NATIONAL LOTTERY

Whereas San Francisco Post 58, VFW, introduced this resolution for a national sweepstake, the proceeds from this sweepstake to be used for pensions, hospitalization for all veterans—also pensions for widows and orphans; and

Whereas it is introducing this resolution, asking that it be acted upon and adopted at the State Encampment at Fresno, Calif., and then forwarded to the National Encampment of the VFW at Miami, Fla.; and seeking that this resolution be given a hearing before the delegates of the VFW, explaining what it will do, and also seeing that the commander in chief of the VFW be authorized to contact other veterans' organizations and to ask Congress to put this national sweepstake ticket on the national election in the autumn of 1958; and

Whereas it should be explained that a national lottery was in existence during the Revolutionary War and was authorized by the Continental Congress and was called the United States Lottery, the proceeds of the lottery helped to finance the birth of the United States: Now, therefore, be it

Resolved, That all comrades and the ladies auxiliary give this resolution all-out support, as it is one of the most vital resolutions that will be presented before this great organization at Miami in August, as it is constructive and not destructive; and be it further

Resolved, That we hope this will not be sidetracked like the resolution we introduced in Sacramento at the Encampment in 1955, in which was the only resolution we introduced that got headlines in the Sacramento Bee—get behind this and give it a push.

Adopted by the 37th Encampment of the Department of California, Veterans of Foreign Wars of the United States, assembled in Fresno, Calif., June 16–20, 1957.

A. J. FLEMING,
Department Commander.

Attest:

ROBERT J. NUTT,
Department Adjutant.

Set Your Sights

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a poem by a young constituent of mine in Pulaski County, Va., Miss Charlena Wright.

This poem, Set Your Sights, has been selected for publication in a volume of religious and philosophical poetry to be called Sermons in Poetry. It was chosen from among thousands submitted

by students to the American Poetry Society.

I believe Miss Wright's poem merits the attention of the Members, and I am happy to have her as a constituent.

The poem, as printed in the June 30, 1957, edition of the Southwest Times, of Pulaski, Va., follows:

SET YOUR SIGHTS

(By Charlena Wright)

America, set your sights high,
Higher, higher, as high as the sky.
Look at the clouds so free from strain,
Listen to the birds' happy refrain.

America, set your sights over,
Over the fields filled with clover,
Look at the mountains so peaceful and free,
Look over the mountains and on the sea.

America, set your sights down,
Down to the valleys and all around.
See some of our freedoms? The heritage of man,
This is America, God's cherished land.

The "Dilemma" of the Public Servant

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article from the Oregon Journal of July 13, 1957, describing a thoughtful address given by Dr. John M. Swarthout before the City Club of Portland, Oreg., on July 12, 1957.

Dr. Swarthout, who is head of the political science department at Oregon State College in Corvallis, has emphasized the dilemma of the conscientious and idealistic citizen who attempts to assay a role in public service. He discusses the difficulties of such service, and he faces up to the fact that, in his own words, "there is no easy solution."

Professor Swarthout is particularly qualified to undertake this subject because he is soon to become associated with the Citizenship Clearing House of New York City, a national organization which attempts to encourage able young men and women to become actively interested in politics and Government. This organization was founded through the wisdom and vision of the late Chief Justice Arthur T. Vanderbilt of the Supreme Court of the State of New Jersey. I can personally attest to its effectiveness. On many college campuses, I have addressed chapters of the Citizenship Clearing House, and both my wife and I have been favorably impressed with the quality and caliber of the students who have thus been motivated to take a genuine interest in our Government at State, municipal, county and Federal levels.

All of us in Oregon, while regretting Dr. Swarthout's temporary absence from the State, are pleased that a political scientist of his knowledge and attainments is about to become identified with the Citizenship Clearing House.

The article describing Professor Swarthout's speech, entitled "Workers' Dilemma Described," follows from the Oregon Journal of July 13. There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORKERS' DILEMMA DESCRIBED

The dilemma of the public servant was described to the City Club Friday by one of them, John M. Swarthout, chairman of the department of political science at Oregon State College.

The dilemma is to leave public administrators free enough to do the things which ought to be done without allowing them too much freedom to do the things which ought not to be done.

Swarthout told his audience there is no easy solution.

He said that in the United States today 1 out of every 10 wage earners is an employee of some branch of the Government.

This, he said, does not include men in the Armed Forces.

He contrasted this situation with the State of Federal civil service in 1800, when the entire United States Government employed only about 100 clerks and office workers.

He attributed the tremendous growth in the rolls of public employees in the Nation's increase in population and the growth of its amazingly complicated economy which causes citizens increasingly to turn to the Government for service.

He listed these drawbacks to public employment:

1. Government jobs generally carry relatively low prestige.

2. In the democratic tradition, the American public is likely to be suspicious of anyone with authority.

3. Businessmen trend to distrust the Government.

4. Most of the dealings the public has with Government are probably of an unpleasant variety such as receiving traffic tickets or paying taxes.

5. The pay of public employees is not munificent, though it is better than it used to be.

6. Government employees are subject to a certain amount of harassment from their bosses, the public.

Offsetting these drawbacks, he said, the two principal reasons that people enter public service today are the fact that Government does the kind of work that these people (social workers and teachers for example) are trained to do, and that a lot of people are just dedicated to doing the things that are done by Government for the benefit of others.

A decreasing number, he said, are drawn to public service by the prospects of job security or simply by accident.

Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a very complimentary and deserving editorial which appeared in La Gazzetta del Massachusetts, an Italian-American newspaper of Boston, Mass., on Friday, July 12, 1957:

DAV HAS MADE AMAZING PROGRESS IN AIDING VETERANS IN PAST 25 YEARS

There is no more dedicated organization to the protection of the welfare and the physical well being of disabled veterans of wars in which United States soldiers, sailors, marines, and airmen have participated than the Disabled American Veterans.

It is fitting, in view of the observance at the State convention of the organization, this week, of the 25th anniversary of the issuance to the DAV of a Federal charter, to pay deserved tribute to the men who have so capably directed the activities of the Massachusetts Department of the national association of disabled veterans.

Unlike other veterans' organizations, the DAV is identified exclusively with those who suffered disability either in active service or because of such wartime activity in assuring the maintenance of American democracy, freedom, and the way of life that has inspired millions of foreign born to seek peace, opportunity, and happiness under the American flag.

The DAV is geared to protect and advance the interests of the disabled. The organization has fulfilled the purposes for which it was created and Massachusetts has always held a rating of prominence in the record of worthwhile and actual achievements.

Obviously the DAV numerical strength is limited because it embraces in its membership only the disabled veterans. The DAV concentrates and with marked success upon aiding the disabled in securing the full benefits to which they are entitled; to securing hospitalization and adequate care for the unfortunates suffering from serious disabilities; to promoting goodwill among all veterans; and to making certain that shut-in veterans are made happy by the knowledge that the DAV never forgets them.

In countless ways the DAV makes life more worth living for the disabled. In its years of activity the DAV has established a remarkable record. It is a record of accomplishment—the fulfillment of the purpose for which the organization came into being.

Demands have multiplied many times in the quarter of a century that the DAV has been leading the fight to gain increased benefits for the disabled. Massachusetts stands high in the list of States where the DAV is known for its achievements.

All veterans are indebted to the DAV. Its work in behalf of the disabled has brought added benefits and more advantages to veterans. To call the DAV a worthwhile organization of veterans is to greatly understate its true value. It is a fine organization made up of men who are unselfishly devoted to helping their less fortunate comrades.

OTC Still Stalled

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. EVINS. Mr. Speaker, the legislation to approve United States membership in the Organization for Trade Cooperation remains pending in the Congress. According to an editorial which appeared in the Denver Post, and which has recently been reproduced in the Northern Virginia Sun, some 35 other countries are waiting for the Congress to

act on this significant legislation. The OTC has no tariff-reducing powers. It would be a strictly administrative organization to smooth out the day-to-day operation of reciprocal trade agreements.

In this connection, under unanimous consent, I include the editorial which was reproduced in the Northern Virginia Sun, an excellent new newspaper, published in nearby Arlington, Va., and whose publisher is Clayton Fritchey and editor is Philip M. Stern, two outstanding and enterprising newspapermen, in the Appendix of the RECORD.

The editorial follows:

OTC STILL STALLED

The legislation President Eisenhower has pleaded for more frequently than any other now appears to have virtually no chance for passage this year. So many Republicans are opposed to it that Representative JERE COOPER, Democrat, of Tennessee, chairman of the House Ways and Means Committee, says he doesn't want to risk putting the proposal to a vote.

The bill in question is one approving the establishment of and United States membership in a 35-nation Organization for Trade Cooperation.

Since United States approval is necessary to the launching of the trade organization, the 34 other countries are waiting for Congress to act.

About 50 nationwide organizations—including such diverse groups as the AFL–CIO, the American Farm Bureau Federation, and the League of Women Voters—have supported the OTC legislation. The opponents are high-tariff protectionist groups.

Actually, OTC would have no tariff-reducing powers. It would be strictly an administrative organization to smooth out the day-to-day operation of existing reciprocal trade agreements.

At present the 35 countries have their trade representatives get together once a year to discuss trade concessions and check on how reciprocal efforts to increase international trade is progressing. OTC would function between the annual meetings to provide review and consultation on trade-barrier problems.

There is no possible ground for opposition to OTC except by those who do not want our reciprocal trade agreements to work and, therefore, look with disfavor on any plan to set up an administrative agency.

But whether protectionists like it or not, trade isolationism is no longer possible in the world in which we find ourselves today—a world in which the United States has more to gain than any other country from a constantly expanding flow of raw materials and goods between countries.

OTC may not be approved by Congress this year. But OTC, or a similar organization, will become increasingly necessary in years ahead.

Fifth Anniversary of the Enactment of the McCarran-Walter Act

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution presented by the Honorable Mitsuyuki Kido at public meeting, Joseph R. Farrington Community Auditorium, June 27, 1957, which was approved unanimously, in observance and celebration of the fifth anniversary of the enactment of the McCarran-Walter Act:

Whereas the Walter-McCarran Immigration and Nationality Act was enacted on June 27, 1952, and all laws relating to immigration, naturalization, and nationality became part of one comprehensive statute for the first time in the history of the United States; and

Whereas said act advances the fundamental American principle of the equality of man by removing a sweeping and inequitable ground for the exclusion of immigrants long present in previous statute, namely, the racial origin of the immigrant; and

Whereas said act further provides that "the right of a person to become a naturalized citizen of the United States shall not be denied or abridged because of race"; and

Whereas said act has further enabled many persons of elderly years who have resided in the United States during a substantial part of their adult lives and who owe undivided allegiance to the United States to acquire the status and privilege of United States citizenship: Now, therefore, be it

Resolved, That we who are here assembled in the Joseph R. Farrington Auditorium in Honolulu, T. H., on June 27, 1957, to observe and celebrate the fifth anniversary of the enactment of the Walter-McCarran Immigration and Nationality Act do hereby reunite in a vote of appreciation to and confidence in United States Representative FRANCIS E. WALTER, of Pennsylvania, and do further commend the devotion and courage he is showing in fighting to preserve and advance the foregoing principles; be it further

Resolved, That a copy of this resolution be forwarded to the Honorable FRANCIS E. WALTER, United States Congressman from Pennsylvania.

United States Supreme Court's Decisions Either Innocently or Deliberately Lend Aid and Comfort to Communism

EXTENSION OF REMARKS

OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. PILLION. Mr. Speaker, I consider it a privilege to insert in the CONGRESSIONAL RECORD two resolutions adopted by the American Legion of Erie County, N. Y., at its 39th annual convention held in Angola, N. Y., on June 29, 1957.

These resolutions are a symbol of the concern that is permeating the American public as a result of the recent Supreme Court decisions. These decisions of the Supreme Court almost appear to have a deliberate purpose of lending aid and comfort to every Communist purpose and every Communist advocate.

The resolutions follow:

RESOLUTION FOR THE NULLIFICATION OF THE JUNE 3, 1957, JENCKS CASE DECISION OF THE SUPREME COURT OF THE UNITED STATES

Whereas the various intelligence services of the Federal Government, notably the Federal Bureau of Investigation, the Secret Service, the Bureau of Narcotics of the Treasury Department, and the Bureau of Internal Revenue, have for years enjoyed the respect, admiration, and confidence of the American people by reason of the magnificent service they have rendered in their never-ending job of securing inviolate the fabric of American society; and

Whereas it has been made abundantly clear year after year by those men charged with the responsibility of operating our intelligence services, and is indeed a matter of common knowledge, that an intelligence organization worthy of the name demands an unimpeachable informant system; and

Whereas the Supreme Court of the United States of June 3, 1957, in the so-called Jencks case determined that confidential files of the Federal Bureau of Investigation must be made available to the defense if a Government witness in a trial has previously furnished written reports to the Federal Bureau of Investigation; and

Whereas this ruling, if permitted to stand as law by the Congress of the United States, will result in the gravest consequences, crippling our intelligence services beyond workability, thwarting the Government's efforts to protect our peoples from the marauding depradations of international Communism and to detect and punish counterfeiters, dope peddlers, racketeers and other threats to our peace and well being; Now, therefore, be it

Resolved, That the Erie County Committee of the American Legion, a patriotic organization whose purpose is to uphold and defend the Constitution of the United States of America, to inculcate a sense of individual obligation to the community, State and Nation, to make right the master of might, and to promote peace and good will on earth, does hereby petition the Congress of the United States to provide for such changes as may be necessary in the rules governing procedure in the Federal court to preclude the necessity of our intelligence services exposing their secret files to defendants in criminal cases so that such services may continue to render the invaluable service to our peoples which they have always done in the past.

Resolved further, That the Erie County Committee of the American Legion transmit copies of this resolution to the congressional delegates from our area: Hon. JOHN R. PILLION, Hon. EDMUND RADWAN, and Hon. WILLIAM MILLER.

Resolved further, That the Erie County Committee of the American Legion does hereby petition the department of New York to pass this resolution and forward same to national headquarters for passage into the national convention.

J. DONALD GRIFFIN,
Erie County Commander.

RESOLUTION FOR THE NULLIFICATION OF THE JUNE 17, 1957, SMITH ACT DECISION OF THE SUPREME COURT OF THE UNITED STATES

Whereas the Congress of the United States, after extensive hearings extended throughout the decade 1930 to 1940, recognized that international communism was poised like a dagger ready to strike at the heart of human dignity the world over, and

Whereas acting on the basis of such knowledge and cognizant of the terrible danger to our institutions and our peoples as well as human dignity and liberty everywhere, the Congress enacted the so-called Smith Act in the month of June 1940 for the purpose of prohibiting the systematic recruitment of individuals dedicated to the violent overthrow of the Government of the United States and to prevent the organization within the United States of fifth columns in the literal sense of that phrase operating in the interest of foreign governments, and

Whereas the Smith Act has enabled the Government of the United States to gain

the conviction and sentencing of well over 100 of the very top brains and effective leadership of this treacherous and rapacious army of traitors without in any fashion impinging upon the civil liberties of freeborn Americans but operating entirely within the framework of every constitutional right, thus proving to be a wonderfully effective weapon for the defense of our people and a weapon worthy of a people governed by law instead of men, and

Whereas the Supreme Court of the United States on Monday, June 17, 1957, in its decision involving the review of the conviction of the leaders of the Communist Party of the State of California has effectively wrenched this weapon from the American people leaving them vulnerable with a breast once again bared to the traitor's dagger by rendering it impossible as a practical matter for the Government of the United States to successfully use the Smith Act as presently construed, and

Whereas this construction acts to the detriment of the people of our Nation by defeating the basic purpose of the Smith Act: Now, therefore, be it

Resolved, That the Erie County Committee of the American Legion, a patriotic organization whose purpose is to uphold and defend the Constitution of the United States of America; to inculcate a sense of individual obligation to the community, State, and Nation; to make right the master of might; and to promote peace and good will on earth; do hereby petition the Congress of the United States to provide for such changes as may be necessary in the Smith Act of 1940 to reestablish its integrity and restore it to the American people as a potent weapon in their eternal struggle with despotism and darkness.

Resolved further, That the Erie County Committee of the American Legion does hereby petition the Department of New York to pass this resolution and forward same to national headquarters for passage into the national convention.

Resolved further, That the Erie County Committee of the American Legion transmit copies of this resolution to the congressional delegates from our area: Hon. JOHN R. PILLION, Hon. EDMUND P. RADWAN, and Hon. WILLIAM MILLER.

J. DONALD GRIFFIN,
Erie County Commander.

The Big Bend, Tex., Civil Air Patrol Squadron

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. RUTHERFORD. Mr. Speaker, I rise today to pay tribute to the work of the Big Bend, Tex., Civil Air Patrol Squadron. Many Members of the House of Representatives may have read in the newspapers of the outstanding job turned in by the Big Bend CAP members in a recent rescue operation in Texas.

The Big Bend CAP instituted a search in the Big Bend National Park for a missing couple, Mr. and Mrs. Clifford S. White, of Houston, on June 26. On that same day the body of Mr. White was found after he apparently died from heat exhaustion.

As the newspapers of the Nation carried headlines proclaiming that Mrs. White was likewise feared dead, the Big Bend CAP—made up of members in the Alpine-Marfa area—continued its tireless search. On the morning of July 1, some 5 days after the exhausting search was started, CAP pilot Herbert Ogle discovered Mrs. White, weak and ill but alive, in a small canyon located in a remote portion of the Big Bend National Park.

Mrs. White has publicly stated that without the aid of the CAP members in the Big Bend area she would never have survived. This points up the wonderful job that the Civil Air Patrol squadron turned in and I wish to commend those who gave of their time, efforts and personal financial resources to successfully conclude this dramatic and humanitarian act.

At the beginning of the search the Civil Air Patrol sought to receive official permission from CAP Headquarters in Fort Worth to begin the operation. George Miller, Superintendent of the Big Bend National Park, wired the Fort Worth headquarters asking for Official Civil Air Patrol participation. For some reason, probably due to a breakdown of communications within the CAP, that telegram has not to this day been replied to, according to information I have received.

Knowing there was little time to waste, the Big Bend CAP Squadron commanded by Maj. Bob Crawford, pooled their resources and raised more than $400 of their own money to cover aviation gas and oil costs in conducting the search. And as I have related, the search was successful.

Unfortunately, the Big Bend CAP members have been informed they cannot be reimbursed for their expenditures because the request for participation did not come from the proper authorities. According to Southwest Wing Commander Col. Sydney Perryman of Olney, Tex., in order for the members to be able to collect for their expenses the original request for an official search must have come from either the Civil Aeronautics Administration, the Governor of Texas, an Air Force base commander, or the sheriff's department of the county in which the search was conducted.

I well realize the need for adequate administrative regulations, but by the same token I can understand that the Big Bend CAP officials had to begin its search as quickly as possible, and thought a request for aid through Park Superintendent Miller would be sufficient.

Although not one single member of the Big Bend Civil Air Patrol has requested that I attempt to help them secure recovery of the money they spent on their errand of mercy, I intend to take the matter up with the proper Civil Air Patrol authorities. It seems inconceivable to me that these persons should be penalized because they did not have time to follow to the letter the normal administrative regulations.

Many people in the Big Bend area helped in this rescue mission, and it is impossible to mention all of them by name, but in addition to those already mentioned I think Mr. Aaron Green, Mr. Buddy Lane, and Dr. W. E. Lockhart should be noted for their actions.

But to all the persons who participated in this mission of kindness, and in particular to the Big Bend Civil Air Patrol Squadron members who displayed courage, initiative and a high sense of duty in the face of personal danger and discouraging circumstances, we owe a debt of gratitude.

The Sudeten Germans—The Policy of Liberation

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BURDICK. Mr. Speaker, the following article presents the Policy of Liberation as outlined by the Sudeten Germans. I commend it to the attention to all who are interested in seeing freedom and liberation once again dominating the world picture.

THE POLICY OF LIBERATION

Under the present conditions, with regard to the long years' tradition of illusions in America, there is no wonder that the policy of illusions had originated and is being carried out by the United States of America and by the German press installed in Germany in the reconstruction time.

But it is also no wonder that another policy, a policy 100 percent opposite to treason and naive illusions, a manly, intelligent policy, originated in America. It is the policy of intelligence, of patriotism, of reason—the policy of liberation. This policy reflects the true character of the majority of the Americans, although it is, in the same way as its authors, not presently in power in the United States of America.

It was Gen. Douglas MacArthur who advocated an intelligent and firm course in Korea:

(a) Economic blockade against Red China;

(b) Bombing of the assembly points of the Chinese invasion army in the Chinese hinterland;

(c) Permitting the national Chinese to operate against and on the Chinese mainland.

MacArthur did understand that the Reds won't start any major war because of these measures—that they will start a world war only and when they have the chance to win it on a worldwide scale and not because of the Korean situation.

The late Senator Robert A. Taft, when candidate for United States presidency in 1952, asked for the following policy:

(a) A great Air Force in America to avoid fight of the land armies, in which the Russians are stronger;

(b) Better radio broadcasts;

(c) Support for anti-Communist forces—and only for anti-Communist forces—in the entire world;

(d) Active support for anti-Communist underground, when time will be mature.

The policy of liberation is inseparably connected with the name of former Congressman Charles J. Kersten. He, for the first time, formulated several points of a unified and classic policy of liberation, including the forming of national military units of the refugees, interruption of diplomatic and economic relations with the Reds and support for anti-Communist underground, economic blockade, etc.

The late Senator Joseph R. McCarthy asked on July 11, 1955, for the establishment of the exile governments out of the refugee politicians and took a sharp stand against the Geneva Conference, based on illusions. To McCarthy belongs the immortal merit to have aroused America and the West to the danger of Communist treason within the free world.

Senator WILLIAM F. KNOWLAND asked for the policy of liberation and for exclusion of the Soviet Union from the United Nations, for the blockade of Red China. He has taken his stand against coexistence with the Red criminals and also against economic and other assistance to Communist Poland.

On January 10, 1957, Representative USHER L. BURDICK asked in the House of Representatives for the expulsion of the Communist governments from the United Nations, for the stopping of trade with the Communists, and he asked for banishing the fear of Russia that has permeated America for several years, clearly recognizing that Russia and her bloc are too weak to lead war.

Congressman CARROLL REECE declared on May 16, 1957, in the House of Representatives that the Oder-Neisse territories are German and that their occupation by Poland ties Poland to the Soviet Union. Poland should give up these territories, return them to Germany, and the bond between Poland and the Soviet Union will thus be abolished.

On February 28, 1955, the Committee of Endorsers published in the New York Times "A Program To Govern Our Foreign Policy," representing the policy of liberation. Two years later, on February 11, 1957, these endorsers constituted the Citizens' Foreign Relations Committee which subscribed to this program of foreign policy, stressing especially two points: Withdrawal of recognition of Communist regimes and underground activities against the Communist world. The committee asks that the free world, in order to save itself, finally starts to do unto the Communists what they have been doing unto us for such a long time. This is, indeed, a revolutionary idea, an idea which marks a turning point in the thinking of anti-Communist Americans. Members of the committee include men like General Willoughby, General Wedemeyer, General Stratemeyer, Ambassador Cromwell, Congressmen Jackson, Gwinn, L. H. Smith, W. Smith, Dean Clarence Manion, Robert E. Vogeler, Adolphe Menjou and others.

FINAL OUTLINE OF THE POLICY OF LIBERATION

If we take all these proposals together, the policy of liberation looks in its final form, as follows:

1. An extremely strong Air Force, guided missiles as well as atomic, scientific, and technical superiority on the part of the West, which can prevent war of land armies on European soil and air attacks against America and which could attack Russia directly in her cities and factories; an immense superiority, which thus can prevent war at all, because Russia can never dare to attack the West and America, strong in atomic weapons and Air Force, strong in science and technics—in a field which is the natural domain of the West and of the United States of America.

2. Complete extermination of Communist subversive activities and of the secret Communist conspiracy in America and in the West.

3. Cessation of diplomatic recognition of the Soviet Union and the satellite countries and the exclusion of these countries; i. e., of their Communist governments, from all international organizations; e. g., the United Nations.

4. A 100 percent economic and other blockade against the East bloc and neutrals trading with the Communists, general boycott of transport, persons, and societies serving the Communists.

5. Recognition of exile government of the refugees and expelles and

6. Formation of national military units composed of refugees from the enslaved nations based on the recognition of the full right for self-determination for all nations and groups. These units would be a magnet of defection for members of eastern armies as well as for satellite nationals generally.

7. More effective and anti-Communist radio broadcasts to be relayed to the East than are the present programs of Radio Free Europe and of the Voice of America; broadcasts, picturing also the true face of the state security police and the true face of the entire international Communist conspiracy; and the true means of defense and fight against it.

8. Military, economic, and other aid to be extended only to nations that are anti-Communist.

9. Opposition to every type of supernational pseudostates aiming to set up a world government.

10. American and Western policy to be adjusted to moral laws, Christianity, and enlightened nationalism of every nation.

11. Proclamation of just aims for future arrangements:

(a) Restoration of the status quo before Communist and Nazi changes.

(b) Full right for self-determination for every nation, as small as it may be.

(c) Punishment of the Communists and of their helpers.

12. Explanation to free nations and to the world of the real strength and the real weaknesses of the Communist system and of Soviet Russia: Banishing fear of Soviet Russia.

13. Explanation to all nations that this policy is the only way to reduce oppressive taxation in the future, to abolish armament and all burdens of the citizens in every state, including citizens of the presently enslaved nations.

14. Proclamation of the readiness of the free nations to give full aid to the presently enslaved nations after their liberation.

15. Active and material support to underground movements in the subjugated countries, so that communism in the East can be destroyed and disintegrated without war, from within, within due course of time.

16. When time will be mature, the West should give sign for general strikes and laydown in the East, if this will serve the aims of liberation without war.

17. Use of all means, in addition to the above-mentioned ones, to reach liberation without war—to prevent war; use of all strongest deterrents to war.

Is More "Packing" of United States Agencies in the Making?

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article which appeared in Labor, dated April 27, 1957.

The article bearing the captioned title follows:

IS MORE "PACKING" OF UNITED STATES AGENCIES IN THE MAKING?

New developments may provide more "grist for the mill" of the House Interstate Commerce Subcommittee, which, as Labor has reported, will soon begin a probe of President Eisenhower's "packing" of Federal regulatory agencies with friends of the special interests they are supposed to regulate. Among the developments are these:

1. In a move so unusual that it lifted many eyebrows in Washington, Eisenhower this week took J. Sinclair Armstrong off his job as Chairman of the Securities and Exchange Commission and made his an Assistant Secretary of the Navy. This means a $500-a-year salary reduction for Armstrong, but there were some suggestions that he was being "kicked upstairs" to get him off the SEC.

As the Wall Street Journal commented, "some financial leaders have been critical of Armstrong's management of the Commission." For one thing, he has cracked down on Canadian and American oil and mine stock swindlers who are said to have powerful connections in high government and financial circles of both the United States and Canada.

When reporters persisted in asking White House Press Secretary James C. Haggerty why Ike transferred the SEC chief to the Navy, Haggerty snapped angrily: "Stop that goddarn nonsense. When the President appoints a man, he appoints him, and that's all there is to it."

WHAT ABOUT MURRAY?

2. Eleven of the eighteen members of the Senate-House Atomic Energy Committee wrote Eisenhower urging him to reappoint Thomas E. Murray as a member of the Atomic Energy Commission. Murray is the one member who opposed the scandalous Dixon-Yates deal arranged by AEC Chairman Lewis L. Strauss. Murray also is the only member who has opposed the Strauss program of giving the power trust a private monopoly of atom electric power developed at public expense. Reports say Strauss has asked the President to drop Murray from the AEC.

The House investigating committee undoubtedly will be watching to see whether Ike reappoints Murray when his term expires next June 30. The committee also will be watching what happens in the following case:

3. The term of Harry A. Curtis as a member of the 3-man board of directors of the Tennessee Valley Authority expires next May 18. He has reached an advanced age and is willing to retire, but the question is who will Ike put in his place?

The law which created TVA says members of its board must be men who believe in the principle of Uncle Sam's great electric power yardstick. Several years ago, Eisenhower refused to reappoint Gordon R. Clapp, who had proved his devotion in a long TVA career which made him chairman. Instead, Ike appointed as a new chairman Army Gen. Herbert Vogel.

Many Members of Congress and local leaders in the seven-State TVA area have repeatedly charged that Vogel, despite his oath to defend the TVA, has done all he could to cripple it. As just one example, he supported the Dixon-Yates deal, which was designed as an entering wedge for destruction of TVA and its low-cost public power program.

So far, Vogel has been outvoted by the other two Members of the board, Curtis and Raymond Patty, both proved fighters for TVA. If Ike replaces Curtis with a man who holds views like those of Vogel, he will control the Board, and the future will look dark to the friends of TVA.

STAKES ARE BIG

These three cases are examples of what's at stake in the Government boards and commissions which, it is charged, are being packed by Eisenhower. The stakes were recently described by Congressman JOE L.

EVINS (Democrat, Tenn.), who headed a committee which made a preliminary investigation of the packing.

In a long and detailed speech to the House, EVINS recalled how Congress found it impossible to devote the necessary time to regulation in the public interest. So Congress, in the years since 1887, created regulatory boards, commissions and other independent agencies, which were supposed to be free from control by the White House.

EVINS described the histories of these agencies, beginning with the Interstate Commerce Commission and going on through the Federal Trade Commission, Federal Power Commission, Federal Communications Commission, Securities and Exchange Commission, TVA, AEC and many others.

They deal with almost every human activity, he said, and they operate under a mandate to further the declared public policy by breathing life into legislative enactments. That mandate, EVINS charged, is being undermined by Eisenhower's packing program.

Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. ADAIR. Mr. Speaker, as we begin debate upon the mutual security bill, I think it is helpful to know what informed observers throughout the country have to say about this legislation. Mr. Clifford Ward writes a column for the Fort Wayne News-Sentinel and, under unanimous consent of the House, I include it herewith:

President Eisenhower's father-knows-best appeal to American taxpayers to back him up on his foreign-aid program is not likely to be too effective. He is making the mistake that many public officials make who are elected by overwhelming majorities. The people may elect a man by a big vote and not accept what he tells them as infallible.

Foreign aid has been with us ever since the end of World War II. It was first argued as a necessary relief for countries of Europe which were made almost penniless by devastating war. Then it was argued that unless they got aid, Europeans couldn't do business with us, and our own prosperity at home would suffer. It was also argued that giving foreign nations help makes friends for us. It was also argued that we must even up the standard of living of other countries somewhat more closely with our own.

It is now argued that foreign aid is primarily money to build up the defenses of other nations so they may resist communism. The presumption is that these nations can't build up their own defenses, or if they can they won't unless we lead the way by helping them. If communism is a world threat which one of our allies wholely accepts and which allies have neither the means nor the will to resist, then we are in serious trouble.

OFF OUR ROCKER

As a Nation, we are slightly off our rocker. The people of Europe find no greater pleasure than in making fun of the manner in which Americans work, without appreciation of the joys of living. They laugh at our daily pursuit of the American dollar, but after we have caught that dollar, they are very insistent that we turn it over to them.

It is true that we, as Americans, work our heads off without too much appreciation of the joys of living, which is characteristic of Europeans, but we are getting just a little tired of working so hard on behalf of Europeans and being laughed at as a result. Furthermore, there are gimmicks in our foreign-aid program which are not being honestly discussed.

Most of the aid which went to European countries never trickled down to the poor and the needy. It stayed in the hands of the rich, who accept tax evasion as a way of life. Only peasants in some European countries pay taxes, not the principal beneficiaries of our foreign aid.

We have poured billions and billions of money, taken from average American workers, into the pockets of the rich of Europe, and today there is no real friendship for us anywhere in Europe.

TWICE BURNED

Any resistance to communism there is American resistance and that resistance is also being laughed at as unnecessary. We draft American boys and send them all around the world to protect nations that have more manpower than we do and that won't think of letting their own youth be drafted. What are we—nuts?

The world is indeed worth saving, but does Ike insist that with all our bad experience behind it, foreign aid is still the way to save it? Furthermore, the question eventually has to be faced: Is it worth laying the United States on the sacrificial altar so that the rest of the world can be saved? An individual might find himself in a situation where surrendering his own life to save another would make moral sense, but it is difficult to conceive how a nation such as ours could find moral sense in destroying itself to save the rest of the world. What do you salt things with after you have destroyed all the salt? It is a good political question as well as a good religious question.

We went to war twice to save the world. Now we find out from our allies that we went to war only to save ourselves and that the wars weren't won by us but in spite of us. Yet we keep on thinking and making the same mistakes as before.

Ike's plea for his foreign-aid program should fall on deaf ears.

That Awful Fingerprinting

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Bulletin of July 14, 1957:

THAT AWFUL FINGERPRINTING

Before getting a visa to come to the United States, all aliens must by law furnish a set of fingerprints to go with their consular application. The regulation does not apply to diplomats and their qualified staff members.

There is, of course, an irrational reaction to putting ink on your fingers and rolling the tips on an official form. It is almost as if the next step is the prison haircut and an issue of shoddy clothing. This accounts for most of the nonsense written about the law. It is supposed to be degrading.

But why should it be? It is only a matter of identification, and in that sense no more humiliating than the requirement to present a perfect stranger with a signed photograph for passport purposes. Everybody who has ever served in the Armed Forces or applied for a Government job must have given up his fingerprints, and that means many millions of people. It is hard to see why it is any more shameful to give your prints than other information, often very personal, required for passport and visas.

The Soviets are particularly sorrowful over this dreadful imposition. It is the only thing, they say, which prevents them from deluging us with musicians, ballerinas, philosophers, and scientists who would do much to uplift and improve the American scene. They say nothing of MVD agents and professional saboteurs, who are the real objective of a measure which ought to be no more than a passing nuisance for innocent people with commonsense.

Speech of Congressman Willliam M. Colmer Before the Mississippi Bar Association

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. TUCK. Mr. Speaker, on June 29, 1957, our colleague, the Honorable WILLIAM M. COLMER, of Mississippi, delivered the principal address before the Bar Association of the State of Mississippi meeting at Biloxi, Miss. The address is an able and timely one and points out many of the dangers confronting the country today. The distinguished Mississippian alludes in particular to the manner in which the Supreme Court is undertaking to usurp the powers not only of the States but of the Congress and the people. I commend his address to the Members of the Congress and to the people of America.

As we all know, Congressman COLMER is one of the ablest and most useful Members of the Congress. Along with the Honorable HOWARD W. SMITH of Virginia, he has taken the lead in resisting the flagitious forces seeking to destroy America as we have known and enjoyed it for lo these many years. At the present time, in my opinion, the Supreme Court is the greatest offender along these lines, and unless their activities are curbed by positive action of the Congress, our liberties will be destroyed.

Under leave heretofore granted me to extend my remarks in the RECORD, I include the address of Congressman COLMER, which is as follows:

SPEECH OF CONGRESSMAN WM. M. COLMER BEFORE MISSISSIPPI BAR ASSOCIATION, JUNE 29, 1957

Mr. President, my colleagues of the Bar of Mississippi, distinguished guests, ladies and gentlemen, as a lawmaker for nearly a quarter of a century, I am chagrined to admit that in no similar period has this country strayed further from the sound philosophy and the principles of good government upon which this Republic was founded. While I cannot escape my own responsibility, as a Member of Congress during that period, for the assaults that have been made on the very foundation stone of our society, the Bill of Rights, I think you will find me recorded most often among the

dissenters. However, those years of service in the Nation's capital have afforded me an unusual opportunity to view the national scene at close hand, and I should like briefly to emphasize for you some of the rocks and shoals that lie ahead.

I am sure that you, as members of the Mississippi bar, are justly alarmed over the ever-increasing tendency toward consolidation of power in the Federal Government at the expense of the States and the freedom of our citizens.

Jefferson, who contributed so much to the cornerstone of our freedom, warned: "It is not by the consolidation or concentration of powers that good government is effected. Were not this great country already divided into States, that division must be made, that each might do for itself what concerns itself directly, and what it can do much better than distant authority."

It was to prevent this consolidation of power that the 10th amendment was adopted, providing that, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

For more than a century that mandate was scrupulously honored. On the few occasions when Congress, with an excess of zeal, invaded the domain of the States, the Supreme Court firmly pulled it back. Thus, when Congress attempted by the Civil Rights Act of 1875 to exercise the police power of the States by requiring the operators of inns, theaters, and other places of public amusement to serve white and colored people alike, the Supreme Court held the measure void. It told Congress that neither the 13th nor 14th amendments conferred any authority for this interference with the conduct of private individuals.

How changed the situation today! Apparently the States no longer have any rights which the Federal Government is bound to respect.

Congress, I am sorry to admit, is partially responsible for this development. It has passed laws, expressed in vague general terms, empowering the Federal agencies to regulate vast areas of our economy. Immediately these agencies set up all the trappings of bureaucracy. They issue directives, regulations, and interpretations, which, as time goes on, bear less and less resemblance to the act passed by Congress.

But the evil wrought by the executive and the legislative branches has been minor in comparison with the transgressions in the past two decades of the nine black-robed gentlemen who occupy the marble palace across the plaza from the Nation's Capitol.

You won't find anything about "preemption" in the Constitution, but the Supreme Court, with ever-increasing frequency, is applying that doctrine to whittle down the jurisdiction of the State courts. Of course, in doing this the tribunal always professes to be carrying out the intent of Congress; the effect is the further centralization of power in the Federal Government. Among the most flagrant examples of this practice in recent months have been the Steve Nelson and the Slochower cases. In the Nelson case, the Supreme Court held, under this doctrine of preemption, that Pennsylvania's antisedition law was void. And in the Slochower case, the Court denied the right of the city of New York to discharge a teacher who had invoked the fifth amendment in a congressional committee investigation concerning his past membership in the Communist Party.

If this doctrine is permitted to go unchallenged, our State courts will become but empty shells. Yet remedial legislation, sponsored by a number of us under the leadership of my able colleague, Congressman SMITH of Virginia, has been languishing in committees of Congress for the past 2 years.

More recently the Supreme Court ordered applicants admitted to the bar examinations in New Mexico and California, after the State board of bar examiners had refused to approve the applications and after the State supreme court in each case had upheld the action of the examiners. This decision provoked the Richmond News Leader to appropriately editorialize that the Supreme Court of the United States had thereby "continued its studied campaign to obliterate the States of the American Union."

Of course, one can conceive of no more flagrant example of digression from the doctrine enunciated by the Founding Fathers than the recent school segregation decision of the Supreme Court, in which the Court admittedly substituted its own political and social theories for legal precedent.

Among the most recent attacks upon the American way of life, as we have known it, by the High Court was the Girard College case. Here, you will recall, one Stephen Girard many years ago founded Girard College for the education of white orphan boys. He set up a trust fund for its operation. But now, the Supreme Court has decreed that he had no right to stipulate that only white orphan boys were to be the beneficiaries of his will. The flimsy reason given was that "the board which operated the college is an agency of the State of Pennsylvania."

Then again, within the past few days, this same Court has made meaningless and ineffective the Smith Act. This law, sponsored by my warm personal friend and chairman of my Committee on Rules, Congressman HOWARD SMITH of Virginia, was overwhelmingly passed by the Congress for avowed purpose, in plain English, of jailing the Communist leaders in this country who advocate the overthrow of our Government by violence. Congressman SMITH told me just before I left Washington that he knew of no way to amend the act so that this Court would construe it to be effective.

If a State no longer can fix standards of propriety and fitness for its teachers (as in the Slochower case a year ago); if a State no longer can operate its public schools exclusively with its own funds so as to avoid domestic strife (as in the school segregation cases); if a State no longer can establish its own rules for appellate proceedings (as in the Griffin case); if a State no longer can pass upon the fitness of prospective lawyers who would become officers of State courts—what, then, is left to the State?

What, indeed?

And how, Mr. President, did this all come about? The answer is obvious. You will recall that during the early days of the New Deal the then President Roosevelt set out to pack the Supreme Court so as to have it conform to this new venture into liberalism. The Congress, as the representatives of the people, refused to go along. But retirements and death intervened. The result was the same; and the nine staid old gentlemen of the moderate and conservative school yielded their seats to men of the so-called liberal school of thought.

And what, I am led to wonder, would the Founding Fathers say to all this?

"There is no danger I apprehend so much," Jefferson wrote, "as the consolidation of our Government by the noiseless and, therefore, alarming instrumentality of the Supreme Court."

Jefferson's basic philosophy is set out in the oft-quoted: "That government is best that governs least."

The Kentucky resolution of 1798, of which Jefferson was the author, spelled out the kind of union that he hoped to see:

"The several States composing the United States of America, are not united on the principle of unlimited submission to their General Government, but * * * by compact under the style and title of a Constitution for the United States and of amendments thereto, they constituted a General Government for special purposes, delegated to that Government certain definite powers, reserving each State to itself, the residuary mass of right to their own self-government."

How different from the philosophy of Jefferson's principal antagonist, the Federalist Hamilton, with his plea for "complete sovereignty in the General Government," his proposal at the Federal Convention that "all laws of the particular States contrary to the Constitution of the United States to be utterly void," and his plan to prevent such laws from being enacted by having the governor of each State appointed by the Federal Government and given a veto power over laws passed by the respective legislature.

From this handful of freedom-seeking men cast into the wilderness of the New World came those sacred institutions guaranteeing the liberties and freedom of its citizens. It is, indeed, an enigma that these sacred liberties, achieved at such an immense sacrifice, are now slowly but surely yielding to the iniquitous doctrines of the false advocates of liberalism.

The trend away from the Jeffersonian theory of government, and toward the Hamiltonian concept, makes one wonder if these pseudo-liberals, who are now predominant in our present-day government, have forgotten that it was Jefferson, and not Hamilton, who prevailed in the writing and the adoption of the United States Constitution and the immortal Bill of Rights.

Only a few nights ago, the great President of the United States warned the governors of several States of the Union in conference assembled of the dangerous trend toward centralization of power in the Federal Government in Washington at the expense of the sovereign States. I was pleased to hear this warning from the prestige of the high office of President. I wish, however, that his actions in such fields as the public-school construction and civil-rights programs were more consistent with the soundness of his argument for States rights.

How different, too, Jefferson's philosophy of government is from that of the self-styled liberals of today, who loudly proclaim themselves his heirs and followers at the Jefferson-Jackson Day dinners, on the one hand, while sponsoring legislation, on the other, to deny the basic right of trial by jury in the name of minority rights. I refer, of course, to the so-called civil-rights bill, which the House has just had under consideration.

But before discussing the civil "wrongs" bill further, please permit me briefly to make clear my own position and philosophy. I emphatically refute the idea that one who opposes this type of legislation is either a bigot or a Negro baiter. I repeat, that I love my fellow man of whatever hue his skin. But in approaching these social and political problems, one must be realistic and frankly face the facts of life. The Negro in the United States has made the greatest progress of any race of people in a similar period of time in the history of the world. That progress has been made chiefly because of the guiding hand of his white southern brother. It must be remembered that only a few generations past he was a savage in the jungles of Africa, and less than a century ago he was a serf in the shackles of slavery. To envision a program, by either a decree of court or a parliamentary statute, overnight placing him upon an equal basis of both opportunity and responsibility with another race of people who for thousands of years have enjoyed the benefits of education, civic responsibility, culture, civilization and Christianity, just does not square with the facts of life. We are proud of the progress that he has made. We deplore the disruption of the good, and ever improving relations between the races, engendered by these ill-conceived and hasty actions of the do-gooders and the politicians. If history of man is not to be ignored, the progress of the

Negro race like that of his white brother must, of necessity, be slow and gradual.

Having just emerged from the hardest fought legislative battle of my service in the Congress on this iniquitous proposal, I can truthfully and sincerely say to you that this is not the innocuous and moderate bill that its advocates pretend it to be. The bill is revolutionary. It is politically inspired, with both major parties confessedly seeking minority votes.

If enacted into law, it would set up under the Commission provision a veritable gestapo with paid snoopers and informers, with the powerful arm of the Federal Government further invading the rights of the citizens of the sovereign States. Moreover, it would, in effect, remove control and supervision of both our primaries and elections from the States into the far-off hands of the Federal Government.

Its proponents claim that its purpose is to permit the Negro in the South to vote, but its implications and its revolutionary machinery could only result in the deprivation of many rights and liberties now enjoyed by all of our citizens. The proponents admit that the alleged evils which they seek to cure are already covered by Federal statutes. Under this bill they would resort to equity, with the provision for the broadest type of injunctions. In fact, the bill is designed deliberately to avoid the right of trial by jury, which defendants under existing statutes would enjoy. The gimmick, as we pointed out in opening the debate in the House, is a provision for making the Federal Government the complainant and administering the law by the Central Government in Washington without the right of trial by jury. Those sponsoring the bill brazenly charge that the southern juries, if the existing criminal statutes were pursued, would not convict.

This is an unwarranted indictment and assault upon the cherished trial-by-jury system, the cornerstone of our criminal jurisprudence.

It is interesting to note in this connection that Congress in 1932 passed the Norris-LaGuardia Act, which specifically provided for jury trials in labor disputes. This action was taken because of the alleged abuse by Federal judges of the injunction power.

It is of further interest to observe that the great liberal, Congressman CELLER, of New York, the author of the civil-rights bill, was one of the chief advocates of the jury trial in the Norris-LaGuardia bill. As a member of the House Judiciary Committee, he argued eloquently for the jury trial on the ground that Federal judges were dictators and that we should follow the old English law for jury trials.

"I have read injunctions," he said when the bill was under consideration, "so fantastic, so arbitrary, that they were practically but one step from a threat of jail to a striker if he coughed, spat, or chewed. Some injunctions read very much like orders of an army of occupation bent upon vicious revenge. Many injunctions are not used to protect property from irreparable loss, but issued to disorganize unions and to terrorize and intimidate those on strike."

Again, in 1947, when the Taft-Hartley bill was being considered, Congressman CELLER made a similar argument against the injunction, as follows: "In those days the judges, without hearing, issued injunctions based upon affidavits of stooges and stool pigeons and agents provocateur. The abuses in the granting of these injunctions so aroused the Nation that in 1932 we passed the Norris-LaGuardia Act which outlawed the granting of ex parte injunctions against labor. This bill would reinstate those ex parte injunctions against labor and would turn the clock back and return us to the robber-baron days and the days of the industrial buccaneer."

But the same Congressman CELLER, who pled so earnestly for the right of trial by jury where labor was involved, argued most vehemently against our jury-trial amendment, which would provide our State, county, and municipal officials, as well as private individuals, the same right of trial by jury.

Just incidentally, every southerner except one voted for the Norris-LaGuardia Act, which is something of an irony in view of the fact that the labor moguls in Washington were among those beating the drums loudest for passage of the punitive civil-rights bill, without the jury-trial amendment, aimed like a gun at our section.

This proposed legislation is just another step in the conspiracy of the modern false prophets of liberalism to concentrate the administration of government in an all-powerful centralized Federal state. I would be as bitterly opposed to it if there were not a Negro in the entire South.

But irony of ironies is the complete reversal of position between the conservative and the liberal elements of our society that has occurred in the course of the Nation's history and especially in recent years. We are now told that centralization is liberalism. Jefferson called it "toryism in disguise." By whatever name called, if the present trend is continued, it can only end in totalitarianism.

The basic principles of human freedom are as invariable as the solar system. They are the same today in the jet and nuclear age as they were in the horseback and ramrod and musket days.

"This is the greatest democracy in the history of the world," another outstanding Virginian, Senator HARRY BYRD, recently said. "It has grown to this position in the brief span of 160 years, and with only 6 percent of the world's population. This could not have been achieved without the form of government bequeathed us as a sacred heritage by our forefathers."

"Strike down the power of States to control their own affairs," he continued, "and concentrate all power in Washington, and you strike at the heart of what makes this Nation great."

Mr. President, I have given you a rather dismal analysis of the picture, as I see it, of the future of not only the South, but of the Republic, itself. I wish I could, with integrity and honor, paint a different picture; but I am sure that you and thoughtful Americans who love this young Republic and its institutions, must share with me genuine alarm at the assaults which are made upon the basis and the bulwark of the Nation's fortress and its institutions, the Constitution and the Bill of Rights. While it is true that the South is often the target, it must be borne in mind that the real objective is to remake America, the New World, along the line of the modern isms and ideologies of the Old.

It would appear that the proponents of the program have succeeded in capturing control of both of our major political parties. For the past two decades this movement has gained momentum. In this movement, principle yields to expediency. And today, both parties are the captives of minority groups.

Up until the past few years the conservative South and the conservatives in the Republican Party were able to work together in holding the line. But now, with the advent of modern Republicanism and the all-out drive by those in charge of that party to recapture the powerful Negro minority bloc vote, the South stands alone as the defender of the true Jeffersonian liberalism.

Mr. President, in my considered judgment there is an answer to the South's problem. We find ourselves politically isolated. In spite of the fact that the South has been the bulwark of strength of the Democratic Party for these many years—in spite of the fact that it has in the past two national elections furnished the only electoral votes, with the bare exception of one border State, received by the Democratic nominee for President, we receive no consideration from that party. We are merely taken for granted while those who control the party seek the support of the CIO, ADA, NAACP, and other so-called liberal minority groups. At the same time we expect no consideration at the hands of the Republicans because we give them nothing. As one who tires of that treatment, and who is apprehensive of the grave and inevitable results—not only for the South, but for the Republic itself—I have long considered the advisability of a two-party system in our section. I have reasoned that under such a system the South would no longer be taken for granted but it, too, would be wooed by both parties. But with the new modern Republicanism and its active entry into the field of competition for the suffrage of the minority groups, I seriously doubt that this is the answer. Therefore, I am driven reluctantly to the conclusion that in this day when political expediency rather than high principle motivates those in charge of both our political parties and the Government, itself, where minority groups hold the balance of power, that the South must itself become, too, an organized political minority. If our southern leaders, forgetful of self-aggrandizement and personal political preference, will take the lead, I am sure that the people of the South will rally to the cause. Then, and only then, will the South's once-powerful voice be heard in the council of the party and be felt in the Congress of the United States.

With such unity the South would become the balance of power in both party and legislative programs. It would no longer be the whipping boy of the Nation. Its strength, particularly in the Congress, itself, would be considerably augmented by the gravitation of the conservative wing of the Republican Party.

Such a program, of course, calls for a crusade of the highest order. In it there is no room for southern politicians who render lipservice to the principles we advocate, while, at the same time, seeking national political preference at the hands of those now in the control of the party machinery.

If, Mr. President, to the timid this proposal appears drastic and revolutionary, I answer that the situation is grave. It calls for new, bold, and affirmative action. No longer can we afford to follow the path of concilation and appeasement.

Surely, the present path now being trod by freemen leads but to the ultimate surrender of all of our cherished, God-given institutions of freedom and liberty, wrested from the tyrannies and oppressions of the past. Assuredly, even in this day of materialism, the descendants of Washington, Jefferson, and Jackson have the courage and the will to see to it that America, the last haven of refuge of freemen, shall not perish from the earth.

What It Means To Be a Port City

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 16, 1957

Mr. NEUBERGER. Mr. President, in the Oregon Journal, published at Portland, Oreg., the May 23, 1957, issue carried an editorial under the heading "What It Means To Be a Port City." This editorial, although emphasizing facts of great importance about Portland, by changing a few names and figures might very appropriately have re-

ferred to any one of a number of American port cities whose access to the sea is by river or canal. The importance of channel maintenance, the trend toward freighters of deeper draft and greater length, the improved bulk handling facilities bring increased activity to ports and with it the need of deeper and wider channels. The investment of public works funds in these routes to the sea are wise investments that increase our Nation's and the world's wealth.

Mr. President, these statements pertain not only in Portland, Oreg., but in Stockton, Calif.; Houston and Beaumont, Tex.; New Orleans, La.; Savannah, Ga.; and Philadelphia, Pa.; to mention a few. Mr. President, I ask unanimous consent to have this editorial included in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IT MEANS TO BE A PORT CITY

An elderly gentleman, nearly a lifelong citizen of Portland, sitting next to us at luncheon the other day said: "The people just don't know how important ocean shipping is to this city."

His remark was pertinent because the luncheon was connected with the observance of World Trade Week and was a forerunner of National Maritime Day (which was Wednesday).

Portlanders do not see as many ships as they used to, and some may think this means a decline in harbor activity. The reasons are simply, however, that all our major docks are downriver, so ships happily don't need to interfere with our bridge traffic (except on rare occasions), and ships are several times larger than they used to be, so not so many of them are needed to carry equivalent tonnage.

Despite this, however, 1510 vessels, flying the flags of 24 countries, visited Portland last year. They handled 10 million tons of cargo, including petroleum, having an estimated dollar value of $750 million.

Portland led the Pacific Coast in total dry cargo tonnage handled, of which 2,054,250 was in export and 168,500 in import. This great disparity between what we ship out and what we receive is not as great as it used to be, and helping to change the ratio are the bulk handling facilities installed by our commission of public docks which have boosted the inbound movement of sulfur, ore concentrates and other bulk items. They have also increased the outbound shipment of coal, scrap and ores to supplement our No. 1 export item, wheat.

Trade dollars find their way into many pockets in Portland, because so many business and commercial activities are allied with the waterfront industry, either directly or indirectly.

If we did not have a harbor, we would not be much of a city. It is well to remember that we did not become an ocean port by accident. We are more than 100 miles from the sea. Ships reach us through a channel that was artificially created and has to be maintained. The time is coming when the channel we have, 35 feet deep and 500 feet wide, will be inadequate to handle our water traffic. Our next goal is a channel 40 feet deep and 750 feet wide. This will have to come through action in Washington, D. C., and it will not come easily, but it is important for our citizenry to be reminded from time to time of our dependence on the port and of what has to be done to keep the port functioning.

Will Taxes Destroy America?

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Fort Wayne Journal-Gazette. We are all deeply concerned over the matter of taxation, and it seems to me that this editorial contains much valuable food for thought.

The editorial follows:

WILL TAXES DESTROY AMERICA?

Inflation and excessive taxation are as old as civilization.

Yet they curse us today—right here in democratic America—just as they did in the nations which existed before the beginning of the Christian era.

And those nations which flourished so long ago—where are they?

Many of them have gone into oblivion—destroyed by excessive taxation and inflation.

Perhaps there was some excuse for their economic mistakes and failures. Their mistakes and failures were made in cruder and less enlightened times.

We have the whole history of human experience to profit by. Can we learn to avoid the mistakes of the past?

Sometimes that seems doubtful.

America was built by free men. They were also practical men. They prized self-reliance.

From early colonial times, they resisted excessive taxes. They fought against inflation and whenever inflation got a hold, they suffered from it.

It is one of the conditions of free men that they are permitted to spend most of the money they earn, rather than have the government spend it for them. When they lose that condition, they are no longer free men.

Are the American people in danger of losing their freedom to spend most of the money they earn?

The trend certainly is in that direction, and the speed is increasing. Every year national, State, and local taxes increase. Government is skimming off the cream of income and leaving the people the milk. And if the income is high enough, they also take a large portion of the milk.

When there is no limit on the amount of taxes the Government may take from an individual or a corporation, it is possible to tax private property out of existence.

If taxes get too high, they destroy the incentive to produce and invest. If the tax structure does not permit the accumulation of capital or does not permit capital to make a profit, then dynamic capitalism such as we have known—and it is the goose which has laid the golden eggs—will die for lack of nourishment.

Where then would be our expansion and growth? There would be none.

Many people will say: "Oh, this couldn't happen in America."

How sure are you that it could not happen?

The 16th amendment to the Federal Constitution which permitted a Federal income tax was adopted in 1913. The people who backed the amendment had no idea at that time that rates would ever be as high as they are today. If somebody back in 1913 had accurately predicted the Federal income tax rates as they are in 1957, he would have been called a crackpot by his contemporaries of just 44 years ago.

How high may the rates be in the year 2001—just 44 years from now?

These are things for the American people, who wish to remain free, to think about.

It is possible that we may become so caught in the web of confiscatory taxes that we can never return to the way of life which came down to us from the Founding Fathers of the Nation.

Most Americans Want Alaska, Hawaii in Union

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by George Gallup, written after taking a poll on the question of Alaska-Hawaii statehood. This article appeared in the New York Herald Tribune of July 12, 1957:

MOST AMERICANS WANT ALASKA, HAWAII IN UNION—GALLUP POLL SHOWS IT WOULD HAVE PASSED 11 YEARS AGO IN REFERENDUM

(By George Gallup)

PRINCETON, N. J., July 11.—If the American public had had a chance to vote in a referendum, statehood for Alaska and Hawaii would have gone through 11 years ago.

Since 1946, institute surveys have found overwhelming sentiment for admitting Alaska to the Union. The most recent test, just completed, finds a 9-to-1 vote of approval.

The story on statehood for Hawaii is similar—the latest test shows a vote of more than 4 to 1 in favor.

The fight over statehood for Alaska and Hawaii is a classic illustration of a dozen or more major issues where the lag between public opinion and legislative action has been a matter of years.

Here are high lights of the trend in sentiment for the two territories:

Would you favor or oppose having Alaska admitted as a State in the Union?

Statehood for Alaska?

	Favor (percent)	Oppose (percent)	No opinion (percent)
1946	64	12	24
1950	81	8	11
1953	78	10	12
1955	82	9	9
1956	74	10	16
Today	71	8	21

Would you favor or oppose having Hawaii admitted as a State in the Union?

Statehood for Hawaii?

	Favor (percent)	Oppose (percent)	No opinion (percent)
1946	60	19	21
1950	76	10	14
1953	72	14	14
1955	78	12	10
1956	71	11	18
Today	64	14	22

The House Committee on Interior and Insular Affairs recently reported out the bill on Alaska. Efforts are being made to obtain a rule from the Rules Committee to bring the bill to a vote. If this is granted, there is little better than even chance that the House of Representatives will pass the bill this session.

Alaskan political leaders have called for an end to American colonialism. Ernest Gruening, Governor of Alaska from 1939 to 1953, has said that "America does not practice what it preaches as long as it retains Alaska in colonial vassalage."

Statehood bills have been introduced at every congressional session for many years but have met opposition from several quarters.

One important obstacle has been the fear of some Senators of a shift in the political balance in the Senate.

The political complexion of Hawaii has been normally Republican, while Alaska has been Democratic. Although Alaska reversed the trend in 1952 and went Republican, the Democrats scored a sweeping victory in Alaska in the 1956 general election.

As in previous surveys, today's study finds little difference of opinion by political party members on the statehood issue. Democrats and Republicans join hands in voting in favor of admission.

Here is the vote by party affiliation:

Statehood for Alaska?

	Republican (percent)	Democrat (percent)	Independent (percent)
Favor	69	71	74
Oppose	9	8	7
No opinion	22	21	19

Statehood for Hawaii?

	Republican (percent)	Democrat (percent)	Independent (percent)
Favor	63	64	67
Oppose	14	14	13
No opinion	23	22	20

In the case of Alaska, there is also a military factor involved.

Early this year, President Eisenhower for the first time asked Congress to grant statehood to Alaska. But he specified admission to the Union should be "subject to area limitations and other safeguards for the conduct of defense activities." In repeating his request for Hawaiian statehood, the President laid down no conditions.

Hawaii became a Territory in 1900, Alaska in 1912.

Mrs. Rogers' Warning

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Standard-Times of July 9, 1957:

MRS. ROGERS' WARNING

Congresswoman EDITH NOURSE ROGERS, of Lowell, a seasoned veteran of 32 years in the House of Representatives, made noteworthy comment on recent Supreme Court decisions, in a House speech that was as outstanding as it was brief.

The remarks by the Massachusetts Republican were inspired by a letter she had received from Mrs. Joseph R. McCarthy, which Mrs. ROGERS inserted in the CONGRESSIONAL RECORD.

Recalling the vigorous fight against Communism waged tirelessly by the late Senator McCarthy, Congresswoman ROGERS warned that decisions by the Supreme Court make it more difficult for the Government to destroy subversive forces from within.

"If in its wisdom, the Supreme Court cannot find within the Constitution the authority for the protection of American freedom," Mrs. ROGERS declared, "then it is the duty of the Congress of the United States, representing the people whose Government this is, to write a new amendment to the Constitution in which this authority is plainly spelled out. Subversive planning to overthrow the Government of the United States must be ended by law."

Mrs. ROGERS concluded: "I hope the Congress of the United States will act. I fear for the safety of our country if it does not act."

Representative ROGERS did not exaggerate the danger in the slightest, for the American people never have faced a more treacherous enemy that the Communist conspiracy. Congress needs to strengthen the anti-subversive laws of this country before the Communists are firmly entrenched as the result of Supreme Court decisions in their favor.

The Coast Guard and Hurricane Audrey

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. PASSMAN. Mr. Speaker, seven Coast Guard aircraft flew over remote Louisiana-Texas reaches of the gulf coast for 164 hours to give warning of the approach of hurricane Audrey or—when the hurricane had struck—to aid its victims.

Three helicopters pitched about in winds sometimes as high as their maximum forward speed while flying search and rescue missions, in the course of which they evacuated 75 persons whose lives were imperiled, transported civilian and military authorities, and delivered emergency rations and canned water.

Four Grumman amphibian planes, faster than the helicopters, ranged over the southwestern Louisiana disaster area on observation and communications duty, directing helicopters and boats to spots where they were most needed.

The pilot and his 1-man crew of one of the helicopters spent 13 hours in the air on Friday, June 28. One of their exploits was the hazardous rescue of a child and 3 women—1 weighing 250 pounds and with 2 broken legs—from a mass of floating debris on which they had taken precarious refuge. The helicopter hovered over the debris while the 4 persons were pulled inside by the crewman.

As the hurricane swung through the gulf toward the Louisiana coastal areas, amphibian planes from the Coast Guard air detachment at Biloxi, Miss., and helicopters from the air detachment at New Orleans were sent out to warn small craft, fishing camps, and isolated communities in the Mississippi delta and westward. Helicopters displayed a large sign, "Hurricane Approaching." An amphibian plane from the Coast Guard's Corpus Christi station dropped warnings to isolated groups on the Texas side of the threatened zone.

The hurricane's high winds, extending far to the north, east, and southwest as the storm swept along, kept planes out of the immediate area which was to suffer most—a stretch of coastal lowlands south and southeast of the city of Lake Charles. The hurricane struck this stretch on Thursday morning, June 27, and tides of 5 to 9 feet quickly inundated the lowlands and their sparse settlements. The communities of Cameron, Grand Chenier, and Pecan Island were among those hard hit.

The Coast Guard helicopters and amphibians and a lone privately owned helicopter converged on this area as the winds began to subside and air access became possible, and began their work of search and rescue, the maintenance of radio communication, and emergency transportation. They kept at it until the Fourth Army took over.

Coast Guard floating units from gulf coast points from New Orleans to Galveston ably assisted in the twin tasks of spreading warnings of the hurricane's approach, gathering up survivors and bodies of the dead after the storm had passed, and providing emergency aid of many other sorts.

Patrol boats, buoy tenders, motor lifeboats, and 16-foot flood-relief boats powered with outboard motors were deployed in the hurricane's wake as quickly as possible, by their own power or by truck. They performed a wide diversity of emergency tasks.

A report of the actions of the 165-foot Coast Guard patrol boat *Dione* is typical. At Cameron, this vessel's personnel rigged emergency lighting, rigged city water and sanitary pumps, dewatered courthouse basement, rigged power supply for emergency communications, repaired ferry ramp, and provided transportation in small boats for Corps of Engineers personnel, State police, radio beacon station personnel and patrols assigned to look for bodies.

The 91-foot buoy tender *Bluebonnet*, cruising in the Cameron-Lake Charles area throughout the night of Thursday, June 27, took 29 survivors and 2 bodies to Lake Charles, brought back to Cameron 3,000 pounds of food, medicine, and blankets, and then spent all of Friday, June 28, helping get the Calcasieu radio beacon back into action.

The 29 survivors and 2 dead delivered to Lake Charles by the *Bluebonnet* had been picked up and transferred to the *Bluebonnet* by a privately owned motor vessel, the 106-foot *Houston*, ordinarily in service as a tow vessel out of Wilmington, Del. A Coast Guard report took occasion to give highest praise to the *Houston* for the assistance she rendered in the disaster area both prior to and after other assisting units arrived.

Tenure of Justices of the Supreme Court

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 16, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by David Lawrence, published in U. S. News & World Report, July 5, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOOD BEHAVIOR OF JUDGES—WHO DEFINES IT?

(By David Lawrence)

Does the Constitution of the United States really provide for the life tenure of Justices of the Supreme Court? The words "life tenure" do not appear anywhere in the Constitution.

The prevailing impression, however, is that, once appointed to the bench, a judge can be removed only by impeachment. But the Constitution says that the impeachment power can be invoked solely in the case of treason, bribery, or other high crimes and misdemeanors.

Supposing, therefore, that no such crime or misdemeanor is committed and that in all sincerity the Supreme Court Justices render judgments which nevertheless have the effect of nullifying important provisions of the Constitution, what steps then are available to the President or to the Congress to see that the Constitution is not destroyed by decrees of the judiciary?

Where is the protection against arbitrary and capricious action by the judges? Five Justices of the Supreme Court, constituting a majority of the nine, are able to establish themselves as an oligarchy and rule the United States. How does our famous system of checks and balances, inherent in the Constitution, deal with such a contingency?

The Constitution says: "The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish.

"The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall at stated times receive for their services a compensation, which shall not be diminished during their continuance in office."

Since Supreme Court Justices may hold office only during good behavior and since obviously the Court itself cannot be the judge of its own behavior, it follows logically that the President and the Senate, acting together, have the constitutional power to determine just how good behavior shall be defined.

The Constitution does not use the word "confirmation" but says that "by and with the advice and consent of the Senate," the President "shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law."

Since the Senate can give consent, it can withdraw consent, as Alexander Hamilton once argued in The Federalist. There is nothing in the Constitution which says that the Senate must acquiesce in the retention of any judge who does not conform to the standards which may be set up to define the term "good behavior."

Congress could require by statute that every Justice come before the Senate periodically—perhaps every 6 years—for reconfirmation. There is no hint in the Constitution that confirmation once given is an irrevocable action. Reconfirmation occurs regularly now on the reappointment of various administrative officers of the United States, and in the case of judges of the Court of Tax Appeals and members of quasi-judicial bodies such as the Interstate Commerce Commission, the Federal Trade Commission, and the Federal Communications Commission. In all these instances, the term of office is definitely fixed by Congress.

Where the tenure is not fixed, however, as in the case of ambassadors and public ministers, the process of reconfirmation becomes merely a method of reexamination looking toward the termination or extension of the period of service.

The phrase "good behavior" in the Constitution indicates a continuing jurisdiction by the President and the Senate over the tenure of the judges.

The Supreme Court, on its part, has recently proclaimed a continuing jurisdiction over the States and all their schools and over all citizens who may do or say anything in connection with Court orders issued in segregation cases. This continuing jurisdiction is accomplished through injunctions issued by the judges which may not be terminated for decades to come.

There is no reason, therefore, why the Senate of the United States on its part may not maintain a continuing jurisdiction and a process of observation to determine whether the Supreme Court Justices are confining themselves to those judicial functions specifically granted to them by the Constitution or by Congress.

Congress can clarify the whole problem in a law—indeed, there would appear to be no need for a constitutional amendment—which would provide a suitable method of establishing whether the official conduct of such Justices still complies with the meaning of the words, "good behavior." Such a law should provide that a two-thirds vote be required for an adverse judgment—withdrawal of consent by the Senate.

The President, because he is a part of the appointive power, should be given by law the authority to consent or refuse to consent to the Senate's judgment.

This would give both the executive and the legislative branches an opportunity to share in the responsibility for whatever action is taken. The American people would be able to fix responsibility, too. They could deal at the polls every 2 years with a mistaken Congress and every 4 years with a mistaken Executive.

The hearings in the Senate in each instance relative to the determination of whether good behavior has been achieved or disregarded should be based on the specifications set forth in such laws as Congress may pass concerning appellate jurisdiction. For the Constitution does give Congress the right to say what cases may be appealed to the High Court and to define what authority the Supreme Court shall have in particular cases. This power is derived from the Constitution, which says:

"In all cases affecting ambassadors, other public ministers and consuls, and those in which a State shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the Congress shall make."

Certainly if a Justice has not lived up to the rules set forth by Congress when it defines by law the appellate jurisdiction of the Supreme Court, or if he refuses to appear before the Senate for reconfirmation, he would not be fulfilling the meaning of the term "good behavior" as defined by Congress, and his term could thereupon be ended. If he still disobeyed, he could be impeached and removed for violating a specific law of Congress.

It is to be noted that to Congress is given the power of regulation of the Supreme Court's jurisdiction.

This is the main safeguard which the American people possess as against what a member of the Supreme Court itself once described as a power inherently oligarchic. Thomas Jefferson all his life regarded the Supreme Court as an irresponsible body and independent of the Nation itself.

It was never intended by the Founding Fathers that the American people should be governed by five men, sitting as a majority of the Supreme Court, who could by judicial order frustrate the FBI, release confessed rapists, and prevent law-enforcement officers in Federal, State, and city governments from nipping treason in the bud or stopping corruption before plots of this kind can be consummated and grave damage done to the Nation.

One of the laws which Congress clearly has the power to make relates to the conduct of its own preceedings, including investigations. Congress has the right to say by statute that the Supreme Court shall not be permitted to pass on cases which involve in any way a change in the rules of the Senate or the House. This must be respected by the Supreme Court because the Constitution explicitly says:

"Each House may determine the rules of its proceedings, punish its Members for disorderly behavior, and with the concurrence of two-thirds, expel a Member."

The Supreme Court in its decision 2 weeks ago conceded that a legislative investigation is part of lawmaking.

Plainly, therefore, there is no right bestowed on the Supreme Court to tell Congress what rules it may or may not make for the conduct of its own investigations which are admittedly part of those proceedings.

But the Court nevertheless undertook recently to tell the Congress that whatever rules of its proceedings it might adopt, these are subject to further review by the Supreme Court of the United States. This is a plain violation of the Constitution.

Can it be persuasively argued that the framers of the Constitution ever intended to leave the President and the Congress helpless to carry out their constitutional functions in the face of such deliberate interference by the judiciary? Can it be said that no means of restraint at all was provided in the Constitution against such arbitrariness on the part of members of the Supreme Court who could indefinitely constitute a majority and issue decisions with all the force of law.

The obvious answer is that Congress, as the body which is representative of all the people, was given such power. It is up to Congress, therefore, to exercise it promptly by defining good behavior and at the same time limiting the appellate jurisdiction of the Supreme Court.

This, to be sure, is the system of checks and balances which the American people have written into their Constitution. It is time for the American people, through their elected representatives, to stop judicial usurpation and to prevent the growth of judicial despotism.

It is time to bring well-meaning but misguided Justices to a realization that they cannot and must not expect to function in contempt of the Constitution itself and still remain in office.

Visit of Attakapas Council, Boy Scouts of America, Alexandria, La.

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. LONG. Mr. Speaker, one of the most enjoyable experiences in the everyday life of a Member of Congress, in my humble opinion, comes from visits from his constituents. It is always a pleasure to play host to someone from home, and this pleasure was mine on July 10, 1957, when I had as my honored guests scoutmasters and Boy Scouts of the Attakapas Council, Alexandria, La., in the Eighth Congressional District of Louisiana, which I have the honor to represent. I personally was privileged to serve as district chairman of the Attakapas Council for a period of 2 years.

These fine young men, who constitute our confidence in the well-being of our America of tomorrow, stopped off briefly in Washington enroute to the National Boy Scout Jamboree in Valley Forge, Pa. I made an appointment for these Boy Scouts with a member of President Eisenhower's staff for July 10. These Boy Scouts presented a scroll of greetings from the city of Alexandria, La., on its 150th anniversary, and Hon. Homer H. Gruenther accepted the scroll in behalf of the President.

After having our picture taken on the steps of the Capitol, I turned my office over to these Scouts, where they enjoyed a regular boy's lunch of hamburgers, potato chips, and cokes, and each received a copy of the Constitution.

I know that much good will come from this National Jamboree where the Boy Scouts from every section of our Nation will get together. The Boy Scout movement is one of the finest single factors working for the development and improvement of youth all over the world.

My guests on this pleasurable occasion were C. J. Schexnayder, Jr., Pineville, La.; E. E. Jones, Jr., Jena, La.; Richard Tullos, Jena, La.; Dwight Beridon, Moreauville, La.; James Phillip Gaharan, Jena, La.; Ivan Butterfield, Alexandria, La.; Sidney Kaplan, Alexandria, La.; Harold E. Beridon, Moreauville, La.; Richard Van Natta, Alexandria, La.; Eldridge Roark, Alexandria, La.; George Kellogg, Elizabeth, La.; Mike Baker, Tullos, La.; Mickey Holmes, Pineville, La.; Hugh Tarver, Pineville, La.; George Cameron, Colfax, La.; Woodie Flowers, Jena, La.; Gene Cooper, Jena, La.; Fred Dozier, Urania, La.; Bill Jones, Jena, La.; Sonny Trammell, Alexandria, La.; Neil Fleckman, Alexandria, La.; Jerry Stevens, Jena, La.; James Smith, Colfax, La.; Bascom Smith, Colfax, La.; Howard Aiken, Tioga, La.; Tracey Urban, Alexandria, La.; Gene Rodney Willbanks, Pineville, La.; Steve Campbell, Jena, La.; Louis Staples, Alexandria, La.; Rowland Vernon, Pineville, La.; Bill Patty, Pineville, La.; Keith Chesson, Kinder, La.; Teddy Tannehill, Tullos, La.; Oscar Cheneval, Alexandria, La.

Undue Protectionist Influence

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. EBERHARTER. Mr. Speaker, on July 9 my colleague and fellow member of the Ways and Means Committee, Mr. THADDEUS MACHROWICZ, of Michigan, made a significant speech on the floor of the House. He directed his remarks to the fact that a Commerce Department official recently visited Switzerland and audacity to predict to representatives of the Swiss watch industry that the United States Government would soon reaffirm the defense essentiality of the domestic watch industry and would impose quotas on Swiss watch imports unless the Swiss "voluntarily" agreed to adopt quotas on their watch exports to this country. In so doing, as Mr. MACHROWICZ pointed out, the Commerce Department official took steps which undermined the President's avowed objectives of eliminating quotas and reducing international trade barriers.

Mr. MACHROWICZ performed a distinct public service by writing the President on July 3 and advising him of this improper and untenable situation, and by then bringing the facts to the attention of the Members of the House. In his public statements, Mr. MACHROWICZ consciously refrained from naming the Commerce official because, as he said, it was not his purpose to single out any individual for criticism. Rather, he was deeply concerned about the larger and more basic issue; that the Commerce Department appears to have been attempting to exert an undue protectionist influence in the current consideration by the executive branch of the alleged defense essentiality of the domestic watch manufacturing industry, and has been taking other actions which tend to undermine the stated objectives of our Government to eliminate quotas and lower other barriers to international commerce.

The Washington Post and Times Herald aptly referred to this point in its excellent editorial of July 13 when it stated, "The alleged action is consistent with the Department's cozy and overprotective attitude toward the domestic jeweled watch industry."

In order to cooperate fully with the Government, the gentleman from Michigan [Mr. MACHROWICZ] did provide, in writing, the name and title of the individual involved to the Secretary and the Assistant Secretary of Commerce. He has received some preliminary information from them and is now awaiting a more complete report on this unfortunate incident.

The Washington Post and Times Herald editorial noted that Congressman MACHROWICZ is quite right in asking the White House for a thorough investigation of any moves to undermine this country's trade policies with a friendly nation.

I wish to associate myself with these comments of the Washington Post and Times Herald and with those of the gentleman from Michigan [Mr. MACHROWICZ], in speaking out against the deplorable actions of the Commerce Department official. Since the ill-advised tariff rise of 50 percent on Swiss watches which the administration established in 1954, protectionist influences have continued to loom large in the administration's handling of problems affecting the watch industry. The time has come for the President to insist that his views on reciprocal world trade be followed by his associates in the executive branch of the Government, and that contrary and mischievous acts become unfortunate memories of the past.

Under unanimous consent, I include in the Appendix of the RECORD the editorial entitled "Tangled Watchworks," published in the Washington Post and Times Herald of July 13, 1957.

The editorial follows:

TANGLED WATCHWORKS

If the charges made by Representative THADDEUS MACHROWICZ, of Michigan, are accurate about the meddling of a Commerce Department official in American trade policy—and there are reasons for believing that they are—then one hand of the administration seemingly does not know what the other is doing. Mr. MACHROWICZ was recently in Geneva as an adviser to the United States delegation at the conference on the General Agreement on Tariffs and Trade. The purpose of the meeting was to reduce trade barriers; yet, according to the Congressman, shortly before the Geneva meeting a Commerce Department official met with Swiss watch manufacturers to attempt to pressure them into adopting voluntary export quotas.

The Department of Commerce has denied any knowledge of the meeting and so far Mr. MACHROWICZ (perhaps unwisely) has withheld all names. However, the alleged action is consistent with the Department's cozy and overprotective attitude toward the domestic jeweled watch industry. The domestics, incensed at Swiss competition, have appealed for relief to the Office of Defense Mobilization on the grounds of defense essentiality. Until a ruling is made, any attempt by an American official to apply backstair pressure on the Swiss is presumptive and mischievous. Congressman MACHROWICZ is quite right in asking the White House for a thorough investigation of any moves to undermine this country's trade policies with a friendly nation.

Historic Names on the United States Map

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. DEROUNIAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on an interesting phase of American history, at the request of Bernard Postal, my constituent. Mr. Postal is the author of the article and editor of the Jewish Digest, in which it appeared, in the June issue:

Jewish Names On the Map of the United States

(By Bernard Postal)

"It's 14 miles to Kaplan." "Turn right at Levys." "Let's stop for lunch in Seligman." "That sign says Aaronsburg." "There's a detour at Cohen's Bluff." "That new motel is just outside of Weiner."

This is familiar talk to everyone who has traveled anywhere in the United States by car, but who ever heard of those places? What map are they on?

You've lunched in Ypsilanti, detoured at Wenatchee, had a flat at Tuscaloosa, gassed up in Fiddletown, spent the night at Rising Sun, visited in Wantagh, turned off the turnpike at King of Prussia, and stretched your legs at Altadena. You've sped through hundreds of places with odd names, historic names, hard-to-pronounce names, but you've probably never seen—and perhaps even heard—of places bearing such common Jewish surnames of Cohen, Levy, Goldman, Edelstein, Altman, Strauss, and Goldstein.

But there are such places on the map, even though most Jewish tourists are unaware of them. That's because so many of the 92 towns, villages, hamlets, counties, mountains, lakes, and forests named for Jews are not along the main traveled highways.

This writer has located one of more geographical units named for Jews in 34 States. More than a third of these places are in the South. In Texas alone there are nine. Sixteen can be found in eight of the original 13 colonies. The only States without at least one place named for a Jew are Delaware, Indiana, Kansas, Maine, Maryland, Massachusetts, Michigan, New Hampshire, North Dakota, Ohio, Rhode Island, Tennessee, Utah, and West Virginia.

The combined population of the 92 places named for Jews is 230,000. Most of them, however, have no Jewish residents. The two largest towns having Jewish patronymics are Levittown, N. Y., and Levittown, Pa., both founded by and named for the Levitt brothers, real estate developers, and both with substantial Jewish communities. The oldest place named for Jews is Aaronsburg, Pa., population 350 (see A Town Founded by a Jew, Jewish Digest, May 1956). It was founded in 1779 by Aaron Levy, a Revolutionary patroit. It's on Route 45, a few miles from the geographic center of Pennsylvania.

America's heritage of place names is linked to the story of the people who built the Nation. Our place names tell of men and women who struggled and hoped and dreamed, who succeeded and failed, who sought fortune and lost it, whose life blood was poured out to keep America free. Among the hundreds of thousands of names of cities, towns, villages, rivers, mountains, and lakes, only a few hundred recall names known to all Americans. The rest are little names, sometimes even unknown to those who live nearby. One by one these names came to stand on maps as the names rose on the tongues and in the memories of people of different time and origin and blood and language.

Wherever you go in the United States this summer you'll probably not be too far from places whose Jewish namesakes contributed in some way to local, State, or national history. • • •

In Texas you'll find 2 of the 3 counties named for Jews. Castro County, in the Panhandle, south of Amarillo, honors Henry Castro, a French-Jew, who in 1842 signed a contract with President Sam Houston, of the Republic of Texas, to colonize the area west of the Medina River. The town of Castroville, on the west bank of the river, was founded by Castro in the 1840's. Kaufman County, and its county seat, Kaufman, just east of Fort Worth, memorializes the services of David S. Kaufman, who was one of the first Members of Congress from Texas after that State joined the Union.

The third county that bears a Jew's name is Levy County, on the gulf coast of Florida. Levy was the original name of David Levy Yulee, who helped draft the first constitution of Florida. Chosen Florida's first Congressman at large in 1841, he was the first Jew elected to Congress. In 1845 he also became the first Jew to win a seat in the United States Senate. Levy Lake, a popular fishing spot in nearby Alachua County, is named for Moses Levy, Yulee's father, who settled in Florida before it became American territory.

If your summer route takes you through Colorado, New Mexico, and Arizona you'll be in country with 15 places named for Jews and another that was once so named. Near the Dallas Divide, in the Colorado Rockies, is Mears Peak, named for Otto Mears, a Lithuanian-born frontiersman, road builder, and colonizer, who helped settle the San Luis Valley in the 1870's. The abandoned mining town of Aitman, in the Cripple Creek area, recalls Sam Aitman, who ran a sawmill there during the gold boom of the 1890's. Just outside of Denver is Spivak, which gets its name from the late Dr. Charles Spivak, one of the founders of the Jewish Consumptive Relief Society, whose buildings occupy most of the town.

On United States Highways Nos. 60–70, near Safford, Ariz., you pass Solomonsville, once the seat of Graham County. It stands where Isador Elkan Solomon opened a trading post in 1876. Seligman, on United States Highway No. 66, at the point where Pacific Time begins, is named for Jesse Seligman, New York banker and philanthropist, who financed the old Atlantic and Pacific Railroad. Nogales, on the Arizona-Mexico border, was founded by Jacob Isaacson, and for years the place was known as Isaacson.

In Northwest New Mexico is a tiny hamlet called Levy, which acquired its name from an early merchant who ran a commissary for the workers who built the first stretch of the Santa Fe Railroad to reach New Mexico. On the route of the Santa Fe is a crossroads hamlet known as Seligman. It is named for Bernard Seligman, who came to New Mexico in 1850. His son, Arthur, was governor of the State from 1930 to 1933.

You'll be within reach of many other places named for Jews if you vacation in the Ohio and Mississippi valley States. On the Mesabi Range iron ore country in Minnesota you'll run into the St. Louis County village of Sax, founded by Solomon Sax, a Lithuanian immigrant who opened that area to settlement in 1893. Just north of Madison, Wis., is the oddly-named town of Slinger, which is a contraction of Schlesingerville, founded in the 1840's by Solomon Weil Schlesinger.

Through Arkansas, Mississippi, and Louisiana the tourist will see road signs bearing the names of 15 towns named for Jews. In Arkansas you'll pass through the rice-growing community of Goldman, named for J. D. Goldman; Levy, a suburb of Little Rock, which honors Max Levy, a Jewish businessman who lent the town's founder money to open a store; and Weiner, a spot on the St. Louis Southwestern Railroad, named for a railroad official. Mississippi signposts point to Kahnville, founded in the 1850's by Louis Kahn; Marks, established in the 1870's by Leopold Marks; and Mayersville, county seat of Issaquena County, named for David Mayer.

One of the largest rice-growing towns in the South is Kaplan, La., founded in 1902 by Abram Kaplan, who pioneered the rice industry in Vermilion Parish. Marksville, seat of Avoyelles Parish, memorializes Marc Eliche, an Alsatian Jew, who came there in 1820. Brandenburg, Ky., recalls Col. Solomon Brandenberg, who fought in the War of 1812 and ran a tavern in Meade County. The once bustling but now virtually deserted Kentucky River town of Gratz is a reminder that the Gratz family of Philadelphia had mercantile interests that linked the east with the newly opened western country in the late 18th and early 19th centuries.

Whatever corner of the country you select for your vacation, you won't be too far from some place named for a Jew. If you're in Oregon, take a look at Roseburg, in Douglas County, named for Aaron Rose, who founded it in 1851. In King's Canyon National Park, Calif., you can climb Mount Reinstein and Goldstein Peak, memorials to early Jewish settlers. In Montana you can hike through the Bob Marshall Wilderness Area at the entrance to the Flathead National Forest. It's named for the great recreation and forestry leader, Robert Marshall, a son of Louis Marshall. In Idaho, remember Stein Mountain, in the Beaverhead Mountains, named for Henry Stein, prospector and sheepman; and the tiny hamlet of Alexander, which recalls Moses Alexander, governor of Idaho from 1915 to 1919. In Wyoming you'll see Hahn's Peak on the Wyoming-Colorado line, burial place of Joseph Hahn, pioneer prospector.

East or West, North or South, the Jews are on the map of the United States. There's Fleischmanns in New York, Gilman in Vermont, Manassas in Virginia, Mendes in Georgia, Gratz in Pennsylvania, Falkville in Alabama, Marcus in Washington, Seligman in Missouri, Edelstein in Illinois, Lehman Caves National Monument in Nevada, Cohen's Bluff and Levys in South Carolina, and many more.

When you find the places that go with the names you'll stub your toes on some of the bits and pieces that add up to the exciting story that is American Jewish history.

Indiana Farm Bureau President To Retire

EXTENSION OF REMARKS

OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mrs. HARDEN. Mr. Speaker, under leave to extend my remarks I should like to call attention to an editorial which appeared in the July 10 edition of the Indianapolis News. The editorial comments on the recently announced retirement plans of Hassil E. Schenck, for the past 23 years president of the Indiana Farm Bureau. Mr. Schenck, who, I am happy to say, resides in the Sixth Indiana District, is one of America's outstanding agricultural leaders and his decision to retire will leave a deep void in the ranks of farm leadership in this Nation. Happily, President Schenck is not leaving the rural scene entirely, for he intends to settle down to active farming in his native Boone County and I know his wisdom and sound judgment will continue to be available to those of us in the Congress who have gained so much knowledge of agricultural problems from him over the years.

The editorial which follows expresses, I know, the sentiments of Hoosier farmers:

A Leader Turns Over the Reins

Farmers the Nation over, especially those in Indiana, owe much to Hassil E. Schenck who, after 23 years as president of the In-

diana Farm Bureau, has announced his retirement.

His record of service to farmers, and to the State in general, is attested by the fact that during his tenure the Indiana Farm Bureau rose to its present membership of 133,000 families from a 1936 total of 20,000. It is second only to Illinois in the Nation.

Mr. Schenck's interest has been broader than that of helping farmers to produce and market better crops and finer livestock at better prices. It was his conception—brought into action—that the farm bureau has a major role in lifting the levels of rural communities—in bringing better homes, better schools, churches and roads, in bringing electricity to farms and in many other ways.

A genial man of vision and energy, this Hoosier farm leader also has been a pillar of strength in the American Farm Bureau Federation, serving on its board of directors longer than any other man. He rightly believes that farmers can handle their own problems through their own organizations, and that the trend will be away from Government controls.

The Indiana Farm Bureau will go forward under younger leaders, at his request, but on the same sound basis and with the momentum which he did so much to establish.

Hassil Schenck deserves the thanks and good wishes of every Hoosier as he plans to go back to his Boone County acres to continue active farming.

The Place of Paper

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein the following editorial from the Laconia Evening Citizen, Laconia, N. H., which appeared on Tuesday, July 9, 1957:

THE PLACE OF PAPER

Laurence Whittemore, chairman of the board of the Brown Co., was one of the speakers at the hearing held in Laconia on April 5 last by a subcommittee of the House Committee on Foreign Affairs on the subject of foreign aid. Mr. Whittemore in his remarks covered a wide range, and he took the position, as did the editor of the Evening Citizen, that our assistance to underdeveloped countries should be more rather than less.

Mr. Whittemore expressed the view that to be most effective many of our assistance plans should be longer than 1 year—long enough, for example, to build a paper mill. To support his point he observed:

"One of the things that many of these countries need is the ability to produce paper. Paper has an effect on a way of life, and so forth, beyond anything else that I know of except perhaps food. You can't start a project and bring it to any kind of fruition within 2 or 3 years, and if there is anything that is useless in the world it is a half-finished paper mill."

We thought of Mr. Whittemore's remarks as we read an editorial which appeared this week in the New York Times. The piece in the Times seemed to spell out the values that Mr. Whittemore had in mind. Here is what it said:

"We take paper for granted. Not merely newsprint, which we know is costly, but just everyday paper. Paper sacks, paper towels, paper cartons, wrapping paper, writing paper, paper matches, paper on cigarettes, paper raincoats, paper tablecloths, paper, paper, paper. We crumple it, we burn it, we throw it into litter baskets. We use it and forget it. And we use more than 300 pounds per person every year in this country.

"It is hard to understand, therefore, the plight of so many of the world's people whose paper supplies are totally inadequate. In most of Asia, for example, the use of paper is less than 9 pounds a year per person as compared to those 300 of ours. Every scrap must be salvaged. It must be used again and again if that is possible. Wrapping the fish in the old newspaper is only the beginning of it. A torn magazine is a bonanza.

"The Food and Agriculture Organization of the United Nations has just pointed out that this is a serious problem in the economy and progress of underdeveloped areas. It is hard to make educational progress when there is no paper available upon which to print textbooks. We were faced with that acute problem when we began to discuss the rehabilitation of Korea. It is hard to hold an election if there is inadequate paper upon which to print the ballots. That has happened, too. Paper can be a cultural as well as an economic instrument, as we are finding out.

"After a meeting of the Asia-Pacific Forestry Commission in Bandung it was decided to undertake more ambitious programs of forestry planting to obtain additional supplies of needed pulp. Naturally, the first solution of the problem that presents itself is the use of a wider variety of pulp sources such as bagasse (sugar cane residue) abaca (Manila hemp), bamboo, sisal, cogan, and straws. Experiments are being made in all these fields, but they take time. In some cases, such as rice straw, for example, the cost may be prohibitive. Meanwhile the need remains.

"One thing that can and should be done is an immediate exploration of the possible use of paper that is now wasted in the large consuming countries. Repulping is certainly possible on a larger scale. There can be a campaign of education in the matter of saving. It was done as a war measure. It can be done in peacetime, and it should be."

Catahoulans Wonder Why Billions for Foreigners; No Flood Protection Here

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Jonesville (La.) Booster of July 5, 1957:

CATAHOULANS WONDER WHY BILLIONS FOR FOREIGNERS; NO FLOOD PROTECTION HERE

Catahoulans are on the eve of another big flood control and relief rally. Records in the Catahoula County agent's office show that Catahoula suffers a major flood on an average of every 3.2 years. Records in the Catahoula Publishing Co. office indicate that big flood control and relief rallies take place at astonishingly similar intervals.

Catahoulans are sick of big flood control and relief rallies.

A little barbecue in the stomach and a torrent of soothing words and promises from politicians and semipoliticians does little to restore the $1,330,630 to the parish that is lost every 3.2 years in agricultural crops, livestock, and damage to farm real estate alone. This is not to mention the countless thousands of dollars that are lost annually in minor overflows. Nor is this to mention the human suffering and misery brought about when families are torn from their homes and crammed into hot, smelly tents in strange communities.

The people of Catahoula Parish are a simple folk. Made up primarily of farmers and fishermen, they understand simple things. They can understand the simplicity of the founding of our country. But they cannot understand the present complicated abrogation of this simplicity.

Catahoulans understand taxes. They understand the necessity of throwing much of what they earn into a kitty to provide for the common good—the building of roads, the administration of necessary welfare programs, the providing for the defense of the Nation.

They understand helping a neighbor when he is down and out. They provide such help without hesitation. But they are reluctant to provide 1 red cent for a leech of a person, who has had ample opportunity to help himself. They were willing to sacrifice to help the war-torn countries of Europe get back on their feet following World War II, 12 years ago. But they cannot understand the countless billions of dollars that have been poured into these countries—billions that could have reclaimed millions of acres of desert and marshlands, built public facilities, and provided superhighways—billions that could have already made these great United States the Utopia it could be.

They have been told by experts that their parish could be protected from devastating flood losses by the expenditure of $2 million. This is a pittance beside the billions that have gone to so-called foreign-aid programs.

Catahoulans wonder.

They are proud that their friends and relatives in next-door Concordia Parish are happily going about their business, tilling the land, anticipating another bumper crop. They wonder, though, why in heaven's name they can't have the same protection. They wonder what terrible crime they have committed that the omnipresent governmental powers that be deny them this equal right.

Catahoulans wonder.

They know where their 'stanch political alliances have lain in the past. They know the benefits they have accrued. They wonder where these alliances will lie in the future.

They remember with a sick feeling in the pit of their stomachs the words of Gen. John R. Hardin, on Saturday afternoon, September 19, 1953. (He was then head of the United States engineers in this flood area that drains two-thirds of the United States.)

The general stated, and we quote, "I cannot promise that in the near future your problems will be solved, but I can promise that we'll do our best in helping you solve them." Catahoulans wonder what the general meant by the "near future," 4 years ago, and what he meant by "we'll do our best."

The general pointed out that the Concordia levee is 1 foot below 1927 flood stage, and any additional levees must also be below that stage. He said, "This pattern must be followed. A reservoir must be available for storage when floods as great as the 1927 flood come."

Catahoulans wonder.

They would be glad to have their lands serve as a reservoir in time of floods as great as the 1927 flood, if they can have the protection they so richly deserve and so desperately need in times of floods not as great as the 1927 flood. They just wonder, when?

General Hardin stated on that sunny afternoon in 1953 that "We will give every con-

sideration. We will weigh and consider the benefits in protection and productivity, but," he warned, "there must be an analysis of the cost and the benefits."

Catahoulans wonder.

They wonder what kind of crooked scales and distorted slide rules "we" are using in weighing and considering the benefits in protection and productivity. They wonder how long it takes to make an analysis of the cost and the benefits when the cold, glaring figures are immediately available in the Catahoula County agent's office. They wonder what line of reasoning justified not expending $2 million that would save $4,461,260 during only 2 of the major floods, which come 3.2 years apart.

They wonder if this year's big flood-control and relief rally will be forgotten, like those of the past, as the politicos and the semipoliticos slip away to their spectral realms, to be disturbed and called back 3.2 years from now.

Catahoulans wonder in anger today. Will they act tomorrow?

Will Future Farm Production Be Under Contract?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following article from the Nation's Agriculture of July-August presents an interesting account of farming under contract. This may well be an important change in our whole concept of farming.

Many will not like the thought of contract farming, yet it does seem to fit the modern pattern of living, in that it will produce uniformity, security, and bigness.

The family farm is being harassed and squeezed on every side in spite of some rather forced optimism in high places:

WILL FUTURE FARM PRODUCTION BE UNDER CONTRACT?

(By Forest L. Goetsch, Doane Agricultural Service, Inc.)

Producing farm commodities under contract is not a new practice—tomato growers have contracted with processors for years and the same is true of sugar beets. Western cattle ranchers have often sold their calves for fall delivery at a certain price, established by bargaining with feeders in early summer.

But recent talk about vertical integration in the poultry industry has created new interests in contract arrangements and raised questions as to how far the practice might reach into the whole business of farming.

This term "vertical integration" can be explained most simply as any arrangement which ties together the various parts of an industry, so that it operates as a unit from production clear through marketing. One concern may own all of the farms and the plants involved, or it may have contracts which give it the same degree of control.

The term "integration" is most frequently applied to the situation involving broiler and egg contracts with operators who have hatcheries, feed mills, and processing plants.

In the case of perishable fruits and vegetables, it has been to the mutual advantage of both grower and processor to have a contract. The grower can't hold the crop once it is ripe and he could very well end up taking a ruinous price if plants were temporarily glutted.

Processors want to insure a supply of raw materials and often try to spread it over a longer period of time by specifying different planting dates and varieties for their growers.

Financing is one of the attractions for poultry producers who sign contracts. In discussing the broiler situation, a feed industry spokesman recently stated, "Broiler production requires much short-term capital.

"Studies show that 60 to 68 percent of total production costs are feed expenses, 14 to 19 percent are chick expenses and 3 to 6 percent litter and other supply expenses. Suppliers have furnished much of the necessary capital swiftly in ample amounts—a unique situation in agriculture where capital availability has often been a major problem."

This need for financing and also the need for up-to-the-minute advice on nutrition, disease prevention and other management information was filled by the feed companies.

Many of the manufacturers have opposed broiler financing programs, but the extremely competitive nature of the industry eventually forced all feed companies to offer complete financing if they wanted a share of the broiler business.

Today over 90 percent of the Nation's broilers are produced under some type of contract. These range all the way from a simple arrangement to buy the feed on credit and pay for it when the chicks are sold, to deals with integrated operators where the grower supplies nothing but the house and his labor and receives a flat amount per head or per pound of broiler produced.

Certainly the feeling of security in having a guaranteed price or income is one of the really big appeals where production contracts are able to provide it. Many farmers remember the terrible depression of the thirties; younger operators look at the recent decline in farm prices and tend to feel that "a bird in the hand is worth two in the bush."

Last summer a big feed company got together with an egg processor and some building and equipment people to offer a contract to farmers which went further in setting a man up in a farming enterprise than anything to date. The man who signed it agreed to carry out specific management practices which would guarantee a quality product and a high rate of production.

The 3-year contract spelled out the kind of pullets to be used, the type of house to be erected, the make of cages and ventilators to be installed and, of course, the brand of feed to be fed.

For abiding by the terms of the contract, the egg producer was guaranteed a minimum of 37 cents per dozen for grade A large eggs, or 2 cents over the consumer grade A market of Kansas City. Prices for other grades were based on the Kansas City market.

The farmer was provided with a "turn key" laying flock operation of 1,680 birds, including the pullets themselves, with an estimated value of approximately $11,000. Financing was on the "time payment" plan, with pullets to be paid off in 9 months and the equipment and building somewhat later. Downpayment was $2,500.

Nothing is ever perfect. This is certainly true of the egg and broiler production contracts. In the case of the Kansas egg deals, it's reported that some farmers have not been satisfied with rate of lay obtained. Egg prices went so low that the companies involved undoubtedly lost money during the spring season of 1957.

Their more recent contracts do not provide a minimum price for eggs—payment is tied to quoted prices at Kansas City or Denver. Some houses that were built under an earlier package deal in Texas have been foreclosed. But then, success can only be built out of past failures.

Of course, giving up individual freedom of action is the thing that irritates lots of folks and would keep them from ever signing such a contract.

Ohio extension service publication puts it this way, "A producer raising broilers or producing eggs on a contract basis for an integrated organization loses some of his independent status.

"He is restricted in the decisions he can make concerning his operations. The producer accepts these restrictions in return for the assurance of a steadier income. This is not unlike the industrial or office worker of a manufacturing plant."

The publication also points out that, "A rapid increase in vertical integration in the production of market eggs would result in overexpansion which depresses price during certain periods."

Don't expect contracts to give you something for nothing. They are carefully written, and before you commit much time or money you should have your own lawyer read the agreement.

Hogs may well be the next important farm product to come under some type of contract production. Recent developments in housing, nutrition, and other management practices make it clear that swine growing can easily move into the hands of specialists.

One group can supply the meat-type breeding stock that is going to be in greater demand, another can produce the feeder pigs for sale at 35 to 50 pounds, and finally these can be fed out by men who specialize in feeding.

The whole industry is being affected by the broad promotion of a type of confinement rearing program by a national feed manufacturer. Starting in Texas and Tennessee, the plan has spread rapidly across the South and then into other parts of the country.

Contracts vary somewhat between feed dealers in different towns, but all of them provide financing of protein supplement for the pigs from 50 pounds until marketing and give the farmer the plan for a simple pig parlor, consisting of an open shed with sloping concrete floor.

Here again the deal brings good management practices to people who in many cases had no previous experience with hogs. Financing is often provided for pigs as well as protein and grain. With good feed and care, the results have been encouraging to many. The feed manufacturer expects 5,000 of these units to be in operation in the South by the end of the year. That's a quarter million hogs grown under contract.

Some of these feed dealers have gone so far as to provide everything except the building and the labor, paying the farmer so much per pound for gain put on the pigs from 50 pounds till marketing. Most broiler contracts, likewise, furnish everything but labor and buildings (note—most broiler contracts do not pay so much per pound of gain).

Naturally this program is not going to expand as fast in the established hog-producing States of the Corn Belt as it will in other areas. It's just like egg contracts in the Northeast.

Corn Belt farmers are likely to take the same attitude toward contract hog raising in the South as Northeast poultrymen have toward egg contracts in the western Corn Belt. They don't like 'em. Specialized production under contracts could very easily result in a number of smaller swine growers and egg producers being squeezed out. As in broiler growing, prices will be set by costs of the big efficient operators.

Cattle feeding on a contract basis has boomed in the Far West and is sure to in-

crease in the Southwest as more milo is produced there. In many instances, the rancher does not want to sacrifice his feeder cattle on the lowest market of the year and so he puts them in a commercial lot where he pays for feed and certain yardage charges. There are a lot of variations of these contracting agreements.

Quite a few processors, such as sugar companies, own feed lots and handle cattle on a custom feeding basis to provide a market for such byproducts as beet pulp, cottonseed meal, and hulls and malt barley products.

Feeding in these completely mechanized, highly efficient commercial lots is bound to increase substantially. The more efficient lots are set up to handle 1,000 head of steers per man each time the lots are filled. More are being established all the time, especially in newer feeder areas. However, it is doubtful that they will ever completely replace the farm feeder.

It's the opinion of our Market Research Department that United States agriculture will make much more use of the practice of contracting, especially in livestock and poultry production.

Capital needs in farming are going to continue to increase, making risks greater. This situation encourages contracting. Farmers today are willing to sacrifice part of their chance for maximum profit in order to have a degree of certainty in their income. The old idea of "going for broke" is not so popular as in the days when everyone was a rugged individualist.

Contracts will also be used for most new crops, such as castor beans, sesame, and special varieties of corn grown for industrial purposes.

All of these things lead us to believe that whether it is through the futures market, through agreements with private business concerns, through contracts with farmer cooperatives, or through some new type of operation, there will be more use of contracts to reduce the risks of farming.

Flood Meeting in Jonesville, La.

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. PASSMAN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Jonesville (La.) Booster of July 5, 1957:

FLOOD MEETING SET IN JONESVILLE, LA., FRIDAY

With Catahoula Parish facing one of the worst economic crises in its flood-ravaged history, the telephone and telegraph wires between Jonesville, Washington, and Baton Rouge were a-buzz with activity this week.

Fifth Congressional District Representative OTTO E. PASSMAN and United States Senators RUSSELL B. LONG and ALLEN J. ELLENDER have promised all out assistance.

Representative PASSMAN, along with other Government officials, is to be in Jonesville Friday for a meeting in the Block High School auditorium at 10 a. m.

The American Red Cross has returned a field representative to the parish. She is currently issuing food orders to those farmers who have been forced from their homes by floods and have no income or resources to provide food for themselves. Assistance has also been promised by the Red Cross to folks whose homes were damaged in hurricane Audrey who cannot repair the damage.

Two meetings of parish officials have been held. The first resulted in appeals for help to Washington and Baton Rouge. The second was held to formulate plans for specific requests for aid to the Government officials who attend the Friday meeting in Jonesville.

Telegrams and letters from elected Government officials are too numerous to quote here.

A press release from the Washington office of Representative PASSMAN said that:

Louisiana Fifth District Congressman OTTO E. PASSMAN has suspended hearings of the House Foreign Appropriations Subcommittee, which he heads as chairman, in order to hold an important meeting Friday at Jonesville. Flood-control protection and Federal assistance for farmers in Catahoula Parish and other flood-stricken areas of Louisiana will be discussed by Representative PASSMAN and several other outstanding authorities who deal directly with these problems.

Others on the program, Congressman PASSMAN reported today, will be Representative George S. Long, of Louisiana Eighth Congressional District; S. J. McCrory, Louisiana commissioner of agriculture; Gen. Norman R. Moore, acting president of the Mississippi River Commission, with headquarters at Vicksburg; Colonel Barschdorf, Vicksburg district engineer; Engineer Morris, of the Vicksburg district; Engineer Baehr, of the New Orleans district; as well as others.

Congressman PASSMAN said General Moore is serving temporarily as president of the Mississippi River Commission, pending the assumption of the post by Brig. Gen. William A. Carter, Jr., who is now assistant chief of staff, G–4, United States Army Far East Forces, and the Eighth Army. He will succeed Gen. John R. Hardin, who recently retired from active duty.

The program has been scheduled to begin at 10 a. m. in the auditorium of Jonesville's Block High School. A large attendance is anticipated.

The Fifth District Congressman is working in cooperation in the present situation with State Senator Ralph E. King, of Winnsboro; State Representative William Peck, of Sicily Island; Roy Snider, president of the Tensas Basin Levee Board of Delhi; Hon. G. D. Babin, mayor of Jonesville; Hon. L. W. Franks, mayor Sicily Island, and other area leaders.

The Jonesville meeting will culminate a series of Washington conferences with relation to the problems involved in which Representative PASSMAN has been active for the past several weeks. A survey of Louisiana's flooded areas, including Catahoula Parish, by a representative of the Department of Agriculture has already resulted from these efforts.

The Congressman reported today from Washington that Undersecretary of Agriculture True D. Morse indicated at a conference Monday the Agriculture Department will cooperate in moving promptly toward implementing livestock feed programs and emergency production loans in the flood-stricken areas.

In northeast Louisiana, Catahoula Parish has been declared a flood-disaster area.

Plus the flood-control-protection information to be presented at the meeting by the two Congressmen and Army engineers, Representative PASSMAN will report on the various Federal emergency-lending programs for farmers, as well as the emergency-feed program possibilities for the area. He will also assist directly in putting the plans for Catahoula Parish into effect.

"We are insisting on help, and in a hurry, for our stricken areas," Congressman PASSMAN has emphasized to Agriculture Department representatives. "As a result of the conferences we have had," he said today, "I believe we are going to get help promptly and effectively.

"Certainly," he added, "there must be no playing of politics with human misery."

Greatest hope of Catahoula officials and citizens is that more will be gained from the Friday meeting than has been gained from the promises of similar meetings of the past.

Education

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to include a significant statement on education written and presented by Geraldine Fisher, of Zion, Ill., upon her graduation this year from the eighth grade:

EDUCATION

"Next in importance to freedom and justice is popular education, without which neither freedom nor justice can be permanently maintained."

This is a quotation written by Charles Kingsley, an English clergyman and novelist. It shows that freedom and justice are most important, but you could not have either without education.

What does freedom mean? Freedom could mean personal liberty or the possession of the rights or privileges of a citizen.

Every person living in these United States, no matter what color or creed, has the following freedoms: Press, speech, assembly, and religion as provided in the Bill of Rights.

What does justice mean? Justice could mean the principle of just dealing or the administration of law.

What does education mean? Education is the manner of training youth for their station in life. We would not have highly trained attorneys, judges, or men who work and fight for freedom if they were not educated.

Our country was founded so that every person could have equal opportunities of freedom and justice. Our flag is also based on this idea. All of the men who wrote the great documents of freedom: The Magna Carta, the Declaration of Independence, and the Constitution of the United States, must have been educated as well as dedicated to the principle of freedom and justice, otherwise these documents would not have stood the test of time.

In John, chapter 8, verse 32, Jesus says: "Ye shall know the truth and the truth shall make you free." How else could you know the truth unless you were educated to know it?

The three qualities that young people need to face life's responsibilities are vision to see things as they really are, imagination to dream of things that may be, and courage to act boldly and make these dreams come true. To develop these qualities, children should start learning in the home followed up by elementary school, high school, and then college.

People, like the natives in Africa, who are not educated, could easily be taken over by other people and countries and completely lose their freedom. An example of this is the countries which have been taken over by communism. The countries in which the people have been educated and trained

have a better chance to defend themselves against oppression.

We have many wonderful opportunities in our educational system today. Therefore, to maintain our freedom and justice we must make use of the privilege given to us for getting our education.

Everybody Can Help Lick Inflation

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the remarks of Hon. CRAIG HOSMER, Everybody Can Help Lick Inflation. We are becoming more aware not only of the danger but the need for understanding inflation, what causes it, and how it can be corrected. In this the Government figures prominently and Congressmen should responsibly shoulder the job of studying and combatting this terrible menace to our form of society. In this spirit I commend this article to my colleagues:

[From National Republic of July 1957]

EVERYBODY CAN HELP LICK INFLATION

(By Hon. CRAIG HOSMER, United States Representative from California)

Perhaps the most important fact that Americans of our time have need to understand is that the causes of inflation must be removed or the burdens will become heavier and heavier until the breaking point is reached. To remove the present causes of inflation involves sacrifices which our people cannot be expected to make unless they realize fully the consequences of not making them.

Who is responsible for inflation? Who is hurt by it? Who must work to stop it? The answer to each of these questions is: Everybody.

We will get out of our inflation difficulty only as each of us comprehends the nature of the problem and the means of attacking it. We must get out of it if we are to avoid disaster.

The aged living in retirement, teachers, Government workers and others on relatively fixed incomes, have long felt the squeeze of prices spiralling beyond incomes. But that is only one of countless tragic burdens of inflation. Others are just now appearing to millions of Americans who formerly regarded "creeping inflation" as no more than an election year catch phrase, without real meaning in their own lives.

Let us start by tracing inflation developments from the years of World War II, when most of the Nation's productive capacity was devoted to making the weapons of victory. Civilian goods were scarce; rigid controls stopped people from bidding up prices. A high proportion of earnings went into savings simply because they had no place else to go.

Postwar removal of controls freed our economic system to return to its historic function of supplying civilian demands, and people began using their savings as well as current income to satisfy pent up desires for consumer goods.

New homes, new cars, new furniture became the rule rather in the American way of life. Power brakes, the second bathroom, hi-fi, and innumerable other refinements were added to old products. Television sets, television dinners, automatic dishwashers and a host of other completely new products were developed. For all these things the American people had a tremendous appetite. This vast new production has meant a constantly rising standard of living for the Nation.

At the same time the people's tastes became richer in the things they wanted from all levels of government. Welfare programs were expanded, thousands of miles of highways turned into freeways, and other new programs undertaken by the score because the people wanted them. Government expansion has been based on quantity as well as quality, for our rapidly growing population has multiplied the needs for schools, police protection, and all other services of government, old and new.

Taken all together, these evergrowing private and public demands for goods and services have aggravated more than could be produced. Since World War II the remarkable growth in our productive capacity each year, except for agriculture has been fairly consistently outpaced by an even more remarkable growth in demand.

With goods and services thus constantly in short supply, buyers and employers were willing to pay higher prices and wages until enough of each were priced out of the market to restore the balance between supply and demand. Had the process stopped there competition among purchasers, which drives prices up, would have shifted to competition among sellers which, if it does not drive prices down, at least keeps them stable. We would have had a little inflation, but not the tremendous amount we have experienced.

The price spiral did not stop because individuals and business alike used not only accumulated savings and current earnings to bid up prices, but another seemingly limitless resource—their future earnings, available by borrowing and repayable in easy installments. Governments vast powers to borrow against future revenues further swelled this inflationary force.

The result today is that not only has the bidding-up process operated to cheapen the value of money, but the very free availability of future dollars (credit) has had a further depressing effect on the value of current dollars.

Another complicating factor has been the steady pressure by workers and business to increase prices they receive as producers, to compensate for the steady increases they face as consumers. This is part of the endless circle known to economists as spiralling inflation.

Spiralling or not, that part of the increased money wages of a bricklayer, for example, resulting from this process and not from increased productivity is inflation. The same is true for that part of the increased price of the home he helped build which does not represent an actual increase in its intrinsic value. Dollars which buy less work or less goods are worth less.

It takes $4.65 today to buy what $4 did 10 years ago. During 1956 wages in California rose by an average of 6.7 percent; but two-thirds of the increase was canceled by rising prices. Only one-third went into increased purchasing power; two-thirds was "taxed away" by inflation. To the person whose wages did not rise, or who lives on a fixed income, the year meant a net loss in purchasing power.

For every family budget, an income of $116 a month is required for every $100 in the 1947 budget, to maintain the same living standard.

It is obvious that inflation will continue to impose this tremendous tax as long as our productive capacity for goods and services cannot fully meet our unrestricted demands. After all, 100 percent of supply is all there there is and when the grand total of all the demands add up to 110 percent, prices are bound to rise until supply and demand are brought into equilibrium. This balance must be brought about speedily before inflationary pressures wreck our economy and bring disaster to all. It means doing something to expand our productive capacity faster and also doing something to put the brakes on demand while accomplishing it.

That sounds simple, but doing it in our complex economy is not so simple.

Expanding productivity depends largely on new and improved plants, machinery, and other instruments of production. The price tag on these for corporations alone is estimated at $60 billion a year. Probably an almost equal amount is needed by unincorporated businesses. The money can come only from reinvested earnings and new investments by individuals of their savings. At the present time neither source is proving adequate to finance as rapid an expansion of productive capacity as needed to remove inflationary pressures. Business has attempted to meet the deficiency by overborrowing, but capacity in that regard is coming to an end. An unpleasant side effect of such borrowing has been to help to drive interest rates up because so many additional borrowers were in the market clamoring for money.

The basic reason our economy has not been getting the amount of investment money it needs for expansion is taxes. High corporate income taxes have siphoned away large amounts of earnings that otherwise would be reinvested. High individual income taxes, which have caused many a TV quiz contestant to stop short of the top prize, because the tax bite makes the risk foolish, also discourage investors from risking their money for a disproportionately small return after taxes.

Although circumstances vary from industry to industry, the overall result is that only about $3.5 billion annually is being invested in new corporate stock issues, whereas capital from this source totaling $6 billion a year is required to finance the necessary anti-inflationary expansion of corporate productive capacity. The investment picture for unincorporated businesses is no less gloomy.

A reshaping of our tax policies is needed to provide both the means and the incentives for an accelerated investment in building up the Nation's productive capacity. Only in this way can we boost supply up near the demands we make, and only in this way can we create the vast number of new jobs needed to employ our rapidly expanding population.

Such tax changes are not a matter of lowering taxes on "big business and the rich" while "the poor" get no relief. Saying so is good demagoguery, but poor economics. Tax revision is a commonsense matter of doing what is needed in a free enterprise economy to eliminate the burdens of inflation and the threat of unemployment, both of which are far more disastrous to "the poor" than to any other economic category.

On the side of putting brakes on demand while supply is catching up, there are also serious complications.

It is not enough to say that government should cut its spending. Government in American democracy is but an instrumentality by which the collective will of the people is expressed. Government can cut spending only in response to a common decision of the citizenry that its highest welfare lies in foregoing desirable but not essential expenses of government until the inflation problem is licked.

Present dim prospects for this Spartan decision exemplify the vital need for a more realistic public understanding of the consequences of not making it. A wholesale constriction of Government spending is involved and even the most ardent advocates of public economy usually want it accomplished by sacrificing somebody else's pet programs.

Probably little short of a reasoned fear of inflation—to almost a point of terror—can generate an effective public demand for even temporary Government frugality.

A similar public awareness of the economics of our situation is needed if Americans as individuals are voluntarily to forgo satisfaction of personal demands for desirable but not essential consumer items during the period needed for productive capacity to be brought up into balance. The prospects for developments in this regard before it is too late also are somewhat on the dim side.

For that reason other inducements to individuals to forgo some of their demands for a while have either been brought, or allowed to come, into play.

Recent increases in interest rates by savings banks is an example. By making savings more attractive, bankers induce more people to put their money in the bank instead of spending for current wants. In this way some existing wealth is being taken out of the market place. The pressure on prices is lessened.

The rise in interest rates to borrowers is having a similar effect by taking some future dollars out of today's market places. As money becomes more expensive, some potential borrowers are priced out and others decide to forego satisfaction of their wants until borrowing becomes less costly.

Unfortunately high interest rates are a shotgun approach to the problem of reducing demands on the economy. They often eliminate those for whom loans will accomplish the highest social purposes. The GI homeownership loan (a loan for an unquestionably desirable purpose) serves as an example.

The Government does not lend the money. It merely guarantees a private lender that his loan at not more than 4½ percent interest to a veteran home buyer will be repaid. In prior years that was about the going interest rate, so the guaranty feature made lending to home-buying veterans very attractive. As a result, nearly $40 billion of credit was channeled to GI housing.

However, today's going interest rates are up to at least 5½ percent. That rate is much more attractive than 4½ percent, even with a Government guaranty, so mortgage money for GI home loans has all but dried up. At the same time, others whose reason for borrowing is perhaps much less worthy get loans because they can afford to pay the added interest cost.

The result may help curb inflation, but it creates hardships by failing to direct the flow of available credit toward homeownership, financing schools, and attaining many other highly desirable objectives. Some say the answer lies in simply granting direct Government loans for socially desirable purposes. They ignore or fail to understand that creation of new and additional credit in this manner would seriously augment inflationary forces and soon drive prices of everything, including money, upward.

In any but the most extraordinary and limited cases Congress should forthwith reject proposals which involve pumping new sums of credit into the economy. If hardships are to be relieved and social objectives attained, the answer primarily lies in directing the flow of existing credit toward them, not in creating new amounts of credit to swell the inflationary stream.

But even this requires extreme caution. Legislation directing the interplay of economic forces toward accomplishment of social objectives, regardless of desirability, is always risky.

Our vital objective is permanently to remove inflationary forces from our economy. To do it we must increase productivity to the level of demand and, until that is done, artificially lower the level of demand. Any actions we take to alleviate hardship occasioned during the process must neither feed inflationary forces, impede rapid expansion of productive capacity, nor interfere excessively with the workings of our capitalistic, free-enterprise economic system.

The end product of that system is enjoyment by today's Americans of the highest standard of living, the most abundant general welfare, the most jobs and the highest wages of any people of any nation in any period of history. Our experience has shown that a certain amount of governmental regulation of the system—antitrust laws, minimum wages and the like—is needed to prevent abuses of the freedom inherent in it.

The experience of other countries, notably France and Great Britain, has shown that excessive governmental interference aimed at social objectives ends in economic chaos. These countries even experience difficulty in agreeing on the social objectives toward which to direct their impaired economies.

Victory in the battle against inflation, just as in battles against hostile nations, requires a willingness to sacrifice.

The people's understanding of these things is needed to guide their own individual courses. And, since political courage is sometimes as much a matter of public understanding as it is strength of personal character, the people's understanding is also needed to spur their public officials to take politically unpopular actions prerequisite to defeating inflationary forces and to resist alluring ones with an opposite effect.

An Open Letter to the Editors of Life Re the Galindez-Murphy Case

---

EXTENSION OF REMARKS
OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. LONG. Mr. Speaker, under leave to extend my remarks, I would like to insert an article by Mr. Juan Arce Medina, attorney at law, Ciudad Trujillo, Dominican Republic.

What makes this article of vital importance is that its author, Mr. Juan Arce Medina, a gentleman whose integrity is beyond question, is the Dominican Republic lawyer who represented the De la Maza family in paying the sum of $50,000 to the family of Gerald Lester Murphy, who met his death in the Dominican Republic at the hands of Octavio de la Maza. De la Maza was promptly apprehended by the Dominican police and then ended his own life by committing suicide while awaiting trial in a Ciudad Trujillo jail.

Mr. Speaker, I hasten to add that the insertion of this document in the RECORD is not to be construed in any way as an attack upon Life magazine or any person connected with Life magaine. Life magazine, in both of its diametrically opposed stories about the affair Galindez-Murphy has been very careful to present them only as theories. The article follows:

AN OPEN LETTER TO THE EDITORS OF LIFE RE THE GALINDEZ-MURPHY CASE

(By Juan Arce Medina, attorney at law, Ciudad Trujillo, Dominican Republic)

LIFE,

New York, N. Y.

SIRS: Last February 25 Life magazine published an article concerning the Dominican Republic, presenting a theory which was pieced together linking the government of this country, and missing Basque exile Jesus Galindez and the American copilot Gerald Lester Murphy in a dark and deadly conspiracy.

The selling of this theory to the American people seems to be the joint project of the small but vociferous Caribbean revolutionary group in New York, their allies—the North American leftist intellectuals J. Edgar Hoover labels pseudoliberal—and Life.

As a Dominican citizen and the lawyer who represented the De la Maza family in the civil suit filed against them by the parents of Gerald Lester Murphy, I strongly feel that the allegations should be objectively examined 1 by 1. I am quite aware that I will not be able to match the voice of the Luce empire in volume; I believe, however, that truth and justice will eventually prove more effective than mass circulation.

The theory is an interesting one. It is regrettable, however, that a clear distinction is not made between what is established fact and what is not. It is possible that the average Life reader was not aware that he was reading mere speculation and unsupported assertions interwoven with conjecture, presented as a theory.

Life says, "it adds up to an amazing tale." But I feel that Life readers would be even more interested in all the facts—facts not twisted out of proportion to support a preconceived conclusion. I, therefore, submit questions which might be of value in preparing future articles on this and related subjects.

First, let's examine congressional reaction to your theory.

1. Representative EDWARD A. GARMATZ, of Maryland, made this comment: "This intriguing article was evidently not based on fact. It was apparently an excursion into the fictional, if not melodramatic field."

Quite a charge, isn't it, to be made against a magazine that purportedly deals mainly with facts, not fiction? I am also curious why such an excursion was made, so obviously in glaring contrast to your usual high standards.

MURPHY IN THE UNITED STATES

2. This reaction is typical of many Congressmen and other observers who have troubled to study your "theory" in depth. The reason is simple: the "theory," as presented in Life and read into the CONGRESSIONAL RECORD by Representative CHARLES O. PORTER, of Oregon, falls apart under close scrutiny. It is a physical impossibility that events took place in the manner alleged.

There is, for instance, Life's caption:

"Based on a description by Gerald Lester Murphy, drawing shows how Galindez was hustled out of subway to go into an ambulance to airport."

Very impressive—until the real basis of that "description" is made known. It was told to Congress by Mr. PORTER, it was not told to your readers: "Gerry, learning from newspaper reports about the missing Galindez, began to add 2 and 2."

I suppose it is possible "to add 2 and 2" "from newspaper reports" and come up with just about any "description" desired. But to solemnly report that "addition" as truth is something less than honest reporting. Wouldn't you agree if another publication did so?

3. Then there are various other events serenely ignored in the "piecing together" of your "amazing tale." Let's take geography.

While the "kidnaping" took place—which Murphy is supposed to have described for the edification of 6 million readers—you have him a good many miles away. He is back at Amityville Airport, "hired by Dominicans * * * waiting with a plane * * * for a drugged and bandaged man believed to be

Galindez * * * ready for a long flight to the Dominican Republic."

But not only is that description—the crux of your theory—allegedly based on the stories of a man who didn't see the kidnaping, but also on that same "witness" who is supposed to have had no idea he was taking part in a "kidnaping" nor even knew the identity of his alleged passenger.

The theory as told to Congress, is that Murphy at first merely "presumed" he flew "a wealthy invalid" on a charter flight from New York to Tampa, Fla.—not a sinister "drugged and bandaged man" hustled out of a subway.

By choice of words and phrases the "wealthy invalid" is later transformed into a "mysterious 'invalid' who was hustled into the plane." Then into a "drugged and bandaged man believed to be Galindez;" finally, now full-blown, it's "Galindez hustled out of subway to go into an ambulance to airport."

All this, according to that very same theory, and as read into the CONGRESSIONAL RECORD, allegedly is based on a description by Gerald Lester Murphy, who his own fiance has said, had merely speculated, months later, on the possibility that his charter passenger had been Galindez.

You say you had "to build a picture * * * from chance remarks." While everybody gets their wires crossed once in a while, the entire presentation shows a progressive fictional development more in the style of a cloak-and-dagger comic strip than Life.

I cannot believe your article was written entirely by regular Life staff writers. Was it?

4. But let's clarify exactly what you mean regarding this crucial part of your theory. That is, the drugging of Galindez on a crowded subway and his kidnaping in the midst of thousands—and its relationship to Murphy who is allegedly on Long Island with a plane, unaware that he is a pawn in your dark and deadly conspiracy.

PORTER was asked in Congress about this. His answer:

"As I understand there were no witnesses to the actual abduction."

Can you explain that statement, please? Who was where and saw what and did what? Please—no possibilities, no adding 2 and 2 from newspaper reports. Can you give a simple precise statement of facts in this regard—and in accord with what is already on record?

5. But in going over your theory point by point, I find a great deal that is not merely the result of sloppy sensationalism. You state, for example, that: "Government investigators identified the ambulance that had been used in the job." The "job" was the kidnaping of Galindez from the subway and his transportation to Murphy's plane at Amityville Airport.

That is a very specific statement. I hope you can give an equally specific answer to the following question:

Can you have the statement verified by the New York police, the New York district attorney, the Federal Bureau of Investigation, or any other qualified United States Government, State, or city investigation agency?

Or do you, like Congressman PORTER, suspect an element of collusion between those agencies and the kidnapers because they do not back your theory?

6. And why don't they back it? Congressman BERNARD W. KEARNEY, of New York, aptly sums up one major reason: "To me it seems strange, because, knowing New York as I do, I know that this entrance to the subway is in a very, very busy section of the city, and the minute an ambulance comes to that particular area there are certainly not only police officers but prowl cars and also plenty of curious spectators."

Police officers have informed me such is the case—that reliable witnesses, policemen, subway attendants, and others, would certainly be available if such an event had really taken place. Yet we are told, "There were no witnesses to the actual abduction."

For my own information, what happened to those police officers, prowl cars, and spectators who were at that subway station when Galindez was being kidnaped? They are not in your "drawing of Galindez being bustled out of a subway to go in an ambulance to airport." The streets, as shown in the drawing, are empty—as they would have to be to make your theory possible. Or do you claim that your cartoonist isn't familiar with midtown Manhattan in the evening?

Isn't it true that neither the drawing nor the description is an accurate, unbiased presentation of known facts? Isn't it true that by your method of piecing together you could just as easily have had Galindez abducted by small green men in a flying saucer as by Murphy in a Beechcraft? I am serious. Could you or couldn't you?

7. You make this statement about Murphy's entries in the Amityville Airport records: "Other entries proved false." You can prove, then, that Murphy did not leave the airport and remained on that airfield, unquestioned by authorities, for some 9 hours waiting for Galindez to arrive in his ambulance? According to the same record book, same page, Murphy had left New York long before the alleged kidnaping. Do you believe Amityville Airport authorities collaborated with Murphy to produce those allegedly false records?

8. Congressman JAMES G. FULTON, of Pennsylvania, asked the following questions about Murphy's allegedly amazing ability to ignore civil air regulations and authorities:

"If it [Murphy's plane] went from the New York airport, how was the plane cleared there?"

Porter's answer: "I suggest that to the gentleman we have a prima facie case."

What does this mean in plain English? And to repeat the question, how was it cleared?

9. Life attempts to substantiate that Murphy and his "invalid" flew the length of the eastern seaboard? In so doing he crossed the entire east coast radar screen of the United States Army; it will not be difficult to establish the exact date and time, if such a flight took place as you allege.

However, apparently you did not check or, if so, ignored the findings. Isn't it possible that by so ignoring you overlooked a story of even greater national import than Murphy's kidnaping of Galindez?

Representative KEARNEY makes this comment:

"I am especially interested [in this point] remembering that we are voting millions and billions of dollars for the defense of our shorelines and our country. It would seem very peculiar and strange indeed for an individual to fly the length of the eastern shoreline to the Dominican Republic without being spotted and checked on."

Do you also find it very peculiar and strange or do you believe that United States' security measures are ineffective? Do you suspect an element of collusion between Murphy and the United States Army? Do you think that a good many other readers, like Congressman KEARNEY, might be especially interested in reading all the facts on this point?

Don't you believe that if Murphy made his alleged flight unnoticed and unhampered by any security service or agency, as you theory indicates, then isn't an exposé in order, a Life article detailing exactly how it was done—without prima facie evasions, just facts—which might well result in a sweeping reexamination of the entire United States system of internal and external security?

10. You state that early on the morning of March 13, N68100 landed at Miami's Tamiami Airport, looking for gas. Do you have airport records to verify that statement? Have you given very careful attention to the exact hour, date, and other facts since Murphy was a Miami-based pilot and apparently had made a number of flights in the south Florida area?

However, there should be little confusion in determining the specific flight you refer to. You may or may not be aware that smuggling of aliens into south Florida long ago resulted in the enforcement of the tightest security control by Immigration and Customs Services, airport management, and local police. Those officers can tell you that illegal or unrecorded landings can no longer be made in swampland or cow pasture, let alone a major airport. You can prove that Murphy and Galindez illegally landed as so stated?

11. Then, you say, Murphy took off for Lantana Airport near West Palm Beach because he was unable to buy gas at Tamiami. The foregoing is even more true concerning Lantana. It is near a large Air Force base and military planes also operate from that field. No flight—in or out of Lantana—is unrecorded.

Can you back that statement with official Lantana records?

I am curious on one point: You have Murphy pay cash for gas here "to avoid signing a gas slip." Why? If you will remember, as Porter has said, at that time what Murphy only presumed to be an invalid was his charter passenger? Wasn't it only much later that Murphy's "wealthy invalid" became the "drugged and bandaged Galindez" by the process of "adding 2 and 2" * * * from newspaper reports?

12. Next, "Murphy flew him to Montecristi in the Dominican Republic." Lantana will have a flight plan of that departure—if it took place. If there is no such record, do you believe that the management of Lantana Airport is also in cahoots with the kidnapers?

But, most important, Murphy's alleged flight from Palm Beach to Montecristi, Dominican Republic, would bring him directly into the Air Force guided missile range extending from Cape Canaveral to Puerto Rico. The Air Force has been operating that range since 1950. It is probably the site of the world's most elaborate system of electronic warning and detection devices.

If Murphy made that flight he was spotted by the United States Air Force and there is a record of that flight.

Have you checked?

13. Mr. Porter indicates no such check was made before the theory was presented to the American public. But you flatly claim that you undertook extensive investigations.

Either you must assume, if belated investigation shows no such flight was made, that the United States Air Force, like all the other responsible authorities concerned in the theory of aerial kidnaping, is derelict in its duties, or in collusion with the kidnapers. Which is your conclusion?

14. Then Murphy returned to Miami. And again Murphy could not have landed a plane in south Florida—that could have carried aliens, Communist spies, narcotics and atomic bombs, as well as Basque exiles—without some official recognition. Again can you substantiate the exact details of that flight with records of the Customs, Immigration, aeronautic and military authorities? If so, please produce them—and all the other necessary flight plans, clearances and records that Murphy would have needed for his alleged flight.

I think you will agree it is presumptuous to accuse responsible authorities of dereliction of duty or collaboration with kidnapers. When you produce specific, documentary evidence from official agencies concerning Murphy's flights—and particularly of that specific flight—only then can this case

be studied to determine what is relative to the sensational charge you have brought against the Government of my country. Can you produce? If so, please do and turn it over to the properly constituted United States authorities. Fair enough?

MURPHY AND THE DOMINICAN REPUBLIC

15. "About that time (November 1955)" you say, "Gerry said he had made a new friend, Arturo Espaillat, New York Consul General for the Dominican Republic." This is interesting because Espaillat was a well-known general in the Dominican army at that time and was not made consul general until April 23, 1956. He did not arrive at his post until May 1.

Also about that time, according to American witnesses, Murphy claimed to have made another new friend at an island hideout. Said alleged friend was Arthur Vining Davis.

Arthur Vining Davis denies having known Murphy. Aturo Espaillat does likewise. Are they both lying? Is Davis also implicated in the kidnaping? Or might it be that both friendships existed only in Murphy's imagination?

16. When Murphy was hired by the Compañia Dominicana de Aviacion in April 1956, you say that the general manager refused him a captaincy because he was short on experience. True enough.

But is this inexperienced young man with defective vision who was not qualified for a Dominican pilot license and never authorized to be anything but a copilot on even the most routine flights also Life's daring aerial kidnapper?

Is this the sinister figure "hired by Dominicans" who—knowingly or unknowingly—hopped invisibly from airport to airport committing offenses ranging from civil air violations to kidnapping?

Is he the master criminal who foiled the United States Air Force, New York police force, aviation authorities, army radar, customs, immigration, and other security services; who flew great distances at night after Galindez was dragged from a crowded subway; flying him alone, unguarded, unattended—and unseen; the man, in short, whom you allege committed the most sensational crime of the century?

There is a modern phenomenon with which police officers—professional investigators—are only too familiar. It is called confabulation. Ever hear of it?

17. One of your photo captions reads: "Living it up in the most expensive hotel in Ciudad Trujillo." Apart from the fact that the hotel in reference is not, now nor then, "the most expensive hotel in Ciudad Trujillo" (as you well know since pictures of the most expensive hotel in Ciudad Trujillo had appeared in Life only a few weeks previously)—don't you think you were straining a bit in your eagerness to represent Murphy as "living it up" from the proceeds of Galindez' kidnapping?

18. Equally unsubtle is the pointed statement that Murphy "said he was making $800 a month plus overtime." That is not quite true; as a matter of fact, you will be happy to hear, he told associates he was making $1,000 a month. As you so correctly state, Murphy "had done a lot of talking." He made the following public statements concerning his wealth and financial history:

"I made a fortune in the lumber business back in Oregon but lost everything because of the manipulations by others."

"I promoted stock in nonexistent corporations and made a lot of money. But I had to get the hell out of the United States when the buyers found out how I'd taken them."

"Arthur Vining Davis told me that he might back my new business."

"I have big investments abroad."

"I have thousands tucked away in the bank."

"I have a lot of women after me but I'm not going to get married unless it can do me some good financially. I expect to be a millionaire and retire before I'm 30."

"I have a lot of big connections—millionaires, politicians, etc. All I have to do is call on them."

"I'm getting a lot of big-money offers from the major airlines. They want me to fly for them and are willing to pay plenty."

It is unfortunate that the above—all pure make-believe, of course, but said before witnesses both American and Dominican—has been completely ignored in the presentation of your theory. Nor did you bother to check Murphy's finances to shed light on his hinted-at reward.

Investigation at his Miami bank failed to show that he had "thousands tucked away;" he did have a $3 deficit. Another check for $20.25 bounced.

Might not that omission be considered slanted reporting in unbiased newspaper circles? Or just how extensive was your investigation?

19. "He showed friends papers from Trujillo which he said would let him get away with anything," is the way Life describes it. He may have said that, all right. But you might have pointed out that those papers were exactly the same as those required of every other American working in the Dominican Republic. Nor were they from Trujillo but from ordinary government offices performing much the same duties as their counterparts in the United States Government concerned with such matters. You accepted idle, harmless boasting as fact. Can you support your claim with exact information about those papers which would let Murphy "get away with anything?"

20. You state that "He (Murphy) flew often with a Dominican pilot Octavio de la Maza." If you had troubled to send a single investigator to check flight records, if you had not confined your investigation in that direction to posing Mr. Porter in the Dominican Embassy in Washington and snapping his picture, you could have had ample opportunity to establish the truth. The fact is, only when absolutely necessary were Murphy and de la Maza scheduled to fly together. Their bitter enmity was known to CDA officials, Murphy's associates, and the United States Embassy alike.

That feud began almost immediately after Murphy came to the Dominican Republic. The mutual antagonism was probably inevitable. One of Murphy's roommates, after listening to his endless adventures and exploits, dismissed them with a shrug. "Little boy talk," he said. Unfortunately, it was not "little boy talk" to de la Maza.

A person such as Murphy, living his own world of idle talk, revery, and adventure magazines, seldom gets into trouble with anyone else. Murphy was just not taken seriously by those who knew him. But with de la Maza he clashed head-on with hard, unpleasant reality. Vain and completely humorless, de la Maza took an intense dislike to the younger man. He sought to deflate him at every opportunity.

Naturally, Murphy resented de la Maza's taunts. Moreover, Murphy—who sometimes claimed to have been a "jet pilot with the United States Army"—was never permitted on a flight without a qualified pilot at the controls and was generally treated casually. His salary remained at $350 a month. But de la Maza was promoted to captain and given a raise. It was too much for Murphy.

These facts were not brought out in the article. They were—and are—easily checked. Do you think their disclosure might have taken some of the punch out of your theory?

21. You state: "they (Dominicans) sought out the pilot de la Maza, who must have felt their hot breath." You indicate that this was about December 10. You ignore an interesting fact in that regard: that "hot breath" was initiated by the American Embassy, not Dominican authorities.

On the afternoon of December 17, United States Consul Harry Lefton notified Attorney General Francisco Elpidio Berras that, acting under instructions from Ambassador William T. Pheiffer, he was passing on "the information that bad blood existed between Murphy and Octavio de la Maza of CDA, and de la Maza should be investigated."

This was done. De la Maza was arrested, interrogated, and detained when he was totally unable to account for his movements during the evening of Murphy's disappearance.

You say you have "pieced together a theory." Don't you think it fair to your readers to also admit that you have discarded facts when they did not quite fit that theory?

22. You speak of "* * * his (Murphy's) Spanish friend (De la Maza)." Apart from the obvious facts that De la Maza was neither Spanish nor Murphy's friend, you ignored an incident regarded by more objective investigators as being of the utmost importance in their relationship.

As indicated previously, CDA executives tried to keep them apart. But on one of their few trips together, Murphy photographed nearby mountain peaks and trees to show the low altitude of the aircraft over dangerous terrain. He then turned the pictures over to the operations manager as proof that De la Maza was a reckless, irresponsible pilot. This episode, which speaks for itself, was completely passed over. Why?

23. You write that "De la Maza and Bernardino has a gun battle in which the latter was killed." Is that the clearest way you can say De la Maza shot to death a fellow Dominican for the very same type of provocation that Murphy gave him?

De la Maza believed that the victim, Bernardino, had informed their superiors of a drunken brawl de la Maza had with the London police.

His reaction to Murphy's photosnapping can be imagined. Unfortunately, Murphy did not stay away from him.

Again, a few words are used to obscure important facts. Why?

24. De la Maza later committed suicide in his cell by hanging himself with a rope made from a mosquito netting which he suspended from a shower fixture. You call it a strange suicide; you have United States officials insinuate that he could not have hanged himself.

That's a trifle presumptive, don't you think, making an extremely serious accusation, considering that even your lofty Olympus in Rockefeller Center is almost 2,000 miles from the scene and you never got much closer?

However, unlike Mr. Porter, I do not suggest that we have a prima facie case. The suicide was carefully investigated and the results turned over to the American Government. And investigation is continuing.

Since you are quick to make conclusions about suicides in other countries, I suggest you first get in practice by studying those at home. I suggest you start with a strange suicide that took place in your country a few weeks ago. A United Press dispatch from Chicago, dated March 31, 1957, reported that a convicted murderer "was found hanged in the maximum security section of the Cook County jail * * * A guard found the body * * * suspended from a bar in the shower stall by a rope made from a bedsheet."

You may want to prove that one can hang oneself in a shower with a bedsheet but not a mosquito net. Or perhaps you can write an article (being careful not to check with authorities or do any on-the-spot investigating) insinuating that Chicago authorities are responsible. Apparently a prisoner could not have hanged himself in that manner in neither Ciudad Trujillo—nor Chicago.

25. "The Dominican officials—as if to justify themselves—released the text of what they said was De la Maza's suicide note." Apparently you would be happier if the Dominican officials had concealed evidence.

Then, no doubt, you could accuse those officials, as you do elsewhere, of a runaround. We just can't win with you people, can we?

26. "It (the note) was full of stark contradictions." Permit me the luxury of a snide comment: If so, it is not the only thing full of stark contradictions. However, it was a letter from a husband to his wife, a letter seeking to excuse murder.

You mention as a major contradiction the fact that De la Maza confessed his crime to his wife, not to the police. Was that really so absurd as you claim? You have, then, infinite insight into the workings of the human mind.

In any case, De la Maza was confronted with insurmountable evidence against him when he wrote that letter and took his life. He knew it; he knew the police knew. It is unfortunate that De la Maza's letter does not conform to your standards. How do suicides write farewell letters in the United States?

27. Don't you think that your general handling of the story was something less than objective? Do you honestly think it was unbiased reporting? Such statements as, "But he did not get away that easily," referring to Murphy, is typical of the stock prose you use to arrive at an already cut-and-dried conclusion.

And Galindez, "Fearing Dominican agents * * * had doorman carefully announce visitors," when that doorman, the New York police and other unbiased observers can tell you Galindez had a great deal more to fear than Dominican agents.

Or, "After 4 harried and futile days the United States authorities hustled them (Murphy's father and fiance) out of the country for their safety's sake." Which apart from the fact that no United States official ever said they were in the slightest danger nor hustled anywhere (Mr. Murphy left because he was short of funds; he had to sell Gerry's car for expenses), your writing has a pulp fiction ring to it oddly out of place in a magazine like Life.

You use loaded verbs and adjectives to substitute for more prosaic fact. I admit, your choice of words and phrases makes exciting reading—but is it journalism?

THE THEORY—FRIENDS AND CRITICS

28. Another intriguing aspect of your dark and deadly conspiracy is the manner in which other enthusiastic proponents of your theory outdo even Life in squeezing the story for melodrama.

There is, for instance, your statement that "When she learned of his disappearance, Sally (Claire) quit (her job as stewardess for Pan American), joined Gerry's father and went down to the Dominican Republic to look for him."

Mr. Porter gets more mileage from that one: "She (Sally) said she had been forced to quit her stewardess job because Pan American officials said it would be too dangerous for her."

Come on, fellows, let's get our stories straight. However, wasn't it your sister publication, Time, that had Mr. Galindez in a ship's boiler, not an airplane?

29. Mr. Porter's uninhibited enthusiasm ("There are any number of conspiracies. I have a tremendous file on them.") makes his telling of your theory the more fascinating.

He told the House of Representatives that De la Maza's father-in-law, "Mr. Rua * * * desperately sought refuge in various embassies and now has been given asylum in the Spanish Embassy."

Mr. Porter's zeal—for investigations of any number of conspiracies as far as possible removed from those in Oregon—is matched only by the imagination of the group pipelining both of you such material.

In any case, Rua and the Spanish Embassy staff were a bit surprised by that revelation: De la Maza's father-in-law is not in asylum in the Spanish Embassy nor any other, nor has he sought such asylum, desperately or otherwise.

But it's a good story—on a par with the rest of the theory. Why didn't you use it?

30. But mere fictioneering is not enough, of course, to dampen the enthusiasm of a few newspapers ever alert to the opportunity to have a go at the Dominican Republic. The Washington Post and Times Herald was quite impressed by your effort. It commented: "It is an unhappy commentary on the efforts of the New York Police and the Federal Bureau of Investigation that a picture magazine has taken the biggest step toward explaining the mysterious disappearances of Dr. Jesus de Galindez. [It] should stir police officials out of the torpor they have previously shown."

Well, I guess you can say you really showed up J. Edgar Hoover, New York Police Commissioner Kennedy, and all the rest. Has it aroused them from their torpor, galvanized them into action following the trail you have pointed out? Have they been duly grateful for your assistance?

But why do those same police officials ignore your theory publicly and ridicule it privately? Could it be that you and those police and FBI officials are not in the same business: that is, you publishing; they trying—quietly and objectively—to solve the Galindez mystery and hoping for a minimum of sensational false leads?

Another admirer is the New York Post. It editorializes: "In a documented and detailed inquiry, Life magazine has produced evidence strongly suggesting that Galindez was kidnaped by Trujillo agents." The Post editor is apparently blessed with better reading ability than am I. Stripping away the prose and getting down to the facts, I don't find that documented and detailed evidence in the article that the Post so gleefully salutes. Where is it?

31. Unfortunately, not all your readers are so ready to embrace your "theory." One such is Representative FLOOD, of Pennsylvania.

He told the House: "I have been around here long enough to know that there are 2 sides to every question and sometimes 3 or 4 sides." Do you agree that there are two sides in this case? Do you think that you have fairly covered the other side or sides?

Representative ANFUSO, of New York, has labeled your theory mere suspicion or innuendo. Can you disprove that charge with documented and detailed evidence?

Congressman FULTON makes this comment: "I wonder whether we should not have some basic facts rather than a lot of this magazine story-business." If you did not provide those basic facts to support your theory, is that not, as the Washington Post and Times Herald would say, "an unhappy commentary" on a news magazine?

Mr. FULTON goes on to say: "I am a member of the Committee on Foreign Affairs. We get a lot of these lurid stories about foreign intrigue and so forth but I would like to see the bases of them before I jump to conclusions." Question repeated.

Do you consider, as does Representative MULTER, of New York, that the theory as told to Congress consists of "very startling charges"?

Do you think that, as Representative MULTER says, it has implicated Members of Congress, the FBI, the New York police, the New York district attorney, the State Department, and so forth? Again, "collusion?"

Do you disagree with Representative ROBSION of Kentucky that the "State Department and the Justice Department have been working with the Dominican Republic (and) I do not believe that there can be any question but that these departments are pursuing the matter diligently." Can you instruct them in how "to piece together a theory" without awaiting the results of investigation?

Would you comment on this statement by a former friend of Galindez: "We have not met anybody with an objective mind, ready to examine all the data and analyze it without any political bias." And, "We must not be blind and deaf to any evidence tending to lead investigation away from the Dominican path.

Do you agree or disagree with Congressman FULTON's statement: "I certainly think that the Customs Service should be asked and the officials at the Miami airport, if that is where he [Murphy] cleared, what kind of an inspection was made." Mr. PORTER says he heartily agrees. However, isn't that one of those "details" the New York Post cited—a detail which might have changed your theory and which should have been checked long before the article appeared?

32. Congressman KEARNEY, attempting to determine if your theory had any basis in fact at all and if even the most routine checks had been made, asked—among other questions—if "the Strategic Air Command had any information concerning the flight of that plane to the Dominican Republic?" Mr. PORTER answered:

"I think that is a very good question. I do not know the answer."

We agree; it is a good question. Do you think it's a good question? Do you have a good answer?

JESUS GALINDEZ ND HIS FRIENDS

33. Do you disagree with this statement published recently by a New York newspaper: "There are certain people in influential positions who want only certain truths to be known or who prefer the truth to be twisted." And that those people are working intently with others who spend night and day in an effort to convince the public that their friend Galindez was killed by orders of Generalissimo Trujillo?

Do you reject the validity of this statement by the newspaper El Diario de Nueva York: "In their [enemies of Trujillo] desire not so much to determine what has happened to Galindez, but rather to prove—whether true or not—that a foreign dictator killed him, they have even withheld information that does not contribute to this theory"? Do you claim that no information was "withheld" in your "theory"?

34. Another of Galindez' postdisappearance "friends" is Gen José Asensio, a leader of the exiled Spanish Left. Asensio seldom misses an opportunity to attend the various political wakes ostensibly held in Galindez' honor. Like his associates, Asensio uses these affairs as a springboard for his own purposes: principally an ambitious program to take over the powerful political position in New York's Latin American colony that Galindez so suddenly vacated. These meetings are also useful as occasions to launch the usual diatribes against Trujillo, Franco, United States Government policy, and so forth.

The Spanish-language newspaper with with which Galindez was closely associated, El Diario de Nueva York, has noted that phenomenon: "Some of those who today call themselves 'friends' of Galindez openly showed hatred against him while he was alive. The campaign against [Trujillo] using Galindez as a cause celebre has thus united people who, up to his disappearance, would not have wanted anything to do with one another. Some pro-Galindez meetings are only manifestations against Trujillo."

What is your personal opinion? Can you honestly say that the people supporting your theory are motivated only by a sincere love of the truth, Galindez and Gerald Lester Murphy?

BEHIND THE GALINDEZ CASE

35. Most of these pro-Galindez meetings are sponsored by a group calling itself the Inter-American Association for Democracy and Freedom. It might even be said that

every propaganda barrage against the Dominican Republic—including your theory—can eventually be traced to 67 West 44th Street, the association's headquarters.

The Inter-American part of the association's name is at least accurate. The leaders are also active in many other organizations supporting ultraliberal causes but when they don the hat of this group they are on the receiving end of a direct pipeline from the Caribbean.

That pipeline runs from Mexico City to San José, Costa Rica to San Juan, P. R., to 67 West 44th Street, and other addresses, in New York City.

The political spectrum undergoes a progressive change in each stage of that network. If you had checked, really done your extensive investigation, you would inevitably have come across that pipeline. Or maybe you did but did not recognize it for what it is.

Just for the record: Do you believe such clamor as you helped unleash against the Dominican Republic just happens? Do you think someone isn't trying awfully hard to create a stereotype in the American mind that Generalissimo Trujillo and the Dominican Republic should somehow be beyond the pale of concern as friend, neighbor, and ally? Do you have any idea for what purpose?

Why don't you trace that pipeline back and find out the facts—for yourselves?

36. Representative FLOOD has made this comment regarding those previously mentioned professional exiles who use the United States as a base to launch attacks against that country's neighbors:

"I believe that my country should be a haven, refuge, and political asylum for people from all over the world, but by the same token, that sanctuary must not be abused by those receiving such asylum, and enthusiasm for their cause must not be permitted to transgress upon the integrity of the sovereignty of this Nation."

Have you considered the possibility that such asylum is being abused? If the charges formulated by the international revolutionary movement are not true but have been wholeheartedly accepted by you would that not be an abuse of your confidence as well as a transgression against both our countries?

Without polemics, just consider the question academically. Would it or wouldn't it?

37. Do you reject the validity of Representative FLOOD's statement: "I am concerned with its (communism's) skillful process of infiltration in this country and in the Central and South American areas."

Do you believe prima facie and without extensive investigation that I am crying red herring? Or do you think Representative MULTER might be right in saying "we ought to have more information" on the ramification of the whole affair?

Finally, don't you think that an unshakable confidence in one's own knowledge and omniscience is an expensive luxury to indulge at this period of the world's history?

38. Herbert Philbrick, nationally famous expert on Communist subversion, has noted the increasing tendency of Communists to form united fronts with non-Communist elements. Orders have been issued, he says, to "Intensify the campaign to establish united fronts and alliances with the left wing forces in America toward a 'united party of socialism.'"

He quotes the party line as laid down by top United States Red Eugene Dennis: "We can have only the most positive approach to all honest socialist and Marxist-oriented groupings and individuals; whatever our differences may be on certain tactical and programmatic questions."

"Toward the accomplishment of these ends," the ex-FBI agent continues, "anti-anti-Communists, 'one-worlders,' 'neutrals,' and leftists of all stripes including multitudes whom the Communists themselves have succeeded in confusing, are being wooed as never before on all fronts and in every sphere of human activity and endeavor."

Mr. Philbrick points out that the Communists are making every effort to have their causes backed by "sponsors who are demonstrably non-Communist * * *"

I'm not saying you're Red, or even pink. I do say that the "groupings and individuals" who have cooperated with you in hurling your theory of Galindez' disappearance at my country do not hesitate to use international communism—or any other force—in their drive for power. I think you were deceived, that what you thought was a journalistic coup was no more than what Representative KEARNEY has labeled a "gross fabrication."

Are you going to reject the above statement "prima facie"?

39. Representative ANFUSO has warned: "In these critical times when the United States is engaged in a death struggle against a common enemy which threatens our very existence, we cannot discard or insult an ally without positive and justifiable cause."

You are sure, then, that you have—really have—a "positive and justifiable cause" to present the "theory" that you did, and in the way that you did?

40. Is it not true that this present assault by slander against the Dominican Republic has been successfully implemented as a bandwagon operation?

That is, for a variety of reasons many oddly motivated elements have joined in these denunciations? Do you disagree with this statement by the Senate Internal Security Committee: "Front organizations enable the Communist Party to mobilize what appears to be a body of public opinion outside the party in support of their campaigns, projects, legislation, or demands. In many cases the statement of such an organization is printed by the press without investigation."

When you initiated what has become a program of campaigns, projects, legislation, or demands aimed at the Dominican Republic did you consider that bandwagon effect on the press and on various political elements? Is that what you planned—or did someone else?

Moreover, I don't think you'll deny that the Life-launched bandwagon as pushed into Congress has had strong impact on the Department of State. Isn't it a fact that such a statement as the following made by Congressman Porter:

"(Life's theory) inevitably leads one to suspect an element of collusion between some United States officials and the Dominican regime somewhere along the line * * * does not force the State Department—always hypersensitive to congressional criticism—to go out of its way to make an issue of the Murphy case in order to disprove the charge of collusion?"

41. Now let's go back and check your statements concerning Galindez:

"There he [Galindez] came to hate and fear Trujillo and had to flee again." Check it, Mr. Galindez merely moved on to the greener pastures of New York City.

"When Galindez dropped from sight, his friends and Trujillo's foes raised a great outcry." Very true, of course. But don't you think that statement might warrant a little unbiased study from a new angle?

Do you see anything significant in this statement by Porter: "His sensational revelations, endorsed as a doctoral dissertation from an American university would take on a prestige that similar disclosures in journals or books, however accurate, would not possess." Porter was, of course, speaking of Galindez, Columbia University, and the book that was the mainspring of the previous propaganda campaign against Trujillo.

The newspaper for which Galindez was a columnist has presented one theory: "Knowing that Galindez' book had already been submitted to the university for publication and that Galindez alive could no longer cause harm to Trujillo, they (Trujillo's enemies) decided to kill him, in order to put the blame on the Generalissimo. * * * One police chief says privately that he backs this theory."

Correct or incorrect: Columbia University gave the book attacking Trujillo prestige; Galindez—vanished—gave it publicity and "assured the sale of at least 100,000 copies?"

You, of course, have Galindez kidnaped from the subway on his way home. On what grounds do you refute general police opinion that Galindez returned to his apartment but left again immediately to keep a mysterious appointment?

Do you find it strange that a note telling the authorities to look for his kidnapers in the Dominican Republic, signed ostensibly by Galindez, suddenly appeared on top of Galindez' desk after his apartment had twice previously been searched by police and the Bureau of Missing Persons?

Who do you think alerted the Inter-American Association for Democracy and Freedom that a propaganda offensive against Trujillo was going to get under way?

Investigators have turned up evidence proving that Galindez did not write the original book "Era of Trujillo." He rewrote it. Would you be interested in following this up?

42. As you say, "Gradually speculation about it faded from newspaper columns. Then in December a second man disappeared—this time in the dictator's own capital, Ciudad Trujillo."

So, according to Porter, "in the minds of those who know and understand the methods of Trujillo, the story of Gerry Murphy's mystifying disappearance began to add up."

True. Those minds began to add up a story as soon as the news of Murphy's disappearance was spotted in the Dominican press. It afforded a pretext for a renewal of Operation Galindez. Do you think those minds were grateful for your cooperation?

43. Do you have any comment on this statement on kidnaping by Senator JAMES EASTLAND, of Mississippi:

"We have evidence in our files that Iron Curtain countries, notably Soviet Russia, have used their U. N. delegations as a base for illegal repatriation of refugees. * * * With almost unbelievable audacity (Soviet agents) defied the authority of the United States by the use of bluff and deception."

The Galindez kidnaping or murder was obviously the work of highly skilled professionals. Which agents are most expert in such operations? Who stands to gain most from driving a wedge between the United States and the only stable government in the turbulent Caribbean? Is it possible that those minds through bluff and deception have made a big step toward realizing that goal?

44. Do you know that the Dominican Republic has twice before been the target of this type of propaganda assault? Twice before, 1947 and 1949, the campaign was coordinated with Communist-inspired attempted armed invasion. Would you like proof of that statement? Do you think it possible that the present smear campaign is to be used as the backdrop for another such move, possibly in the economic field?

45. Inasmuch as your theory of the kidnaping of Jesus Galindez could have been pieced together by anyone literate enough to read a newspaper, you may want to make a sincere effort to see justice done, to determine Galindez' fate beyond all doubt, even if you cannot make the Dominican Government the kidnaper.

In line with this thinking, Representative BARRATT O'HARA of Illinois, states:

"There should be the same fair treatment afforded nations in the protection of their reputations as under our concept of American justice we accord to individuals."

Do you think it possible you can "accord that same fair treatment" when the Dominican Republic is concerned?

Until now, of course, as El Diario de Nueva York notes: "The publicity given to the anti-Trujillo accusations has been so enormous as to drown out the voices of certain people—including high-ranking police officers—who hold contrary views."

I believe it is not unfair to say that you have saddled yourself with the burden of presenting proof in the Galindez case. Don't you think you owe it to your readers—if not us—to back off a bit and perhaps study the Galindez mystery from a less rigid perspective.

You are probably quite aware that any lack of anti-Trujillo bias by Life or any other individual or publication is an invitation to immediate smear attack. As the Diario de Neuva York can well testify:

"The opinions prevailing in certain circles are so strong that he who tries to express his views objectively is attacked by the anti-Trujillo people."

Is objectivity too much to expect from you?

46. You conclude: "But with the Galindez-Murphy-de la Maza cases Trujillo seemed to have given unprecedented ammunition to his enemies." Have you thought of the possibility that that unprecedented ammunition is more in the nature of what military ordnance men call a shaped charge—a shaped charge fabricated by the enemies of both our nations?

Do you think that the unprecedented ammunition, that shaped charge which you fired against us might just possibly be aimed more at the people of the United States than at us?

In short, haven't you been a bit trigger-happy?

Sincerely,

JUAN ARCE MEDINA,
Attorney at Law.

Even Our Secretary of Agriculture Should Be Able To See We Can't Come Out Even With Egg Prices Like This

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, Mrs. Marvin Nilson of Twin Valley, Minn., pointed out in a letter to me on egg prices: "Even our Secretary of Agriculture should well be able to see that we can't come out even with prices like that."

Under leave to extend my remarks I request permission to insert this letter in the RECORD.

TWIN VALLEY, MINN., *July 12, 1957.*

Mrs. COYA KNUTSON,
Washington, D. C.

DEAR MRS. KNUTSON: At the present time we are getting 24 cents a dozen for No. 1 eggs—the price has been as low as 19 cents. Even our Secretary of Agriculture should well be able to see that we can't ever come out even with prices like that.

I can quote these prices for the following towns in this vicinity: Twin Valley, Fiom, Ulen, Ada, Hendrum, Halstad, Mahnomen, Waubun, Moorhead, Hutterdahl, Hawley, and Gary, so you can see how unhappy we all are with the situation.

Sincerely,

MRS. MARVIN NILSON.

I Am An American Day

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. BOGGS. Mr. Speaker, as national cochairman of the Helios Foundation and I Am An American Day Committee, I would like to call the attention of the House to the 20th annual I Am An American Day held on May 19, 1957.

Because many of the Members of the House and the Senate are sponsors of this organization, I will be brief in my remarks, but feel that new Members will be interested in the history and objectives of this organization.

This event was first celebrated in May 1938 prompted by Mrs. Paul d'Otrenge Seghers, native of Poland, founder-president of the Helios Foundation. At her instigation, the movement is now observed throughout the Western Hemisphere and is motivated by a desire to cultivate American ideals and better understanding among mankind.

I take the liberty of quoting a few of the messages received by the committee at the recent celebration from leaders here and elsewhere:

From Jose Luis Cruz Salazar, Ambassador of Guatemala:

"I have the honor to acknowledge receipt of your very esteemed letter of April 27, 1955, in which you attached a copy of the letter which you addressed to His Excellency, Col. Carlos Castillo Armas, President of Guatemala.

"There is no doubt but that the celebration of I Am An American Day will form another link in strengthening and uniting the countries of the Americas.

"Thanking you for your courtesy, and with renewed expressions of my esteem."

F. Antonio Rizzuto, Buenos Aires, Argentina:

"He tenido el agrado de recibir su muy atenta carta del 18 del actual, en la que me informa de la celebracion del Dia Yo Soy Americano, en el mes de mayo de cada año.

"No puedo negarme a aceptar el ofrecimiento que usted me hace en nombre de la señora Bronislawa Seghers, presidenta y fundadora de la Helios Foundation, en virtud de mi intensa labor panamericanista. Nadie mejor que yo puede ver con gusto y satisfaccion inciativas de este indole.

"Le agradezco la distincion que me hace y quedo a sus ordenes, esperando mayores detalles al respecto.

"Saludo al senor alcalde con mi mas distinguida consideracion."

Embajada DePanama, Washington, J. J. Vallarino, Ambassador:

"Thank you for your note of April 27, enclosing copy of a letter to His Excellency the President of Panama with reference to the celebration of I Am an American Day.

"I sincerely believe that the decision of the Helios Foundation to dedicate its 19th annual celebration to the Latin American neighbors and friends is of great significance in furthering closer friendship, better understanding and mutual cooperation between the states of this hemisphere and also believe that the decision taken by the Helios Foundation should have a far reaching effect, the good results of which it is impossible to estimate at present.

"I wish to extend my most cordial congratulations to the Helios Foundation for their decision and best wishes for a very successful I Am an American Day celebration throughout the American States."

From the Presidency of the Dominican Republic signed by Hector B. Trujillo Molina:

"The initiative adopted by the Helios Foundation in dedicating the celebration of the 19th anniversary of I Am an American Day to the Latin American countries constitutes a warm and heartening recognition of the mission of the men and women of America.

"To be an American implies, in the first sense, the militant conviction that America should be the common country of all the peoples which make it up. Therefore, to defend the liberties and independence of our continent, strengthening its solidarity and collaboration, both politically as well as economically and socially, contributes, by virtue of our example, to the realization of the universalist fate of America, not only among ourselves but also in the world.

"It pleases me, therefore, to know that the Helios Foundation looks with this transcendant vision at the noble objectives which it has laid down, in such a way that it is for me particularly pleasing on the occasion of the 19th anniversary, to send you a message of warmth and congratulations in the name of the people and the Government of the Dominican Republic."

A message from Poles in exile:

We Poles, filled with gratitude and love for the country which in our greatest need in life, has embraced us and opened its doors to us—bow our heads in deep humility before the Stars and Stripes—the symbol of freedom.

May we also take this opportunity on this I Am an American Day dedicated to the ideals of America, to express our pride that one of our sisters, Bronislawa Seghers, who came to these shores 34 years ago, immediately recognized the importance of preserving and cultivating the ideals upon which this democracy was founded, and out of her grateful heart originated the I am an American Day, now observed throughout the entire Western Hemisphere. That this 20th observance is being dedicated to the millions of people throughout the Western Hemisphere and captive European nations is very gratifying and we send all of those sponsoring this noble work and those in bondage, looking to us for liberation, our prayers.

We finally want to join in again expressing our loyalty, our faithfulness, our readiness to live, to fight, and to die—if necessary—for the protection of the flag of the United States.

For the Poles in exile: Ambassador Jan Ciechanowski, Dr. and Mrs. Bohden Nagorski, Mr. and Mrs. George Szczerbinski, Ambassador and Mrs. Michael Mascicki, Gen. and Mrs. Wladyslaw Bortnowski; Prof. and Mrs. Oskar Halecki.

A message from the curator of I Am an American Day Museum:

"In 1938 an idea was born in the West Hills of Long Island where Walt Whitman first saw the light. Today the widespread appreciation of being an American proves the importance of the inspiration of this idea. When I Am an American Day was conceived by Mrs. Paul d'Otrenge Seghers, who keenly felt the depth of such privilege, few others realized as she did the urgency of its need.

Mrs. Seghers has through her I Am an American Day programs supplied the drive of a great force for the preservation of the things we Americans cherish. Heritage is lost if traditions die. Our sacred rights, our American way, must be protected for us and those who follow.

"I am proud to be a charter member and to have taken part in all of these patriotic activities since their inception.

JESSE MERRITT,
Historian-Curator.

Hon. Fred J. Munder, county judge of Suffolk County, N. Y., founder-member of the Helios Foundation and cochairman of the day:

"For 20 years I have had the privilege of participating in the observance of I Am An American Day at Sunnyhill Farm. The origin in 1938 of this observance was the result of the hope of Mrs. Paul d'Otrenge Seghers.

"To preserve American doctrines, we must be ever alert. I know of no better way to remind all of us in our great Western Hemisphere of the need for this awareness than through the continued observance of I Am An American Day, being dedicated this year in unity with our valued friends, the Latin American Republics and the Dominion of Canada, to the 100 million people in the 9 captive European nations."

Cardinal Spellman's message for I Am An American day:

"From the very birth of our country all her varied peoples have lived and worked together to make and keep our country consecrate. Yet we, their heirs, have often failed to put the proper price upon the precious things of life our forefathers and sons bought for us with blood. Freedom is one of these. But freedom is not a treasure which, once possessed, cannot be lost, and it will be lost for us and for our children and their children unless it is cherished, defended and preserved as it was fought for and won.

"Liberty is God's gift to America and faith in God is America's might. May God bless America."

From Hon. Edgar F. Hazleton, Surrogate, Suffolk County, N. Y.:

"Here at Sunnyhill Farm where in the spring of 1938 I am an American Day was born, we foregather each May to take stock, as it were, of Americanism, but at this 20th annual I Am An American Day observance, we are fortunate to welcome and honor our true and loyal neighbors of the Western Hemisphere, the 21 Latin American Republics and the Dominion of Canada, into our group of freedom-loving Americans, express our admiration for their cultures and their great contributions to the world of science and the arts. I know that their old traditions combined with our new way of life, will fortify the existence of our all-American unit and out of this a firm mutual appreciation and strong path toward an everlasting peace, in the world, at large, will be cemented.

"A dream long dwelt upon amounts to prayer, and prayer wrought in faith comes true. So has it come to pass that the vision of prayer of Mrs. Bronislawa Seghers, to fix in the minds of our people the dignity and meaning of being an American, celebrates its 20th anniversary here at Sunnyhill Farm, where I Am An American Day was conceived and born."

DeLesseps S. Morrison, mayor of the city of New Orleans:

"Today the meaning of I am an American takes on new significance. Oftentimes the men and women of the North and South American Continents have felt that the meaning was I am an American in the United States. But, through the unity and brotherhood with which we are ever widening our efforts in the United States and New Orleans, La., we find more and more that we are Americans together. We have a common heritage for we all fought for our independence. We all came to this New World in pursuit of a new and better life. And here we have established a vision that our mother countries now hasten to add to their own ways of life. We are united in one heritage, one belief, and one thought. A thought that finds expression throughout the United States and the Latin American neighbors. Together we lift our voices to proclaim in unit, I am an American.

Rt. Rev. James P. DeWolfe, bishop of Long Island:

"You have the assurance of my prayers for God's blessing and guidance to be with you in every endeavor.

"May I take this opportunity to extend my good wishes for the complete success of the observances."

Robert D. L. Gardiner:

"I heartily endorse I Am an American Day as it is an annual reminder to everyone in the Western Hemisphere to thank God for the great privilege and all the blessings that go with being an American."

Mort S. Cox, manager, Hot Springs Chamber of Commerce:

"The observance of I Am an American Day means much to us in Hot Springs National Park, particularly because of your many delightful visits here with us. May the acknowledged benefits derived from the healthful hot waters of Hot Springs National Park continue to be yours to give you strength and health in your work of cultivating American ideals and better understanding among mankind.

"Our thoughts are with you, with best wishes on the occasion of your 20th I Am an American Day celebration."

Hon. Ezra Taft Benson, Secretary of Agriculture:

"It probably rarely occurs to many of us that people from the tip of the vast continent of South America to the Arctic Circle, and on many of the offshore islands of this hemisphere, can proudly say, 'I am an American.'

"As Americans, as the people of the New World, we own lands in every climate, vast mountain ranges, mighty rivers, magnificent cities, and endless reaches of fertility on which are based all our riches, agriculture. But we own more than that. We own and cherish dearly-bought freedoms of the individual.

"We can give thanks in many tongues for these blessings, but in spiritual solidarity, when on May 19 we celebrate I am an American Day throughout this hemisphere."

Henry Cabot Lodge, Jr., United States Representative to the United Nations:

"May I extend all good wishes for a successful observance of I am an American Day. This 20th observance should do much to help American citizens reaffirm faith in their heritage of freedom."

Postmaster General Arthur E. Summerfield:

"The 20th anniversary of the observance of I am an American Day deserves the full support of every American as well as the citizens of our good neighbors in Canada and the Latin American countries.

"I am glad to join with my fellow postal workers in this expression of hearty endorsement of the ideals of I am an American Day. It is our prayerful hope that the mutual understanding and trust existing between the countries of the American Continents will continue to flourish."

Hon. Adlai E. Stevenson:

"I am an American Day is designed to bring democratic values and responsibilities into clear focus. It is an occasion also for honoring all those who, by coming of age or through naturalization, have attained the status of citizenship.

"I hope that the splendid objectives of this 20th annual observance will be realized this year in gratifying measure.

"This commendable movement, which originated on May 31, 1938, at Huntington, Long Island, deserves official recognition."

Rev. William J. Dunne, S. J., president, University of San Francisco:

"I would like to express my great admiration for the splendid work you are doing through the Helios Foundation and particularly the spreading of I Am an American Day. Never have we had a greater need for emphasis upon the blessings we have received in the United States of America.

"I am proud to have met you who originally undertook this work. I pray God to grant you many years of good health and spare you for these important tasks."

Mayor Floyd A. Housley, of Hot Springs, Ark.:

"The citizens of Hot Springs National Park, Ark., America's oldest Federal reservation, join me in sending this greeting and encouragement to you on the occasion of the 20th annual celebration of I Am an American Day.

"We know your stay and treatments in Hot Springs have benefited you in previous years. We earnestly pray that the waters of this world famous resort make possible your continued work and presence at many, many more I Am an American Day celebrations.

"From all of us, best wishes."

Senator FRANCIS CASE of South Dakota:

"I am glad to learn that the theme for the 20th anniversary of I Am An American Day is 'peace with freedom and justice for all.'

"Eventual attainment of the objective so well begun will ultimately result in bringing to all peoples the peace for which they yearn and hope. To the people over whom the Iron Curtain has fallen this anniversary gives a ray of hope on a distant horizon. Our prayers and willingness to help will encourage them once again to strive for that freedom which was lost."

Senator GEORGE D. AIKEN, of Vermont:

"I wish to take this opportunity to congratulate the many persons who are endeavoring to make the 20th annual observance of I Am An American Day a successful program dedicated to our neighbors in the Dominion of Canada and in the 21 Latin American nations.

"In a very real sense we are all Americans sharing in common heritage of freedom. We should do all within our power to help improve relations between these countries, and at the same time make for strong unity of purpose on international problems.

"The interchange of students, journalists, scientists, and leaders in other walks of life is a valuable tool for improving relations. The Helios Foundation is to be commended for fostering this exchange work that is making closer bonds of understanding between the people of Latin America and North America."

Senator JOHN W. BRICKER, of Ohio:

"Military solidarity and the maintenance of cordial relations between the people of the United States and the people of other countries of the Western Hemisphere are essential in the worldwide struggle against atheistic communism. I hope that the 20th anniversary of I Am An American Day will strengthen the bonds of personal friendship and military unity which are so essential in the global fight for freedom."

Senator FRANK A. BARRETT of Wyoming:

"I read with a great deal of interest the efforts of your organization to contribute to a better understanding and friendship among the peoples of the United States and other republics of the Western Hemisphere. May I commend you and your organization for striving toward such a lofty goal.

"It is through such organizations as yours, having for their purpose such unselfish principles as better understanding and increased friendship among nations, that the free world continues to remain free."

Message from Gen. Frederick M. Waterbury, national cochairman I am an American Day Committee:

The auspicious day when Bronislawa Seghers became a citizen of the United States started a chain of reactions for all present and future citizens. She had suffered cruelly at the hands of Communists—physically ill and heartsick. She had groped through fogs of every kind of frustration.

The only tangible asset left her was the comfort of spirituality—that never left her. And because she must rise from this horrible depression, she found solace and comfort, in her aloneness, in the voice which spoke to her, recalling that she is an American.

It was then that I am an American penetrated into her subconscious mind, consoling her, in spite of all her tribulations and sorrows. She then conceived the idea of having a day set aside for all Americans to rededicate themselves to the ideals of their country. The sympathetic and generous thought for others who too could find uplifting courage in the realization of I am an American encouraged her and brought about the first I Am an American Day at this memorable spot at her home, Sunnyhill Farm, Huntington, Long Island, in May 1938.

It is now being observed throughout the Nation, and each citizen can proclaim his thankfulness and pride in the ringing words, I am an American.

Today, Mrs. Paul d'Otrenge Seghers, the founder of I am an American Day is still devoting her entire life to spreading a great appreciation and love for her adopted land—America.

I Am an American Day message from Tiburcio Carias, Jr., Ambassador, permanent representative of Honduras, to the United Nations:

The word "pan-Americanism" already has an illustrious place in the annals of the history of nations. Pan-Americanism is a potent appeal that has transformed the horizons of human aspirations in an entire continent. Yet we must confess that lapses in the practical application of these high aspirations have frequently been observed.

This is why the praiseworthy purposes of the Helios Foundation, as revealed by the tireless, constructive, and imaginative work of its originator, Mrs. Paul d'Otrenge Seghers, and her coworkers in the foundation, merit the admiration of all who labor for the intensification of our spirit of collectivity and toward a more impulsive fervor in our pan-American consciousness.

Those in the Americas who must be practical as well as idealistic, should begin by encouraging the extension of genuine patriotism so that its sentiment embraces not merely one area but the entirety of our hemisphere. Should this enlightened goal be accepted, we would see progress in our movement toward a supreme continental well-being.

When the lavish measure of our geopolitical potentialities are not only recognized but placed in their proper perspective, then the scope and dignity of this majestic conception will have produced its own reward.

In a world flooded by dark prophecies which confuse the spirit of mankind, we must not be discouraged by the complexity of our problems, but must, on the contrary, strive to conquer our apathy in resolving them.

Senator FRANK J. LAUSCHE:

"It gives me great pleasure to commend the Helios Foundation as it observes the 20th annual I Am An American Day. Our country has need of such organizations which cultivate American ideals and traditions and which work to promote better understanding among the peoples of the world. It is my sincere hope that the leaders of Helios will continue this inspiring program which this year recognizes our kinship to the citizens of the Dominion of Canada and the 21 Latin American Republics."

Senator JOHN F. KENNEDY of Massachusetts:

"It is gratifying that on this 20th anniversary of I Am an American Day we in the United States can join hands with our neighbors to the north and our neighbors to the south to the very tip of the southern continent in celebration of a common heritage and a common goal. And in both the inheritance which we share and the goal to which we are together dedicated there is one word which stands above all others—and for which we can be thankful above all—and that is: peace. Rich is our heritage; great be our goal."

Senator ESTES KEFAUVER of Tennessee:

"It is a pleasure for me to participate in the I Am an American Day celebration of the Helios Foundation.

"The ties between the nations of the Western Hemisphere have shown the true spirit of brotherhood by trading together and living together in peace for many years."

Senator WILLIAM F. KNOWLAND, of California: "I am happy to send a message of greetings on the occasion of the 20th anniversary of I Am an American Day, sponsored by the Helios Foundation.

"A great deal has been done in the past few years in creating a better understanding and friendship among the people of the United States and our neighbors to the north and south. The Helios Foundation has played an important role in this effort. The importance of personal contacts and friendship on an international level should never be forgotten and cultural interchanges amongst the countries of North and South America should be greatly encouraged."

Senator CHARLES E. POTTER, of Michigan:

"This year we celebrate I Am an American Day on the theme peace with freedom and justice for all. Not only should we observe this day with reverence, but we should carry uppermost in our minds and hearts our thanks that we enjoy peace and freedom every day of the year. While we treasure peace with freedom for ourselves, we must hope and work toward that day when all men of all countries will enjoy the same blessings that we as Americans enjoy."

Senator EVERETT MCKINLEY DIRKSEN, of Illinois:

"Best wishes in your every endeavor to advance the cause of this country through the I Am an American Day observances. It is an excellent way to dramatize our duty, our interest and our devotion to this great Nation in a feverish world."

Senator STUART SYMINGTON of Missouri:

"I Am an American Day 1957 is an occasion to be proud of the energy, the ability, and the cooperation of the peoples of the Western Hemisphere.

"As a Nation, we are confronted by the growing menace of communism striving to destroy those freedoms and rights for which Americans have fought so valiantly. This is a time for all of us to be alert.

"Even in our freedom loving countries, there are prejudices, unemployment, slums, and areas of distress. The elimination and cures of such weak spots are goals which we should seek .

"Above all, we must stand strong in defense of our freedoms. We dare not relax our vigilance, lest we find ourselves with only memoraies of the greatest of all civilizations."

Senator RALPH E. FLANDERS of Vermont:

"I was glad to learn from your letter of recent date of the proposal to mark the 20th anniversary of I Am an American Day on May 19 and to have it dedicated to our neighbors to the north and to the south.

"It is most unfortunate that we who are citizens of the United States seem to have taken to ourselves the designation of American. There are two Americas, North and South. The people who live to the south of us in Latin America, all the way to Cape Horn, are all Americans. We have a common pride and a common interest. Anything which extends that interest and draws us closer together makes better Amercians of us all.

"I congratulate you on your efforts toward this end."

Senator FREDERICK G. PAYNE, of Maine:

"The efforts of the Helios Foundation to cultivate American ideals and better understanding among mankind have my hearty endorsement on this, the 20th anniversary of I Am an American Day. Dedicating the day this year to the countries of the Western Hemisphere is a fitting tribute to, and reminder of, the free interchange of good will which American neighbors enjoy.

"The Americas provide an excellent example to the entire world that free nations can exist in peace and harmony. It is my hope that your program will serve to focus attention on the brotherhood of the Western World; that it may be a beacon of hope to the enslaved areas of the world—areas where totalitarian communism today deprives millions of people of their liberty and freedom."

Senator JOHN MARSHALL BUTLER, of Maryland:

"It is most appropriate that the 20th anniversary of I Am an American Day be dedicated to our freedom-loving neighbors. The fine spirit of friendship between the nations of the Western Hemisphere has set a notable example for the entire world.

"We cannot, however, rely entirely upon these accomplishments of the past. All peoples of the Western World must strive continuously to protect our common ideals of freedom and foster the development of even better understanding and mutual respect.

"I am confident that the program of the Helios Foundation will have a significant and lasting effect on the achievement of this essential goal."

Jacques Leger, Ambassador of Haiti:

"Je me fais le plaisir d'accuser reception de la lettre du 28 avril ecoule sous couvert de laquelle votre Honneur a bien voulu me transmettre copie de celle qu'elle a addressee le 26 du meme mois a Son Excellence Le President de la Republique d'Haiti.

"Je remercie Votre Honneur de cette courtoise communication qui a recu ma meilleure attention.

"En retour, je me fais le vif plaisur de l'assurer que la Republique d'Haiti, tout comme les austres Republiques Americaines auxquelles echoit le privilege de se voir consacrer le XIXeme anniversaire de I am an American Day, saura accueillir avec enthousiasme une telle initiative et al recommendation qu'elle inspire.

"Partageant l'ideal de la Fondation Helios, le Gouvernement de mon Pays ne manquera pas de s'associer a son herureuse initiative dictee par le loyable souci d'aviver le courant de sympathie qui existe deja si heureusement entre l'Amerique Latine et les Etats Unis.

"Veuillez agreer, Monsieur le Maire, les assurance de ma haute consideration."

Miguel Angel Campos, Ambassador of Cuba in Washington:

"I take this occasion to congratulate you on such a worthy and commendable undertaking, and I wish you every success."

From the Capital de Puerto Rico, Puerto Rico:

"Recibi su amable carta de fecha 18 de abril de 1955 en la cual me invita para que sea miembro del Comite Interamericano encargado de la celebracion del Dia Yo Soy Americano.

"Gustosamente acepto su cordial invitacion y le ofrezco mi mas decidida cooperacion para que la celebracion de ese dia sea un rotundo exito interamericano.

"Espero de usted que me envie las instrucciones pertinentes para yo poder desempenar

cabalmente mis responsabilidades como miembro de ese Comite.

"Con mi mas profundo buen deseo por sus continuos exisito, quedo."

Embajada Honoraria de la Cuidad De Nueva Orleans, Asuncion, Paraguay:

"Complazcome en acusar recibo de su atenta de fecha 18 del corriente mes, en la que me extiendo una cordial invitacion para sea uno de los miembros del Comite Interamericano, encargado de la celebracion del dia Yo Soy Americano.

"Acepto can el mayor gusto su amable y gentil invitacion pudiendo contar desde ya con la colaboracion entusiasta de mi parte.

"Hago propicia este oportunidad para saludar of Senor Alcalde con mi mas alto y distinguida consideracion."

Antonio Ruiz Galindo, Mexico, D. F.:

"He tenido el gusto de recibir su grata carta de 18 del presente mes, con su atenta invitacion para que sea el suscrito uno de los miembros del Comite Interamericano encargado de la celebracion del dia Yo Soy American.

"Agrdezco muy sinceramente su invitacion y solo quisiera que tuviera usted la bondad de decrime en que debe consistir mi cooperacion para el objecto de que se trata.

"Quedo en espera de sus letras y con muy afectuosos saludos, aprovecho la ocasion para repetirme su afectisimo atento amigo y seguro servidor."

A. D. P. Heeney, Ambassador of the Dominion of Canada:

"We are most gratified that the celebration is being dedicated to Canada and the Latin American Republics. I wish you every success in this neighborly enterprise."

Victor Andrade, Ambassador of Bolivia:

"I want to congratulate you for the decision to celebrate the 18th annual I Am an American Day celebration to the Latin American Republics. This action shows the true and strong hemisphere position adopted by the city of New Orleans as well as the Helios Foundation."

Manuel Resumil Aragundo, District Governor of Santo Domingo:

"Tengo recibida su atenta carta del 18 de abril ultimo por la cual tiene usted la gentilesa de hacerme la mas cordial invitacion para que sea uno de miembros del Comite Inter-American encargado de la celebracion del Dia Yo Soy Americano.

"Estimo muy plausible el proposito que animo a la senora Bronislawa de Seghers, al crear la Helios Foundation, y con el proposito de prestarle la cooperacion que este a mi alcance, le agradeceria remitirme los estatutos y reglamentos que rigen dicha organizacion a fin de estar mejor edifacado y poder ofrecer una mejor colaboracion.

"A agradecerle la fina cortesia que ha tenido al extenderme la invitacion aludida, saluda a usted muy atentemente."

Enrique Bustos, Minister Plenipotentiary and Consul General of Chile:

"Congratulations and best wishes on the ninteenth annual I Am an American Day celebration and your wonderful work."

Jorge Hazera, Ambassador of Costa Rica:

"I have the honor to acknowledge the receipt of your letter of April 27, 1955, addressed to Ambassador Facio who is retiring from his post, and transmitting a copy of the neighborly proposal you have sent to President Figueres concerning the possibility of dedicating the third Sunday of this month as I Am an American Day thereby extending to the inter-American level the celebration established and observed yearly by the Helios Foundation on a national plane.

"We have become accustomed to the awareness that you never fail to demonstrate of the importance of promoting good neighborliness and good partnership among the peoples of the hemisphere and congratulate you on this new evidence of your feelings."

Joao Carlos Muniz, Brazilian Ambassador:

"Thank you for your letter of April 27 regarding the observance of the third Sunday in May as I Am an American Day.

"Please accept our best wishes for this excellent initiative in promoting stronger bonds of friendship and culture between nations of the American Continents."

Senator MILTON R. YOUNG, of North Dakota:

"Thank you very much for your recent letter concerning I Am an American Day. This is certainly a very worthwhile project. During these days of international crises and ill feeling, it is more important than ever that the freedom-loving people of the world coordinate their efforts to the advancement of real democracy.

"The activities of your I Am an American Day cannot help but foster warm relationships between the United States, the Dominion of Canada, and the Latin American Republics to the south. As we continue our interchanging of ideas and work together on mutual problems, we cannot help but advance the common cause of freedom and good will.

"Mrs. Seghers; pursuant to your request, I am pleased to enclose an autographed picture. I hope and trust this will be satisfactory. Thank you again for writing."

Senator IRVING M. IVES, of New York:

"On this 20th anniversary observance of I Am an American Day, I am tremendously gratified by the news that this significant occasion is being dedicated to our neighbors in the Western Hemisphere.

"The citizens of the Dominion of Canada and the citizens of the 21 Latin American Republics share with us in the Divine blessing of peace and progress. It is most desirable and appropriate that they join with us in an appreciation of the liberties and opportunities that have ennobled the common history of the North and South American Continents.

"And as we share in these blessings and seek to measure up to the responsibilities they bring with them, let us join also in prayer that the millions of less-fortunate human beings behind the Iron Curtain may someday—and God grant that it be soon—have equal cause to rejoice with us in man's long struggle to unfetter the human spirit."

Senator WARREN G. MAGNUSON, of Washington:

"I am happy to hear that the Sunday, May 19, observance of I am an American Day will witness an extension of this significant ceremony to our neighboring nations to the north and south of us. It is good to know also that Ambassador Dr. Carias of Honduras has accepted the chairmanship of the expansion in Latin American countries.

"But a moment of reflective thought on the part of each of us, whether in North or South America, is required on May 19, or any other day, to reaffirm the great heritage which is ours through American citizenship. However, the same reflection strengthens and renews the conviction and realization that our full responsibility is not realized until we have bent every effort to guarantee others those privileges and dignities which are ours.

"I am happy to enclose the autographed photograph which you requested.

"My best wishes for a most successful observance this year."

Senator RUSSELL B. LONG, of Louisiana:

"I appreciate having the information contained in your recent letter regarding the forthcoming celebration of I Am an American Day. I am convinced that your program is very valuable, and I sincerely hope that it will enjoy continued success."

Senator HUBERT H. HUMPHREY, of Minnesota: "On Sunday, May 19, we will all celebrate I Am an American Day. I welcome your decision to dedicate the day this year to our Canadian neighbors to the North, and our Latin American neighbors to the South.

Nothing is more important to a continued and increased exchange among the peoples of the Americas. The benefits to ourselves and to the world are incalculable.

Best wishes, and good luck to you in your endeavors."

Senator FRANK CHURCH, of Idaho: "It is a pleasure to respond to your request that I contribute a message to be published in your forthcoming 20th anniversary program.

"The true spirit of brotherhood, which is the heart of Americanism, has validity for the hemisphere, as it does for the Nation, the neighborhood, and the world. In your efforts to propagate this spirit, I wish you well."

Senator ARTHUR V. WATKINS, of Utah: "Congratulations to the Helios Foundation as it prepares to celebrate its 20th anniversary of I Am an American Day which is dedicated to the propagation of Americanism each day of the year among all of the peoples on the American continent.

"Best wishes for your efforts in keeping with this honorable ideal."

Senator JOHN SPARKMAN, Alabama:

"In this great country of ours, it seems to me that every day could appropriately be I Am an American Day. It is well, though, to designate a specific day to take stock of the many blessings that we enjoy simply because we live in America.

"And it is appropriate that we dedicate this day to our neighbors in the Western Hemisphere. By working together, and maintaining friendly relations, these nations can be mutually beneficial in promoting the well-being of each of us. We can form a strong bulwark for individual freedom and for our national security.

"Two great Americans—President Franklin D. Roosevelt and Secretary of State Cordell Hull—working together as a team recognized this fact. I am delighted that the wise policies which they set forth have been followed by their successors.

"I am glad to assure you that I will work for an even better understanding by the people of my own country and those of the other republics of the Western Hemisphere."

THOMAS H. KUCHEL, Senator of California:

"The many bonds between all of the republics of the Western Hemisphere will be tightened and made more meaningful as I Am an American Day takes on international significance.

"This annual observation has done much to build unity in our own Nation. The peoples of all countries in this hemisphere share a common heritage, in that each nation was built by emigrants from the Old World who joined with the inhabitants in forming new governments and affording broader opportunities for rewarding lives in the true spirit of freedom and democracy.

"I commend the Helios Foundation for its steps in improving the relations between all Americans regardless of nationality."

Senator HOMER S. CAPEHART, of Indiana:

"Thank you very much for giving me the opportunity to participate in I Am an American Day.

"It occurred to me that your slogan Peace With Freedom and Justice For All, was particularly appropriate this year and I join with you and millions of others in expressing the hope that the freedom-loving people behind the Iron Curtain may regain their independence in the not-too-distant future."

Senator Earle C. Clements, of Kentucky:

"Peace With Freedom and Justice For All, is a completely appropriate theme for the annual I Am an American Day program.

"A peace that would mean enslavement of the bodies and souls of freedom-loving peoples of the world would be a living death. As we work toward peace in the world, we must ever be on the alert to guarantee that the rights of all people to life, liberty and the pursuit of their own happiness shall be safeguarded."

Senator HENRY M. JACKSON, of Washington:

"It is only fitting on this 20th I Am an American Day that our theme should be Peace With Freedom and Justice For All.

"We need to remind ourselves today and every day that there are vast areas of the world where people are not free.

"This is especially true at a moment when the new turn in Soviet foreign policy is in danger of obscuring the fact that 100 million freedom-loving peoples are still captive behind the Iron Curtain.

"We say to the world: If the Soviet Union really wants to show good faith, it can return to these peoples the freedom that once was theirs. This is an important message to tell the world. But this alone, is not enough.

"Equally important, we must continue to protect and strengthen our freedoms at home as a symbol of hope for captive peoples everywhere. And we must pledge our untiring efforts to help free them from their bondage."

Senator RICHARD L. NEUBERGER, of Oregon:

"I am happy to join my colleagues who have written you in their commendation of your idea of dedicating I Am an American Day this year to all the peoples of North and South America. I think it is a splendid idea thus to celebrate the long-standing friendly association of the two hemispheres and to reaffirm the American ideals of peace and freedom which we hold in common."

Senator H. ALEXANDER SMITH of New Jersey:

"I am happy to send these words of greeting to the Helios Foundation on the occasion of the 20th I Am an American Day.

"It is with special gratification that I note this year's theme, Peace With Freedom and Justice for All, and the tribute your group is paying to the millions of captive people behind the Iron Curtain.

"We must never cease our peaceful efforts to restore to those people the freedom, independence, and self-determination they once enjoyed before their subjection to Communist totalitarianism."

Senator A. WILLIS ROBERTSON, of Virginia:

"The 25th anniversary of I Am an American Day is a most appropriate time for every citizen of the Americas not only to render thanks for the blessings of constitutional liberty but also to pledge his devotion to the cause of protecting that liberty.

"The United States desires to cooperate with our neighbor democracies in this effort but, in my opinion, the most important service we can render them is to continue to provide a successful example of a republican form of government.

"The genius of this system lies in constitutional guaranties of the kind set forth in our Bill of Rights and the careful balancing of powers between Federal and State Governments and among the legislative, executive, and judicial branches of the Federal Government.

"While these remain intact we can concentrate our efforts on combating communism and similar threatening ideologies. If they are nullified by allowing one branch of the Government to usurp the functions of another, our greatest danger will be from within our own land and we will be headed toward the destruction which overtook attempts at democratic government in ages before our own."

Senator JAMES E. MURRAY, of Montana:

"I am tremendously gratified that the Helios Foundation is dedicating I Am an American Day to our northern and southern neighbors and becoming a Western Hemisphere movement. It is a step toward international solidarity, oneness, and brotherhood which mankind must achieve.

"The Helios Foundation is making a great contribution through its work and activities."

Senator JOSEPH H. CLARK, of Pennsylvania:

"Thank you so much for your letter concerning the preparations for I Am an American Day.

"It is fitting that the 20th anniversary of this program should be dedicated to our good neighbors to the north and south. The understanding and mutual respect that exists between the United States and Canada on the one hand and the Latin American republics on the other is something for which we are all grateful and may well be proud. We must encourage and further this spirit of cooperation.

The Helios Foundation and the I Am an American Day celebration have my best wishes for continuing success."

Gov. Earl K. Long, of Louisiana:

"This is to extend my congratulations to the Helios Foundation for its sponsorship of I Am an American Day on Sunday, May 19, 1957.

"It is fitting and proper that those of us who are citizens of so great a country as America should from time to time pay tribute and reflect upon those great ideals which have made this country what it is today. Americanism, with its many meanings to many people in our country, signifies a single ideal and way of life that is known by all of us who have lived to enjoy the wondrous freedom and liberty which is ours.

"Because of my strong feelings on the subject of Americanism, I am most happy to extend my greetings, and wish the foundation great success in the celebration of this year's I Am an American Day."

Senator GEORGE SMATHERS of Florida:

"I am happy to join in paying tribute to the 20th anniversary of your I Am an American Day.

"The great harmony and the atmosphere of cooperation which has been created throughout the Americas is an example of strength in unity to the entire world. I think it is fitting that a day be set aside each year on which we focus attention on the feeling of Americanism, which is such an important part of our lives every day of the year. There is no greater cause than the continued strengthening of the ties among American nations and the foundations of freedom which characterizes our relationships."

Senator EDWARD MARTIN of Pennsylvania:

"I was greatly pleased to learn that the 20th anniversary of I Am an American Day has been dedicated to strengthening the bonds of friendship which unite our Republic with Canada and the Latin American Republics.

"The cordial relations which happily exist among the Nations of the Western Hemisphere are a powerful influence in support of our mutual devotion to the ideals of liberty and independence. Patriotism finds its highest expression in the love of freedom which every true American holds to be a divine endowment—an inalienable right bestowed by God upon all mankind.

"As we observe I Am an American Day I am happy to salute our American neighbors of the north and the south and join with them in prayer that all our people may be brought closer together in understanding and cooperation for peace, progress, and prosperity."

Senator KARL E. MUNDT:

"We who are fortunate enough to live in the Western Hemisphere should take the occasion offered by I Am an American Day to thank almighty God for the blessing of freedom and self-determination, which we enjoy under our systems of elected governments and we pledge ourselves to the eternal task of protecting our institutions of freedom against foreign ideologies which have brought unhappiness and human slavery to so many human beings.

"In no other area of the world, save our Western Hemisphere have so many people for so long enjoyed the peace and progress provided by our democratic processes. The very term "American" has become recognized around the world as being synonymous with the rights of self-determination, private ownership, and a reward of merit system which permits people to move forward and upward in conformity with their aptitudes, ideals, and strength of character. Here we recognize no hereditary rules and we refuse to yield our freedom to dictators supporting themselves by one party political machines which permit no opposition and deny the cherished freedoms recorded in the Bill Of Rights of the Constitution of the United States. We seek to impose our system upon no other country but we deny to none the right to emulate if they choose and to profit from the experiences and examples available here on the Western Hemisphere. The association of countries in the Western Hemisphere comprise a family of progressive people determined to protect themselves against all invasions from abroad, either military or ideological and eager to help like-minded people everywhere attain the rich rewards available through operation of government based on free enterprise and upon free elections."

Senator ALLEN J. ELLENDER, of Louisiana:

"Please feel free to use my name as a sponsor in your observance of I Am an American Day.

"The efforts you are undertaking are deserving of deep appreciation by all our people. I am particularly pleased to note that you have decided to dedicate your forthcoming celebration not only to Americans of the United States and Canada, but also to our fine allies and loyal friends of the Latin American Republics.

"It has been my privilege to travel extensively among the South and Central American nations. Truly, our Latin American friends offer us great hope for the future. Their lands are rich in resources, their cultural backgrounds are admirable. Only their economic development has lagged. Unfortunately, the United States, as a nation, has sometimes ignored the possibilities for mutual assistance which these underdeveloped lands offer us. While we have extended the hand of friendship to them in the past, and have been richly rewarded for our efforts, I believe we should now embark upon a comprehensive and unselfish program of assisting these lands in raising their living standards and improving their ways of life.

"This undertaking, we must make clear, is not motivated by greed or avarice. Rather, it must advance in an enlightened manner, investors must not exploit; they must help develop. A fair share of the profits obtained from any operation in the Latin American countries should be reinvested in those lands. Fortunately, the policies of past exploitation have given way to bona fide development. This must be our policy in the future as well.

"The United States of America is a technically advanced nation. Our know-how, if shared in a friendly spirit and combined with Latin America's resources, can bring this hemisphere an era of plenty which even the most visionary of our leaders cannot today envision.

"Please accept my best wishes in your endeavor; it is an honor for me to have my name associated with your 20th I Am an American Day celebration."

Senator JOHN O. PASTORE, of Rhode Island:

"There will be a thrill beyond the confines of our continents as you dedicate I Am an American Day to our neighbors to the north, from whom no fortress separates us; and our neighbors to the south, to whom we are joined by the finest ties of friendship.

"I say that the thrill will reach far and wide because we draw our cultures, north and south, from other continents to which we bear such close kinship that we begin to understand the essential unity of mankind with a common origin in God and a common destiny in human dignity.

"Add to all this the fact that the proud title "I Am an American" belongs to us all—

north and south—but the pride of possession is also an obligation—not only to be grateful for the opportunity that America has meant—but to share its blessings with a world which is drawn closer—people to people—as time and space no longer build a wall of selfish separation."

Senator DENNIS CHAVEZ, of New Mexico:

"May 19 is I Am an American Day. On this day we publicly proclaim the best freedom of the individual in the world today. So long as there is one island of freedom and security in the world, it will represent a hope and a haven for all those who want this sanctuary."

Tolls and the Seaway

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. MINSHALL. Mr. Speaker, knowing of the congressional interest in the St. Lawrence Seaway, and particularly as it affects the Great Lakes area, I thought my colleagues would be interested in reading this very appropriate editorial which appeared in the Cleveland Plain Dealer on Sunday, July 14:

TOLLS AND THE SEAWAY

Mr. Seaway—Dr. N. R. Danielian of Washington—is worried. Ever since early spring he has been expressing apprehension over what inflation is doing to the great St. Lawrence waterway project.

Danielian, who was lead spear carrier for the seaway from the early 1940's on, has now reached the stage of saying it will not pay for itself and will have to be operated at a deficit. These things he told a Capital audience Wednesday.

Directly opposed in views is Lewis G. Castle, Administrator of the Seaway Development Corporation. His prime job, along with Canadian counterpart organization, now is to set tolls. And Castle breathes optimism. Despite the fact that the estimated annual costs of operating and amortizing the seaway have skyrocketed from $15 million (a 1953 figure) to $28 million over a 50-year period, Castle insists user tolls will still cope with everything.

Well, as the nurse sang in South Pacific, Castle could be a cockeyed optimist. To be of any value, the seaway must be used. There's no sentimental value attached to it, no waving flag which commands business to employ this new transportation alley. The seaway is just another cold-blooded dollars-and-sense proposition. Potential users, who advise and counsel with Danielian, are saying they'll go right on doing what they've done before if toll rates are set too high.

There's sound ground behind their argument. Why should they be asked, much less required, to underwrite inflation and the mistaken estimates of both the Seaway Development Corp. and the Corps of Army Engineers?

It can also be reasoned fairly that there should be no tolls at all. We taxpayers underwrite vast improvements on the inland waterways (notably on the Ohio River and upper Mississippi) for reasons of the general welfare and national defense. Millions are allotted for dredging the Delaware above Philadelphia, too.

The international passages at the Soo, the Cape Cod Canal, and between Seattle and Vancouver—all these are operated as free facilities. Is not the seaway a greater defense asset than all these?

Of course it will be. But we do not ask that tolls be abolished. It's just that they must be set at the level which encourages the greatest number of users and still be fair to other modes of transportation. And, if this means a partial Government subsidy, then what of it?

The railroads and east-coast ports will scream; let them. There are satisfactory ways of settling this thing, such as extending the seaway's amortization period beyond the 50-year deadline. There might also be a moratorium on tolls for the first few years until the operation shakes down.

In any case, there must be a decision on toll policy soon. Shipping companies have their plans for new vessels pegged on tolls. Cities are holding dock projects in abeyance until action is taken. So are industries who hope to locate on the Great Lakes standing by.

No one can possible justify spending hundreds of millions for a facility that won't be used. There is a limit to what can be placed on the users' shoulders, and that surmounts any so-called moral obligation to make the seaway self-liquidating.

Pay TV Trials Should Await Approval by Congress

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a letter which I forwarded to Federal Communications Commission Chairman John C. Doerfer on July 8, 1957, urging that the Commission refrain from conducting proposed field demonstrations of subscription television unless express approval is first obtained from Congress. The text of the letter follows:

JULY 8, 1957.

Hon. JOHN C. DOERFER,
Chairman, Federal Communications Commission, Washington, D. C.

DEAR MR. DOERFER: I have been following with great interest and some concern the progress of the Commission's current proceedings in docket No. 11279, looking to the introduction of subscription television. Although more effective use of television in the service of all the people is a worthy purpose, it is imperative that no expedient be adopted that will impair the traditionally free television system authorized by Congress.

Since the television spectrum is a limited natural resource belonging to all the people, the interest of the public in its exploitation must always be paramount. Now the Commission contemplates diversion of a portion of the spectrum frequencies hitherto devoted to free television to the service of television for a price. If it were reasonably clear that, as its proponents claim, subscription television would supply new financial resources and supplemental programming to support the present system, and that it would not withdraw broadcasting stations and spectrum frequencies from their present service in television (as might be the case if the new service were limited to newly constructed stations and unused channels), the proposed experiments would merit wholehearted support.

Present indications, however, militate against the achievement of these goals and give rise to the danger that improvident experimentation with subscription television may permanently frustrate existing national objectives for a nationwide and competitive free television service.

First, as the recent report of the House Antitrust Subcommittee found, critical television station shortage already contributes to the obstruction of these national objectives. The Commission itself has stressed the time-consuming character of allocations problems. These problems have not to date been solved. Second, restrictive industry practices leading to concentration, also noted by the Antitrust Subcommittee, remain to be corrected. Third, the Commission has not yet received the report of its own network study group with respect to television industry problems.

Introduction of subscription television, even on an experimental basis, before these problems are solved, must not only further delay their solution, but may bring in its train a number of disastrous consequences. Stations to which the television audience is accustomed to turn may be blacked out for those who cannot or do not wish to pay, thereby impairing the utility of viewer-owned receiving equipment; the best existing programs that the public is accustomed to receive without charge may be siphoned off; the trend, noted by the Antitrust Subcommittee, toward the monopolization of outstanding talent may be accelerated; the television audience may be divided along economic lines; and a method of broadcasting will be inaugurated, having such an unparalleled builtin profit potential that it may drive free network television as we know it from the airwaves.

These dangers, of which the Commission is well aware, contain such a grave threat to the public interest in television that no action authorizing even the experimental diversion of television frequencies to the use of subscription television should be taken without the express approval of Congress.

Fundamental questions of law and of public administration combine to dictate this result. In the first place, the communications act does not, of course, expressly authorize pay television. Rather, an underlying purpose of the act is regulation that will make communications systems available, so far as possible, to all the people. The expedient under consideration by the Commission would not only divide the public into economic classes with reference to their eligibility to enjoy the benefits derived from exploitation of a public resource, it would introduce a method of spectrum utilization for which Congress has provided no clue of approval nor any framework of regulation.

The perplexity of the problem as to the Commission's authority under existing law to authorize and regulate subscription television is highlighted in the Commission's Notice of Proposed Rulemaking of February 10, 1955, and in its Notice of Further Proceedings of May 23, 1957. In the earlier document, the Commission propounded the following questions of law:

"A. Whether the Commission has the authority under the Communications Act of 1934, as amended, to authorize and regulate subscription television operations.

"B. Whether subscription television constitutes broadcasting within the meaning of section 3 (o) of the Communications Act of 1934, as amended; and if it is not broadcasting whether subscription television constitutes a common carrier or other type of service, and whether the Commission has authority to permit subscription television to employ channels assigned to television broadcasting.

"C. If, under the Communications Act of 1934, as amended, the Commission does not have the authority to authorize and regulate subscription television, what amendments to the act would be required in order to permit the Commission to authorize and regulate such a service?

"D. What rules and regulations of the Commission would have to be amended in order to permit the Commission to authorize and regulate subscription television operations?"

In reply the Commission received many briefs and statements of law, but these appear to have left the Commission uncertain as to the answers to a number of important questions. Thus, in addressing the NARTB convention in April 1957, former Chairman McConnaughey stated:

"We have difficulty in knowing just what it (subscription television) is; it's not quite a common carrier, yet it has many attributes of a public utility."

In its Notice of Further Proceedings the Commission declared its inability at this stage of the proceedings to classify subscription television under the Communications Act or to say whether it is broadcasting or something else.

Predictably, subscription television will not take the form of a common-carrier operation. Such classification would be inconsistent with broadcaster responsibility for programing and with the avowed object of producing superior programs.

Existing law provides no basis for regulation of a non-common-carrier public utility. No such enterprise was within the contemplation of Congress when it passed the Communications Act. Classification of subscription television as a public utility other than a common carrier would thus require firsthand congressional consideration of such policy matters as rate and financing control and program responsibility.

These problems are not solved if subscription television is classified as broadcasting. The question then remains whether the Commission must permit subscription television to compete without limitation with existing broadcasting and, if so, whether this would stack the deck against the survival of the latter. A further question is whether the Commission's existing licensing authority alone is adequate to assure competition and program responsibility on the part of subscription television broadcasters. Past difficulties of the Commission in bringing network practices within the ambit of its regulatory influence, and the extensive litigation required to establish the authority of the Commission's chain broadcasting regulations are well remembered. Subscription television would subject added and more complex relationships to regulation under the Commission's already burdened licensing authority, namely, as the Commission has pointed out, relations between subscription program producers, distributors, community franchise holders, television stations, manufacturers, and distributors of encoding and decoding equipment, and the public.

In light of the complexities and basic departures from established practice inherent in the regulation of subscription television, the Commission's refusal prematurely to classify the proposed technique is prudent. The same cannot be said for the Commission's conclusion, stated in its notice of further proceedings that it does have the statutory authority to authorize the use of television broadcast frequencies for subscription television if it finds that it would be in the public interest to do so. The Commission states that it believes that this authority falls within the powers conferred on the Commission in the Communications Act for licensing the use of radio frequencies.

The statement of this far-reaching conclusion in the face of uncertainty as to the classification of subscription television under the act and without any indication as to why or how the Commission reached it it disturbing because the notice of further proceedings implies that the Commission is considering, or would under circumstances satisfactory to it, consider embarking upon widespread authorization of the use of subscription television without seeking express congressional approval.

For the Commission to make its authority to license frequencies the sole basis for authorizing so radical a departure from existing methods in television would be to stretch the licensing authority to its very limits, if not beyond them. Even if ultimately held to be legally sound, the Commission's conclusion would assuredly be subjected to judicial test. Avoidance of protracted litigation is thus an added reason for seeking congressional sanction of such proposals as the Commission ultimately determines to be in the public interest, rather than embarking on a course that is likely to be fraught with waste and delay. Clarification by Congress in advance will not only assure a more accurate reflection of the desires of the people, but will also go far to avoid costly, time-consuming litigation and possibly corrective legislation.

These considerations apply as fully to experiments like the field demonstrations projected by the Commission as they do to full-scale nationwide authorization of subscription television operations. Such experiments involve the dilemma that if the trial is conducted on too narrow a basis it provides no information of value as to the ultimate effects of the method on trial, whereas if the demonstration is conducted on a basis broad enough to be meaningful, investments are made and interests tend to jell so that it becomes well nigh impossible to reverse the forces that have been set in motion.

Examples of such nonreversability are readily found in the history of television. In its 1941 report on chain broadcasting, for instance, the Commission stated that it would oppose network ownership of stations if it were deciding the matter ab initio. More graphic and more apt is the experience of the Commission in attempting to remedy its 1952 error in authorizing UHF broadcasting on a basis which permitted intermixture with VHF stations having established receiver-set circulation. Over the past 5 years, the Commission's concern with this problem has not provided an effective solution, and UHF remains on the critical list—with the Nation's hopes for a truly nationwide and competitive television system hanging in the balance.

The Commission has expressed full awareness of the dilemma involved in the proposed demonstrations, but states that it may be possible to avoid the objectionable results of either extreme. It is entirely proper for the Commission to pursue this happy mean, but it is necessary to recognize that experimentation on any meaningful scale will inevitably create interests and unleash pressures which, in comparable situations, the Commission has been unable to control. Such experimentation must therefore be regarded as potential commitment to a course from which there may be no return. The built-in profit potential of subscription television, arising from the fact that any charge for program reception would be many times greater than the present per set per program cost of program production, practically guarantees that an experiment that proves at all successful in terms of public acceptance will mean the withdrawal from free television of the channels and stations employed.

The potential effects of such withdrawal cannot be exaggerated. For example, one of the alternatives proposed in the Commission's Notice of Further Proceedings is that the demonstrations should be conducted in cities having four or more stations or services. On first impression this seems practical, but when it is recalled to what extent existing broadcasting depends upon the larger stations in the larger cities, the potential consequences of this proposal assume alarming significance. In 1955, 14 network-owned stations accounted for over 30 percent of all broadcast income before Federal tax of all television stations. The three network stations in New York City, alone, accounted for 15 percent of that income. The 9 network stations in the 3 cities (New York, Chicago, and Los Angeles) in which CBS, NBC, and ABC then each had a station accounted for 25 percent. Should experimental subscription television be inaugurated in one or more of these cities and prove successful, would not the networks become eager applicants for the privilege of using the new technique? Would the Commission have the capacity, or even a valid rationale, for denying their applications? Could networking as we know it survive the withdrawal of its most profitable stations? Such hypothetical examples could, of course, be multiplied.

In these circumstances, it is clear that the proposed demonstrations of subscription tlevision involve a calculated risk of such magnitude and with such vital implications for the future of television broadcasting that the decision whether or not to embark on them should be made by Congress and not by the Commission.

Sincerely yours,

EMANUEL CELLER,
Chairman.

H. R. 8609—Self-Expression for the Blind

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. BARING. Mr. Speaker, on July 9, 1957, I introduced a bill H. R. 8609 to protect the right of the blind to self-expression through organizations of the blind. That bill was inspired by a very real situation which is developing in certain areas throughout the country—a reluctance on the part of a number of agencies to recognize our blind as normal people, and to consult with them in matters which concern their welfare and affect their opportunities.

I would like at this time to insert in the RECORD a copy of a speech made by my administrative assistant which supports H. R. 8609. This speech was made on the occasion of the 17th annual convention of the National Federation of the Blind.

While Seward spoke as a Lion in behalf of Lionism, his remarks might well be made here, not only in behalf of my constituency, but in behalf of our entire blind population.

His speech follows:

TALK BY TIM SEWARD AT THE 17TH ANNUAL CONVENTION OF THE NATIONAL FEDERATION OF THE BLIND IN NEW ORLEANS, JULY 6, 1957

It is a very special privilege to be with you here in New Orleans on the occasion of the 17th annual convention of the National Federation of the Blind. I am beginning to feel like one of your official family, since I have

had the pleasure of attending two of your State conventions and this is the second national convention I have visited.

By way of introduction, I might say that I am here today as a Lion—not to bring you a message from Lions International and not to officially represent the Lions Clubs of Washington, D. C., or the Capitol Hill Lions Club, of which I am a member, although that club has asked me to express to you their every good wish for a successful convention and to congratulate you on your splendid work. I came simply as a Lion in behalf of lionism, because lionism lives in the hearts of men the world over. It is something within ourselves that is subject only to broad definition, as our great patriots have given such eloquent definition to freedom and democracy. Lionism is something intangible. It is cloaked in qualities, principles, and ideals. Among other things, lionism stands for selflessness, understanding, and cooperation.

On this premise, we as Lions salute you of the National Federation of the Blind for the great job you are doing. The philosophies you have developed have given vitally to your programs, and purpose and courage to your membership. You have come a long way since the inception of your organization. I know this is manifested at not only national level but also at both State and local levels as well. For the past several years, and until I recently moved to Washington to serve on the staff of Congressman BARING, I belonged to a Lions club in Las Vegas, Nev. I am proud to be here today with the delegation from that State.

There it was our privilege to grow up with Southern Nevada Sightless, Inc., the southern chapter of the Nevada Federation of the Blind. I remember about 3 years ago when our club held a car raffle to raise funds to purchase a piece of equipment for the blind workroom. The same year the blind of Nevada held their annual State convention in Las Vegas. That year the Lions Clubs made the convention arrangements for them. It was suggested that every member of our club invite a member of Southern Nevada Sightless to be his guest at the banquet. It was of course our banquet and the blind were our guests. Nevertheless at that time they were thankful to us.

Last year the blind held another State convention in Las Vegas, but this time all of the arrangements were made without any assistance from the Lions and the work in perparation for that convention was done by the blind themselves. It was a good convention, and the Lions were invited to the banquet as guests of the blind. Last year Southern Nevada Sightless conducted its own White Cane drive and the Lions lent only a helping hand. I believe these 2 years contrast the changing attitudes toward blindness, which is due to your own efforts, and it shows progress within your State organizations.

I know there are still many of us who do not understand this progress, because we do not understand the purpose and the objectives of the National Federation. I know there are many sighted people who want to help the blind, but they want to do it in their own way. The do not know the difference between working for the blind and working with the blind. They would be charitable rather than understanding. They would be kind rather than cooperative. They still fell that the blind should be content with the things they have learned to do with their hands in their sheltered, subsidized workshops. They do not realize that blind people are perfectly normal people who simply cannot see. They do not understand that blindness is merely a physical nuisance. They do not realize that like everyone else, the blind want to live normal and useful lives; to marry; to raise families; to own their own homes; and to vote for those who will represent them in government.

To accomplish this end the blind are willing to fight for their right of self-expression, as individuals, and through their organizations. Yes, you who were born without sight and you who have lost your sight later in life have these rights as your birthright, because you are just as much citizens of this country as we who can see. I am afraid some of the workers for the blind might not agree with that statement. You are entitled to both social and economic equality, and to this your organization is directed. From the beginning of Lions International, Lions Clubs all over the world have felt a particular closeness to their blind neighbors. Then it was no problem to recognize the blind, because the blind were quite in evidence in every city, town, and country place. The blind beggar was folklore. Writers of the day characterized the blind as a symbol of poverty. In truth, this concept of blindness was simply a reflection of false attitudes. It was a misconception.

There have always been those among us less fortunate than others, who could not provide for their own needs and who were forced to beg for a living. They were not necessarily blind. But because there were blind individuals who were dependent on charity, Lions have become used to considering the welfare of these individuals their dedicated work. For the past 25 years Lions International has set aside a day each year to pay tribute to the blind. That day is called White Cane Day. Today there are few blind people on the streets seeking charity, and there are fewer blind individuals appealing to service organizations for assistance. Does this mean, then, that the blind and the Lions should now go separate ways? What is the relationship today between the blind and the Lions?

To answer these questions we might review for a moment your own progress. We know that for years groups of blind people have worked together to improve their opportunities. They have learned to read and write Braille. They have learned to work with their hands. They have learned trades and they have learned professions. In many places clubs and various types of organizations were formed. Officers were elected and responsibilities were assigned to the membership. Then in 1940 the National Federation of the Blind was established as the only national organization of the blind in the United States. It worked with the individual blind groups and organizations, and one by one these organizations have become a part of the national federation. Today, as you all know, the blind organizations of 43 States are affiliated with the National Federation of the Blind. Today the membership has swelled to approximately 40,000 active members. This organization fairly represents the blind because this organization is the blind.

In purpose, I would say that it is principally devoted to the task of correcting the misconception of blindness, and further to the rehabilitation of all the blind people of our country. Its philosophies are well known to all of you because, you are the national federation. It believes that blind people are essentially normal people and that blindness in itself is not a mental or psychological handicap. As I said, it is merely a physical nuisance. The federation knows that legal, economic, and social discriminations based upon the false assumption that blind people are somehow different from sighted people must be removed, and equality of opportunity should be made available to the blind; that because of their personal experience with blindness, the blind themselves are best qualified to lead the way in solving their own problems; that the general public should be made aware of those problems and should be asked to participate in their solution. In other words, in its philosophy the federation is not dependent, nor is it independent. It is interdependent. Within the framework of these philosophies we have today active, energetic, and purposeful organizations in practically every State in the Union, working toward the same goals and living the same ideals.

You, as members of various State organizations, are a part of that great effort. Through your work the blind have now taken their place in every segment of our national economy. There are in this room today eminent doctors, lawyers, educators, craftsmen, businessmen, students, and, I expect, statesmen. I did not say politicians. Many of you do own your own homes. Many of you are married and have families. All of you, I am sure, are capable of answering the question often put to the person seated by you—does he want sugar in his coffee? Yes, you are the blind of today. You are the ones who will provide opportunity for the blind children of tomorrow. Through your efforts they will have the same chance to attend our schools and our colleges as their sighted neighbors. They will be taught braille as a matter of course—not as a special privilege. It is you to whom we will come should we lose our sight as you have, and it is you who have taught us in lionism and in our communities to live together and to work together. Yet there are many problems you must still face. There are still many blind people whose only job opportunities are in sheltered workshops, and there are even some of these organizations requiring their workers to publicly voice their praise of their benefactors for giving them employment opportunities as a special privilege. I am sure this is not the equality of opportunity you seek.

I realize there are still Lions and even Lions clubs that do not know the National Federation of the Blind and do not know what you are trying to accomplish. I know there are some of us in lionism who feel that the blind are infringing on our rights by conducting their own white-cane drives, because, as I have said, the Lions for the past 25 years have honored White Cane Day. The white cane is a symbol of blindness, and what more understanding and true spirit of lionism than to return the symbol of blindness back to the blind and thank God they are able to carry their own banner.

Again, does this mean that the Lions and the blind should go their separate ways? I believe not. I believe we are on the threshold of a new era. I believe that it is time we better understand our relationship with the blind and to do that we must better understand the blind. We should understand that you not only seek but are entitled to both social and economic equality; that you are normal people and as such you have the right of self-expression is individuals and through your organizations; that both Federal and State agencies should consult with your representatives in formulating programs that concern your welfare, or further your opportunities. Most certainly no official of such agencies should exert his influence against your right to belong to an organization of the blind. To this end I believe we can work together as a team, and lend a hand when it is needed. I believe we can look with pride on the progress you have made. I believe that it is far better that we learn the purposes and objectives of your organization and help you accomplish them rather than try to steer you on a different course. In short, I believe we should work with you rather than for you, and this I believe is true Lionism.

Indiana University Curator Organizes Oldsters

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 11, 1957

Mr. BRAY. Mr. Speaker, I have previously mentioned the work of Dr. Frank Beck, who has become such a leader in trying to bring about conditions which will allow our older people to lead full, useful lives. The Borrowed Time Club, which he founded in Bloomington, Ind., has become widely known and used as a model for similar clubs throughout the country. He has served on the Indiana State Commission on the Aging and Aged, and recently accepted the position of curator of the chapel at Indiana University. His energy and vigor are an inspiration to young and old alike, and his ideas make him the subject of frequent interviews and stories such as the following which appeared in the Indianapolis Sunday Star, on July 14, 1957:

INDIANA UNIVERSITY CURATOR ORGANIZES OLDSTERS

(By Hortense Myers)

BLOOMINGTON, IND.—One of the country's greatest resources is being wasted at incalculable cost to the entire American Nation, in the view of an 85-year-old "borrowed timer."

Dr. Frank O. Beck, who recently began a new career as a chapel curator at Indiana University after retirement from Northwestern University, said in an interview:

"In the 70 years I have been around universities, I never knew a day when experience had as little value as it has today."

The short, lively, retired educator, who also is a Methodist minister, is founder of the Borrowed Time Club. The organization of some 200 oldsters developed from a meeting of 10 persons in his home at Bloomington, a university town of some 25,000.

The curator of the new Beck Chapel at Indiana University noted that by 1975 the national population will include 21,000,000 persons past the customary retirement age of 65. At present, nearly 14,000,000 men and women in the United States are more than 65 years old.

Dr. Beck said of this growing segment of society:

"We are the only leisure group that is not parasitic. We don't live off society. We have the largest contribution of leisure for local projects. Very often we can do better work than we ever did before—just not as much of it."

But busy Dr. Beck mourned that society is not making much effort to use the contributions of the over-65 group.

"I talked with a group of Chinese and Japanese students here at the university and asked them what they noticed about our Nation. They said it was our failure to get value from the aged.

"I don't want ancestor worship, but we are failing to educate our youth to see the value of maturity. As it is now, maturity has little chance in this competitive world until you do retire. All the pressure is to live up to certain standards. You get to retirement age, when these pressures no longer count, and the tendency is to sidetrack us.

Yet we are people who have done things, and can do things. Lots of people in their 60's and 70's have made great contributions to society.

Dr. Beck believes society will have to correct its entire attitude toward the aged to be able to use their contributions. He noted also, that current economic trends make it difficult for many persons to acquire enough income to retire on.

Beck stressed that the Borrowed Time Club is not a do-gooder organization nor does it want anybody to do anything for it. Members hold a monthly birthday party, complete with cakes, candles, gifts and entertainment.

"Old folks like to celebrate birthdays," he said. "We think of life as having a certain number more years. We are a fellowship. We have no constitution, no password, no handshake. Anybody our age can come. And we have no dues, just a birthday collection."

A few lonely, retired persons have moved to Bloomington on the strength of stories about this group of past-70 men and women who help each other take another hitch on life beyond the Biblican threescore and ten years.

But moving to a strange community is one of the errors Dr. Beck believes is being made at present by many retired persons.

The lively oldster, smartly dressed with a flower in his buttonhole, snorted:

"Homes for the aged are somebody's hobby—they are no solution at all, but an ugly step in evolution. And all these books on how to retire to Arizona, how to retire to Florida—misleading, that's all."

But Dr. Beck admitted:

"As the situation is now, there are places that offer opportunities not available in most of our hometowns. As long as old people can't find a suitable place to live in their own communities, they will be attracted to places where everything is done for the aged.

"We can't cut the grass any more or shovel snow. We can't care for a big house. Transportation becomes a problem. The services society gives must be brought to us—churches, libraries, stores, nurses, doctors."

The U. N. Hails a Cab

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein the following editorial from the Christian Science Monitor, Boston, Mass., on Monday, July 15, 1957:

THE U. N. HAILS A CAB

The United Nations has decided to make use of the greatest latent publicity force in New York—the city's 20,000 taxi drivers. This should help it reach one of its destinations—full popular support—in considerably less time than if it did all the driving itself.

The world organization on the East River is not exactly putting the cabbies to work as salesmen. It is merely inviting them and their families to take the tour of the U. N. buildings this summer—free.

This friendly gesture will serve, we hope, to cement good relations between the Organization and the gentlemen who more often than not drive visitors to its door.

We have heard of hackies grumbling to fares about how much the U. N. was costing American taxpayers. Now, in addition to finding out that the First Avenue headquarters is a fascinating place where a lot of very important, useful work is being carried on, we will expect those few misinformed cabbies to discover that the average American is assessed less than a good taxi tip to pay for his annual share of U. N. costs. About a dime, to be exact.

Overtime Ban Pinches Workers' Budgets; More Cutbacks Likely; Congressman Doyle Asks Air Force Secretary Why Navaho Missile Contract Canceled and Asks for Other Workload as a Necessity Against Community Chaos

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 2, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore so to do, I present the test of a very important and timely and significant article appearing in the Wall Street Journal, Monday, July 15, 1957, by one of the feature staff reporters of said valued publication.

Treating as it does especially about the matter of the aircraft industry in the Los Angeles area, and because it especially mentions the fact of the very recent cancellation of the Navaho missile project centered at the great North American plant at Downey, Calif., I feel it especially timely for me to present the text of two telegrams just received by me in connection with this cancellation several days ago by the Air Force.

The telegrams follow:

DOWNEY CHAMBER OF COMMERCE,
Downey, Calif., July 13, 1957.

Congressman CLYDE DOYLE,
Congressional Office Building,
Washington, D. C.:

The economic impact on North American Aviation Navaho Missile decision and related subcontractual cancellations by Air Force severe blow to community of Downey and surrounding areas. Urge Air Force Secretary Douglas' recommendations and $500 million investment in Navaho Missile be reevaluated from national defense and economic viewpoint.

DAN D. MACKENZIE,
President.
EDWARD W. KOEHLER,
Executive Secretary.

CITY OF DOWNEY,
Downey, Calif., July 12, 1957.

Congressman CLYDE DOYLE,
Congressional Office Building,
Washington, D. C.

DEAR CONGRESSMAN DOYLE: We have been notified that the missile contract awarded to North American Aviation Co., Downey Branch, known as Navaho, is being cancelled out by Defense Department due to lack of funds. This will cause approximately 11,000 workers to be relieved of employment resulting in great economic stress to this community. For a city of 90,000 to have 11,000 unemployed would create economic chaos. I appreciate your assistance and any help that you can give to prevent this catastrophe. With best personal regards.

HOLLIS M. PEAVY, *Mayor.*

Mr. Speaker, I also herewith present the text of a letter by me dated July 15, 1957, to the Secretary of the Air Force in connection with this Navaho missile contract cancellation and its resulting chaos as identified by the honorable mayor of the important city of Downey in the great 23d Congressional District of California.

The letter follows:

JULY 15, 1957.

Hon. JAMES H. DOUGLAS,
Secretary of the Air Force,
Department of the Air Force,
Washington, D. C.

MY DEAR MR. SECRETARY: Here are copies of two very, very important telegrams received by me as Representative in Congress of the great 23d District, wherein the important city of Downey, Los Angeles County, Calif., is located. Downey is also the location of the North American Aviation Navaho missile project, about which these telegrams are concerned. These notify me of the cancellation by the Air Force of the Navaho missile project and subsequent to receiving same I talked with the mayor of the city of Downey, Calif., and he informed me he believed the notive of cancellation was a great surprise.

I am now immediately undertaking to speak with you directly so that I may transmit to the officials of the city of Downey and the Downey Chamber of Commerce the fact I have spoken directly with you.

Realizing that you also comprehend something of the economic and total shock to the community and area—and the thousands of families, both adult and children, which this cancellation notice has already caused and will continue to increasingly cause, I solicit from you at the earliest possible moment (in duplicate, please), a comprehensive, clear-cut statement which I will immediately furnish to the community of Downey in order that you will be telling them the whys and wherefores of the cancellation of the Navaho missile project which it is now believed will throw out of employment almost immediately about 11,000 North American workers at the Downey plant alone (to say nothing of the resulting unemployment to several thousand other employees of auxiliary plants or subcontractors, etc.).

You will note from copy of telegram from the mayor of the city of Downey, amongst other things, he says, "For a city of 90,000 to have 11,000 unemployed would create economic chaos."

And now, Mr. Secretary, isn't there some reasonable basis of considered review of this decision on account of possible later discovered material factors which were not presented to your attention when this cancellation order was made? Or, Mr. Secretary, if such is not the case and that you presently continue to feel it is imperative and in the best interests of our national defense that the Navaho missile contract order with North American continue to be in a canceled status, isn't there some necessary and reasonable workload which can be immediately assigned to North American at Downey so that these appreximately 11,000 present employees of North American at the Downey plant (as well as the several other thousands of auxiliary plants) can be stabilized in their employment necessities?

And I know, Mr. Secretary, that you and your distinguished associates realize that for every North American employee presently about to lose his or her employment with North American, there are corresponding dependent families of adults and also minor children. This 11,000 unemployed then means 40 to 50 thousand dependents necessarily in a state of economic uncertainty and insecurity which logically results in a terrifically destructive and hazardous attitude and circumstance surrounding each of the families concerned; surrounding the total community and geographical area, including the merchants of all necessities of life, and conveniences also.

For these reasons, and all the other reasons, which I am sure you must take into consideration in making such major decisions of policy as you had to make in the Navaho cancellation, I earnestly solicit your earliest possible statement as above requested.

I have the honor to be
Sincerely yours,

CLYDE DOYLE,
Member of Congress.

This Navaho missile, Mr. Speaker, I am informed has already consumed more than $500 million in expense and was designed to fly about 1,700 miles an hour. No doubt the contracting manufacturer had reason to believe, until the last several days, that the plant would receive another authorization of over $100 million on this contract which had already used about $700 million, I am informed. Thus it is that our Defense Department finds it necessary, expedient, and in the best interests of national defense, in their judgment, to make such radical changes in projects on account of the rapidity with which technical development produces radical changes.

This article by Mr. Bush in the Wall Street Journal, together with the cancellation of the Navaho missile contract in one of the great aircraft industry manufacturing centers of our Nation, to wit, Downey, Calif., again demonstrated how intimately the entire family life of American workers, in urban areas such as Los Angeles County, is increasingly dependent upon what happens in the field of our national defense manufacturing requirements, policies, and technological improvements and changes.

My letter to the Air Force Secretary, Mr. Speaker, but briefly sets forth some of my natural concern. I am sure that you and all of my other distinguished colleagues likewise comprehend the economic shock which definitely results in the 11,000 American workers' homes and families who will forthwith have no immediate source of income; to say nothing of the several other thousand employees in the related aircraft industry in that immediate vicinity who held gainful employment in that aircraft industry as result of the basic, prime contract between the Air Force and North American.

Would not it be an all-round magnificently sound assurance of much less such chaos in American industry if there could be agreed to and rigidly observed by the nations of the world a safe and sound disarmament policy which would logically result in more of the wealth of our Nation and the nations of the world being safely channeled into peacetime production and peacetime programs of daily life? Mr. Speaker, no doubt many other millions of people in our beloved Nation also daily pray and hope that out of the disarmament conference now in being in Paris there will come an agreed disarmament policy which will be safe and sound and likewise resultant in a defense budget which will not necessarily require such a huge portion of our total national budget each year. Believing as I do in an always present national strength and ability to resist any totalitarian aggressor, I nevertheless have my faith fixed toward a recognition of the soundness and the commonsense and the necessity too of their being agreed to and put into practical effect an international arms program which will also accomplish some of my hopes and prayers herein set forth; looking to the preservation of mankind and against the day of possible destruction of mankind by man himself.

The article follows:

OVERTIME BAN PINCHES WORKERS' BUDGETS; MORE CUTBACKS LIKELY—ENGINEER DELAYS BUYING RUGS, AIR COOLER; AUTO DEALER COMPLAINS OF A "BLIGHT"—LIVING ON A 40-HOUR CHECK

(By Thomas W. Bush)

LOS ANGELES.—Mrs. Al Ignatowski, wife of a Lockheed Aircraft Corp. engineer, only a short time ago was shopping for carpeting for the living room and dining room of the family's tract home in nearby Canoga Park.

Mr. Ignatowski was pricing a small air conditioner for the front room.

Then Lockheed handed Al some bad news. In two steps the company cut his work from 45 hours to 40 hours, ending a 3-year stretch of $25-a-week overtime pay. The cuts reduced engineer Ignatowski's weekly take-home check to $128.

PURCHASE PLANS DELAYED

"Our carpets and air conditioner were pushed way into the future," says Al, a veteran of 9 years with the big airframe maker.

Thousands of aircraft workers throughout southern California are giving their budgets the same hard scrutiny. They and the communities in which they trade are beginning to feel the impact of a recent Defense Department order chopping off overtime in military airplane building plants.

And the present belt-tightening is but a shadow of things to come. Aircraft industry officials expect a flurry of order cancellations, resulting in some unemployment and further reductions in workers' take-home pay. The Air Force last week canceled development of North American Aviation's Navaho intercontinental guided missile, a move which the company says will idle 10,000 workers. Overtime trimming and the prospect of more order cuts results from pressures on the Defense Department to pare its spending; the Air Force, largest of the military spenders, has been ordered to knock $1 billion to $1.2 billion out of its 1958 spending plans. Overtime cutbacks and the Navaho cancellation will save only a fraction of the spending that must be eliminated.

MORE COMPETITION FORESEEN

So far the main impact of the aircraft slowdown has been felt in southern California; the Navaho cancellation will hit the same area, since most of the work on the faster-than-sound missile was centered at North American's Downey, Calif., plant. Overtime has been reduced somewhat at some aircraft plants in the Southwest and East, but workers and the merchants they buy from haven't felt as great a pinch.

The slowdown also is expected to sharpen aircraft industry competition—with some big concerns bidding against smaller ones for subcontracting jobs—and stiffen union demands for higher pay. Already some union officials have said they'll bargain for pay hikes to make 40-hour pay envelopes as fat as the old overtime checks.

Overtime reductions and small cutbacks in employment so far this year have reduced earnings of southern California's 278,000 aircraft workers by an estimated $1.5 million to $2 million a week. Although total aircraft employment in this plane-producing

corner of the country is considerably higher than a year ago, the latest statistics available show May employment down about 1,000 from April. These figures, of course, don't take into account the Defense Department overtime order or the Navaho cancellation.

SAW HANDWRITING ON WALL

Some companies had started to trim work schedules before the order to end overtime. "We saw the handwriting on the wall in January," says D. M. Wilder, Lockheed's director of industrial relations. Lockheed, which employs 33,500 persons locally, estimates that its overtime cuts affected 10,000 to 11,000 persons who, Mr. Wilder says, "are getting an average of $25 per week less than they were before."

Convair division of General Dynamics Corp. reports that $366,000 has been lopped off its weekly payroll at a San Diego plant as a result of the overtime cut.

Jack Hurst, president of United Auto Workers, Local 887, says about half the union's 8,000 members in North American Aviation's Los Angeles airframe division lost varying amounts of overtime before and after the Government cut.

Douglas Aircraft also wes seriously affected, according to union sources. "A majority of our 14,000 members were making between $24 and $60 a week overtime," says Robert E. Roberts, president of the International Association of Machinists, District Lodge 720.

Shrunken pay checks are being pushed through the pay windows of smaller companies as well as the big ones.

"We've cut out all overtime except what's vitally essential," says an official of Ryan Aeronautical Co. near San Diego. "Before the cut we were working 25 percent of our 8,075 work force an average of about 10 hours a week overtime." These 2,000 workers draw about $92 a week for 40 hours; the 10 hours overtime previously added about $37 to their week's wages.

"The overtime cuts have been serious, because many of our people had been working overtime for so long they took it for granted and budgeted to include their expanded pay checks," says Machinist official Roberts. "We have been trying to get our members to budget for 40 hours' income a week," adds Mr. Hurst, "But they won't do it, especially if they can buy a TV set for nothing down except their promises to pay."

Individual workers are quite specific about the changes wrought by reduced overtime.

"I got cut 11½ hours a week," says Bob Anderson, a Douglas Aircraft jig and fixture builder. "It's costing me roughly $2,000 a years." Mr. Anderson says he's had to dig into savings to pay for a second car for which he'd signed a sales contract before his personal budget was trimmed. And now he's decided to get rid of one of the autos as he "can't afford both."

Leo Randall, another Douglas machinist, says, "I paid income taxes on $7,800 last year; this year I'll hit about $5,600."

In small communities clustered around the Los Angeles area aircraft plants retail merchants already are feeling the overtime cutbacks.

CUTTING THE GROCERY BILLS

"Our volume is off about 5 percent from 3 or 4 weeks ago," notes Donald McCleary, manager of Toluca-Mart, a supermarket near Burbank. "Since they can control their food budget, food is about the first thing they cut down on."

"Young fellows in my department who were hired as much as 3 years ago never knew what it's like to live on a 40-hour pay check," explains Engineer Ignatowski. "They made time purchases that takes as much as 40 percent of their income even though it's income over which they have no control. One of the fellows who rides to work with me has set up a rigid food budget. He eats eggs for breakfast 3 days a week, and 18-cent-a-box cereals the other days. Instead of steaks he has spaghetti and meat balls for dinner. His entertainment budget is wiped out."

There's only so much that can be cut out of the grocery budget, though, so many other types of merchants report sales declines that trace directly to the Defense Department order.

"There's a blight here; sales are on a level with a year ago, but a month ago they were a third ahead," states Ray Vane as he looks across the deserted showroom of his Inglewood Chrysler-Plymouth agency. Inglewood, hemmed in by North American, Douglas, and Northrop Aviation, is especially sensitive to aircraft workers' reduced buying power.

Mr. Vane says he hasn't yet had trouble with repossessions or collections, but he's taking steps to avoid credit troubles. "Our service department is going on a cash basis instead of opening new charge accounts." he says. The decline in new car sales has been accompanied by a 30 percent increase in service and repair business at Mr. Vane's garage. This means "people are fixing their old cars instead of trading them in on later or new models," he reasons.

BUY BONGOS, NOT RADIOS

"I hadn't had a red month in so long I could hardly remember what it feels like, but June was the worst month I've had in 2 years," says an official of another Inglewood auto dealership, Harvey Smith Oldsmobile. "Business was off a good 40 percent to 45 percent from earlier this year."

Youthful Mike Gallicchio, a partner in Mike 'n' Bob's record shop in Inglewood, notes, "We're getting the same number of people in here, but those who were spending $10 to $15 at a time are now spending $5 and $6. And those who spent $5 to $6 before the overtime cutbacks are now spending only a dollar or two. A lot of people tell us that it's really hurt them to live on 40-hour-a-week pay instead of 52 hours. We haven't sold nearly as many radios this season as we did last year at this time. People are buying bongo drums—a $10 item. But you have to sell three bongos to make up for one radio."

"Collections are anywhere from a week to 30 days slow, and sales are off about 10 percent from last year," says C. A. Ross, mustached manager of Joy's, a gift and jewelry store on Inglewood's Market Street. "People were buying gifts, expecting to pay for them out of their overtime earnings. Now that they're falling back on their regular paychecks, they come in and browse, but they don't buy."

Sales at A. B. & S. sporting goods in Inglewood are down 15 percent to 20 percent from a year ago, complains Albert W. Bogen, a partner. "This is a luxury business. If people don't have extra money they don't buy from us."

But elimination of overtime hasn't greatly affected collection and loan activities, according to lenders. A Bank of America official who handles small loans in the bank's Inglewood office reports a few requests to allow borrowers more time to pay back their obligations. However, loan delinquencies are unchanged from a year ago.

Further pay check shrinkage due to stretchouts or cancellations of contracts would bite deeper into the southern California economy. This would be especially true if cutbacks are extensive enough to affect the area's many smaller concerns who subcontract defense equipment. Subcontractors also fear new competitors.

BIDS FROM BIG FIRMS

"What we're concerned with is the stretchout, which may cause big firms to compete with small companies for subcontracting jobs," says John Marschalk, executive director of the Strategic Industries Association, a trade group representing 112 defense subcontractors. "In the past 48 hours 2 fairly large firms have bid on small subcontracts and have succeeded in taking them away from the small outfits."

The president of a Los Angeles company that produces components for the aircraft industry adds: "By the end of the year I expect our aircraft division to be closed out; I see no new work coming up for it."

To bolster individuals' earnings, unions are planning to ask for pay increases aimed at making up for lost overtime pay.

"Very likely we'll bargain for salary increases next spring to offset the overtime cuts," says Ritchie Payne, business representative for the aircraft chapter, an engineers' union representing about a third of Lockheed's 3,400 engineers in the California division at Burbank.

A spokesman for Machinist Lodge 727, which represents 16,000 Lockheed workers, adds, "We're going to gear our sights to higher wages to offset these cutbacks." The pattern of demands won't be set until fall, but "it'll be a sizable chunk," the spokesman adds.

The Sudeten Germans—The Policy of Illusions

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. BURDICK. Mr. Speaker, as I have done in the past, I wish again to insert in the RECORD an article on the Sudeten Germans sent to me by Dr. Walter Becher, of Munich, Germany, who is the secretary general of the Sudeten-German Council, and member of the Bararian Landtag.

The Sudeten Germans settled uninhabited border regions of Bohemia and Moravia more than 700 years ago. Here they founded cities and industries, contributed much to the cultural development of the countries, and for centuries lived in peace and cooperation with the Czech people. In the Czechoslovak Republic after 1918, the right of self-determination was given to the Czechs, but was denied to the Sudeten Germans, the Slovaks, the Hungarians, the Carpate-Ukrainians and the Poles, who made up the majority of the inhabitants.

Since Dr. Benes, the leftwing leader, made a pact with the U. S. S. R. in 1935, the Sudeten Germans have suffered oppression and misery; and since 1945 all adversaries of communism in Czechoslovakia have been suppressed, and the Hungarians and the 3.3 million Sudeten Germans, who constituted the main anti-Communist force in Bohemia and Moravia were dispossessed and expelled.

The Sudeten Germans now want to return to their homeland in freedom, and to live there under the full right of self-determination as neighbors of the Czech people. They want to contribute to the liberation of the enslaved nations in the East, to the Czech people, and to the fight for survival of the free world.

The article follows:

THE POLICY OF ILLUSIONS AND THE POLICY OF LIBERATION

THE POLICY OF ILLUSIONS

The West's policy of illusions is of an old date. It started with the recognition of the

Soviet Union before World War II, went high in the West's wartime cooperation with the Communists, and found its temporary peak in the secret agreements of Teheran, Yalta, and Potsdam. In these agreements, the Western statesmen, in a naivity and childish-like trust toward the Communists, gave to the Communists the present positions of power. The illusions continued later through China, where Chiang Kai-shek was forced to accept Communists into his government because they were just "agrarian reformers," until China was completely lost, and it continued through Korea, where Americans were forced to fight with tied hands.

The policy of illusions experienced a decline in 1951 with the return of Douglas MacArthur and later with McCarthy's and congressional actions and revelations. This decline of the policy of illusions lasted until 1954 or until 1955, until the Geneva Conference.

At present, we are living in a period of a very flower of this policy of illusions again. This policy considers as its greatest wisdom to maintain that there is a genuine, real movement among the Communists in the East towards a "de-Stalinization" and liberalization of communism, toward "national communism," Titoism and Gomulkaism. This policy of illusions neglects willfully the fact that the international Communists are deceivers and that they can pretend anything, it neglects the fact that the real power of communism is the secret State security, the "invisible government" and that therefore changes on the surface are mere changes of puppets directed from behind the scene, which can perform any play necessary to fool the West. The policy of illusions neglects also grossly the Hungarian revolution which clearly proved that any Gomulkaism or national communism is a phony nonsense—that the subjugated peoples want a full, absolute freedom and that the road to this freedom does not lead through Tito and Gomulka.

PRESENT ILLUSIONS ABOUT GOMULKA

This policy of illusions sees the great example of the development toward de-Stalinized national communism, independent from Moscow, in Gomulka's Poland.

We have been told that Gomulka represents the yearnings of the Polish people, that he is a Polish statesman and popular hero, that the Polish masses are standing behind him. We are being told—and I have here in mind also the German press—that the Polish elections of January 1957 were held in a free atmosphere, that, as the distorted expression says it, "they were free within their scope" (Sueddeutsche Zeitung). We are being urgently taught that the West must give the Poles economic assistance in order that Poland be kept on its free way or even go on it forward. We are, at the same time, being admonished that this economic help must be made in such a manner that it does not endanger the relations between Soviet Russia and Poland. We are being taught, indeed, that we must strengthen the Polish Communist economy in the same way as the Soviet-Polish friendship.

We are being taught that in order to strengthen the democratization process in Poland, Germany should give up its eastern territories and recognize the Oder-Neisse line and set up diplomatic relations with that Communist Gomulka.

Parallel to this, we have been taught—by the German press too—that it is necessary to recognize Red China for membership in the United Nations, to give Formosa to the Red Chinese in order to win them over from the Soviet Union.

We are being taught the illusion that Poland can detach itself from Soviet Russia, though everybody knows that the Red army in Poland can direct and stop everything as it did in Hungary. We are being taught that we are giving aid to the Polish people (Sueddeutsche Zeitung) while we are giving it in reality to the Communist regime.

All these opinions are of the same kind, all these suggestions—economic help to Poland, as well as the recognition of the Oder-Neisse line, and the cession of Formosa—are of the same stock.

ILLUSIONS ARE COSTLY

As far as decent men are concerned, on whom this policy of illusions is being enforced, all these opinions have one support and ground. It comes from the illusion that we—Europeans and Americans and all free peoples—can preserve our freedom and, indeed, even liberate those presently enslaved by measures based on such illusions, without any sacrifice, very comfortably, in a lazy manner, and even with profit in trading with the Reds.

These comfortable illusions, we are being taught presently, are similar to those of World War II. The way in which we are being told that the Polish Communists want independence from Moscow, that they are de-Stalinized, national Communists—it is the same way in which we had been taught that the Chinese Communists were mere "agrarian reformers." These illusions can lead only to the final victory of communism and to our destruction. These comfortable illusions are in reality treasonable illusions. The policy of illusions is the policy of treason.

We have found this already about the past. It seems sure, that we again will discover in the future—in the case we still remain free in the future—that again treason was at work, that it is presently at work.

In the future, we will have to pay perhaps by our lives for this treason; by millions of lives. At present, we pay by our taxes. As long as communism and the threat of war exist, we will continue to do so at an ever increasing rate. There is no solution for this, as long as we keep on the road of the policy of illusions, because illusions must always be paid for.

Farmers Are Losing Their Pants With the Price of Eggs

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, "Vertical integration in poultry raising is a reason for present low prices of eggs," Roy Fletcher, of Dent, Minn., writes me. The Haugen Bros. of Argyle, Minn., say they received 19 cents for grade A eggs for a few weeks, and the highest price this year has been 25 cents. John L. Radniecki, of Trail, Minn., one of my old and dear friends, says, "The egg-producing farmers are losing their pants on the price of eggs this year. I hope Congress can do something about it."

This trend runs through most of the letters I receive, even those regarding other subjects. Under leave to extend my remarks, I request permission to insert the letter from Roy Fletcher.

The letter follows:

DENT, MINN., *July 13, 1957.*

Congresswoman COYA KNUTSON.

DEAR MADAM: The price of eggs at present is 21 cents per dozen for No. 1, and the average price is 18 or 19 cents. Thanks to vertical integration in poultry-raising. This deal where the commercial feed dealer furnishes the feed and the farmer is left holding the bag. I think that is the greatest threat to the family-type farm, especially the diversified farmer. We will continue to have a surplus of poultry and eggs and no price until that is remedied. I will send you a detailed report on what I think should be done at your request.

Sincerely,

ROY FLETCHER.

Seely-Brown on Connecticut Towns' Contribution to American Democracy

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. MAY. Mr. Speaker, I have asked for leave to extend my remarks today, and it has graciously been granted, so that I may insert in the RECORD a portion of a speech which was made the other day by my colleague, the Representative from the Second District of Connecticut [Mr. SEELY-BROWN.]

The occasion of the speech was the centennial celebration of a town in his district, the town of Scotland, which just 100 years ago was incorporated by the General Assembly of Connecticut as the 158th town in the State in order of establishment.

We have in Connecticut, as many Members who are somewhat familiar with our State perhaps know, a number of towns that are named for famous cities the world over, such as Washington, Berlin, New London, Lisbon, Manchester, Canton, Bethlehem, and even Brooklyn, but we have only two towns named for countries, unless we count the Promised Land of the Israelites, Canaan. Those two towns are Lebanon and Scotland.

It was Scotland, in Windham County—population in 1857, 720; population in 1957, about 600—that on July 12, 13, and 14 commemorated the centennial of its establishment as a town, and it was at the principal ceremonies on July 13 that the gentleman from Connecticut, Congressman SEELY-BROWN was a speaker. All honor to Scotland on its hundredth birthday. But it was not that event alone which caused me to ask for permission to extend my remarks, but also and in particular the significance of the remarks made on that occasion by my colleague, and which remarks I ask to be presented herewith:

REMARKS BY CONGRESSMAN SEELY-BROWN

Isaac Magoon, Scotland's first settler and who gave it its name would be proud if he could be here today, on the 100th anniversary of its incorporation as a town, because throughout Scotland's century as a municipal entity and for 157 years before that it has continued to be, as it was first intended, a community where every resident could enjoy to the fullest, life, liberty, and the pursuit of happiness.

Let other towns boast, if they wish to do so, of the great growth of population that has been theirs through their history,

or let them rejoice in the flourishing industries, or the fine public buildings, or the great institutions which are inside their borders, but I think that every person who counts Scotland his home can be happy that here is a community that has enjoyed progress that still does not mean drastic change, and the fact that Scotland's population is about the same today as it was in 1857 when the general assembly incorporated it as Connecticut's 158th town is a measure of the durable virtues that obviously are abundantly present in the people today as they were a century ago.

Years ago I selected Windham County as the spot I chose to call home for the rest of my life, and the place to live and to bring up my family, after an opportunity to see and to enjoy many other fine sections of our country. The early history of the towns of this county, yours and my own and all the other 13, always has had a particular fascination for me, and this has been true especially since I have had the opportunity to serve you in public office.

My own town of Pomfret had been settled only 14 years when Isaac Magoon established this settlement here within the town of Windham, and Pomfret had been incorporated as a town only 19 years before Scotland was organized as a parish in 1732, continuing as a part of Windham until it became a separate town of 1857. Others more scholarly than I, and better versed in local history than I, will review some of the illustrious facts from Scotland's past, but it is naturally of interest, not only to all who live nearby but to every passing traveler, that here in this town of Scotland General Rochambeau's army camped for a time, during the American Revolution, on its way to reinforce the hard-pressed Continental forces.

I think it is particularly interesting, too, in the light of present-day efforts to develop more and more employment opportunities here in eastern Connecticut that according to your own town records, manufacturing began here in 1706 when Josiah Palmer was given water rights on Wolf Pit Brook to "set up a mill, he building the same within 3 years and ditching and damming there as he thinks needful on the commons, not to damnify particular men's rights."

It often has been said of Connecticut that its greatest exports through the years have been men, men of character and ability, who gave their strength to build greatness in other parts of this country, and Scotland, of course, has had a share in this, both before 1857 and since then, but I would like to mention just one thing in which Scotland has played a typical part, not because of the works or the efforts of any one man, but because of the type of community that it is, a small town in Connecticut that glories in being small but independent.

What I am referring to is the part that Scotland has played, and that of every other Connecticut town, in giving to the United States of America one of the most important devices of government that has helped to make our country the greatest in the world.

This was the introduction into the Constitutional Convention of 1787 of the "Connecticut compromise," which proposed that one body of the Congress was to represent the States, and the other was to be representative of the people, by districts. The body that represents the States, of course, is the Senate, and every State has two Senators and only two, whether it be Nevada, which has fewer people than the city of Hartford, or New York, which has a larger population than many of the sovereign countries of the world. The body that represents the people by districts is the House of Representatives.

This whole idea was taken from Connecticut, where the idea has been in successful operation for more than 2 centuries.

Here it is the Senate that represents the people by districts and it is the House of Representatives that represents the towns. The next time you hear some well-intentioned but poorly informed person urging a Connecticut constitutional convention so the "basis of representation" of the House of Representatives can be changed, you will be on sound ground if you will plead that the best that Connecticut has in its past and in its future, like the best that our country has in its past and in its future, so far as self-government is concerned, can be credited, in part at least, to the marvelous balance established in our Constitution, and which promotes freedom and progress at the same time.

I extend my sincere felicitations to every son and daughter of Scotland, including alike those who are here today and those who may be far away. While your centennial celebration is an event of greatest interest to your community and to your neighbors, I am sure that the true significance of this event will not be minimized by any person who is proud of Connecticut's great past and hopeful for a long and even greater future.

What Is Life Really Like in Red China?—Firsthand Report by GI Returnee—III

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third of five interviews conducted by U. S. News & World Report with American soldiers whom the Reds captured in Korea and persuaded to go to Communist China. The interview follows:

UNDER RED RULE YOU CAN EXIST BUT YOU CAN'T ENJOY YOURSELF

David Hawkins was taken prisoner at the end of November 1950, in the first big attack made by Chinese volunteers in the Korean war. In prison, the Chinese appointed him a mail clerk; and at the expiration of the deadline for return to the United States in January 1954, Hawkins became a resident of China.

The Chinese picked him as a prospective leader and sent him to Peiping University after 6 months of indoctrination. He spent 2 years in the Communist capital as a student and as an employe in truck-repair plants, then worked 6 months in Hankow, training the Chinese to run trucks. He returned to the United States in February 1957.

Hawkins grew up in Oklahoma City. He is remembered there as a boy of average intelligence who quit high school when he was 16 to enlist in the Army. He returned there after leaving China, now is employed in the pattern department of a metal-casting firm at Bethany, a suburb of Oklahoma City.

The following interview with Hawkins was recorded in Oklahoma City:

Question: "You spent quite a while in Peiping. Did you see a lot of Russians over there?"

Answer: "In Peiping, I guess they have close to 10,000 Russians—technicians, specialists, and their families."

Question: "Do they get along with the Chinese all right?"

Answer: "Well, the Russians are rather standoffish. From what I saw of them in the streets and in the cafes, they don't mix much with the Chinese. They keep more or less to themselves."

Question: "What's Peiping like? With all these technicians from Russia, are they building anything?"

Answer: "The city has been practically made over. All the streets have been widened, and they have built up around the outskirts—built new houses, factories, schools, colleges, set up new traffic regulations."

Question: "You mention traffic. Are the roads any good?"

Answer: "They are in the city. But so far as transportation by road—highways from one city to another—the highways are very poor. In fact, they hardly exist. Outside the city limits you can't travel for more than, I guess, 200 or 300 miles.

"For instance, from Peiping the farthest you can go is to Tientsin. From Tientsin to other cities, the road doesn't exist. You have to go by rail or fly."

Question: "Are there many cars in Peiping?"

Answer: "Quite a few. They are all owned by government organizations. There aren't any privately owned cars."

Question: "The private individual cannot buy a car?"

Answer: "Well, he could if he had the money. But the price is up in the thousands of dollars."

Question: "How about radios and TV sets and things like that?"

Answer: "There's no TV at all. Radios, we could get little sets for 50 or 60 dollars."

Question: "How is the housing in Peiping? Pretty good?"

Answer: "It's very crowded. One flat that I was in had eight people in a room that was not much bigger than an average American bathroom."

Question: "Do they have good plumbing?"

Answer: "Oh, in the cities it's adequate. They've cleaned up the old, antique plumbing in all the cities—like the sewer gutters in the street. They've done away with all that. In the countryside they still use outside toilets, but in the cities most houses and tenements are built with flush toilets, sinks, and tub showers."

Question: "Is Peiping the most modern city in Communist China?"

Answer: "Tientsin is more modern than Peiping. In Tientsin there used to be an international settlement—the French concession, the American concession, and so on—and they all built buildings that are European in style.

"Peiping is wealthier, though. There are a lot of new buildings. They are putting up new tenement houses, but separate family houses like we have don't exist—except, of course, away out in the countryside. There they are made of mud like an adobe house, with a thatched roof, or a clay roof."

Question: "Did you have heat in the winter?"

Answer: "In Peiping and Tientsin, they do. In Hankow—I worked in Hankow for 6 months—they don't."

TO KEEP WARM—GO TO BED

Question: "How did you keep warm during the winter?"

Answer: "When I got home from work I just went to bed. I had plenty of covers."

Question: "Can you travel around in China?"

Answer: "It is very much restricted. A foreigner—a westerner or a European or any foreigner in China—cannot travel outside the city limits without a visa. To go even a short distance—say from Peiping to Tientsin—you have to go to the Security Bureau and ask for a travel document; you have to tell them where you are going, who you are going to see, what business you are

doing there, and how long you are going to stay.

"Then, even if you get this travel document, when you get to the other city, you have to go and register at the nearest police station within 24 hours.

"The Chinese can travel from one city to the next without these documents, but they cannot move permanently from one place to another without permission."

Question: "Is permission to move granted to the Chinese?"

Answer: "The probabilities are very high that permission would be denied, especially if the person is going there alone. If he has a family—a wife there, or a place to go to—then perhaps he could get permission. But otherwise there is not much chance."

Question: "Is it easy to get a job in Communist China?"

Answer: "Not by asking for it, no. You see, everything that is run in China is run according to a plan. You don't walk up to a plant or a factory or any organization and ask for a job. You don't do it. If you don't belong to an organization, it's very difficult to get work. A fellow gets a job in a certain place and he is obliged to work in that place until the organization finds that perhaps he would be better fitted in another factory. For instance, if they open a new factory, he might be transferred to that factory. He won't be transferred just by going to the boss and asking for a transfer."

Question: "How did you get a job?"

Answer: "Actually, at the indoctrination center in Taiyuan I asked to be sent to a farm. Instead, they sent me to the university. And in the university, when I asked to be sent first to a driving job, they sent me to a repair factory in Peiping. Finally, after I asked the Chinese Red Cross to help me get transferred, I got this job in Hankow. I was a driving-and-repair instructor there."

Question: "Did you teach people to drive, or what?"

Answer: "I was mostly concerned with trucks—Soviet, Polish, Hungarian, and Rumanian trucks. I just taught the Chinese to drive them and to make repairs on them."

Question: "Are they good drivers?"

Answer: "You must understand that China is still backward. Most American high-school kids of 17 or 18 could have taught them as much as I could. Some of them learn to drive in the army. My job was to try to improve the Chinese method of driving so they wouldn't take a truck and just drive the wheels off it in 6 months, so it would have to be sent back to the factory for repair."

Question: "What was the pay?"

Answer: "Well, it depends on what grade you have. They have 1 to 8 grades. We were paid according to our grade—that is, according to our technical ability. And the Chinese Red Cross also gave me 50 extra Chinese dollars every month."

Question: "What did they pay at the first factory where you worked?"

Answer: "I was a mechanic in the engine-repair department and I didn't know too much about it, so the salary was only about 80 Chinese dollars a month. That included what I got from the Red Cross."

Question: "The Chinese didn't get that much? They didn't get any Red Cross money?"

Answer: "No. From the factory itself—for a third-grade worker, which I was—the Chinese would get about 45 to 50 Chinese dollars a month."

Question: "Did you get raises? How much did you make as a driving instructor?"

Answer: "I got more at that time. I had a quota of hauling to fulfill every month with my truck besides instructing. If you overfulfill the quota, then you are paid a bonus by your factory.

"Being that my driving ability was a bit higher than that of the Chinese, I was overfulfilling my quota and getting a bonus every month. So in that job I was getting about 170 to 180 Chinese dollars a month."

Question. "How much is that—how much in American money?"

Answer: "It would be about 85 to 90 dollars a month. The equivalent of the Chinese dollar is a little over half. A Chinese dollar is worth 52 cents."

Question: "How far did your money go? Could you afford to buy a suit once in a while?"

Answer: "Yes. And when I was working in Peiping I bought two suits of Air Force fatigues."

Question: "How much did you have to pay for them?"

Answer: "Thirty-four dollars and fifty cents a pair—that's Chinese dollars. An ordinary Chinese, of course, couldn't afford them. Like I say, I was paid more than the ordinary Chinese, so I could do it."

Question: "What does the ordinary Chinese wear?"

Answer: "He wears a very simple blue cotton uniform—all one color."

Question: "How about the women? How do they dress?"

Answer: "In 1956 they started to begin wearing dresses, blouses and stuff like that. Before, they wore the same clothes as the men."

Question: "How about the food? What was breakfast like?"

Answer: "I didn't eat any breakfast at all."

Question: "Why not?"

Answer: "Well, because the Chinese eat soupy rice. They have these preserved turnips, and I never could get accustomed to it, so I didn't eat breakfast at all. For dinner and supper during the weekdays I always ate at the factory. An average meal at the factory would cost you about 20 cents, in Chinese money."

Question: "What was this dinner like?"

Answer: "The main meal consisted of rice. Then you could have a side dish—some sort of food to go with your rice—fish or meat and vegetables, something along that line."

FOOD WAS ADEQUATE

Question: "How about the Chinese? Did they have enough to eat?"

Answer: "Well, as I say, I ate in the factory, and ate the same food as the ordinary Chinese worker ate. It was adequate.

"In our terms, we would not consider it adequate because we eat a very wide variety of meats and fish and everything like that. But the Chinese are by no means starving—their food is adequate. They subsist quite well on it.

"You would more than likely become very tired of Chinese food that is served in a factory, because they serve it in a very common way that is most suitable for the Chinese in the factory as a whole. They fix it only 1 or 2 ways. They vary their meat only 1 or 2 ways."

Question: "Were there vegetables with the meal?"

Answer: "Yes, they have peas, carrots, turnips, cabbage. Cabbage is eaten to a very great extent—potatoes not so much."

Question: "Did the food taste good? Did you like it?"

Answer: "Well, I got used to it eventually. I still preferred the western style of food, but I could eat the Chinese food. It tasted commonplace and quite flat."

Question: "What was it that made you want to leave China?"

Answer: "Well, of course, the way of life was a lot different from what I was used to. Insofar as material life was concerned, it was very inferior to what I was accustomed to in the States. The regimentation—I didn't like that at all. And what we consider personal freedoms are really hampered under their type of system.

"You can exist under such a system, but you can't live or enjoy yourself. But I was afraid of coming home. I figured that if I come home I stand to be sent to prison for 20 or 30 years, something like that. So I figured even though I'm not happy in China, I can make it if I have to."

Question: "In ordinary living over there, just day by day, how is it different from this country?"

Answer: "I missed my own type of food. You couldn't buy, for instance, hamburgers, hot dogs, or cokes, or anything like that. The commodities you wanted to buy—that most of us are accustomed to—just didn't exist."

Question: "Like what?"

Answer: "Good shoes—keeping up in the fashions so far as clothes are concerned—a wrist watch—things along that line. To put it into general terms, I missed the American way of life.

"You go to a movie, it's always a Chinese movie. You just get tired of talking Chinese all the time. Dances are conducted in a much different way than we conduct them. Life is very restricted—there is not any privacy."

Question: "No privacy at all?"

Answer: "It just doesn't exist. If you want to be alone, it is pretty difficult to be alone. If you meet a Chinese, even if he has known you for only 3 minutes, he will ask your name, your address, where you work, how much you get paid a month, how you were captured, where you fought—all different kinds of things like that which we consider very private or intimate questions."

Question. "Couldn't you tell him to mind his own business?"

Answer: "No. If you don't answer such questions, they think you have an ideological problem—that you're not following the party line."

Question: "Did you get used to their ways?"

Answer: "No; you feel you're not part of them. You feel like you're living in Oklahoma City filled with Eskimos, and you're the only Oklahoman there.

"There's no night life. Everything closes at 9:30 regardless of what day of the week it is. There's only certain places you can go. Everything is set. And then, there's the criticism meetings."

Question: "What are they like?"

Answer: "You have to bring out all different kinds of things—well, picture it like this:

"For instance, if you went with a girl on Saturday night, the next week you had to tell every place you went, what you did, perhaps how many times you kissed her, all different kinds of stuff like that, right down to the most minute details. If you can picture that, then you can picture a criticism meeting. At the university, they had them every week, on Friday.

"It takes some getting used to having no thoughts of your own. I mean, you're obliged to have your mind like an open book, no hidden thoughts or anything like that."

Question: "How did you feel when you started to come back to the United States?"

Answer: "All the things that I had missed before were right at my fingertips. In Hong Kong, I saw an American movie and the first 5 minutes I couldn't even understand it. I was all set to understand it spoken in Chinese, and when they started to speak in English, I couldn't understand it."

ALL HUSTLE IN THE UNITED STATES

Question: "And when you arrived in this country——"

Answer: "Well, I could buy clothes without having to have them tailored. I could go to a movie any time I wanted to. And there was a lot of talk about. Life itself

was all hustle and bustle with lots of places to go and enjoy yourself."

Question: "What did you buy?"

Answer: "Well, one thing—I bought myself a dog. I didn't have a dog in China."

Question: "Why not?"

Answer: "They killed all the dogs. They said they were running wild, spreading disease, and what not."

Question: "Do you consider yourself better off over here?"

Answer: "Yes. There are many things that you can't buy in China that are considered very ordinary, everyday things here—for instance, different styles of shirts, different styles of trousers, shoes, fingernail clippers, watches, cars, motorcycles, furnishings in your house, radios—everything."

Question: "You missed clothes and 'gadgets' while in China?"

Answer: "That was only part of it. You have to understand the part that the difference in systems played. The regimentation—the freedom that you have here that you don't have there.

"Like I say, here if you want to go to another city, you just jump into your car and go. But you don't over there. And here you don't have to attend criticism meetings. You don't have everybody else minding your business.

"You're not watched. In China, everywhere you go, they know where you go, what you did, and everything like that. Here you don't have to worry about everybody else poking their nose in your business or breaking into your house any time they get ready to."

Question: "Who could break into your house—the police?"

Answer: "Yes. Special service, the police, or even your local citizens committee—they have them in every neighborhood. If you beat your wife, the citizens committee can come in and turn you over to the authorities. If you don't keep your house as clean as they think you ought to, you can be turned in. You don't have that here."

Report by Congressman Elmer J. Holland, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. ROOSEVELT. Mr. Speaker, I am always pleased to read the newsletters which Congressmen send to their constituents. I was particularly interested in an article written by the Honorable ELMER J. HOLLAND, pertaining to natural-gas legislation which I am sure will be considered in the future. At this time I would like to insert it in the RECORD for the benefit of my colleagues:

YOUR REPORT FROM CONGRESSMAN ELMER J. HOLLAND, 30TH DISTRICT, PENNSYLVANIA

THE STORY OF THE MONTH: THE GAS AND OIL DEPARTMENT

Apparently President Eisenhower feels that he can't do enough—let alone too much—for the oil crowd that helped finance his election.

He gave them the tideland oil—the oil companies, of course, enjoy the 27½ percent depletion allowance in their income taxes—they get away with not paying 1 cent tax on over $300 million they make in net profits from their operations in the Middle East—and now, he is trying to give them even more privileges.

At the insistence of the big oil interests, the President has again asked Congress to exempt them from effective Federal rate regulation on natural gas. If this is done, according to the experts, it would cost the American people upward of $950 million a year. Such a proposal—the passage of the Harris-O'Hara bill—has been called "a betrayal of the American public." However, on June 9 President Eisenhower wrote to Chairman OREN HARRIS, of the House committee considering this bill, and said:

"I wish to reemphasize the importance of enacting natural-gas legislation at this time."

Today, more than 21 million American families (over 60 million people) use gas in their homes and depend upon it for heat, hot water, cooking, and other essential daily needs. Over $12 billion have been invested by consumers alone in cooking stoves, home heating units, hot-water heaters, clothes dryers, and other equipment that require gas as fuel.

A vast network of interstate pipelines brings gas to nearly all the major cities of the Nation. These have been built since 1938 when the Natural Gas Act went into effect. Municipalities and consumers alike have supported this pipeline development—and have invested billions of dollars to distribute and utilize natural gas. This was done, of course, with the assumption that the Natural Gas Act would be enforced by the Federal Government and gas costs would be held at a reasonable level.

These millions of consumers of gas are indeed captive for certain companies serve certain locations, there is no competition here, and the consumer has accepted this captive status in good faith, for he thought gas would be considered a public service commodity and the price he would pay for gas would always be fair, because Federal price regulations would guarantee justice.

The bill that the President wants passed would take the control over the initial price of natural gas in the field from the Federal Power Commission, and would outlaw cost as the determinant of fair price, and would substitute a new concept, "reasonable market price," in its place. With gas producers now enjoying an almost unlimited sellers market, the new rate concept of market value would require the Federal Government to legalize whatever price the traffic will bear.

Even with Federal control, in the last 10 years, the average price at the wellhead has gone up from 5.3 cents per thousand cubic feet to 11 cents per thousand. This is a rise of 91 percent during the 10-year period on the wholesale price. The American Gas Association reports that in 1938 there were less than 7 million consumer gas connections, by 1955 there were 23 million. In 1938 there were 184,900 miles of pipeline, by 1955 there were 449,400, and the natural gas utility revenues soared from $406 million in 1938 to $2,970,000,000 by 1955.

According to industry spokesmen the goal is to raise the price of gas at least 15 cents higher at the wellhead; that is what they would call a reasonable market price. This would not only add $950 million annually to the gas bills of the captive consumers, but could add another $175 million to the bills of electric energy consumers who buy power from companies that use gas as fuel in generating electricity.

Who will be the real beneficiaries of the handsome rewards which the enactment of the Harris-O'Hara bill would bestow?

It is little known that 85 percent of all the natural gas sold in interstate commerce for resale is produced by less than 100 companies, most of them oil companies, and that about one-third of the supply is furnished by 7 oil companies. The fact is that a few big oil companies make most of the sales. It is they who would get most of the millions gained from the new rate, and the billions which would be added to the values of the reserves they now hold.

If consumers are to be properly protected at the bargaining table when gas prices are established, the Federal Power Commission must be required to establish prices in relation to producers' costs, and not have prices set by reasonable market price.

Eisenhower's election was an expensive one when you realize he was forced to request the passage of such legislation at the price of the general American public.

The Sudeten Germans: The Policies of Reason, Morale, and Liberation in the Abolishment of War

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. BURDICK. Mr. Speaker, the following article points up the part that a policy of reason and morale plays in the overall policy of liberation of enslaved and oppressed peoples which it is hoped will result in the abolishment of war:

THE POLICY OF REASON

The policy of liberation was not only devised by America's most able heads: it is, in fact, a policy based on knowledge of the Communist system, on intelligent and far-seeing thinking, on reasonable courage and moral feeling.

It is a policy which sees the strong but also the weak sides of the enemy, not veiled in illusions. It is the policy which sees the weakness of Russia in her political forced system and her economy, the weakness in the satellite nations and the weakness of the entire unholy Communist international conspiracy so as they are, without illusions.

The traitors in the West were a clue to the communization of a great part of the world without war—they are in our hands the clue to the decommunization of the world without war.

This policy does not seek comfort in doing nothing and profit in trade with the Communists. This policy does not sacrifice future full freedom of the Communist slaves and of all of us for temporary improvement for the Tito and Gomulka governments.

This policy is a policy of commonsense which says that an enemy cannot be weakened by our strengthening him, that he cannot be defeated when you help him. The policy of liberation restores again that reason and sound human thinking so much suppressed for a long time in the West by illusions and treason.

THE POLICY OF MORALE

The policy of liberation is, however, also a moral policy. It sees the basic truth that the world cannot remain half free and half slave. It wants to have it fully free and sets finally, instead of the wavering and ineffective passive reacting of the West to Communist initiatives, based on comfort and pro-Communist illusions, an active policy of liberation against the active Communist policy of subjugation.

The policy of liberation is thus a policy of reason and of morale.

THE POLICY OF LIBERATION IS THE POLICY OF ABOLISHMENT OF WAR

In the same way as the removal of a criminal brings peace to a community, the

abolishment of criminal communism is the only way to abolish war and bring peace to the entire world.

The policy of liberation puts a most important stress on the abolishment of communism without war.

While the policy of illusions and treason can lead only to the perpetuation of the Communist system and to our destruction, either without war or in a final war catastrophe in which the free world would be destroyed and would definitively lose, the policy of liberation is a policy seeking the abolishment of communism without war and to the abolishment of war at all. It is first point of the policy of liberation which states that the West must be so strong in science and technics, that the Communists cannot start any war. In the same way, all other points of the policy of liberation, including the dissolution of the Communist system in the East from within, represent measures of abolishing communism without war.

Here lies the deep wisdom of Douglas MacArthur who, being an anti-Communist of first class, preaches the abolishment of war at all.

In the policy of liberation, American and Western intelligent thinking and moral greatness unite in complete harmony. Those who are preaching the abolishment of communism, are at the same time preaching the full abolishment of wars for ever.

There is no doubt that the time of the policy of liberation will come in the United States of America and in the West. It is only a question of the time. The West is not in its majority naive and treasonable. The nations of the West are moral and intelligent peoples. They will accept a moral and intelligent policy.

THE POLICY OF LIBERATION IS THE POLICY OF THE FUTURE

Marx based his predictions of the final victory on the greediness and inhumanness of "capitalists" which would bring their own destruction. He proved wrong, for free men proved to be better than he had calculated.

The present masters of communism, analogically to Marx, reckon with the naivete, thoughtlessness and greediness for profit of the West, which tend to support the East and trade with it. They will prove wrong, too.

Before long, the free nations will awake of their weakness, of their sleep, of their trade with criminals and of their illusions and will unite under the principles of reason and morale. These principles are embodied in the great policy of liberation.

Real Purposes of Kremlin Purge Is To Confuse and Soften the West

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. JUDD. Mr. Speaker, the best hope the Kremlin has of confusing and defeating the United States and our allies is by making us think the recent purges in the Kremlin mean a fundamental change. Threats do not scare us; but pretended conversion and reform might dupe us. If the reform were genuine, they could show it in 10 minutes by setting free the captive nations. Until they do that, the old, old peaceful coexistence ruse is more dangerous to us than the belligerence of Molotov, et al. I include a penetrating article on this by Edgar Ansel Mowrer. The article follows:

KREMLIN UPSET AIMED AT DEMOLISHING NATO

(By Edgar Ansel Mowrer)

The Kremlin shakeup may be many things to many people. Most important for us, I think, are two aspects.

The first, the dropping of the last of Stalin's old guard (Molotov, Kaganovich, Malenkov), is obviously a new step in streamlining the Khrushchev policy of disrupting the West by peaceful coexistence.

Without the slightest doubt, Krushchev and company have embarked upon a great gamble. They are loosening their hold upon satellite countries and liberalizing their internal regime. They know—Hungary proved—there is danger in this policy. But the Kremlin men are betting the new policy will disrupt the West and ultimately destroy NATO before it will do real harm to the Communist world.

For so long as the Russians continue to allow a certain freedom to Gomulka and to court Tito, the West, it seems, is quite ready to overlook the fact that the suppression of the Hungarian revolt was Stalinism at its worst and demonstrated to all those who have eyes to see that Russia has not essentially changed.

SOCIALISTS RESPOND

Another proof of the success of the peaceful coexistence racket is its effect upon German and British Socialists.

The former, led by the indecisive Ollenhauer who has a chance of becoming Reichskanzler in the September election, are willing to exchange the real protection provided by the North American Treaty Organization for a purely theoretical European security system, in order thereby to secure from Moscow permission to reunite divided Germany.

British socialists led by Gaitskell seem ready to go along, though they are somewhat less outspoken about it.

Yet the effect of any such exchange would be the return of United States forces from Europe to the United States and the virtual certainty that thereafter a Soviet attack upon West Europe with conventional weapons would not bring about American retaliation by H-bombs, at that point the only thing which could save West Europe.

Khrushchev is obviously playing for just such a European security system and the end of the (to him) hateful NATO, and is ready to take chances to bring it about.

But to win he obviously had to appear to bury Stalinism forever. In order to make that credible, Molotov, Kaganovich, and Malenkov had to go. Once more the Soviet wolf pack is eating its own leaders.

DECISIVE CHANGE

The second, and for me more decisive, aspect of the change in the Soviet leadership is the acceptance by Marshal Zhukov of a place on the presidium of the central committee which runs the U. S. S. R.

From the time he arrested Beria, Zhukov has been an authority within the Soviet Union. Obviously at that time he, who hated Stalin for having humiliated him after he led the victorious Soviet army to Berlin, could have had almost any position he wanted. Yet he was satisfied to be a substitute member of the presidium. Just why I do not know. Perhaps it was in order not to reveal to foreigners the full extent of military influence within the U. S. S. R.

Many foreign correspondents in Moscow have denied that Zhukov is anything more than the most obliging servant of Khrushchev. The wise Finns have known better. Now Zhukov emerges as one of the Supreme Soviet leaders, openly.

Some Americans find comfort in the marshal's rise to power. As Ike's old friend, with whom he corresponded privately as President, he seems to these people a reassurance against any sort of Stalinist adventures. Just a bluff old soldier.

I cannot share this reassurance. Zhukov is both the conqueror of Berlin and the butcher of Hungary. I find him in no respect morally superior to Stalin.

Nor am I certain a Soviet regime increasingly tending toward bonapartism will be any less expansive than its predecessors. It will be somewhat different, when it finally arrives. It may not be less malevolent or a lesser problem for free peoples. It needs all the watching we can give, and an end to current illusions.

Dr. Blair's Later Writings Explored

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 11, 1957

Mr. LATHAM. Mr. Speaker, I believe the Members of the House of Representatives and Senate will be interested in the following article concerning Dr. John M. Blair, chief economist of the Senate's Antitrust and Monopoly Subcommittee:

[From the New York Herald Tribune of May 24, 1957]

DR. BLAIR'S LATER WRITINGS EXPLORED

(By Donald I. Rogers)

Dr. John M. Blair, chief economist of the Senate's Antitrust and Monopoly Subcommittee, headed by Senator ESTES KEFAUVER, Democrat, of Tennessee, has accused this correspondent of being unfair in the several columns I have written about him because I used the words "dialectic" and "socialistic" in successive sentences. It is his contention that since his writings in "Seeds of Destruction" (1938, Covici-Friede, $4, New York) have been rejected by Marxism and the Daily Worker, he does not qualify for the label.

Dr. Blair's writings reveal him to be suspicious of big business; fearful that under the capitalistic society as it exists the workingman will fare worse and worse; apprehensive that the expanding corporations will form into oligopolies (near monopolies) at the top levels, and unsure of the durability of America's economy under capitalism unless the system is further policed.

In his answer to me, Dr. Blair did not deny these premises. Though he said that space would not permit him to restate his views which, naturally, have changed since he wrote the book prior to 1938, he did find space to recite favorable reviews which appeared in a number of newspapers.

It is obvious for me to point out that reviewers in 1938 might have taken more kindly to the persuasions of Dr. Blair than would reviewers today. Furthermore, one hardly regards reviewers in book-review sections of the general press as competent economic spokesmen.

However, it is on the point of creeping oligopoly that the Kefauver committee will strike at American business in the forthcoming hearings. Therefore it seems logical to this commentator to have the beliefs of Dr. Blair known to the intended victims of the inquisition prior to the hearings.

On the subject of the "good faith" amendment to the Robinson-Patman Act, introduced as S. 11 by Senator KEFAUVER, there will be considerable discussion. Around

this discussion will center much of the philosophy propounded by Dr. Blair. It has to do with "rigid pricing policies" which Dr. Blair holds to be detrimental to the consuming public.

The issue revolves around the good faith meeting of competition, as a defense to a charge of price discrimination under the Robinson-Patman Act. If the amendment is adopted, a producer would not be able to give a more favorable price to one customer in an area without giving it to all customers in the area.

Dr. Blair is an expert in this field. He has spent much of his professional life in it.

Thus, since he will take a leading role in two issues of paramount importance to American business, let's explore some more of Dr. Blair's writings—later writings. In the American Economic Review of May 1955, he wrote:

"Two decades ago, one of the liveliest issues engaging the attention of economists was price rigidity—particularly the relationship between such price behavior and the structure of industry. Largely because of the war and the subsequent abnormal sellers' market, the issue seems to have been all but forgotten. The industry-by-industry analysis presented in this paper shows that in four major areas of the economy—farm products, foods, textiles, and lumber—prices were flexible in both depressions since these areas were generally atomistic in both periods. Moreover, the analysis also shows increasing rigidity, following the concentration of the industry, in such diverse fields as iron and steel, salmon, salt, biscuits and crackers, molasses, matches, plate glass, window glass, and anthracite (the last two in an inverse manner).

"Now that the abnormal postwar sellers' markets appear to have come to an end, it may be highly appropriate for the economic profession to focus its attention again on the subject of price inflexibility. If one agrees with this observer that price rigidity during a downswing is economically injurious, the reasons for examining the factors which might contribute to such price behavior are self-evident.

"The results of this analysis suggest that one of those factors—and an important one at that—is economic concentration. But even if one holds that price rigidity is not harmful, further examination should be made of the manner in which such prices are set, the considerations behind their determination, the economic effects of their being imposed at alternative levels, etc. If this paper has done no more than to contribute to a reopening of interest in this whole question of depression price behavior, it has more than served its purpose."

There, then, is the line of Senator KEFAUVER's upcoming campaign. The words are in Dr. Blair's economic paper: price rigidity—economic concentration—prices at alternative levels.

Ten Men Who Moved a City—Greater Philadelphia Magazine Honors Dedicated Leadership of Handful of Bold Men

---

EXTENSION OF REMARKS

OF

HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mrs. GRANAHAN. Mr. Speaker, the national magazines and leaders in civic affairs in every city in the Nation and in many cities abroad have been fascinated by the Philadelphia Story—the facts in the rejuvenation of our great and wonderful city from a decaying, corruption-ridden community living on past glories to a modern city taking its rightful place among the greatest cities in the world.

We who live in Philadelphia have proudly traced this urban miracle in the changes we could see before our eyes each day, as each new project got underway. Chiefly, however, we traced it in the spirit and forward-looking outlook of our city officials, our civic leaders, our business community, and the enthusiastic cooperation of friends and neighbors in every part of the city. It has been a truly great achievement.

Recently, the magazine Greater Philadelphia, edited and published by Mr. Arthur Lipson, attempted to tell this story in thumbnail sketches of 10 of our citizens who have worked for, and who continue to work for, the improvement of Philadelphia. These 10 are all closely related to, or are part of, our business community, although 2 of them are known primarily in the Nation as political figures, United States Senator JOSEPH S. CLARK, our former mayor, and our present mayor, Richardson Dilworth.

Others named to this select and honored list by the magazine are Mr. Harry A. Batten, board chairman of N. W. Ayer; Mr. William Fulton Kurtz, of the First Pennsylvania Co.; Mr. Robert T. McCracken, attorney; Mr. Edward Hopkinson, Jr., of Drexel & Co.; Mr. Harry G. Schad, of Atlantic Refining Co.; Mr. Albert M. Greenfield, man of many business interests; Judge Edwin O. Lewis, of Common Pleas Court; and Mr. James M. Symes, head of Pennsylvania Railroad.

This is, as I said, the group of selections of Greater Philadelphia magazine. As the magazine itself concedes, in an undertaking as vast as this one has been, many Philadelphians have played outstanding roles, in addition to the 10 it cites.

Personally, I think many others in the city who are not among the 10 named by Greater Philadelphia magazine could also be considered eligible for any list of the outstanding 10 who have contributed to Philadelphia's progress, but each person would probably have a different list.

For instance, I think the men in our congressional delegation who over the years played leading parts in the enactment of the Independence Hall renewal project, in the restoration of the Delaware River channel, in the housing and redevelopment laws, and in other Federal programs which have been so singularly useful in helping Philadelphia to build its modern miracle city could properly be included in any list of those who have done much to rebuild our city.

And of course Philadelphia's newspapers have been in the very forefront of all of this progress, and have maintained a steady drum-beat of interest and crusading zeal for our city's improvement. Their editors and publishers deserve a great deal of the credit for our success.

Nevertheless, the men selected by Greater Philadelphia magazine for this high honor are all most deserving, Mr. Speaker, and under unanimous consent, I hereby submit for inclusion in the Appendix of the CONGRESSIONAL RECORD this outstanding article entitled "Ten Men Who Moved a City," an article which I believe will be of interest to every Member of Congress and to those in every city who look forward to duplicating the great achievements of Philadelphia.

The article referred to is as follows:

TEN MEN WHO MOVED A CITY

"The sickest city in the land," observed a national maazine in the sticky summer of 1948, "is Philadelphia. It is suffering from the longest case on record—81 years—of machine politics."

Yet in less than 10 years Philadelphia has been transformed from a national scandal into a national model. That it was possible at all is a tribute to the eventual triumph of the democratic process. That it transpired so swiftly is a tribute to the dedicated leadership of a handful of bold men.

Philosophers and social scientists hotly dispute over whether leaders create history or history creates leaders. But they all agree that leaders are rare.

Philadelphia came out of World War II in worse shape than most American cities. Its municipal government was at best incompetent, at worst dishonest. Its ledger was saddled with debt. Its backbone industry—textiles—was heading for sunnier southern climes. Its port was filling up with sludge. Its residential areas were rotting. And its citizenry was smothering under a stifling blanket of apathy.

At this critical juncture, isolated and indignant groups of businessmen angrily boiled up to the city's troubled surface. The groups coalesced, and a hard core of executives rolled up their sleeves and learned the science of government.

To it they applied the organizational techniques which had elevated them to high and powerful positions in banking, in law, in industry, in commerce.

And they shed their political affiliations for a common allegiance and a common cause.

It was a unique American reform movement: it smelled of money and influence. Skeleton after skeleton was shaken out of musty municipal closets and their rattling aroused an electorate after almost a century of lethargy.

To symbolize the achievements of this group, Greater Philadelphia magazine has selected 10 local executives whose dedicated leadership and shirt-sleeve participation ran the course of that decade and is still running—men who patiently and unremittingly committed their time and talents to help create this civic renaissance. If their interests were selfish, it was an enlightened selfishness—a desire to create a better city in which to live and work.

All of these men were, and—with the exception of two—still are, nonprofessionals in government. They do not complete the roster. There are others. But for an area which counts over three million heads there are not many others.

JOSEPH S. CLARK

Nestled in the northern reaches of Philadelphia is a small principality called Chestnut Hill. For a long period it was almost exclusively inhabited by a happy band of squires who claimed to have all of the virtues of the main line aristocracy and none of the vices.

It is a strange phenomenon, peculiarly Philadelphian, that from this silk-stocking section should come much of the political leadership which transformed city hall from

a symbol of entrenched reaction to an instrument for the public welfare.

JOSEPH SILL CLARK has much about him which is Chestnut Hill: A prep-school-Harvard education, a background in corporation law, inherited wealth and position, and an articulate seignorial drawl.

Born into Republicanism—he reportedly left the party on the prohibition issue—he campaigned actively for Al Smith. Except for a brief try at a councilmanic seat, his first venture into municipal politics was to support the unsuccessful bid of Richardson Dilworth for the mayoralty in 1947. Two years later he was a candidate himself, took the city controllership with the aid of the independent vote. The post gave him a sounding board for reporting irregularities by the score. He was an easy victor in the mayoralty campaign of 1951.

Thin, boyish, yet tough as nails, CLARK set a standard for a political leadership which would be hard to match. Relieved of many ceremonial and technical administrative functions by the new charter, he was able to broom the hall with a thoroughness which at first dismayed and then aroused regulars in his own party.

Not enormously popular personally when he entered office, his militant uncorruptibility soon captured the imagination of his constituents who endorsed him for the Senate with a plurality so overwhelming, it reversed for CLARK himself, the national Niagara which deluged his party.

HARRY A. BATTEN

From his sedate office on the 12th floor of the N. W. Ayer Building on Washington Square, board chairman Harry Batten gazed out over the smoky expanse of south Philadelphia. At the tail end of his vision was the burning dump which surrounded marshy Stone House Lane—the last Hooverville in Philadelphia, inhabited by a gamey mixture of derelicts, squatters, goats, cows, and dogs. He was pondering a pesky problem.

As a prime mover in Philadelphia's projected $90 million Food Distribution Center, adman Batten took his civic assignment seriously, studied central food markets in Cairo and Chicago, Paris and Pittsburgh. He was therefore disturbed by reports from real estate scouts that the task of assembling a 400-acre site was downright impossible.

Philadelphia's breadbasket is a sprawling cumbersome business: Produce is hawked nightly amid the tangle of ancient stalls, tractor trailers, and municipal filth which is Dock Street. The city's wholesale meat market is more than a mile away; still further are separate egg and poultry bazaars. To pick up provisions the small grocers and butchers (who sell 50 percent of the city's foodstuffs) swarm across the downtown streets congesting them with 8,000 vehicles nightly.

Although the 500 food wholesalers who trade here have complained about the situation for generations, it wasn't until the Greater Philadelphia Movement initiated a United States Department of Agriculture survey that any plan for remedying the situation received serious consideration. GPM's ball was picked up by the city, the planning commission, and then the redevelopment authority which took the necessary steps to acquire ground.

But no practical sites were in the offing until Harry Batten, musing at his window seized upon an idea. If no land were available, then make land. The burning dumps and river fill were shoveled into the marshland near Stone House Lane and a site created. Today giant earth movers are scooping out foundations and sewer lines are worming in from the Delaware. Batten is watching and prodding as Philadelphia prepares the world's best and biggest coordinated food center.

WILLIAM FULTON KURTZ

One of the Wall Street Journal's favorite anecdotes—it turns up about once a year—concerns a crusty banker with a glass eye which is invariably mistaken by customers for his good one.

Despite its persistence, that story is becoming obsolete—at least in Philadelphia. The Quaker City banker today, if not a new breed, is definitely a new strain. He is no longer insulated from the affairs of his community, but more often than not, finds himself plump in the middle of them.

The best example of this new look in financiers is urbane, frank William Fulton Kurtz who retired as board chairman to become chairman of the executive committee of the First Pennsylvania Co., Philadelphia's first billion dollar bank.

Kurtz, who has steered most of Philadelphia's federated charity drives since 1940, was a leader of the indignant band of executives who joined forces at a luncheon meeting in the Midday Club in 1948 to form the Greater Philadelphia Movement—an extra-governmental, non-partisan, non-profit, civic-minded conclave of the city's power elite. Kurtz, offered the chairmanship of the group, felt that if the organization was to be more than just another name on a letterhead it needed active participation from the top down. And the task ahead was so staggering that one man could not spare enough time from his job to handle it. He advanced the idea of a three-pronged cochairmanship where responsibilities could be divided and strengthened. "It was his original vision," one GPM founder reported, "which gave direction and focus to the infant organizatiton. It's impossible to overestimate his contribution."

Although Kurtz stepped down as cochairman of GPM in 1952 to serve a 4-year stint as vice chairman of the high-powered Philadelphia Redevelopment Authority, his work in GPM has continued to be significant.

And while he stoutly insists that he is a banker first and last, his most precious coin is a broad, consistent contribution to his community.

ROBERT T. M'CRACKEN

If society is based on law, then the city's startling political and economic comeback is strongly rooted in its streamlined new charter, overwhelmingly endorsed by a public referendum in the spring of 1951. Among other things, it took the bulk of municipal workers out of politics and into civil service, it created a strong executive branch and it untangled a hodgepodge fiscal operation.

Prospects for a vigorous new charter were dim in the middle forties. The last revisionist movement occurred in 1938 when a group of young Turks made an abortive attempt to hammer one through.

It wasn't until 1948 when a runaway committee of 15, appointed by city council as a sort of cost-cutting Hoover Commission, made a series of shocking revelations about irregularities in the public till.

The reform movement which followed rallied its forces around the job of creating a new, workable home rule charter. Leading that movement was Robert McCracken, a distinguished Philadelphia attorney who had been president and chancellor of the State and city bar associations. As a cochairman of GPM he was instrumental in the organization of the city charter committee at a get-together in the Warwick Hotel in 1949.

McCracken, who commanded a great deal of influence in Republican circles (although he never sought or held public office) was acquainted with then mayor, Bernard Samuel; he had helped draft some city-county consolidation legislation and acted as an arbitrator in several local party disputes. He called on Samuel and told him that he had a more than passing interest in seeing that the commission which was to draft a new charter was nonpartisan and nonhack. Samuel agreed, asked him to serve on the commission and, together with the president of city council, appointed a majority of McCracken-suggested nominees. McCracken, who was one of the principal drafters of the charter, spent at least 3 afternoons a week on the assignment for one 5-month period.

Nor did he relinquish his interest after the charter was enacted. In 1954 he helped set up the committee for good government which opposed some crippling charter amendments and has watched over it since with an eagle eye.

EDWARD HOPKINSON, JR.

An old-line Philadelphian (his great-great-grandfather was a signer of the Declaration of Independence) and the successor to E. T. Stotesbury's senior partnership with Drexel & Co., Edward Hopkinson, Jr., was not an obvious choice for czar of city planning.

Not that he wasn't sensitively aware of the needs of the city: He had wrestled with traffic and transportation problems as chairman of the executive committee of the PTC; he was thoroughly familiar with municipal financing—his firm had handled and given advice on many local bond issues; and he knew Philadelphia intimately—grew up in the heart of the downtown area.

But Hopkinson was a banker and corporation director, and city planning to many respectable Philadelphians and most of its politicians smacked of welfarism and radicalism. It was regarded as the proper domain of the weepy social worker and the long-haired architect.

In 1942, from his top post with the chamber of commerce, Hopkinson issued a challenge: After the war ran its inevitable course, long-delayed civic improvements must be set in motion immediately. When Mayor Samuel announced the formation of a new commission for city planning a few months later, Hopkinson was chosen chairman.

And observers who expected to see a financier allocate planning funds with a closed fist were disappointed. Philadelphia, Hopkinson observed in 1945, was "running downhill because it wasn't spending enough to keep itself on the map. The unpropertied taxpayer knows the difference between good and bad municipal service," he pointed out at a realty luncheon. "And the propertied are not foolish enough to believe their holdings can retain their value in a deteriorating city."

Under his 13-year reign the blueprints for the new city—public housing, highways, zoning, redevelopment—were carefully and realistically drawn. And when he stepped down late in 1955 he could already find concretized in expressways and dwelling developments—many enduring monuments.

HARRY G. SCHAD

When Harry Schad was finishing up his studies at Philadelphia's stubborn, sturdy Girard College he was also finishing a work-study program which meant spending part of each week as an apprentice in industry. His assignment: Clerking at a local shipping concern.

After graduation he was asked to join the firm and has been up to his gunwales in maritime activity ever since. He is today a vice president and a director of Atlantic Refining Co.

While Schad's arena for port development is frequently on the bridge of local shipping organizations (from the board of managers of the Seaman's Church Institute to the board of commissioners of the port authority, and currently at the head of the joint executive committee) he has executed his

most telling maneuvers in the gleaming marble corridors of government where he is a persistent and brilliant infighter. In the last two decades he has made more than 100 excursions to Washington, Harrisburg, and Trenton where he has buttonholed legislators and technicians, budgeteers and engineers in the interest of the Delaware River Port with a bulldog tenacity.

His convincing explanations and unequivocal statistics have helped win for the region victories which range from the establishment of a port authority to the appropriation of channel deepening funds.

The port, which skidded to fourth place at the close of World War II is today a comfortable second, and leads the Nation in import tonnage. Schad's big guns are now turned on appropriations for further improving the channel and for better general cargo-handling facilities. Under his admiralship, no shred of doubt surrounds the outcome.

ALBERT M. GREENFIELD

"While the other kids were building forts with alphabet blocks, Albert was building a real estate empire with city blocks," joshed a long time friend of astute Albert M. Greenfield. His jest was not too far from fact. For Greenfield's career in real estate and commerce dates back to his 14th year when he left school to clerk with a Philadelphia realty lawyer. Four years later—with a $500 shoestring capitalization—he was in business for himself; and at 23 he completed his first multi-million-dollar deal.

Greenfield has since made, lost, then remade a large personal fortune and, although he divorced himself from his vast real estate interests when he assumed the chairmanship of the Philadelphia Planning Commission a year and a half ago, he still chairs an investment banking house with farflung mercantile holdings.

Greenfield's participation in the public life is longstanding under difficult circumstances; because his financial interests have so permeated the commercial life of the city it is difficult for him to make any contribution—no matter how altruistic—without having his personal motives questioned by dissidents.

Despite the handicap of power, he has not shirked what he felt was the duty of a citizen toward his community and has pioneered on rostrum and agency board the cause of interracial, interdenominational, and international fellowship.

Probably his most significant contribution is in the field of redevelopment. Under his direction a $250 million renewal program for the Society Hill section of Philadelphia is gracefully sliding down the ways. The target: Restoration and reinhabitation of the decaying "Old City"—a 4 square mile expanse of loft buildings, slums and revolutionary shrines once the heart of Penn's Greene Countrie Towne.

In the works is the most ambitious planning project ever taken by an American city: A lengthy, detailed, comprehensive plan for tackling the long-range regional problems of an exploding urban population.
